## THE NEW INTERNATIONAL ENCYCLOPÆDIA

ON'SUL (Lat ). The title given to the two chief magistrates established in Rome on the expulsion of the kings in 509 BC So violent was the hatred of the monarchy that the Romans were unwilling to intrust the new Republic to a single executive, but gave the entire administration to two consuls, of equal rank and jurisdiction, that each might check any tyranny on the part of the other At first the entire power of the King, in state and church, at Rome and abload, was vested in the two consuls, and each was wholly responsible for the acts of both, the acts of either, however, were nullified by the dissent of his colleague. Gradually their powers were limited, and many of their functions were given to other officials, such as the censors, the pixtors, and the ædiles. They held office for one year only, and years were reckoned by their names. In the early days of the Republic one consul was generally commander in chief in the field, while the other remained to administer affairs at Rome, but often both were forced to lead the armies in battle In such cases they commanded by turns, of the Senate, at clections, and at the chief public festivals. Together with the Senate, they exercised a general supervision of the state. As a mark of then high office, they wore a white toga with a crimson border (toga prætwate), sat in public on the curule charr (sella curulus), and were accompanied by 12 attendants (heters) bearing the faces (q v).

The consuls were elected by the Cometa Cen-

The consuls were elected by the Contrata Centurata (see Comitta). In the earlier period the date of the election and of entering upon office was irregular and dependent on circumstances, but if convenient the election took place generally in July, and after 183 s.c. the consulship began regularly on January 1. At first only patricians were eligible to the office, and a consul could not be reelected. After a long struggle of the plebeans for recognition, it was established by the Leges Lucinia Sexthat (see Licinian Rodations), in 367 s.c., then one of the consuls must be a plebeian. Meantime, between 444 and 367 s.c. the consulship was frequently suspended, and the military tribunate with consular power, an office to which plebeians could be elected, was substituted for it. In 342 s.c. both consulships were opened to the plebs by a popular vote, and it

was ordained that ten years must elapse before a consul could be eligible for reelection; however, it was not until 215 no that two plebean consuls were elected together, and one of these was quickly ousted Not until 162 no. did the plebeans succeed in obtaining two effective consuls

With the organization of the Empire by Augustus, the consulship ceased to be of real importance. In the division of functions between the Emperor and the senatorial body the consuls remained the head of the latter; but their nomination became a prerogative of the Emperor, and their election a farce. They still gave their names to the year, but the position was simply one of henore, so that we very often find several consuls named in succession in one year, the eponymous consuls holding office only for four, or even two, months, and then being replaced by others. The original pair were called consules ordinaris, their substitutes consules suffect. Under the later Empire nothing but the name and the honor of the consulship remained. The Emperor Honorius was made consul in the very year of his birth! Official dating by the name of the consuls came to an end in 537 Ap. Consult Mommson, Romsche Staatsrecht, in (Leping, 1857-88); Daremberg and Sagho, Dictionnaire des autquités romanes, vol. (Panis, 1892); Pauly-Wissowa, Real-Empire, vol. (Panis, 1892); Pauly-Wissowa, Real-Empire, vol. in the consultation of the con

ONSUL, Menoawile. An agent appointed another for the special purpose of promoting commercial intercourse between them. The earliest prototype of this official is the ancient Greek process, whose functions were to represent his country, and to protect its citizens while trading at the place of his residence, Modern Greek applies this term to the consul of to-day. That "consul" has superseded "pioxenus" as the title of the international agent of commerce is due to the supremacy of Italian commerce in the Middle Ages. During that period Italian traders in a foreign country were accustomed to have their disputes settled by magistrates of their own upon whom they conferred the proud title of "consul." In 1485 Richard III appointed the first consul for English merchants (Lorenzo Strozza, at Pisa), beyong more thereto, it is said, "by observing

from the practice of other nations the advantage of having a magistrate for settling disputes among merchants trading in another country."

This judicial function of the early consul is maintained at present in certain Oriental and African countries. In other lands his primary duties are those of an international commercial agent. The exact nature of his activities and the manner in which he is to perfoim them are determined mainly by the government appointing him and by theaty with the power in whose territory the consular office is exercised.

The consular service of the United States embraces one consular agent and consul general (located at Carro, and enjoying a quasi-diplo-matic position), consuls general, vice consuls general, deputy consuls, consular agents, consular clerks, and office clerks, numbering, in 1913, about 1200 persons The fees received by the consular offices, which under the Law of 1906 are covered into the Treasury, practically cover the expenses of the service Under earlier laws all or part of the fees were retained by the consular officials. Thus the total income of the Consul at London, whose salary was fixed at \$5000, approximated \$20,000 The abolition of the fee system by the Law of 1906 was accompanied by an increase in salaries, especially in the Oriental consulates The number of consulates general (January, 1914) is 67, and of consulates 235 The incumbents of these offices who receive salaties of \$1000 or over are not allowed to transact business in or with the countries to which they are accredited merly a large proportion of the officials in the consular service were foreigners resident in the countries in which the consulates were established The Law of 1906 required that all officials receiving salaries of \$1000 and over must be American citizens. All consuls are ap-pointed by the President by and with the ad-vice and consent of the Senate. They qualify by taking a prescribed oath of office, and by executing a bond to the United States for the faithful discharge of their duties and for accounting for, paying over, and delivering up all fees, money, goods, effects, books, records, papers, and other property coming to their hands. Upon filing the oath of office and the bond a commission issues, and a request is made by the State Department to the government within whose jurisdiction the office is situated for an exequatur, upon the receipt of which the consular officer is entitled to perform his functions and enjoy the privileges of his sta-tion. The exact extent of these privileges depends upon the conventions or treaties existing between the United States and the countries to which the consuls are accredited. In the absence of any convention, a consul, after 1eceiving his exequatur, while not entitled to the exemptions of a diplomatic agent (see DIPLO-MATIC AGENTS, ALIEN), is a recognized officer of a foreign state, under the special protection of international law, he may raise the flag and place the arms of the United States over his gates and doors, and his official papers and archives are exempt from seizure and destruction While the duties of consular officers pertain chiefly to commercial transactions, they are not limited to them. These officers "stand as protectors and advisers of their countrymen present in foreign lands, they act as judges, notaries, administrators of interests and of all

property of such as have no legal representative, they have to prevent frauds on the revenue, to notice infractions of treaty stipulations relating to trade, to advise their government of new laws or regulations within their distinct, to preserve the discipline of the commercial marine, to guard seamen from oppression, to aid the destitute, and to make reports upon matters affecting commercial, industrial, financial, and agricultural pursuits"

Some of the specific duties of consuls included under these general duties are the arbitration of disputes between master and crew, the relief of destrute seamen, the care of property of their countrymen in case of shipwircek, etc., the issuing of passports, the authentication of documents, and the certification of marriages, births, and deaths. The consuls of the United States are expressly prohibited from performing the marriage ceremony, but the statutes provide that when a marriage is duly solemnized in accordance with the law of the country in which the consul resides, the consul shall, upon proper application, issue a certificate of such solemnization, provided such persons would have been authorized to marry if residing in the District of Columbia

Ministers and consuls of the United States in China, Siam, and Madagascar have the judicial powers which are bestowed upon them by Chapter 47 of the Revised Statutes, including jurisdiction in criminal cases and in civil cases involving sums of \$500 or less. The personnel of the consular courts is specially determined, varying with the country and the subject matter under dispute, thus, in capital with four of his countrymen as assessors, and that their verdict must be approved by the minister before conviction can be had, and in some countries provision is made for a consular mixed court consisting of natives of the country and of the United States. Consuls have the judicial powers above referred to also in Tur-key so far as relates to climes and offenses committed by citizens of the United States, and in civil cases where such powers are permitted by the laws of Turkey or its treaties with civilized nations or by its usages with the Franks or foreign Christian nations, and in Persia, as to suits and disputes between citizens of the United States. Special provisions exist granting special powers to the consuls of the United States in the Barbary States, Muscat, Samoa, and in some other places where treaty has provided for them. In China, Madagascar, Siam, Turkey, and other non-Christian countries the property of deceased persons, both real and personal, is administered under the probate jurisdiction of the consular courts of those coun-(The judicial powers of the United States Consul in Japan were terminated on July 17, 1809, by the treaty with Japan which took effect upon that date.) Provision is made for an appeal from the consular courts under certain conditions to the minister, and to the circuit courts of the United States. See Ex-TERRITORIALITY.

In recent years many complaints have arisen as to the character of the American consular service, and several bills, having for their object the placing of the service under the merit system, have been introduced in Congress One of these was the Lodge Bill, introduced in 1906. It was amended so as to eliminate the require-

ment of competitive examinations for entrance to the service, but in the form in which it became law it provided for classification of service on the basis of work performed, with a view to promotion for efficiency from the lower to the higher grades. This plan had already been introduced by executive orders of President Cleveland (1895) and President Roosevelt (1906). The expectation that through the chance of promotion a better class of men will seek consular office has to a considerable degree been realized. Permanence of tenure is necessary if candidates for the service are to equip themselves with sufficient technical information, and some assurance of such permanence of tenure is held out by the new law.

and some assurance or such permanence of semical sheld out by the new law Consult Warden, On the Origin, Nature, Progress, and Influence of Consular Establishments (Paris, 1813), Tanling, British Consular Junisdaction in the East (London, 1887), the Consular Regulations of 1896 (United States Public Document, Washington, D C), House Report No 562, Fifty-swath Congress, First Session, Senate Report No 1802, Fifty-stath Consular Styleshall Consular Styleshall Consular Report No 1802, Fifty-stath Consular Report No 1802, Fifty

gress, First Session

CON'SULATE (Fr consulat) The form of government in France from 1799 to 1804 After the sudden overthrow of the Directory on the 18th Brumanie (Nov 9 1799), the members of the Council of Ancients and the Five Hundred, or rather such of them as approved of that act of violence on the part of Bonaparte, appointed three consuls-Sieyes, Bonaparte, and Roger Ducos. Sieyes and Ducos were quietly Roger Ducos. Sieves and Ducos were quiety, got rid of by pensions, and Cambacéres and Lebrun took their places. This approach to a monarchical government was confirmed, Dec 24, 1799, by the Constitution of the Year VIII, by which Bonaparte was made First Consul. The consuls were elected by the Scnate for 10 years and were eligible for reelection There was a Conservative Senate (sénat conservateur) of some 60 members appointed for life, a Tribunate of 100 members, and a Legislative Assembly of 300, but their powers were very limited, while those of the First Consul were made almost absolute He promulgated laws and appointed or dismissed ministers, ambassadors, members of the Council of State, military and naval officers, and all civil and criminal judges, excepting justices of peace and members of the Court of Cassation Bonaparte at once took up his residence at the Turierres and held a splendid court In May, 1802, he was reëlected for 10 years, and in August of the same year was made First Consul for life Nothing but the Imperial name and insignia was wanting to complete the picture of ab-solutism, and these were supplied. May 18, solutism, and these were supplied, May 18, 1804, when Napoleon was made Emperor. Consult Hélice, Les constitutions de la France (Paris, 1875-80); Thiers, Histoire du consulat et de l'empire (Paris, 1845-62), and the various lives of Napoleon, the memons of the time, and general histories See France, Napoleon I.

CONSULATE OF THE SEA. See Conso-

LATO DEL MARE.

ONSUM'ERS' LEAGUE. An "association of their buying in such a way as to further the welfare of those who make or distribute the things bought." The movement started in England in 1890. About the same time the Working Women's Society of New York was investigating the condition of women and cash

girls in the stores of that city They called a public meeting in May, 1890, to ask the help of consumers in bettering these conditions, and as a result the Consumers' League of New York was formed in January, 1891. Similar leagues have since been organized in almost all the important cities of the United States leagues have been especially active in their efforts to improve the conditions of employment of workers in retail establishments, but wherever practicable they extend their activities to manufacturing as well The leagues, according to the needs of their respective cities, draw up lists of conditions which a store must maintain in order to be called a "fair house" These include, as a rule, a minimum standard of wages, reasonable hours of employment, freedom from arbitrary exactions in the way of fines, etc., adequate provision for the employee's etc; adequate provision for the employees health and comfort while at work Further conditions, designed to safeguard the public health, are frequently made, such as the proper protection of food exposed for sale from dust, etc Stores which fulfill the conditions pre-scribed are placed on a "white list," and not only members of the league, but the general public as well, are urged to patronize such

The promoters of the league soon found that its work must be extended to reach the makers of goods, both to improve their conditions and to protect the purchaser, who had no way to distinguish between factory-made goods and those made or finished in sweat shops Ac-cordingly the National Consumers' League was organized in 1899 with Mrs Florence Kelley, who had been a successful factory inspector in Illinois, as secretary In order to identify the factory-made article a "consumers' label" was adopted, which can be placed on goods made in factories maintaining the following conditions.

(1) compliance with State factory law, (2) the manufacture of the goods on the premises;
(3) no child under 16 employed, (4) a 10hour day, (5) permission given for inspection by a representative of the league The Na-tional League has provided for the education of purchasers through lectures, the distribution of literature, and organization. The State leagues use similar methods While the membership of these leagues has nowhere become so great as to have a perceptible control over the sales of any business of extensive proportrons, their indirect influence, through the creation of public sentiment, has been very considerable. One of the most noteworthy achievements of the leagues has been the fixing of the attention of the public upon the over-work from which the employees of stores suffer rust before Christmas In many cases the evils of evening selling have been mitigated, and in some cities the stores have been closed, by mutual agreement, on Christmas Eve, instead of remaining open until late at night, as formerly The Consumers' Leagues have also exercised a considerable influence upon the

course of labor legislation.

See Factory Inspection, Sweating System, Union Label.

CONSUMPTION (Lat. consumptio, a consuming, from consumere, to consume, from come, together + sumere, from sub, under, emere, to buy). One of the traditional dvrsions of political economy J. B Say, the earliest systematizer in the science, devotes a book to consumption, following books on production and distribution Say's treatment of consumption is, however, little more than an analysis of the possible effects of productive and unproductive consumption and of public expenditures, which he treats under this head. The classical school generally followed Say in the order of division, but, in consequence of the exclusion of public expenditures, often left the division "consumption" with scarcely any other content than a discussion of lutury

The marginal-utility school placed a new emphasis on consumption, through their derivation of value from utility, or want-satisfying power. The law of the declining scale of satisfaction is essentially a law of wealth consumption. The phenomena of varying elasticity of wants, of the search for variety in satisfaction, of the reinforcing of satisfacin satisfaction, of the reinforcing of satisfac-tions through complementary lelations, are further examples of pinneiples derived from consumption serving important theoretical purposes The general principles derived from investigations of family budgets, such as those of Duopétiaux and Engle (qv.) and those of the United States Department of Labot, are prepared, treated as equative presentes. are properly treated as inductive principles of consumption Under the same head are to be classed investigations of the minimum wage and of the standard of living (q.v) and The social laws of consumption, as exemplified in imitation (fashion) and desire for distinction in dress, housing, etc., have usually been treated in currenty manner, but have served as a basis for illuminating studies by Sombait and other economists In America especial stress has been laid upon the study of consumption by Prof. S N Patten (qv.). While the importance of the study of consumption is generally admitted, no thoroughly satisfactory treatise covering the whole field has been written. The most systematic work on the principles of consumption has been done by Cuhel, Zur Lehre von den Bedurfmssen (Innsbruck, 1907), and Brontano, Versuch einer Theorie der Bedurfmssen (Munich, 1908). The most suggestive examples of the application of the principles of consumption to the problems of progress are found in Patten, Theory of Prosperity (New York, 1902), and Sombart, Der moderne Kapitalismus (Leipzig, 1902) See Political Economy

CONSUMPTION. See TUBERCULOSIS.

CONTACT (Lat contactus, from contingere, to touch, from com, together + tangers, to touch). In geometry, two lines, of which one at least is curved, are said to be in contact when they have two or more consecutive points in common. For example, in analytic geometry a tangent is said to be in contact with a circle in two consecutive points. This is called contact of the first order. If two curves have contact at three consecutive points, the contact is said to be of the second order, and so on,

eg, the curves  $y=x^a$  and  $y=3x^a-3x+1$  have contact of the second order. The analytic condition for contact of the first order at a point a=a, between two curves,  $y,=\phi(a)$ ,  $y=\psi(a)$ , is that  $\phi(a)=\psi(a),\phi'(a)=\psi'(a),\phi'$  and  $\psi'$  being the first derivatives. The condition for contact of the second order is that  $\phi(a)=\psi'(a),\phi'(a)=\psi''(a),\phi'(a)=\psi''(a),\phi'(a)=\psi''(a)$ . Contact of the third order requires the derivative of the third order, and so on. In contact of the nth order between two surfaces there must be (n+1) consecutive common points

CONTACT ACTION, CHEMICAL. See CATA-

LYSIS, REACTION

CONTACT DEPOSITS. See OBE DEPOSITS. CONTAGION (Lat contage, contact, from contingere, to touch, from come, together + tangere, to touch). The communication of a disease from the sick to the healthy, either by direct contact of a part affected with the disease, or by indirect contact through the medium of the excretions and exhalations of the body Among the contagious diseases are measles, scarlet fever, smallpox, eryspelas, typhus fever, bubone plague, epidemic influenza (the gippe), diphtheria, and tuberculosis. See BACTEMIA, EPIDEMIO, INFECTION CONTAGIOUS ABORTION IN ANI-

CONTAGIOUS ABORTION IN ANIMALS. This disease has been increasing in
importance economically until it now ranks
second only to tuberculosis among the diseases
of cattle. In the United States alone the direct
loss among daily and range cattle reaches into
the millions, while the potential loss is enoimous and inestimable. While most frequent
among cows, the disease is commonly met with
in mares and less often in sheep, goats, and
swine. It occurs in otherwise healthy mothers
as a result of external infection, producing inflammatory lesions of the feetal membranes and
cotyledons, usually appearing in an enzootac
form. In the cow it is caused by the Bacillus
abortus, commonly known as "Bang's bacillus,"
and in the mare by the Bacillus don trues

and in the maje by the Bacillus abortious equinus, and possibly other microgramsins. Premonitory symptoms when piesent are manifested two or three days before the expulsion of the fetus by swelling of the udder, edematous swelling of the vulvai lips, reddening of and small milaned nodular formations on the vulvovaginal mucosa, and the appearance of a miceus or mucroprurulent odorless discharge from the vagina. In cows abortion soldiom occurs before the fourth month of pregnancy, but may occur at any time after that period. The factus is expelled with ease and is usually dead at birth. If abortion occurs at the end of six months, the young may be alive, but lives only a few hours. Marcs abort between the fourth on the cauth month of resignificant

fouth and the eighth month of gestation.

If an aborting cow is placed in a herd which has hitherto been healthy, an outh cak of abortion may occur. Bulls that have served abortion ing cows transmit the disease to other cows. In general, the microorganisms to which the disease is due are found in the male and female gential organs and on the afterbirth from aborting animals.

The bacillus has the udders of apparently healthy cows as its normal habitat and may be eliminated continuously for years in the milk of infected cows that no longer abort. The treatment for this disease includes iso-

The treatment for this disease includes isolation of affected animals and the application of thorough antisepsis. In case of an outbreak of abotton the fectus and fectal membranes from abortung animals should be burned or deeply burned, the posterior parts of the animals should be washed in some antiseptic solution, repeated antiseptic vaginal douches should be grven, and the stable should be thoroughly disinfected. In order to prevent the possible spread of the infection, the posterior parts of other cows or marcs in the same stable should be carefully washed with a solution of lysol, cicclin, pofassium peimanganate, or corrosive sublimate. Solutions of calobic acid and of methylene blue, pieferably administered by mouth, have been found to have valuable cunative effects

Noncontagious abortion is occasionally met with among faim animals, there being a number of conditions which may cause it A general cachexia or anæmia may be among the predisposing causes of abortion, and among other conditions and causes which may lead to aboition mention should be made of acute diseases of the vital organs, contagious fevers, chronic diseases of the abdominal organs, diseases of the ovanies, kidneys, or bladder, daarrhea, fatty de-generation of the heart, ingestion of large quantities of cold water, various forms of indigestion, especially those which are accompanied by the formation of gas in the stomach, impludent feeding with succulent forage in large quantities, such as roots, potatoes, apples, pumpkins, ergotized grasses, sweaty or rusty grains and grasses, mechanical injuries; standing in stalls with too great a backward slope, nervous excitement, and muscular strain Consult Report Bureau of Animal Industry, United States Department of Agriculture for 1911; Hutyra and Marck, Pathology and Therapoutics of Diseases of Domestic Animals, vol 1, Hoare, System of Veterinary Medicine, vol. 1.

CONTA'GIOUS DISEASES. The law takes cognizance of contagious and infectious diseases as they menace the public health, for the protection of which health and quarantine laws are enacted under the broad authority of the police power of the state. For purposes of administration, this power may be delegated to municipal corporations on like political subdivisions.

While the right to take summary measures for the public safety is one of the most ancient of government prescriptions and is rarely challenged, yet it is mone the less formidable, insemuch as it involves the power of the state forcibly to confine those suffering from infectious diseases, even where properly caref for by friends or relatives, and other like interference with the personal rights of liberty and property. Maritime quarantine was early practiced by the Venctians in the fifteenth century; but minimpal health regulation is of somewhat later development, and the two are still usually separated in administration. Thus, e.g., the Board of Health of the City of New York exercises jurnsdiction within the city proper and upon the waters of the bay to the limits of quarantine, which, with its shipping, is under the authority of the Board of Quarantine Commessioners and the health officer of the port. In the United States the enactment of quarantine laws is held to be among the powers preserved to the States under the Constitution. Under their authority State boards of health are created and general statutes passed delegating the power to local boards in etties, towns, and

villages Violations of the sanitary code are usually made misdemeanors and punished by imprisonment or fines. For the purpose of avoiding any questions that might arise from the possible interference of local regulations of the public health with the Federal prerogative of regulating interstate commerce, Congress early passed acts adopting such State laws and requiring their observance by Federal officials (Act of Feb. 25, 1799, Act of April 29, 1878 [20 Stat L 37]). In 1879 a National Board of Health was created, but its powers were little more than advisory, and by the Act of Congress, Feb. 25, 1893 (27 Stat L 449), it was abolished and its powers and duties transferred to the Marine Hospital Service, which, under the direction of the Secretary of the Treasury, performs the functions of national quarantine Questions pertaining to the people at large arising from immigration and importation belong to Federal jurisdiction as incidental to the constitutional right of regulating commerce Thus conditions of entry are imposed, such as detention, inspection, and disinfection, and under the Act of 1893 protective restrictions may even be laid upon interstate intercourse where a danger is threatened and State authority is wanting or lax. The Federal quarantine may arrest the entrance of forbidden persons or things; but once past the "Barge Office" or customhouse, the local authorities take jurisdiction Naval vessels as well as commercial are bound to observe quarantine rules

The Great Britain a similar system of sanitary protection prevails. In England the controlling statute, the Public Health Act (38 and 39 Vict. c 55 [18761], is comprehensive in its provisions and regulations, though it does not extend to Scotland or Ireland, or, except as to special provisions, to the city of London. The Infectious Disease (Notification) Act (52 and 53 Vict. c. 72) and the Infectious Disease (Prevention) Act (53 and 54 Vict c 34), as the titles signify, provide respectively for the course to be pursued in notifying the proper authorities in cases of defined contagious illness, and the regulations to be adopted in the way of imspection and disinfection to prevent infection. The first applies to the United Kingdom, and may be adopted by urban and rural authorities of ports and local districts, the second is confined to England.

În its international aspect the obligation resting upon a state to adopt proper regulations to prevent the spread of epidemics belongs to the so-called natural duties rather than the more defined and absolute principles of international jurisprudence. But with the increase of international intercourse and the development of a more sensitive national conscience, a demand has arisen among civilized nations for the recognition of the right to such protection by another state, as well as the long-established one of surrounding itself by defensive barriers. The United States, Great Britain, Germany, and other countries, have provided for inspection of meats and like food exports. In 1879 Sir Shenstone Baker prepared a Code of International Quarantine, which was approved by the United States. Consult Lumley, The Public Health Acts (London, 1902). See Quaranting, Policie Power

ANTINE, POLICE FOWER
CONTARINI, kön'tá-réné. The name of a distinguished Venetian family, one of the 12 that elected the first Doge. Between 1043 and

1684 eight doges were furnished by this family, and several of its members were men of note-DOMENICO, Doge in 1043-70, was the first of the family to be invested with that dignity, during his reign the rebuilding of St Mark's Church was begun -ANDREA, Doge in 1368-82, terminated the long was between Venuee and Genoa by defeating the Genoese fleet at Chiog-gia His return from this expedition was depicted by Paolo Veronese by order of the Republic -Ambrogio was Ambassador of Venice to Persia in 1473-77 and gave an account of his travels, published in Venice (1487)— GASPARO (1483-1542), Cardinal and diplomatist, went as Venetian Ambassador to the Diet of Worms in 1521, thence accompanied Charles V to the Netherlands, England, and Spain, and v to the Netherlands, England, and Spain, and in 1523 concluded the Emperor's alliance with Venice In 1535 he was made Cardinal by Pope Paul III, and as Papal Legate to the Diet of Ratisbon, in 1541, made the most extensive concessions to the Protestants, endeavoring to bring about a reconciliation with the Catholic church Of his earnest efforts to introduce sweeping reforms in the latter, his Consilium de Emendanda Ecclesia (1537) is sufficient proof The best known of his other writings proof is De Magistratibus et Republica Veneta (1543). GIOVANNI (1549-1605) was a painter of the Venetian school, who formed himself chiefly after the works of Titan and Palma the Younger Called to Vienna by Emperor Ru-Younger Called to Vienna by Emperor Rudolph II, he painted many portraits, but he is more noted for his historical compositions, among which are "The Doge Marino Gilmani Adoring the Virgin," "Conquest of Verona by the Venetians," both executed for the Doge's Palace in Venice, and "Baptism of Christ." Consult Romanin, Storia di Venezia (10 vols., Venice, 1853-61), for Ambrogio's journey, Hakluyt Sonety Publications, No 49 (London, 1873), for Gasparo, Brown, Studies in Vonetian History, vol 11 (1b., 1907), and Regesten und Briefe des Cardinals Gasparo Containi (Braunsberg, 1881)

CONTARINI FLEM'ING. A romance by Benjamin Disraeli (1832)

CONTÉ, kôn'tà', Nicolas Jacques (1755-1805) A Fiench chemist and inventor, born at Aunou-sur-Orne (Orne) He was at first a painter, but afterward turned to the mechanical arts, and, when France was deprived, through war with England, of its plumbago supply, invented a substitute in the shape of a mixture of graphite and clay This substance he utilized for the manufacture of black-lead pencils, known as crayons Conté, by a process since followed in making all pencils. He also made extensive researches concerning the military acrostat, became director of the aerostatic school at Meudon, and was appointed by Napoleon chief of the aerostatic corps of the French army of invasion in the Egyptian expedition During that expedition his inventive genius proved to be of great service, for, after the reverse at Aboukir, the revolt at Carro, and the consequent loss of instruments and supplies, he directed the manufacture of cloth, surgical instruments, bread, arms, ammunition, and other necessaries. He also devised (1798) a barometer, similar to the later one of Vidi In 1802 he assisted in founding the Society for the Encouragement of National Industry, and was appointed to superintend the publication of the commission's great work on the Egyptian expedition At the time

of his death he was constructing an engraving machine with which he hoped to do this work. Consult Jomard, Conté, sa vie et ses travaux (Paris, 1852)

CONTEM'PORANE'ITY (from Lat. contemporaneus, simultaneous, from com-, together + tempus, time) A term used in geology to imply that two formations were deposited during the same period of time. This does not necessarily mean that they must contain the same fossil species, nor is it likely that they will, except when the two areas of deposition are in the same basin. The term "contemporaneity" is sometimes confused with homotaxy, which means that certain formations occupy the same relative positions with respect to the development of life forms Thus, certain formations of the Devonian in Europe and North America might show similar faunas, but not have been deposited at exactly the same time. They would be homotaxial See Geology
CONTEMPT' (Lat contemptus, from contem-

nere, to despise, from com-, together + temnere, to despise). In law, any disobedience of, or disrespectful or disorderly conduct in the presence of, any court of legislative body. It is punishable because it tends to impair the dignity, power, and authority of such bodies, and thus interfere with the administration of the law, and generally the body concerned has an inherent power summarily to impose upon the offender a penalty of fine or implisonment, or both All courts have such power. The guilty person may usually have these penalties remitted by "purging" the contempt, ie, by making pecunially reparation, as far as possible, for any damage caused by his acts and apologizing for his fault. If satisfactory, an order or minute is then entered icciting that this has been done and directing that the culpit be relieved from the penalty. The power to punish as contempt any willful misconduct committed in the presence of the court, which was an ordinary incident of common-law procedure, an ordinary metaent of common-aw procedure, received a great extension in the process for enforcing the decrees of the courts of equity, or chancery, "Equity acts in personam," i.e., its judgments, as distinguished from those of the common law, are orders or decrees directing specified persons to do or to refrain from doing certain acts. The breach of such an order, though committed out of court, as must usually be the case, is a contempt and the or-dinary process of the equity tribunals is to punish such an act of disobedience by imprisonment It is this use of the purisdiction of punishing for contempt in labor disputes that has been under fire in 'iccent years, under the nume of "government by injunction," as an arbitrary method of dealing with oftenses prohibited by judicial order and as subjecting offenders to the penalty of imprisonment without trial by jury and the other safeguards of the ordinary jury and the other sategnards of the ordinary eriminal law. Consult Rupajje, Treatise on Contempt (New York, 1884), and Oswald, Con-tempt of Court, Committal, and Attachment, and Arrest upon Civil Process (London, 1895), CONTEMPT OF PARLIAMENT. See PAR-

TTAMENT

CONTES À NINON, kônt zà nô/nôn' (Fr., Ninon stories). A collection of short stories by Emile Zola, which were collected and published in 1864, when their author was only 24 years old. It was his first important work and has been deemed by some critics his best book of short stories, being free from the exaggerations and brutalities which marked many of his later writings In 1874 he published Nouveaux contes à Nunon

CONTES DE MA MÈRE L'OYE, könt de ma mâr lwa (Fr, stories of my Mother Goose) A famous collection of fairy tales by Charles Perrault (1697), purpotting to be wiitten by his 10-year-old son The stories are taken from popular tradition and are told in simple, childish language, which has made them very successful among children for 200 years

CONTES DES FÉES, da fa (Fr. stones of the fauries) A collection of fany stories from various sources by the Comtesse d'Aulnoy (1710), in which many of the tales received their literary form in French.

CONTES D'HOFFMANN, Les (Fr tales of Holfmann) An opera by Offenbach (qv), first produced in Paris, Feb. 10, 1881, in the United States, Nov 14, 1907 (New York)

CONTES DRÔLATIQUES, drô'la'têk' (Fr, droll stories). A series of 30 tales by Balzac, abounding in Rabelaisan humon and copying the style and spelling of the sixteenth century They were published variously in 1832, 1833, and 1837.

CONTES DU LUNDI, du lën'dê' (Fr, Monday stories). A collection of short stories by Alphonse Daudet (1873).

CONTI, kôn'th'. The house of Conti was a younger branch of the house of Bourbon-Conde (See CONDE) It first appears in French history in the sixteenth century, when Fiancois, son of Louis de Bourbon, first Prince of Condé, took the name of Marquis de Conti from his mother's fief of Conti-sur-Selles, in Picardy. Towards the end of the century he was made Prince of Conti. He died without heirs in 1614, and for 16 years the title was in abeyance In 1629 it was bestowed upon the infant Aimand de Bourbon, second son of the Prince of Condé This second Prince de Contras generally regarded as the founder of the house IIIs son, Louis Armand, Prince de Conti, succeeded him, and on his death, in 1685, left the title to his younger brother, François Louis (1664-1709), who styled himself Plince de la Roche-sur-You et de Conti and was the most noted member of the family. He had been educated under the eyes of the great Condé and embraced a multary career with enthusiasm. He served in Hungary against the Turks, but, owing to incautious let-ters which he wrote home, he lost the favor to Chantilly Pardoned through the intercession of the great Condé, the Prince served with distinction under the Duke of Luxembourg and was present at the battle of Steenkerk (1692) and Necrounden (1693). In 1697 he was put forward by Louis XIV as a candidate for the Polish crown and was in fact elected King by a part of the nobles, but found himself powerless against the opposition of Russia, the Emperor Leopold I, and the Pope, and abandoned his claim. Louis XIV was never his friend and feared Conti's popularity, so that the Prince spent his later life in retirement. In 1709, however, he was summoned to take command of the Army of Flanders, but was carried off by an attack of the gout, Feb 22, 1709 Mas-sillon pronounced his funeral oration, and Saint-Simon, in his memoirs, speaks of him in glowing terms. His son was a worthless roue

of the tune of the Regency, but his grandson, Louis François (1717-76), Prince de Conti, distinguished himself as a brave and popular commander. The last member of the house was Louis François Joseph (1734-1814), Prince de Conti, son of the preceding, who after a somewhat checkered career died at Barcelona. Consult Mattin, Histoire de France, vols 1x, x, 1 (Boston, 1864-68), Mémores of Fontenay-Marcuil, La Rochefoucauld-Doudainville (Paris, 1861-64), and Saint-Simon (London, 1889), Topin, L'Europe et les Bourbons (Paiis, 1868), Mémoires of Noailles (th, 1777), D'Argenson, Mémoires (London, 1893), Bernis, Mémoires (Paris, 1878), De Broglie, Le secret du roi (th, 1879)

CONTI, Augusto (1822-1905). An Italian philosophical witer, born near San Minnato in Tuscany. He studied law at several Italian universities and practiced in Floience, until 1848, when he enlisted as a volunteer for service against Austria. Subsequently he practiced law and taught philosophy in San Miniato, in 1856 was made professor of philosophy in Lucca, in 1863 professor of the history of philosophy in Florence. His published works include: Evidenca, amore e fede, o a criteri della filosofia (1862, and subsequent editions). Storia della filosofia (1864, and subsequent editions), Storia della filosofia (1864, and subsequent editions), Italian (1869), Philosophy (1879), Dio omo ordinatore del mondo (1871); Ilvero nell' ordine (1876, 2d ed, 1891). In these and other works Conti makes an earnest attempt to bring into agreement the teachings of different philosophical schools.

of different philosophical schools.

CONTI, Niccolò Der An Italian traveler of
the fitteenth century. He leanned Oriental languages and carried on an extensive traffic in the
East. He traveled in Egypt, Arabia, Persia,
and India, and later gave a complete account of
his travels to Poggio Bracciolin, secretary of
Pope Eugenius IV Poggio's manuscript relating the observations and adventures of Conti
was first published in 1723, under the title Historica de Varietate Fortuna. Conti was one of
the pioneers of European commerce in the East,
and one of the first to advocate the idea of finding a western way by sea to the Eastern counties Consult Grardina, I viaggi de Niccolò dei
Conti (Catalia, 1898).

CONTINENT (ML continens, from Lat continuer, to touch, from com, together + tenere, to hold). The largest natural land division, of the largest natural land division, of the cuter portion of the earth is composed of two layers—the solid rocky crust, or "lithosphere," and the water areas, or "inydiosphere," and the water areas, or "inydiosphere," in the carly peniod of its history the earth may have been surrounded entirely by the hydrosphere, but at present and, so far as known, in all geological ages, the crust has been folded into mountain chains, forming nuclea around which the continental land areas are grouped, while the waters have accumulated in the intermediate depressions Geographes usually iccognize as continents Eurasia (comprising Europe and Asia), Africa, Austriala, North America, and South America; the two Americas, however, are sometimes grouped as a single continent, although such a classification is hardly justifiable unless Africa be included with the Burassian continent. A sixth continent is probably represented by the land areas in the Amtarctic

It is estimated that the land region (qv) constitutes about 55,000,000 square miles, or 28 per cent of the entire suiface of the earth. The continents vary widely in form, area, relief, and distribution on the globe, yet they may have many features in common Usually the regions of greatest elevation are found in the interior, while along the coast line there is a gentle slope outward which, continued beneath the sea, forms a slightly submerged land strip called the "continental shelf" On the seaward edge of the shelf the slope is very rapid down to the great depths of the sea. The average altitude of the continents, according to the calculations of Lapparent, Muriay, Penck, Supan, and Heiderich, is shown below

ESTIMATED AVERAGE ELEVATIONS OF THE CONTINENTS

CONTINENT	Lapparent	Murray	Penck	Supan	Herderich
Europe	958	938	918	951	1,230
Asia	2,883	3,188	3,116	3,084	3,018
Africa	2,007	2,020	2,132	2,034	1,975
Australia	1,188	803	918	853	1,542
North America	1,953	1,886	1,968	2,001	2,723
South America	1,762	2,077	2,067	2,001	2,493

Between the form and distribution of the continents many interesting comparisons may be drawn. The two Americas, compilsing the greater part of the land area in the New World, are triangular in shape, the apex of the one lying in the Isthmus of Panama and the apex of the other being represented by Cape Hoin. Both continents are bounded on the west by a long mountain system, and both have a region of lower elevation in the eastern portion Old World, on the other hand, is composed of a single triangular land area which has its base on the Arctic Sea and its apex at the Cape of Good Hope Here the main trend of the mountain chains is east and west. In general, the continents that extend into or he within the Southern Hemisphere-South America, Africa, and Australia-are most regular, contrasting strongly in this particular with North America and Eurasia in the Northein Hemisphere northein continents have a wider extension from east to west than the southern, and are further characterized by a great group of islands lying along the southeastern coast.

That the great land areas are not stable either as to form or elevation may be regarded as established beyond doubt by geological evidence. Moreover, certain coastal regions are known at the present time to be undergoing changes of level by which land emerges above or sinks below the sea. The extent of these oscillations in past ages can only be conjectured. Lyell's theory that there has been a constant interchange between the land and water areas has been objected to on the ground that there is no evidence that the abysmal depths of the ocean have ever been elevated, for the existence of any considerable deposits abysmal in character and containing a deep-sea fauna has not been conclusively established within the interior of the continents The changes of level between the land and the sea take place very slowly, and may be caused either by gradual vertical movement of the land area or by variations in the level of the ocean itself Geologists generally agree that the positions of the present continents were determined as far back as The Laurentian plateau of Archæan times. North America, the Brazilian highlands of South America, and the Scandinavian peninsula and Lapland in Europe are composed of crystalline rocks, and except on the margins they are bare of all sediments These primitive lands were extended in area by the deposition of sedimentaly strata on their borders, and by great up-heavals accompanied by foldings of the crust into mountain ranges.

The evolution of the continental lands can be studied only tentatively, and is largely con-jectured from the evidence afforded by the characters of the fauna and flora that lived in past ages. During the Cretaceous and Tertiary times the animal and plant life of South America, South Africa, and India were strikingly similar, while there was also a uniformity between the life forms of Europe and North America cucumstance can best be explained by the assumption that in these periods the continents had an east and west trend, so that Brazil, Central Africa, and lower India were united by one broad land starp, and eastern Canada with Europe by another Between the northern and southern continents an ocean basin extended from the 1sthmus of Central America eastward to the Indian Ocean, or nearly at right angles to the basin now occupied by the Atlantic changes by which the continents assumed their present form took place gradually and were accomplished by a slow depression of portions of the land and by encroachment of the sea. It is probable that certain legions for a long time remained above sea level as large islands, the unsubmerged remnants of which still exist, e.g., in the Cape Verde and Canary islands, in the British , Isles, and in Madagascai These changes were doubtless completed before the appearance of mankind, at least within historical times, so far as is known, there has been no marked alteration in the form of the continents.

marked alleration in the folm of the continents.

CONTINENTAL SYSTEM. The name given to the commercial policy adopted by Napoleon for the purpose of shutting lengland out from all connection with the continent of Europe, and thus compelling her to acknowledge the maritime law as established at the Peace of Utrecht. This system began with Napoleon's famous Berlin Decree of Nov 12, 1806, which declared the British Isles in a state of blockade and prohibited all commerce or correspondence with them, every Englishman found in a country occupied by French troops or by their allies was declared a prisoner of war; all merchandise be-longing to an Englishman was made lawful prize; and all trade in English goods was en-tirely prohibited. No ship coming directly from England, or from a British colony was allowed to enter any port; and any ship seeking by false declarations to evade this regulation was confiscated with its cargo as if British property.

England was not long in making reprisals. By an Order in Council, Jan 7, 1807, all neutral vessels were prohibited from trading from port to post within France or any country in alliance with it or under its control Every neutral vessel violating this older was to be confiscated with its cargo. Napoleon responded by a decree dated Warsaw, Jan 25, 1807, which ordered the confiscation of all English or English colonial merchandise found in the German Hanse towns. By a second Order in Council, Nov 11, 1807, all harbors and places in France and her allies in Europe and the colonies, as well as in every country with which England was not at wai, but from which the English flag was excluded, were placed under the same restrictions as if strictly blockaded These orders were followed by reprisals on the French side. By the Milan Decree of Dec. 17, 1807, strengthened by a second, of Jan. 11, 1808, issued from the Tuileries, any vessel, of whatever nation, that had been searched by an English ship, or had submitted to be sent on a voyage to England, or paid any duty to the English government, was to be de-clared denationalized and treated as English. By the Treaty of Tilsit (1807) Russia consented to close her ports to English commerce, and in order the more effectually to annihilate such commerce, there appeared, Aug 3, 1810, the tariff of Trianon for colonial goods, this was extended by a decree of September 2, on October 18 followed the deeree of Fontamebleau, ordering the burning of all English goods, an order which was to be carried out with more or less modification in all countries connected with France

The consequence of the Continental System was undoubtedly the spinging up upon the Continent of many branches of manufacture. On the other hand, the price of foreign goods rose to an extraordinary height, the daily confort of the middle classes was seniously affected, and the American carrying trade, then very prosperous, was practically runed. On the whole the Continental System, both politically and economically, was a mistake Russia abandench at in 1810, and with the breaking up of Napoleon's power the system collapsed entirely. On the English side the enforcement of the Orders in Council gave offense to the United States and was one of the principal causes of the War of 1812 Consult: Mahan, The Influence of Sca Power upon the French Revolution and Empire (Boston, 1894). Thies, History and Empire (Paris, 1845-tore du consulta et de Vempre (Paris, 1845-tore du consulta et de Vempre (Paris, 1845-tore du tensible de commerce (Paris, 1875), Henry Adams, History of the United States (New York, 1880-01). See NEURALS, NAPOLEON I CONTINGENT (from Lat. contingère, to touch). A quota of toops, furnished to the

CONTINGENT (from Lat. contingere, to touch). A quota of taoops, furnished to the common army by another branch of the service or by different coöper atting nations or armoss It was the naval contingent that saved the day in the defonce of Ladyamth against the Boers in 1809. The various contingents of the international armies formed the common army under the leadership of Count Waldersee, the German commander, in the China campaign of 1900 The troops to be furnished by each of the United States under a call for volunteers by the Piesident is its quota

CONTINGENT REMAINDER. See RE-

CONTINUANCE. In law, the adjournment

of a cause from day to day or from one term of the court to the next succeeding term. proceedings of a case on tital or otherwise before the court are continuous until it is disposed of by judgment decree or other final proreceding An interruption of the proceeding, whether by the absence of a party, or his failure to proceed, or by the termination of the sitting of the court, naturally results in a discontinuance of the proceeding, with the consequence that it loses its place on the calendar and must be begun over again at a future term or sitting of the court. To obviate this result, the court may make an order continuing the case from day to day or from time to time until disposed of. Continuances are granted as a matter of course when necessitated by the adjournment of the court in which the case is pending and, on the request of either party to the suit, for good cause, as for the illness of a party or his counsel or the illness or disappearance of a material witness, and the like In this class of cases, however, the application is addressed to the discretion of the court which may grant or withhold the continuance prayed for See Ap-Journalment, and consult Blackstone, Commen-taries on the Laws of England, and the authorities cited under Procedure, Legal

CONTINUED FRACTION. See FRACTION. CON'TINU'ITY (Lat continuitas, from continuis, uninterrupted, from continere, to hold together, from com-, together + tenere, to hold). In geometry, a vital principle which asserts that if from the nature of a particular problem we would expect a certain number of solutions, then there will be the same number of solutions in every case, although some may be imaginary. For example, a straight line and a circle in the same plane intersect in two points real, coincident, or imaginary. The sum of the angles of a quadrilateral is a perigon, whether the quadrilateral is convex, cross, or concave In this case, however, angles which have decreased and have passed through zero must be regarded as negative By the principle of continuity theorems concerning real points of lines may be extended to imaginally points or lines change can take place only when some element of the figure passes through either a zero value or an infinite value, eg, iotate an asymptote of the hyperbola about the origin, before rotation it cuts the curve in two infinite points; after rotation it cuts it in two real points or two imaginary points. In case of the real points, rotate it still further and these pass to infinity, and imaginary points occur propositions of elementary geometry may be inferred from this principle. It was first stated inferred from this principle It was first stated by Kepler, emphasized by Boscovich, and put into acceptable form by Poncelet in his Tranté des propriétés projectives des figures (2d ed., Paris, 1865-66

More generally, continuity is a philosophical concept exemphided in space and time. It has been defined as a series of adjacent parts with common limits, as influte divisibility, ie, that, however small the segment between the two points, a further division is possible, but in modern analysis continuity is the essential property of a continuum. By a continuum is understood a system or manifoldness of parts possessed in varying degree of a property 4, such that between any two parts distant a finite length from each other an infinite number of other parts may be interpolated, of which those

that are immediately adjacent exhibit only indefinitely small differences with respect to the property A This is expressed by Cantor as a perfekt zusammenhangende Menge, a perfect concatenation of points, eg, all numbers ra-tional and irrational in any interval form a continuum A concatenation not perfect is called a semicontinuum, eg, the rational or the irrational numbers in any interval A straight line is said to possess continuity

By the continuity of the loots of an equation is meant that, as a result of certain variations of the function, different pairs of roots may during the process become equal or imaginary, the total number always continuing the samean example given by Leibnitz By the continuity of a function of x is meant the fact that indefinitely small and continuous changes in the value of w between certain limits produce indefinitely small and continuous changes in the Consult Jordan, Cours d'analyse function (Paris, 1893), Poncelet, Traité des propriétés projectives des figures (ib, 1865-66), Encyclopadie der mathematischen Wissenschaften, vol 1 paste aer mannematischen verschieden, vol. (Leipzig, 1901), Cantor, Mathematische Annalen, vols xx and xxı (th. 1882-83), Mach, in The Open Court, vol. xiv (Chicago, 1900) CONTINUITY, Law of A principle first formulated by Leibnitz (qv), which is ex-

pressed in the Latin sentence, Natura non facit saltum ('Nature does not make sudden leaps')
This is a denial of discreteness, and the assertion that differences of kind are merely differences of degree The law of continuity may be illustrated in the solar spectrum, which presents us with a series of colors blending into each other in such a way that it is impossible to say where one color ends and another begins. By abstracting from the intervening colors and shades we can represent any detectable differences to ourselves as discrete, but this appearance of discreteness comes from failure to attend to the mediating shades Generalizing this, we get the law that all gaps between differing kinds are bridged over by intervening kinds, which form a continuum of differing degrees Darwinsen gives a view of evolution that supports the law of continues to the law of ports the law of continuity in biology De Vries's doctrine of mutation (qv), on the contrary, would deny the validity of the law of continuity in this field William James (qv) has vigorously assailed the universality of the law of continuity, maintaining that experience presents us with discontinuities as well as with continuities, and "that conjunctions and separations are, at all events, coordinate phenomena which, if we take experiences at their face value, must be accounted equally real" James seems to be justified in his contention, the law of contimuity is an unwarrantably sweeping generalregion Consult James, Essays in Radical Empiricism (1912) Sec Leibnitz.

CONTIO See Competium.

CONTOR/NIATE (It contorniato, from contorno, contour, from ML contornare, to turn around, from Lat com-, together + tornare, to turn, from tornus, Gk. ropros, tornos, lathe). A term applied to a class of antique copper medals, slightly larger than coins, which have a deep line cut round the edge, like a furrow, and are thereby marked by a strongly project-ing edge. They show on one side a head, often of an emperor or other ruler, sometimes Homer, Sallust, Horace, or other authors, and on the other a scene from the circus or amphitheatre or from mythology or, rarely, darly life No contornate is known to be certainly earlier than the third century AD, most of them are later Of the many explanations of the use of contorniates none has won general acceptance. Consult Smith, A Dictionary of Greek and Roman

CONTOURS' (F1, from ML contornare, to In topographical surveying and go around) military sketching, the lines in which horizontal planes, at constant vertical intervals, intersect the surface of the ground Contouring is method of exhibiting relief of ground by means of lines so drawn on a map as to indicate points of equal elevation The lines so drawn on a map and the corresponding lines on the ground are called contours The word contouring is applied to the field work directed especially to obtaining data for drawing contours The difference of elevation of points in adjacent contours is called the contour interval, and is usually constant for all the contours on the same map The horizontal distance between contours, measured in a radial direction with reference to the curvature of the contours, is called the contour distance. For equal contour intervals the map contours are closer together, as the slope is steeper It follows that for steep slopes the map contours will approach each other very closely, and for a vertical wall or cliff they will coincide Contours are designated by their heights above a datum plane. The height is expressed in feet, except when the metric scale is used, when contour intervals are in meters Facility in reading contoured maps is essential for military officers. It enables them quickly to form a mental picture of the general configuration of the ground over which they are to operate, to know the nature of the slopes to be traversed and the amount of cover available for the concealment of troops. See SURVEYING ENGINEERING, MLLTARY See ar-ticle MAP, where contour lines are shown on the topographical map there given CON'TRABAND OF WAR (It. contrabbando,

Sp, Portug contrabando, from ML contrabannum, contraband, from contra, against + bandum, bannum, proclamation, from OHG. ban, Ger Bann, AS. bann, Eng ban). In international law, goods of such character as to be liable to seizure by a belligerent in the course of trade between a neutral and the enemy in time of war. Munitions of war intended for the use of the enemy and chemicals or other raw materials to be converted into instrumentalities of war by the enemy are always deemed contaband. Other things innocent in character are similarly re-garded if intended for the use of the armed forces of the enemy, but not if intended for general use or consumption in the country of the enemy It is obvious that the latter class of cases may often call for delicate discrimina-tion and may lead to sharp differences of opinion between the belligerent intercepting such a cargo and the neutral state whose commerce is thus interfered with To some extent the matter has been regulated by treaty among the leading powers, but no satisfactory definition for contraband goods has yet been reached. The changes in methods of modern warfare render the list a constantly shifting one. Great Britain has adopted the classification of (a) goods ab-

solutely contraband, and (b) goods occasionally contraband. In the case of a Swedish ship in the War of 1812 bound for the neutral port of Bilbao with a cargo of giain intended for the use of the British fleet lying there, the cargo was held to be subject to confiscation as contiaband. So, in the Climean War, Great Britain claimed coal destined for a Russian port to be included under the head of occasional contraband France in the War of 1859 refused to treat coal as contraband The United States at the time of the Civil War adopted the English position, as did Germany in the War of 1870, and Russia in the war with Japan Such differences threaten to furnish serious controversy in the event of war between any of the great commercial nations The rules of international law do not prohibit subjects of neutrals from carrying contraband to either belligerent, but they do so at their own 11sk So neutral merchants may trade in arms, ammunition, and stores in time of war as in time of peace, but either belligerent may capture such goods as are of direct and immediate use in war, if it can intercept them in their passage to the enemy While a while not within neutral jurisdiction neutral power is bound to prevent the departure of armed expeditions from its shores and the supplying of munitions of war, etc., to belligerent vessels in its ports, no duty is imposed of restraining contraband trade, though it has no right to interfere in behalf of subjects whose property is seized by one belligerent on the way to another, provided it belongs to the class of forbidden commodities.

Three requisites are necessary to constitute the offense of carrying contraband. 1 Sale and transport of contraband goods within a neutral territory is permissible, but they may not be sent across the frontier to a belligerent by land or sea. 2 The goods must be intended eventually for a hostile destination. The offense is completed with the deposit of the contraband cargo at the belligerent destination.

The ship when captured is generally taken to a prize court by the captor, and the penalty of conviction is the confiscation of the contraband goods, unless the owner of the contraband also has ownership in the vessel, in which case the ship, or his share therein, is likewise confis-cated, and also any innocent goods of his ownership False papers or misrepresentation as to destination may lead to the ship's condemnation. The carrying of agents or dispatches of an enemy must be distinguished as more properly unfriendly neutral service than carrying of contraband The Trent Affair (qv), in which a British vessel carried agents of the Confederate government to England, comes under the former description.

The term contraband of war was mappropriately though ingeniously applied during the Civil War by Gen B. F. Butler, while in command at Fort Monioe, to captured slaves, as a ground for retaining them when demanded by their Southern owners. CONTRABASS TUBA. See TUBA.

CONTRACT (from Lat contrahere, to draw up, from com-, together + trahere, to draw). In English and American law, an agreement, en-

ments essential to all forms of contracts are. (a) an obligation founded on the promise made by a party to the contract and resulting from his intent to enter into such an obligation, (b) a meeting of the minds of all the parties to the contract as to the terms and conditions of the promise given Additional elements may be required to give validity to various classes of contracts, as is pointed out below

Classification - Contracts are usually classified as (a) contracts of record, (b) contracts by specialty; and (c) simple contracts

Contracts of record, so called, are conclusive legal obligations created by the judgment or order of a court of record Examples of contracts of record are judgments, recognizances, statutes staple, etc They are not true contracts at all, as they do not contain a promise and are not founded upon the intention of the party bound, but should properly be classified as quasi contracts

Contracts by specialty are contracts depending for their validity upon the formality of their execution They are required to be in writing and to be perfected by sealing and delivery by the party to be bound thereby The usual form of specialty contract is a covenant (qv) A bond (qv), though in strictness not a contract, being an acknowledgment of indebtedness instead of a promise to pay, has always been regarded and classified as a specialty contract Contracts by specialty require no consideration to give them validity. As in the case of other contracts, courts of equity will not specifically enforce a specialty contract unless it is founded upon a consideration.

At common law the scal required to be placed upon specialty contracts was of great technical importance, but the law in this respect has been greatly modified by modern statutes. In nearly all of the United States a scioll or mark with the pen may be used in place of a seal a number of States it is provided by statute that the seal upon a sealed instrument is only presumptive evidence of a consideration, the effect of which probably is to make a consideration necessary to the validity of a sealed instrument, at least where it is intended by the parties that a consideration is to be given. In a few States all distinction between specialty contracts and simple contracts has been abolished by statute The common-law form of action for enforcing all kinds of specialty contracts, except a bond, was the action of covenant (q v ). Recovery upon a bond was secured by the common-law action of debt (qv) These distinctions are not preserved in modern systems of pleading The usual period of limitation upon specialty contracts is 20 years

Simple contracts are contracts which do not depend for their validity upon any particular formality as to execution, but upon the existence of a consideration, which is a detriment, or a surrender of a right, given in exchange for the promise (See Consideration) A simple contract may be in writing or by parole, or may even be implied from the acts and conduct of the parties manifesting their intentions

As no formality is required in the creation of a simple contract, it always comes into existence as the consequence of an offer and acceptance. The offer must be accepted in accordance with its terms within a reasonable time, or within the time stated in the offer in order to a counteroffer, puts an end to the first offer, which cannot thereafter be accepted unless re-In contracts entered into by letter, in most junsdictions, the offer is deemed to be accepted upon the posting of the letter of acceptance, but in a few States it is held that there is no acceptance until the letter of acceptance is actually received by the person making the offer Inasmuch as there must be an agreement in order to create a contract, any mistake as to the terms of the offer or acceptance will prevent a meeting of the minds of the parties and no contract will arise But a mistake as to some collateral matter will have no effect upon the contract unless induced by fraud, in which case the defrauded party may resend the contract. Thus, if A offers to sell property to B for \$10,000, and B accepts, understanding the offer to be \$5000, no contract anses, but if B understands the offer made and accepts it because he erroneously believes the property is of much greater value, a contract does arise Simple contracts are frequently classified as express and An express contract is one entered impliedinto on terms expressed in spoken or written words An implied contract is one which is inferred from the acts or conduct of the parties The latter should not be confounded with the so-called contracts implied in law, as, eg, the obligation to repay money paid by mistake, which are not true contracts, because not based upon intention. They are properly classified as quasi contracts (q v ) Express contracts may be by parole or in writing, the only difference in legal effect being in the method of proof. A few simple contracts are required, however, by the Statute of Frauds (q v ) to be executed in writing Simple contracts are further classified as unilateral and bilateral A unilateral contract is one in which only one party to the contract makes a promise in exchange for the other party's giving something or doing some act. A bilateral contract is one in which each of the two parties gives his promise in exchange for the promise of the other, the promise of each being a consideration for the promise of the other

Contracts are also said to be executory or excuted. An executory contract is one which has
not been fully performed. As the performance
of a contract terminates its existence as a legal
obligation, it will be observed that the expression "executed contract" is a contradiction in
terms. A present sale of personal property is
sometimes said to be an executed contract, but
the expression is improper, as the sale may be
effected by a more meeting of the minds without any promise, and hence without contract.
See Sairse.

As a contract pioper is always an expression of the will or intent of the party to be bound, a promise made by a person mentally incapable of a free act of will or consent, or by a person under a legal disability to bind himself by contract, is unenforceable. Thus, the contract of a linatic or idiol, or of a person so under the influence of a narcolae or of intexeating liquor as not to be capable of a free excresse of will, or (at the common law) by a married woman, is wholly void. The disability of the mained woman in this respect has, however, been generally immoved by statute. The contract of an infant, i.e., a person under the age of 21 years, 18, on the contrary, not void, but may be disaffirmed by him when he attains full age.

Performance -- In the case of all true contracts, whether by specialty or simple contracts, the obligations of a party to perform may not arise until the happening of a condition, or the performance of his promise by the other party, as expressly or impliedly provided in the contract by its terms. If there be no such provision in the contract, by certain settled rules of construction (known as the law of conditions im-plied in law), the performance of one party may be deemed a condition precedent to the performance of the other, or the performance of each of the parties may be a concurrent condition to the performance by the other, i.e. each party must tender his performance before he can recover damages for the breach of contract by the other. In general, impossibility of performance is no defense to an action brought to recover damages for breach of contract If, however, the contract contemplates the continued existence of the parties of the subject matter of the contract, the death of a party or failure of subject matter is a defense. Thus, in contracts for personal service, death of the employer or employee terminates the contract, and a contract for the use of a particular building or other property is terminated by the destruction of the property.

Suits upon Contracts -Owing to the jule of pleading in actions upon contract at common law, the plaintiff must show that he has given consideration for the defendant's promise third person for whose benefit the contract was made, but who was not a party to it, could not sue upon it This is still the jule in most juiisdictions, although not in all, and in a few, notably New York, in the single case when A gives money of property to B upon his agree-ment to pay money to C, C may sue upon the contract upon the theory that a debt has been created in his favor. Equity exercises jurisdiction to compel specific performance of a contract when legal damages would be madequate. also exercises its powers to resemd or reform written contracts affected with fraud or mistake Fraud is also a defense at law to an action founded on contract, it having been early adopted by the courts of law, although it is a defense equitable in character Contracts which contravene rules of public policy or statutory enactment are illegal and void TLLEGALITY

Contracts in the Civil Law — In the Roman law contracts on the Civil can actionable obligation ment which created an actionable obligation. The original roots of contractual obligations were apparently pledge and vow. In the first case, the debto gave the creditor a pledge, which the creditor lad until the debto had fulfilled his promise. If a debto had nothing else to pledge, he pledged his own person in the form of a sale. This transaction the Romans called nomin! It created something analogous to a judgment debt; and as the debtor was in default, the creditor levied on his body (manis smeets). By the time of Gaius this contract had become antiquated. A vow to the gods to do something for, or pay something to, the third person enabled the priest to intervene and insist upon performance—from this not sprang the sacral contract of the priestly law, the sponso, and out of the sponso grew the sacral contract of stipulation.

At the time of Gaius (early Empire) five classes of contracts were recognized: (a) The

verbal contract, strpulatro, which was actionable because a certain form of words (question and answer) had been observed. It was usual to draw up a written statement (cautio) reciting the terms of the agreement, but the validity of the contract rested on the exchange of the spoken words (b) The literal contract (from litera, 'writing') This was actionable because a formal entry had been made in the creditor's ledger (expressitatio) In the case of the verbal and the literal contract it was neither the agreement alone nor the form alone which created the obligation, but the two together (c) The real contract This was actionable because something (res) had passed from the creditor to the debtor, and the return of the thing or an equivalent had been promised. To this class belonged the bailments known as mutuum, com-modatum, depositum, pignus Besides these there were many other real contracts without special names Ultimately it was recognized that any agreement for reciprocal performances would become a binding contract as soon as one party had performed (d) The consensual con-tract This was actionable by virtue of the agreement (consensus) between the parties, although no form had been observed and nothing had passed There were only four contracts of this class emptio venditio, sale, locatio conductio, hiring, societas, partnership, and mandatum, commission of agency

Agreements that fell within none of these four classes were simple pacts (pacta), not contracts, and were not actionable. Such pacts might, however, be available for defense, eg, when a cicditor had given his debtor an informal iclease or an extension of time, and pacts made immediately after the conclusion of a contract (pacta absects) were treated as part

of the contract.

In order that a contract should be valid it was necessary that the partness should be of such ago as to be capable of binding themselves and of sound mind, and that the object to be attained should be neither impossible, illegal, nor immoral Mistake (error) was regularly fatal to the validity of a contant, provided the mistake was excussible and essential A mistaken reason or motive for contracting was not regarded as essential Where, however, the mistake was caused or utilized by the other party, these limitations disappeared, and the contacts were voidable for fraud (dolus) Duress (metus) also made a contract invalid

In modern European codes all agreements except those looking to impossible or immoral ends are valid and actionable, unless a special form is required by law and the required form has not been observed. It is therefore maintained by many writers that the Roman category of real contracts has disappeared, and that there are now but two classes, the formal and the

consensual

CONTRACT, SOCIAL See SOCIAL CONTRACT CONTRACTION (Lat. contractio, from con-trahere, to draw up) The wish or necessity for economizing labor and parchment led the scribes of the Middle Ages to use a great many abbievia-tions or contractions in their manuscripts These contractions were transplanted into the first printed books, and more recently they have been reproduced in many works, where it was thought desirable that the modern print should represent as nearly as possible all the peculiarities of the ancient manuscript knowledge of contraction, therefore, is indispensable, not only to readers of old writings, but to readers of the printed books of the fifteenth, the sixteenth, and the earlier part of the seventeenth centuries, and to all who desire to avail themselves of the vast stores of historical and archæological materials accumulated in the rolls and records published by the governments of Great Biltain, France, and other countries. See PALEOGRAPHY

Contraction may be divided into six classes (1) contraction, properly so called, (2) contraction by elision or suspension, (3) contraction by writing a smaller letter above the word contacted, (4) contraction by running two or more letters into one character, (5) contraction by symbols representing syllables or words, (6) contraction by initial letters

CONTRACT LABOR LAW, or ALIEN LABOR LAW
The provisions of the statutes of the United States iclative to immigration prohibiting the bringing into the country of aliens who are under contract to perform labor or service of any kind in the United States The first provisions of this character were enacted in 1885. These were general in terms and were interpreted by the counts to have reference only to persons imported under a contract to perform unskilled manual labor. As this interpretation was unsatisfactory to the labor organizations at whose instance the law was passed, it was amended by a subsequent Act of Congress (Act of March 3, 1903, chap 1012) so as to cover "labor or service of any kind, skilled or unskilled." See Intendent

CONTRACT SURGEON and ACTING DENTAL SURGEON. In the United States army, a civilian physician or dentist employed under contract with the surgeon-general of the army Civilian physicians and dentists may be employed as contract surgeons and acting dental surgeons under contracts entered into by, or with the authority of, the surgeon-general of the army. They are entitled to the transporta-tion and fuel allowances of first lieutenants, and when on duty at a post or station where there are quarters belonging to the United States, they receive the quarters in kind allowed by regulations to a first heutenant; they are not entitled to commutation of quarters nor to the 10 per centum increase of pay when serving beyond the territorial limits of the United States They are entitled to the same official obedience from enlisted men as commissioned officers, and may be detailed on councils of ad-ministration and boards of survey, act as post treasurer, etc, and witness payments to en-listed men under the provisions of paragraphs 1315 to 1337 of the Regulations, but may not be detailed for duty on courts-martial Generally expressed, the contract surgeon's eligibility for duty is the same as that of a first lieutenant of the Medical Corps, except in so far as it is limited by the fact that he is not a commissioned officer. Candidates for appointment as acting dental surgeons must be not less than 21, nor more than 27 years of age, and must be graduates of standard medical or dental colleges, trained in the several branches of dentistry, of good moral character, and, prior to appointment, will be required to pass a satisfactory professional examination before a board of dental surgeons, convened for that purpose. Contracts with acting dental surgeons are made for three years, but may be annulled, for cause, at any time. They are attached to the medical department, and are assigned to duty in accordance with the recommendations of the surgeon-general of the army, or the chief surgeon of a military department. An acting dental surgeon is allowed, as an assistant, one enlisted man from the hospital corps, and must operate upon those entitled thereto only.

The United States is the only country in the "Consult world employing army dental surgeons. United States Army Regulations (1913). See

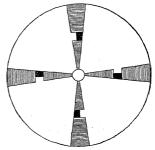

SURGEON, MILITARY. CON'TRAFAGOT'TO (It., counterbassoon). The name in orchestral scores for the double bassoon. See Bassoon.

CONTRAL'TO. See ALTO. CON'TRARY MOTION. See Motion, in

CON'TRAST (Fr. contraste, from ML. contrastare, to withstand, from Lat. contra, against + stare, to stand). The enhancement of the difference between objects or attributes of objects which results from their juxtaposition or immediate comparison. Contrast has been employed, very loosely, as a principle of explanation in psychology; and we cannot even now say that the whole field of "contrast phenomena has been adequately explored. It is, clearly, no explanation of a given fact to refer it to a general law of contrast, any more than it is an explanation of a mental connection to refer it to the "association of ideas." We must know, in each particular case, the conditions under which the fact is determined and the connection takes

1. One chapter of the psychophysics of contrast may, however, be considered closed. This is the chapter that deals with the contrast of light and colors. If we lay two black strips upon a gray ground and then push a white cardboard under one of them so that the white projects on either side, we see at once that the black on white is blacker than the (same) black on gray. If we lay a gray disk upon a red ground of the same brightness and stand so far away that the contour of the disk is eliminated, we see a bluish green in place of the gray disk; and the color is most intensive along the line of junction of disk and ground. These experiments may be varied in many ways.

The principal laws of contrast, as determined by such experiments, are five in number: (a) Contrast always takes the direction of greatest opposition. A white induces a black, a color its complementary color. (See VISUAL SENSA-TION.) (b) The more saturated the color (the redder the red, the purer the white), the greater is the contrast effect. (c) The contrast effect is greatest along the line of junction of the contrasting surfaces (marginal contrast). (d) The more nearly alike two colors are in brightness (both light or both dark), the better will be the contrast effect. And (e) the more nearly homogeneous the contrasting surfaces (the less distinction there is at the line of junction), the

Disks for mounting upon the color mixer, to show light and color contrast. The black portions of the disks are black, the white portions white, and the shaded portions of some color. From Helmholtz, Physiol. Optik (1896).

better will be the contrast effect. Helmholtz sought to explain these facts, in purely psychological terms, as deceptions of judgment; we see aright, but estimate wrongly; and Wundt accepts the explanation for certain of the phenomena. The psychological theory, however, breaks down when one attempts to carry it out in detail. There can be no doubt whatsoever that, as Hering maintains, contrast of light and color is a matter of direct physiological conditioning, the result of the interaction of excitations within the visual organ, a symptom or expression of the functional unity of the retina.

2. Whether contrast occurs in the perceptual sphere, whether, e.g., "great" and "small" contrast as do blue and yellow, is a much disputed question. There are certain optical illusions (see LLUSIONS) which seem to be most easily "explained" by reference to a law of space contrast. In its most direct form the theory of spatial contrast affirms that "the space sensation of a stimulated retinal point is a function primarily of the position of the point stimulated, but also of the space sensations of the neighboring retinal elements" (Loeb); the formula that holds of sensation is thus applied, without modification, to the sphere of visual space perception. It has been said, again, that lines of different direction exercise "contrastive" influences upon the movements of regard, i.e., upon the movements made by the eyes as we attentively follow the course of the lines. mans.) And, lastly, it has been asserted that figures of the same size, surrounded by like figures of another size, look larger "by contrast" if the surrounding figures are smaller, and smaller if these are larger. (Wundt.) Most of these illusions can, however, be otherwise ex-plained; and, despite the array of authorities, the fact seems to be that a given perception is never really changed by contrast with other perceptions. "Perceptual contrast" consists rather in a feeling. When we see a middle-sized man by the side of a dwarf, we are surprised at his height; when we see him by the side of a giant, we are disappointed in his height perception of the man's height is not affected by the neighborhood of smaller and larger men, the contrast that we "feel" is felt, literally, as

surprise or disappointment

3 Many psychologists, again, assume the existence of an affective contrast (see Affective Contrast (se TION), a particular pleasure appears more pleasant if it follows a preceding unpleasantness, and conversely (Fechner, Hoffding, Lehmann ) The affective value of a stimulus, however, is not constant, as is its sensation value, but varies with the present state of the organism and the corresponding disposition of consciousness The "particular" pleasure, then, is not a determinate amount of pleasantness, that may "seem" to be greater or less according to its affective setting. The pleasure actually aroused may differ within wide limits, while the stimulus remains the same Moreover, where there is affection, there is also sensation, where there is affective contrast there must also be a "perceptual contrast," in the sense just defined of the conditions of the arousal of a contrast feeling. It is, then, perhaps safei to give up the idea of an "affective contrast" altogether

4 Lastly, we must note that, in certain psychological systems (Wundt, Hoffding), the law of contrast figures as a general law of the mental life Wundt, e.g., speaks of the "law of psychical contrasts" as one of the three psychological laws of relation, all "volttonal processes... are arranged in groups made up of opposite qualities, these opposites obey in their succession the general law of intensification through contrast . . The law is secondarily applied to ideas and their elements" The rejection of this law does not necessarily carry with it the rejection of spatial and affective contrast, though its acceptance would naturally incline us to accept the alleged illustrations of its working.

CONTRAT SOCIAL, kôn'tra' sô'se'al'. See

ROUSSEAU, JEAN JACQUES

CON'TRAYER'VA (Sp. contrayerba, antidote, from contra, against + yerba, Lat herba, Eng herb). A medicine once in much repute against low fevers and as a mild stimulant and diaphoretic, but not used in the United States It consists of the rootstocks (rhizomes) of different species of Dorstonia, tropical American plants of the natural order Moiacem. The genus is remarkable for the plane receptacle in which the numerous small flowers are fixed-the male flowers in superficial depressions, the female flowers in deep sockets. The flowers have neither calvx nor corolla. The fruit consists of achenia, imbedded in the fleshy receptacle from which they are projected by elastic force when ripe. Dorstema contrayerva is a perennial plant with palmate leaves and somewhat quadrangular receptacles. Its rootstock is knotty, one to two inches long, about one-half inch thick, reddish brown, pale within, sending out on all sides many slender fibres (roots), which are generally loaded with small brown knots It has a pecul-187 aromatic smell and a somewhat astringent,

warm, bitter taste It keeps badly It contains so much mucilage that a decoction of it will not pass through a filter Dorstenia brasiliensis, a stemless species, with oblong, heart-shaped leaves, and a circular receptacle, a native of the West Indies and Brazil, possesses similar properties, but is said to be more energetic. Other species have been represented as efficacious against serpent bites, hence the name "contrayerva," a counterpoison.

CONTRERAS, kon-trā'ras A village about 12 miles southwest of the city of Mexico, the scene, Aug 19 and 20, 1847, during the Mexican War, of an important battle between a Mexican force of 7000 under General Valencia, supported by another of 12,000 under General Santa Anna, and a United States force of 4500 under General Scott The Mexicans occupied a strong position on high ground and fought for a time with great gallantry, but, being attacked both in front and rear at daylight on the 20th, finally gave way and fied in confusion, after having lost in killed and captured over 1500. The American loss in killed and wounded was reported by General Scott at 60 Consult Wilcox, History of the Mexican War (Washington, 1892), and Autobiography of Lieutenant General Scott (New York, 1864)

CONTRERAS, HERNANDO DE (c 1520-50). A Spanish adventurer, a son of Rodrigo de Contreras, Governor of Nicaragua After the confiscation of his father's property he plotted revenge by organizing, in company with his biother Pedro, an expedition against Peru, which he determined to seize as his inheritance, tracing his claim somewhat remotely to certain lights of his grandfather, Pedranias, the former Governor of Nicalagua. After murdering the Bishop of Nicaragua, they captured Panama, April 20, 1550, and took a large part of the treasure left there by the licentiate La Gasca. While Hernando was puisuing La Gasca, who was already on his way from Peru to Spain, the citizens of Panama retook the city and pursued the brothers Hernando was shortly afterward drowned (May, 1550) while endeavoring to make his escape, and Pedro fied into the interior of the country, where every trace of him was lost.

CONTRERAS, JUAN SENEN DE (1760-1826). A Spanish soldier He was born in Madrid, studied military matters, under commission from Charles III, in England and various continental countries, and took part, in 1788, in the campaign of Austria against the Turks the War of Independence he greatly distinguished himself, in particular at Talavera and at the defense of Tarragona, where he was captured by the French He was imprisoned in the castle of Bouillon, but escaped thence in 1812 and made his way to London, whence he re-turned to Spain in 1814 He wrote an account of the siege of Tarragona which appeared in Paris in 1825 as volume in of the Mémoires relatifs aux révolutions de France et d'Espagne

CON'TRIBU'TION (Lat contributio, from contribuere, to contribute, from com-, together the trabuers, to grant, from trabus, trabe, probably connected with trabs, beam, Umb treft, Welsh tref, village, Goth paurp, AS. porp. OHG dorf, Ger Dorf, village) In the law of war, a levy of money or supplies imposed by an invader upon the citizens of an enemy's territory The term requisition is usually applied to a levy of supplies, which may consist of food,

forage, clothing, or means of transport Contributions are an outgrowth of the conditions of pillage and devastation which formerly marked Private property in the course of an invade land was of course exempt from seizure owing to its immovability, but personal property, being of a portable character, was appropriated for the purpose of maintaining and strengthening the invading force. This practice reached its height during the seventeenth century, when armies of adventurers swept over Europe, depending upon the country for support Gradually, with the growth of more humane feelings and for the more practical reason of increased efficiency and discipline in armies, the practice hardened into the usage of permitting inhabitants of invaded territories to purchase immunity from plunder by payment of a money indemnity.

A contribution is of the nature of an extraordinary tax (regular taxes being appropriated as public property by the enemy), and though it is levied primarily by the invader, it may be administered by local representative authorities, and its incidence thus regulated Modern usage has approved the giving of receipts on bons de requisition for the sums or quantities taken, to guard against burdensome demands by later bodies of invaders, also to furnish a basis for recovery from the domestic government in the event of national division of the loss. Yet the state is not generally held hable for losses entailed by contribution, but these losses are considered to have been beyond the state's control, except when a certain territory has been given over to an enemy to protect the rest of the country. In that case justice demands a different rule Effort has been made by international convention to modify the usage of exacting contribution, and modern warfare has relaxed its severities, though during the France-Prussian War it was rigorously enforced by Prussia. The Allies made no levies in the Crimea, nor did the United States in Mexico in 1847 The British also generally purchased supplies from the Boers In each of these cases, however, this conduct appears to have been dictated by motives of momentary policy Contribution should be distinguished from tilbute, which is usually a condition of peace exacted by treaty Consult the authorities referred to under WAR Sec

TAX; TRIBUTE, CONQUEST
In municipal or private law contribution denotes the night of one person to exact from another his proportionate share of a common loss; as where one of two sureties on an obligation discharges the whole obligation, he is entitled to call upon his cosurety to contribute his share of the amount so paid. The term is sometimes employed of the right of a surety to secover from the principal debtor the amount paid by the surety in discharge of the latter's liability, but this is more properly termed "indemnity" or "exoneration" (qq v). In excepdemnity" or "exoneration" (qqv). In exceptional cases, also, a tenant in common or joint tenant of real estate might at common law be compelled to contribute to the cost of necessary repairs. (See Principal and Surety, Tenant IN COMMON ) In manitime law, also, the principle of contribution is applied in cases where, in order to save a ship of cargo, a part of the goods are cast overboaid. In such case the loss is equitably distributed so as to fall on the entire ship and cargo. See MARITIME LAW.

CONTRIBUTORY NEGLIGENCE. See

NEGLIGENCE.

CONTRITION (Lat contritio, gilef, from contenere, to bluise, from com-, together + tenene, to rub) Sonrow for sin Roman Catholic theology, it signifies "a sorrow of mind and a detestation for sin committed, with a firm purpose of not sinning in the future" A smaller degree of soliow, arising from "the consideration of the turpitude of sin or from the fear of hell and of punishment,' is called "attrition"

(variant of comptroller, CONTROL/LER q v for etymology) On shipboaid, a contrivance for holding the anchor chain and keeping it from running out while getting up anchor or mooring It is made in two parts, one of which slides vertically When this part is up, the chain slips freely over the jaws of the controller, when the movable part is lowered, the chain drops in a slot, where it is caught and held For further security the controller usually has an arch-shaped iron strap above it, this keeps the chain in place and has sockets for a heavy bar which holds the chain down against

the laws
CONTUCCI, ANDREA See
CONTUSION. See BRUISE. See Sansovino.

CON'ULA'RIA (Neo-Lat nom pl., from Lat. comus, cone). A genus of fossil Pteropoda of curious form found abundantly in some Paleozoic tocks and tately in Permian and Triassic heds The shell, when perfectly preserved, has the form of an elongated quadrangular pyramid of which the sides are flattened and the edges sharp In size they vary from half an inch to 10 inches in length. The surface is ornamented by numerous transverse 11dges, and the interior is divided by septa in the apical portion. aperture is closed by four incurved lobes, which are extensions of the sides of the pyramid. Certain forms in the Utica slate of New York State, originally described as algae, have been shown to be sessile Conularia, in which the young remain attached to the parent shell to form a colony with the appearance of a branching sea-weed Consult Hall, "Geological Survey of New York," in *Palæontology*, vol. v, part in (Al-bany, 1879), Ruedenann, "Notes on the Dis-New York, in Factoriology, Vol. v, pair 1 (In-buny, 1879), Rudeinann, "Notes on the Dis-covery of a Sessile Comilaria," in American Geologist, vol. xvii (Minneapolis, 1890), Slater, "A Monograph of the British Contiluin," in The Palacontographical Soutely, vol. for 1907 (London, 1907) See also PTEROPODA

CONUN'DRUM (probably a pseudo-Latin word, hardly from Lat. conandum, thing to be attempted, from conant, to attempt). A pun in the interrogative form, a kind of riddle (q.v.) involving the discovery of some odd or absurd resemblance between things utterly dissimilar, or of some odd difference between similar things. The conundrum is usually put in the form of a question, the answer to which either is or involves a pun A good example is the following. O. When is it easiest to read? A. In the autumn, when Nature turns the leaves. Save in folklore and savage life, the conundrum has almost entirely supplanted the riddle

CON'VALLA'RIA. See LILY OF THE VALLEY. CONVEC'TION OF HEAT, CONVECTION CUB-RENTS. See HEAT, Empansion

CONVENT. See Monastery. CONVENTICLE (Lat. conventiculum, dim. of conventus, assembly, from convenure, to assemble, from com-, together + venire, to come).

1. The private religious meetings in the early Church. 2. Later a cabal among the monks of

a monastery formed to seems the electron of a favorite as abbot, the word consequently fell into disrepute 3 It was given as an appellation of reproach to the assemblies of Wichit's follows and was atterward applied (4) to the meetings of English and Scottish Nonconformats. In this connection the legal term developed The Conventuele Act of 1604 made all assemblies for religious purposes, other than those of the Chuich of England, illegal, permitted houses to be searched for suspected conventicles, and imposed the penalty of transportation for repeated offenses

CONVEN'TION (Fr, from Lat conventio, a coming together, a meeting, from contentre, to meet, from com-, together + venue, to come). In the civil law, a contract, pact, or treaty. Hence, in more general usage, a rule of conduct depending upon agreement, express or implied, rather than on any positive rule of law Thus. we speak of the conventions of a constitution, meaning those parts of it which are the result of custom and of general agreement, as distinguished from the law of the constitution, which is embodied in statutes or in judicial decisions The term is also employed in a technical sense, in the language of diplomacy, and in military affairs, with the signification of treaty or agreement respecting the conduct of military operations or the relations of the contracting parties to one another .

In the political sense, the term "convention" signifies an extraordinary assemblage of delegates, representing the people of a state or the members of a political party, for other purposes than the regular functions of government Thus, a regular legislative body is not a convention, though the term is sometimes applied to the joint meetings of the two houses of a State Legislature when convened for the formal election of a United States Senator The two houses of Parliament constitute a convention, whether acting jointly or severally, if assembled, without authority of law This was the character of the two "convention Pailiaments," as they were called, which met in 1660 to iestore Chailes II to the throne, and in 1689 to alter the succession from the house of Stuart to William and Mary. In both of these cases the illegal and revolutionary acts performed were afterward validated and confirmed by regular acts of Parliament Of a similar character was the convention by which the first French Republic was declared in 1792, and under which the Revolution was carried on till the establishment of the Directory in 1795

Constitutional Conventions. The fact that conventions may be made up of delegates representing the whole body of the people of a state, and chosen specifically to represent the popular will in a particular matter, has made them a favorite matrument for framing a new scheme of government or for amending an old one The convention is thus a more munclaste representative of the people, with a higher and more imperative mundate than the legislature. There has been only one natronal constitutional convention in the United States—that which framed the Constitution, but the high character of this assemblage, the patriotic spinit and wisdom which animated it, and the astonishing success which has attended its labors, have made it the immortal type of such gatherings. In the United States its members are revered as the "Tatlers of the Constitution."

This convention met, pursuant to the call of the Congress, in Philadelphia, on the 14th of May, 1787, to frame measures for the preservation of the union of the States and the establishment of a stable and efficient government, and, under the presidency of George Washington, it completed its labors on the 17th of September It included most of the men of authority and influence in the country, among them such well-known figures as Alexander Hamilton, Benjamin Franklın, James Madıson, Roger Sherman, Robert Morris, Elbridge Gerry, and Rufus King, and all but one (Rhode Island) of the original 13 States were represented in its deliberations and in the final vote by which the Constitution was adopted The Constitution (Art V) provides for its own amendment by the process of a convention called upon the demand of two-thirds of the States, but the greater case and simplicity of the alternative method, of proposing amendments to the several States by a two-thirds vote of the two houses of Congress, has caused the latter method to be See Constitution of the United preferred States

In the States composing the American Union, however, the convention method of amending their constitutions has usually been followed The ordinary procedure is for the Legislature to call a convention to be chosen by vote of the electors, and providing for the submission of the results of its work to the Legislature, and then to the people for ratification In many cases the proposed amendments are submitted directly to the people, without previous reference to the Legislature, and in at least one re-cent case (Mississippi, 1890) an amended constitution was promulgated and put into effect by the constitutional convention which framed it, without ratification by the people or the Legislature. Doubtless such amendment, by convention only, is valid, if the powers of that body are not limited by the statute calling it into existence But where the Legislature, in calling a convention, prescribes for the submission of its conclusions to the Legislature or the people, or both, for ratification, the amendments do not acquire the force of law until such iatification has been had See Jameson, Treatise on Constitutional Conventions (4th ed, Boston, 1887)

Political Convention. A gathering of delegates representing a political party for the purpose of placing in nomination the candidate of that party for an elective office. The method of holding elections is carefully regulated by statute in all communities in which public offices are filled by popular vote, but the method of nominating candidates for such offices is usually left to the initiative of the voter. Under the party system which prevails in most popular governments, the process by which candidates are selected and placed in nomination is usually supervised by the party organizations seeking to control the election In Great Brit-ain candidates for Parliament are named by committees composed of party leaders, and in the early history of the United States the necessary leadership was supplied by party committees in Congress Nominations for the presidency were made in this way until 1824 At the present time, however, nearly all nommations for elective offices in the United States, whether great or small, are made by the primary and convention systems The primary is the meeting of the electors themselves, at which delegates to the nominating conventions are In some instances, however, the system is more compleated, the voters at the primaries choosing delegates to local conventions, and these, in their turn, electing delegates to represent the party in State or national convenience. The enormous extension of this system is doubtless due to the ease and completeness with which it lends itself to partisan control of elections, and thus of the machinery of government It has doubtless done much to build up the system of party domination and the power of the great party leaders The party organization, controlling the primaries, makes up a convention of its partisans and dependents, and thus dictates the nominations for office, leaving to the voter no choice but that of supporting or rejecting the candidate of his party Then, when the party organization of city, county, or State, through a refinement of these methods, becomes wholly subservient to one man, we have the "boss" system which exists and flourishes to a large extent in the United States The party convention, as the chief instrumentality of boss rule, has excited so much resentment in recent years that its existence is seriously threatened. In some of the States attempts have been made to sender the pismaries and conventions more truly representative of the body of the voters by statutory regulation of the nominating machinery, and in others a system of "direct nomination" of candidates for public office by primaries held for this purpose or by direct ballot has been instituted This movement is gaining ground rapidly and bids fair to destroy the convention system altogether or to leave it only the function of formulating and declaring the principles of the party

National conventions-for the nomination of candidates for the presidency and vice presidency of the United States—were first held about 70 years ago. The Anti-Masonic party (1828-32) was the first political party to perfect the national-convention system, and that party held the first national convention in the presidential campaign of 1832 Both factions of the Democratic-Republican party had, however, held nominating conventions that were not national non systematically representative during the campaigns of 1824 and 1828 The collapse of the congressional nominating caucus in the campaign of 1824 hastened the development of the convention system Political conventions, like most other representative bodies, usually reach their conclusions by a majority vote of the delegates present. The national conventions of the Democratic party, however, are governed by a peculiar rule, requiring a two-thirds vote for a candidate in order to secure the nomination. Another practice, pe-cultar to the machinery of the Democratic party in nominating its candidates for the presidency and vice presidency, is the "unit rule," as it is called, under which certain State conventions bind the delegates of those States in the national convention of the party to cast the unanimous vote of the delegation according to the wishes of the majority of its members.

Although the principal business of political conventions is the nomination of candidates for office, they have, in the course of American political development, become the councils of the great parties, and in and by them the prin-

ciples of political action are formulated and declared The "platforms," as they are called, adopted at State and national conventions, constitute the declarations of policy of the parties making them, upon which they seek the verdict of the people at the ensuing election. This declaration of principles has become one of the most important functions of political conventions and often constitutes the principal part of their work. See Election, Nomination, Political Party. Consult Bryce, The American Commonwealth (ed. 1912)

CONVENTION, NATIONAL (Fr convention nationale) The third assembly of the deputies of the French people chosen after 1789, and the one which assumed the government of France on the overthrow of the throne in 1792 After the Legislative Assembly had decreed the suspension of the King, Aug 10, 1792, it voted the election of a National Convention, which commenced its sittings on September 21, imcommenced to sittings on september 21, mediately after the dissolution of the Legislative Assembly Its first act was to declare the abolition of the kingship and to make France a republic Upon this followed the trial and condemnation of the King Through the support of excited mobs, the extreme Jacobin party became predominant in the convention, where, from the elevated seats on which its members (See sat, it received the name of the Mountain MONTAGNARDS ) The Revolutionary Tribunal and the Committee of Public Safety were created by this party The Girondists (qv), at first a powerful party, were destroyed, many of them perishing by the guillotine, and a new constitution, thoroughly democratic, was new constitution, thoroughly democratic, was adopted Aug 10, 1793 Its operation, however, was suspended until peace should be restored Meanwhile the rulers in the convention displayed marvelous energy, almost a million citizens being placed under arms, and immense supplies of military stores being raised by means of continual requisitions. By order of the majority of the convention thousands of its political opponents were thrown into prison, and the number who died by the guillotine increased daily both in Paris and throughout France. In the end the National Convention became subject to the dictatorial power of Robespierre (q v ) and independent opinion was no longer expressed. The overthrow of Robespierre was followed by a great reaction, the Jacobins were suppressed, and finally the remnant of the convention, after concluding peace with Piussia and Spain, dissolved itself, Oct 26, 1795, leaving to the nation a new constitution, which placed the government in the hands of the Directory (qv). During its long lease of life the National Convention had passed over 8000 decrees and acts and had set into motion forces which profoundly in-fluenced the history of France and of Europe, See France, Danton, History Marat, See France, Danton, Robespierre, etc.

CONVENTIONAL. In art, a term which indicates that a work has been produced in accordance, not with the absolute principles of beauty in form and color, or with the appearance of natural objects, but with the appearance of natural objects, but with the theories and rules concerning forms and colors which prevail at a given time or in a given country or social class. An arbit who adheres too rigidly to such rules a said to be conventional. The term is also used to describe representations of natural objects; as, e.g., leaves which

are not strictly true to nature Such representations are frequently used for decorative effect,

and the objects are said to be conventionalized CONVENTION PARLIAMENT. A Brish term for a Parliament convened without royal authority. The English sovereign has a vested pierogative in the assembling of Parliaments, but when the crown is in abeyance convention Parliaments meet—as before the restoration of Charles II (1660), and when William and Mary were offered the sovereignty after James II had fied the kingdom (1689) The acts of such Parliaments are subsequently ratified by a Parliament summoned in due form

CONVERGENCE See SERIES

CONVERSANO, kön'vër-sa'no A city in southern Italy, in the Province of Bari, situated on an eminence about 20 miles southeast of the city of that name and 5 miles from the Adriantic coast (Map Italy, M 7) It is the seat of a bishop, has a beautiful cathedral of the thirteenth century, the numery of San Bendetto, and a castle which belonged to the family of Acquaviva A trade in wine, oil, flax, cotton, and almonds is carried on. It was founded by the Etruscans Pop (commune), 1881, 11,801, 1901, 13,865, 1911, 15,112 Consult S Simone, Il duomo di Conversano (Troni, 1896)

CONVERSAZIONE, kön'věi-sa'tsê-ō'nâ (It, conversation) A gathering for social purposes and conversation, where amateurs and others meet for interchange of ideas on literature, art.

or science

CONVERSE, FLORENCE (1871—) An American author, born in New Orleans Signaduated from Wellesley College in 1893 and was a member of the editorial staff of the Churchman from 1900 to 1908, when she joined the staff of the Atlantic Monthly Besides her stories in the magazines, she is author of Diana Victiva (1897). The Bus den of Christopher (1900), Long Will, A Romance (1903, "Everyman's Library," 1908), The House of Prayer (1908), 1 Masque of Sibyls (1910). The Children of Laght (1912).

CONVERSE, FREDERICK SIEPTERD (1871—

CONVERSE, PREDERIOR STEPTERD (1871—
). An American composer, born at Newton,
Mass. He was educated at Harvard University
and at the Royal Academy of Music, Munich
From 1899 to 1901 he was instructor in harmony in the New England Conservatory of
Music. At Harvard he was instructor in music
in 1901—04 and assistant professor in 1904—07.
His compositions include "Sonata in A",
"Snite for Piano", "Festival of Pan" (1904),
"Night and Day"; "Tae belle dame sans merel,
"Tirce Love Songs", "Two Songs for a Soprano
Voice", "Quartet in A Minor", "Two Songs
for Low Voice", "Silent Noon"; "Laudate
Dominium"; "The Pipe of Desire", "The
Sacrifice", "Joh," an oratorio, and "Ormazd,"
a symphone poen

CONVER/SION (Lat. converso, from converters, to turn, from come-together + nerters, to turn; connected with Ochurch Slav vriitits, Skt. vart, to turn, Goth vourpan, AS veerpan, OIMG, Ger. vouden, to become) In loge, the transposition of subject and predicate in a proposition—c.g., "No S is P" becomes by conversion "No P is S." Conversion is simple when no other change is made in the original proposition than the transposition of subject and predicate. It is limited or accidental (per accidens) when the quantity of the proposition is reduced

from universality to particularity—e.g., "All S is P" becomes by limited conversion "Some P is S" Simple conversion here would be unwarranted Conversion is by contraposition when it is preceded by obversion (q'v) The proposition obtained by conversion is called the converse of the original proposition See Logic

CONVERSION. At common law, the unauthorized assumption by one not the owner of the dominion of the owner over goods and chattels The act of conversion may consist either in the destruction of the property, its sale or transfer to a third person, or the use of it as owner. For example, a person converts the horse of another by wrongfully taking it into his possession or detaining it, an auctionee or agent for B converts the furniture of A by selling it as the property of B, although he may believe that it is B's property, a manufacturer converts A's cotton of wool when he makes it into cloth, even though in good faith he thinks the cotton or wool is his own, a person who wrongfully draws out a gallon of liquor from a cask and fills up the cask with water converts the entire quantity In each of these cases the converter wrongfully assumes the dominion over the property and exercises it to the exclusion of the owner The mere loss of property by a carrier, or its deterioration because of careless storage by a warehouseman, is not conversion, as neither carries nos warehouseman in such case exercises an act of ownership over it

The common-law action by the owner against the converter was that of trover, so called from the French trouver, to find, because the declaration contained an averiment that the defendant had found the property and had thereafter converted it to his own use This averiment, being in most cases fictious, is no longer employed, and the action is now spoken of as one of con-

version inther than of trover

The amount of damages recoverable in an action of this kind is generally the value of the plaintiff's interest in the property at the time of the conversion Where the conversion was willful the owner may usually accover the enhanced value due to the repair or improvement of the property by the converter, and he may in any case, whether the conversion was innocent or willful, usually retake the property in its improved form, in lieu of suing for damages Whether the defendant has the right to reduce damages by tendering the property to the plaintiff is a question upon which the courts in this country are not agreed Upon principle it would seem he has no such right. In case the property is still in possession of the converter, the owner has the option of reclaiming or of suing for damages. If he resorts to the latter alternative, obtains judgment, and collects it, the title to the converted property vests in the defendant But neither in England nor in the United States does title vest in the defendant without the plaintiff's assent, unless the judgment is satisfied See Tort, Trover, Recaption, Damages, and consult the authorities there referred to

Conversion of property in equity is quite a different thing from the common-law tort, which we have been considering. In equity, real property is treated as converted into personalty, and personal pioperty into reality, where the owner has properly expressed his intention that such an alteration should take place. Land may be converted into the purchase money, in equity, by a contract to sell, it may be converted into per-

sonalty, also, by a devise in a will to sell it and distribute the proceeds. As equitable conversion works a radical change in the legal character and the devolution of property, the intention of the owner to effect such a conversion

must be clearly manifested

The conversion of land into personalty is also brought about in the administration of the setates of bankrupts or of intestates, generally under statutory provisions. The land is sold by trustees or administrators, and the proceeds applied to the payment of debts. Conversion is applied, by some authorities, to the change of partnership debts, with the consent of creditors, into the debts of one partner, or the change of a partner's debts into those of the firm. See Equiry, and consult the authorities there referred to

CONVERTEE. A device used in tiansforming molten pig iron into steel by the Bessemer process (see Iron, SireEL). The converter consists of a heavy sheet-iron, pear-shaped vessel, suitably hind with acid or basic refractory material, and having numerous holes in the bottom through which a powerful air blast is driven during the piocess. From this vessel the resultant molten steel is pouted into molds. A similar apparatus is also employed in converting copper matte into crude metal. See Correst.

CON'VEX See CONCAVE

CONVEYANCE (from convey, OF converer, convoier, Fr convoyer, from ML converer, to concoies, it convoyes, nom ML convoies, to accompany, from come, together + via, way, connected with Lith. veza, wagon, track, Skt. vaha, 10ad, Goth. vizys, OHG vec, Ger veg, AS veg, Eng vay, from Lat velice, Skt vah, to carry). The technical term for a transfer of very larger the weal accounts the very larger to the very larger the very larger to the v real property, the word having in law retained its earlier English meaning of a transfer, or passing, of a thing from one to another. It comprehends all manner of transfers-whether by livery of seisin, judgment of law, or deedwhereby any interest in land is vested in another, but it is strictly applicable only to transfets inter vivos, and does not include de-vises of land by will, or the devolution of an estate upon the heir by descent, or to the husband and wife of their curtesy and dower, or to the state of its right by escheat or forfeiture, neither does it include involuntary transfers of property, as by bankruptcy, the creation of judgment or statutory liens, etc. It is, thus, a term of much narrower signification than alienation, and somewhat more restricted than common assurance, though it is much wider than the term grant, as it includes transfers of interests which do not require, or which cannot be effected by. that process. A lease for years, even though made by parol, is a conveyance, and so is a mortgage, a declaration of tiust, a marriage settlement, the creation of a power affecting land, etc. The term is also applied to the transfer of title to a ship, but not to the alienation of other species of personal property. The general substitution of written for parol and ceremonal transfers of land, effected by the Statute of Frauds (29 Car II, c 3, 1676), has made the term conveyance one of common application to the instrument of transfer as well as to the transaction itself.

The difficult and technical character of the law of real property appears at its worst in the complicated piocesses which have from time to time been developed for transferring such property. The earlier methods of the common-law

system depended for their efficacy largely on the notoriety of the transaction, the feoffment, or livery of seisin, being a public ceremonial, and the subsequently devised processes of "levying a fine" and "suffering a recovery" being attended with the publicity of judicial proceedings. These "notorious" conveyances, as they were termed, have in modern times given place to more convenient modes of transfer, which are called "secret" conveyances This salutary change has been brought about by the general substitution of written deeds of transfer, which task tested upon delivery, for the older and more formal methods, and the form and style of these deeds, formerly in the highest degree technical and complicated, have in recent years been greatly simplified by statute The general prevalence of registry acts and of the practice of recording deeds in the United States does not affect the secret character of the conveyance, as such, this being complete upon the delivery of the deed, the object of the recording being only to guard against a subsequent fraudulent transfer of the same property to an innocent purchaser for value

The earlier modes of conveyance at the common law, besides their notoriety, and in part as a consequence thereof, had the extraoidinary operation of transferring a greater estate in the land than the transferrer himself had That is to say, a tenant for life or years might by feoffment convey the premises in fee simple to a It is true the fee thus conveyed was stranger a defeasible one, but it placed the landlordneversioner or remainderman-in the situation of a dissensee, and forced him into the disadvantageous position of a plaintiff seeking to vantageous position of a plannin seeking to recover his land from one who claimed it under a notorious public conveyance. This was called a "tortious," on wrongful, conveyance, and the term "tortious" was thus applied to all the carlier modes of alienation which possessed this curious power. Conveyances by deed, on the other hand, have never been attended with these consequences, have never possessed a tortious operation, and have therefore been distinguished as "innocent" conveyances Whatever they may purport to do, they pass only such interest as the grantor can lawfully convey All modes of conveyance are now of this character, the older conveyances and the tortious effect of them having been done away with, both in England and in the United States, by statute. A currous survival of this obsolete and discredited doctrine appears in the modern American doctrine of conveyance by estoppel (q v.) Notwithstanding the improvements which have been effected in recent years in the substitution of secret for notorious conveyances and the simplification of the former, the conveyance of land continues to be a much more cumbrous, uncertain, and expensive operation than the transfer of personal property. Many suggestions have been made looking to the elimination of these objections and the assimilation of the two species of property in this respect, and in several of the United States and in some of the British colonies different systems for achieving these objects have been adopted and are now on trial. These will be explained under the titles LAND TRANSFER, REGISTRATION OF TITLE. See the several titles of the various modes of transfer referred to in this article, and in addition, ALIENATION; Con-VEXANCING, TITLE; WARRANTY, and the authori-tics there referred to.

CONVEY'ANCING The act or art of preparing the deeds or instruments used for the transfer of property from one person to another As such writings not only form the evidence of the right of the person possessing or claiming possession of property, but do in themselves constitute the title thereto, it is of the greatest importance that the conveyancer employed to prepare them should be possessed of a competent knowledge of the law and have the skill required to frame them in such a form as clearly to express and attain the object intended early stages of society there is no call for the profession of a conveyancer, property is held in right of occupancy, without any written title, and even lands are conveyed from one to another without writing, the new owner being usually put in possession in presence of witnesses called for the purpose, by some symbolical form, such as the delivery of earth and twigs

In the early history of the Jews the symbolical mode of transferring title prevailed (Ruth But they subsequently developed a much more artistic system of conveyancing, making use of all the safeguards that are used in modern times, viz, writing, witnesses, subscribing, sealing, and recording the documents (Jer. XXXII 9-12) In Rome, as elsewhere, early transfers of property, whether land or goods, were of a ceremonial character Later, a distinction was made between property capable of transfer by a simplei process (res nec mancipi) and such as could be effectually transferred only by the older and more formal method (res mancipi) It was not until Justinian's reign that the distinction between the two classes of property was abolished and a simple form of conveyance made sufficient for both

Strictly speaking, the term "conveyancing" has no application to the various modes by which the title to chattels is transferred These processes have almost always been of the simplest character, and do not usually call for expert knowledge or for elaborate writings to render them safe and effective. It is to the feudal system of land tenuic, and to the complexities and refinements which it introduced into the simple notion of ownership, that we owe the difficulties and dangers which attend the transfer of title to land at the present time. As the feudal system nowhere exercised a stronger and more persistent influence than in England, so there is no country in Europe in which the conveyance of lands is as complicated and precarious an undertaking as it is in that country and in most of the United States number and variety of estates and other interests which may exist at one and the same time in the same parcel of land, and the diversity of circumstances under which these varied interests may arise, may be transferred and extinguished, have combined to make conveyancing one of the most technical and difficult branches of the work of the legal profession In England thas resulted in the development of a special branch of lawyers who are known as "con-veyancers" In the United States the process of specialization has not gone so far as that, the business of conveyancing being still for the most part in the hands of the profession at large or latterly, in the larger cities, in those of title-guarantee companies, which generally employ a large force of specially trained lawyers for the purpose

The process through which the conveyancer

must go may be briefly described He has first to make a careful search of the public records and from these to prepare an abstract (qv.) of the title to the land in question. He must then examine with the greatest care all of the documents constituting the chain of title, in order to determine their validity and sufficiency. He will then be prepared to draw up the appropriate document to effect the transfer desired—which may be a deed of trust, a marriage settlement, a grant of the lands, or a last will and testament. In England, where no system of general registration of land titles is in force, the conveyancer has recourse to the original documents of title, which are carefully preserved and transferred with the land

The complexity, uncertainty, and expense of the old method of conveyancing have long called for radical reform In England, in the United States, and in Canada land-transfer reform associations exist, and are vigorously pushing for legislation in this direction, something has already been achieved, but much remains to be done Few even of professional conveyancers would deny the truth of the statement made by the Duke of Marlborough in the Fortmghtly Re-view, that heretofore "in every country the theory of the land laws has depended on the fact that land was never intended to be dealt with by free commerce and barter, and its sale and ex-change have at all times been surrounded with legal difficulties of every description." As property is subdivided into smaller and smaller tions, and as the number of conveyances which make up the chain of title to a piece of real estate continually increases, the difficulty and cost of establishing a clear title become more and more burdensome So great has the task of searching and verifying titles become in New York and other large cities that land-title guarantee companies have been formed, which insure purchasers and mortgagees against flaws in titles

In the United States the system of conveyancing generally adopted is that by deeds of grant, or bargain and sale, many States have enacted statutes simplifying the older methods. and several prescribe an exact form of deed, defining the legal effect of the specific words of conveyancing, limiting, conditioning, and so on It follows that the laws of the States are not uniform, but the essentials of a conveyance by deed are practically the same, requiring that it be in writing, be signed and sealed by the grantors, be acknowledged before a notary or other officer authorized by the statutes, and be actually delivered The direction which all present agitation for reform in conveyancing is taking is that pointed out by the success of the Torrens system of Australia The main principle in that system is the registration of titles as distinguished from the registration of deeds. It was introduced first in South Australia about 1857 by S11 Robert Richard Torrens, was eminently successful practically, and was afterward adopted in the other Australian colonies and elsewhere Under it the ownership passes only on the filing, in the proper registry office, of the title, thus the actual transfer and the public notice of it are simultaneous, and the records of the office cannot be impeached by flaws in the conveyance itself, nor can a purchaser be deceived by the existence of a deed not recorded and of which he could have no knowledge The system of registration is a very simple one, a special folio of the record is devoted to a single piece of land, and there in one place and together are recorded all transfers and transactions affecting the title of that piece of land or forming a charge on it, and, we repeat, the title to that land can shift only upon the registration itself The government holds to the landowner under this system much the same relation that a corporation issuing certificates of registered stock holds to the purchaser thereof, 1e, the transfer of such stock certificates is made on the books of the company and takes effect only upon new entry therein Under the Torrens system a "Master of Titles" is intiusted with the duty of seeing that the transfer is regular and is properly executed. A guarantee fund is established by the state to compensate any persons injuicd by errors of any kind The great merit of this system is that, once established, it makes title certain and absolute, and obviates research in ancient conveyances Canada the system has been tried-though in a limited and imperfect form-in Toronto, and there is a strong agitation for its universal adoption under a compulsory law In England a Land Transfer Reform Bill was introduced in 1875 by Lord Cairns, and passed, but in a mutilated and altogether unsatisfactory form, in 1882 a second act was passed simplifying the art of conveyancing and leading the way towards a general reform, in 1889 Loid Salisbury's government introduced a bill making the Torrens system compulsory, which was defeated only after its third reading and by a very small majority In New York an Act was passed and went into effect in January, 1891, which pro-vided for a reformed or block scheme of indexing conveyances to supplant the old system of consecutive registration of deeds indexed only by the names of the parties thereto. This is also a step in the direction of the Torrens sys-tem of registration A voluntary Torrens sys-tem has been adopted in several of the States of the American Union, but the picliminary work of title registration is so great and attended with so much expense that little has yet been

done to bring the system into extended use Consult Leonard A Jones, Forms in Conveyencing and General Foins (5th ed. Indianapolis, 1899). Welsteinholme, Forms and Proceedins Adopted for Use undo the Conveyencing Acts (5th ed., London, 1891). Sheppaid, The Touchistoms of Common Assurances, etc. (Amered, Philadelphia, 1840-41). Greenwood, Manual of the Practices of Conveyencing (8th ed., 1b., 1900). Huntes, The Dominion Conveyence (Toronto, 1893), Brewster, Conveyence of Estates in Fice by Deed (Indianapolis, 1904).

CONVEYOR. A device for moving or transporting freight, either in bulk or in packages, for a himted distance. It is much used for grain, coal, ore, and the like, in the form of an endless belt or band passing over supporting pulleys. The edges are tunied up by anding pulleys. The belt may discharge endwise over the last pulley as it passes over it and changes direction, or the charge may be thrown off sidewise by a deflecting guide. Or, the conveyor may be an endless chain with buckets, which dump at a designated point. The belt conveyors usfally run at a relatively high speed, the bucket conveyors must move more slowly, but have the

advantage that they can serve as elevators also Conveyors for packages and small freight are usually belts or in slat form in terminals and warehouses, or convey parcels from store departments to the delivery-department vehicles. Conveyors are used in power plants for coal from bins to furnaces, and for ashes from the

ash pits to the discharge carts

CONVICT (Sp, Portug convicto, from Lat convictus, pp of convince e, to convict, from com-, together + vincere, to conquer) son found guilty, after due trial, of a criminal offense, in general use applied only to those convicted of felony or serious crimes, not to those guilty of petty offenses. The system used by a country in dealing with convicts is termed the convict system In Europe in the Middle Ages the punishments inflicted upon criminals were cruel and brutal Wholesale execution and mutilation gave way to transportation to colomes in the seventeenth century Down to the time of the Revolution convicts were transported from Great Britain to the English Colonies in America, after the Revolution transportation to Australia came into vogue and continued until near the middle of the nineteenth century. In Russia transportation to Siberia was a favorite mode of disposing of convicts until 1900, when the system, in its essentials, was abandoned Transportation is still a part of the French penal system, although it is rarely em-ployed Confinement in prisons, with or without hard labor, enforced labor on public works, or, under a gradually vanishing system, on private works under lease or contract, are the prevailing modes of disposing of convicts In some jurisdictions, as a neward for good behavior, convicts Consult are given their liberty under parole Drahms, The Criminal (New York, 1900), Whitin, Penal Servitude (ib, 1912), Aschaffenburg, Crime and its Repression (Boston, 1913). See CONVICT LABOR, ('RIMINOLOGY, PENOLOGY, PRISONS

CONVICT LABOR. In all pententaries the work of keeping the institution in good order and carrying on the domestic arrangements is done by the prisoners. In addition, repairs and improvements, such as constructing new buildings, are often made by inmartes under expert direction. This would not furnish sufficient employment to keep the prisoners occupied. For the sake of the convict as well as for the pecuniary returns, it is customary to employ the prisoners in productive enterprises. In America the following general systems prevail.

In the leave system the convicts are leaved to contractors for a fixed sum and period, the entire responsibility for the care and safe-keeping of the convicts devolving upon the contractors. This system may reduce the cost to the State, but it tends to great abuses and should be abolished. It prevails only in some of the Southern States

The contract system exists in two forms. In the first the labor of the convicts is furnished to contactors for a fixed sum, the contractors personally directing the employment in the institution. The raw material and machinery are furnished by the contractor, though in some cases the State furnishes the latter. In the second form, the piece-price system, the contractor furnishes the material and pays a stipulated price for the fluished product. The direction of the industry is in the hands of the prison officials. The advantage of this form is that it

avoids the possibility of trouble coming from the presence in the institution of employers who are not directly responsible to the authorities

The contract system has been in general use It has many advantages The industry is managed by experts who can buy and sell to better advantage than can the warden, who, presumably, is not so well posted Moreover, the State is not subject to loss because of gluts in the market or because of official ignorance or duplicity. It necessitates no great investment in expensive machinery. It has furnished steady employment to the prisoners and has reduced appreciably the net cost of maintenance

There are, however, serious objections to the plain. When it involves the presence of outside overseers, it may seriously interfere with prison discipline. From an educational standpoint the lightly developed industry interferes with the training of the individual convict. This applies with special force to the younger prisoners Employers have condemned the system on the ground that the cheap labor gave the contractor an unfair advantage. Labor unions have objected because they felt that it had a tendency to lower wages. The objections have weight While the total of prison labor is but a small part of the labor of the country, the introduction of special industries may easily depress and unfairly compete with similar local industries.

For these reasons the contract system is losing ground and is giving place to the public-account system. The State furnishes the plant and materials and conducts the entire business through its officials Any profits go to the State, and any loss is borne by it Products are sold upon the open market, or, as in a number of States, only such articles may be made as will be utilized in other public institutions or in the various State departments Under this system the individual prisoner may be employed as seems for his best interest Generally speaking, this plan is probably the best yet proposed In recent years a strong tendency has developed to employ convicts, without the intervention of a private contractor, on the highways and other public works. Experiments with the system were first made in Colorado, in 1908 Oregon, New Mexico, Arizona, and Utah now use this system Convicts thus employed are not required to wear prison garb, and they are placed wholly on their honor, working under the direction of an un-armed foreman The results of this system have been highly favorable In Colorado, in 1911-12, convicts thus employed built 157 miles of road at a cost of \$298 a mile, or one-fifth the normal contract cost Only one in 100 has tried to Similar results have been attained in Oregon

The advantages of employment upon the public highways are (1) physical improvement in the persons so employed, (2) gain in self-respect, with increased probability of reform, (3) solution of the problem of competition with free labor. Usually convicts so employed are given special inducements to good behavior, such as reduction in term and wages, which may either be paid to the dependents of the men under sentence, or may be reserved for them until their discharge. The system of wage payment to convicts has been established in several States in the United States and has also been tried in France, Germany, and England. It is gaining ground and may be expected to become practily universal, since it increases the efficiency

of convict labor and renders easier the work of reformation Consult United States Industrial Commission Report on Prison Labor (Washington, 1900), Proceedings of National Prison Association (Pittsburgh, 1898, 1899), Henderson, Introduction to Study of Dependents, Defectives, and Delinquents (Boston, 1893), Henderson, Outdoor Labor for Convoits (Chicago, 1907), Whitin, Penal Servitude (New York, 1912)

CON'VOCA'TION (Lat. convocatio, from convocare, to call together, from com-, together + vocare, to call, from vow, voice) An assembly of the clergy of the Church of England, analogous in many respects to Parliament, at the same time with which it usually meets As a factor in the development of English institutions, it is of great interest, being in some shape perhaps older than Parliament, into which attempts were made to incorporate it in the reigns of Edward I and Edward II Convocation formerly exercised the right of enacting ecclesiastical legislation and also of voting subsidies to the crown, but the former right was greatly restricted under Henry VIII and by later acts of Parliament, while the latter was abandoned in 1664, since which time the clergy have been taxed like other citizens Certain convocations are of importance in the history of both church and state in England, in particular that of 1529, which reasserted the royal supremacy, and declared that "the Bishop of Rome has not, in Scripture, any greater jurisdiction in the king-dom of England than any other foreign bishop", that of 1502, which confirmed the Articles of Religion, that of 1603, which enacted an important body of canons, and that of 1661, which completed the levision of the Book of Common Prayer About the beginning of the eighteenth century a factious spirit prevailed, so that the sittings of the Lowei House were distinguished by contention with the bishops Convocation was prorogued in 1717, and not again assembled until the revival of church life in the nineteenth century caused a demand for the renewal of its sessions By the influence of Bishops Wilberforce, of Oxford, and Philpotts, of Exeter, the Convocation of Canterbury reassembled in 1852 and that of York in 1856, since which time their meetings have been regularly held. The provinces of Canterbury and York have each a convocation of its own. The Upper House is composed of the diocesan bishops, the Lower of bishops suffragan, deans, archdeacons, and cer-tain representatives of the lower clergy, known as proctors Convocation is reelected with every new Parliament, and now commonly meets three times a year While Convocation has at present no legislative functions, its discussions are of great interest to members of the Church of England A "House of Laymen" has recently been organized, which, while not constitutionally forming a part of convocations, discusses similar topics on parallel lines In 1905 was formed the Representative Church Council, composed of joint sessions of both convocations, together with the House of Laymen Consult Trevor. The Convocations of the Two Provinces Their Origin, Constitution, and Forms of Proceeding, with a Chapter on their Revival (London, 1854), Latibury, A History of the Convocation of the Church of England (1b, 1842; 2d ed, 1853), Whitehead, Church Law (1b, 1872)

In the University of Oxford the term "Convocation" is applied to the assembly composed of all masters of arts, nonresident as well as resident, which finally accepts or rejects the statutes which have passed the narrower governing bodies, the Hebdomadal Council and Congrega-

tion See Oxford University

CONVOL'VULA'CEÆ (Nec-Lat nom pl, from Lat convolvulus, bindweed, from convolvere, to roll together, from com-, together + volvere, to roll). A family of dicotyledonous plants, the morning glory family, comprising 45 genera and about 1000 species, chiefly displayed in the tropics They are annuals or perennials, many are twining or climbing in habit, and one genus, Cuscuta, is a climbing parasite (See Dodder) In many the stems contain a milky juice, and some have tuberous roots which are of economic value as furnishing jalap, scammony, sweet potato, etc Some are noted for their beautiful flowers, as the morning-glory The leaves are generally alternate and without stipules The calyx is five-parted and the corolla with a five-lobed and plaited limb which is usually valvate, sometimes convolute. The stamens are inserted within the corolla, alternating with its lobes The ovary is free and consists of two (rarely more) carpels and bears two or more ovules The fruit ripens into a herry, nut, or capsule

CONVOL'VULUS (Lat, bindweed), or Bino-WEED A genus of plants, the type of the family Convolvulacee This genus contains nearly 150 species, herbaceous and shrubby, generally with a twining stem and milky juice, large and beautiful flowers The plants of this genus are very abundant in the tropics, but comparatively rare in cold climates Many are cultivated as ornamental plants, particularly species of Convolvulus and Ipomaa, the latter being commonly known as "morning-glory" Some species have large farmaceous roots, capable of being used as food, of which the sweet potato (qv), or batatas, is the most important Two or three species are common in the eastern United States and are called "bindweed" Convolvulus arvensis is a troublesome weed in some sandy soils near the coast, and Convolvulus sepuum in licher soils The former has rose-colored fragrant flowers, the latter large white flowers Both are ornamental, the latter is now often planted to cover posts and trellises Convolvulus scammonia yields scammony, and the root of Ipomaa pandurata is used as a purgative in the United States. Convolvulus scoparius, a shrubby species, native of the Canary Isles, yields one of the kinds of wood called "rosewood," which has a strong smell of roses Exogonium purga, formerly known as Ipomooa jalapa, of this order yields jalap, a well-known eathartic It abounds in Mexico. For illustration, see Plate of Di-COTYLEDONS

CONVOY (Fr. convo., from convoyer, to convoy) The name given to one or more ships of war appointed to protect a fleet of merchant vessels against the attacks of an enemy or pirates. If a merchant ship part company with the convoy, or neglect to obey the signals, all claims of insurance are forfeited. The name is sometimes applied to the merchant vessels so escotied. In the military service a convoy is, properly speaking, a train of wagons laden with provisions or warlike stores, the term, however, is applied also to the detachment of troops, or escort, anyonated to protect such a train

CONVUL'SION (Lat. convulsio, convulsion).

A symptom of disease occurring in sudden at-

tacks during which the patient generally loses consciousness, the muscles of a part or of much of the body are contracted and relaxed involuntarily, in spasmodic and irregular movements. the eyes are generally open, the eyeballs turned up or to one side, the teeth are set tight to-gether, the tongue or cheeks are frequently bitten, the breathing is at first ariested, then labored and deep, the face is generally red, and the saliva cozes from the mouth as froth In epilepsy (q v) the convulsions are as just described, and the patient generally sleeps immediately after them before regaining consciousness. In hysteria (q v) there is less writh ing and more rigidity, the patient is not entirely unconscious in most cases, the cheeks remain pale, and he regains consciousness after a period of confusion, without sinking into a sleep, the tongue is not bitten, and froth does not issue from the mouth. Uramic convulsions are very similar to those of epilepsy Convulsive seizures accompany many diseases They may be due to cerebial pressure, as in brain tumors, tertiary syphilis, cerebral hemorrhage, thrombosis, or embolism (see APOPLEXX), or extradural hemorphism (see APOPLEXX) orrhage and meningitis, certain nervous diseases, eg, general paresis, epilepsy, and hysteria, certain general toxemias as uremia, the puerperal state, lead poisoning, acute and chronic alcoholism Convulsions in children (spasms) are likely to arise from slighter causes than in adults Besides the diseases mentioned above, which may occur at any age and cause convulsive seizures, the following causes are operative in infants and young children dentition, acute inflammations of the car, gastiointestinal irritation (overloading the stomach, worms, etc), the onset of the acute evanthemata, birth injuries, tubercular meningitis, and nekels

In cases of infantale convulsions the clothing should be removed and the patient immersed in a hot bath up to the neck for 10 or 15 minutes or till the limbs relax. An enema of scapsuds will always be of advantage to a child. The chileptae patient should never be grasped and held by any one, but should be protected from falling from the bed with cushions and pillows. The tongue should be protected from being bitten by being thrust back into the mouth, or by a lubber claser inserted between the teeth. The patient should not be allowed to bury the nose

and mouth in the pillows
CONVUL'SIONARIES (Fi convulsionnancs, from Lat convulsio, convulsion, from convellere, to convulse, from com-, together + vellere, to pluck) A fanatical sect of Jansenists who sprang up in Plance about 1730 Then meeting place was the churchyard of Saint-Medard, in a suburb of Pans, where was the tomb of a certain Francis of Paus, who died in 1727 and was reckoned very holy by the Jansenists on account of his extravagant asceticism. At this tomb people began to gather for preaching and prayer Muacles and cures are also alleged to have been performed, for proof of which we are referred to a work written by Carré de Montgeron, a member of the Parliament of Paris, and entitled La vérité des miracles opérés à l'intercossion de M. de Paris et autres appellans (3 vols., Paris, 1737) "They threw themselves into the most violent contortions of body, rolled about on the ground, imitated birds, beasts, and fishes, and at last, when they had completely spent themselves, went off in a swoon." Some of the phenomena seem to have been genuine and of a sort that would now be ascribed to hysteria In 1733 the King issued an order for the imprisonment of these fanatics, but it was found impossible to put a complete stop to the mischief. They brought Jansenism into so much disrepute that Voltaire declared the tomb of Francis to be the grave of Jansenism. Consult P. F. Mathieu, Historie des miracles et des Convulsionnaires de Saint-Médard, précedée de la wie du daore Paris, 1844.

CON'WAY. A river in North Wales, 30 miles long, noted for its scenic beauty. It rises in a small mountain lake and flows between Llainrust and Trefriw into the Irish Sea. At Conway it is half a mile broad at spring tides, which rise here 21 to 24 feet. The Conway has been famous for its nearls since Roman times.

famous for its pearls since Roman times
CONWAY, or AB'ERCON'WAY. A seaport market town and municipal borough of Carnarvonshire, North Wales, beautifully situated on a steep slope on the left bank of the Conway, 22 miles northeast of Carnarvon (Map Wales, C 3) It is surrounded by triangular walls, 12 feet thick, with 21 towers and battlements The principal streets are wide and regular Here is situated St Mary's Church, it is also the seat of the Royal Cambiian Academy of Art Conway Castle, one of the noblest ancient structures in Britain, stands on a precipice overlooking the river It was built in 1284 by Edward I to check the Welsh Its walls are 12 to 15 feet thick, with eight vast towers, four of which are each suimounted by a slender turret Inside is a great hall, called Llewelyn's Pop., 1891, 3400, 1901, 4681, 1911, 5242 Out-aide the town can be found evidences of the Roman camp, Conovium, in the ruins of baths, roads, and pillars Consult Historical Sketch of Conway Castle and its Environs (Carnarvon, 1852)

CONWAY. A city and the county seat of Faulken Co, Ark, 30 miles north by west of Lattle Rock, on the St Louis, Iron Mountain, and Southern Railroad (Map Arkansas, C 2) It is the seat of Hendrix College (Methodist Episcopal, South), organized in 1884, Arkansas State Normal School, and Central Baptist College for Women, opened in 1892 Conway has an extensive cotton trade, lumber, flour, and cottonseed-oil mills, cotton compress, broom factory, and excelsion works The city was settled in 1871 and incorporated three years later It is governed by a mayor, who is elected every two years, and a council. The electric-light plant, water works, and sewcage system are owned and operated by the municipality Pop, 1890, 1207, 1900, 2003, 1910, 2794
CONWAY. A town in Carroll Co, N H.,

conway. A town in Carroll Co, N H., containing the villages of Kearsarge, North Conway, Conway, and Conway Centre, about 60 miles (direct) north-northeast of Concord, on the Sacc Riven and on the Boston and Manne Railroad (Map New Hampshire, N 5) The village of North Conway is famed for beauthful secrety and is a popular summer resort Conway is the centre of an extensive granite industry and has a ribbon-peg factory, spool mill, box factory, and lumber and canning interests. The water works are municipally owned Pop, 1890, 2331; 1900, 3154, 1910, 3413 Consult Mis. M. E. Bastman, East of the White Hills GONWAY, HERNY SERMOUR (1721-95). An

English field marshal, a second son of Francis Seymour, first Lord Conway He was aid-decamp to the Duke of Cumberland at the battles of Fontency (1745) and Culloden (1746). On March 30, 1759, he was appointed heutenant general, and he served in 1761-63 under the Duke of Brunswick in Germany In 1757 he was in the unsuccessful Rochfort expedition For his attitude in Parlament in the Wilkes case he was deprived of his military command by the King, which resulted (1765) in the crown's abandoning its right to remove army officers for what they did in Parlament He persistently opposed the war with America, and on Feb 22, 1782, in an address to Parliament, urged the advisability of discontinuing aggressive warfare against the American Colonies Shortly after the resignation of Lord North, he became commander in chief of the army (March 27, 1782)

CONWAY, Hugh The literary pseudonym of Frederick John Fargus, part of which may have been first suggested to him by his student life

on the school frigate Conway
CONWAY, MONGURE DANIEL (1832-1907).

An American clergyman, historian, and ethical writer He was born in Stafford Co, Va, and was graduated at Dickinson College (1849) and at the Harvard Divinity School (1854), having studied law and been a Methodist minister in the interval He imbibed humanitarian and rationalistic ideas and returned to Virginia to preach them, but was obliged to leave the State. He then took charge of a Unitarian church in Washington, D C, but, too outspoken against slavery, was forced to go to Cincinnati, where he preached, wrote books, and edited The Dial There, and later in Boston as editor of The Commonwealth, he urged emancipation, and in 1863 went to England to explain the cause of the war He was minister of the ultraliberal South Place Chapel, London, from 1863 to 1884 At the close of the last century he returned to America and resided in New York City Among his volumes are The Rejected Stone (1861), Idols and Ideals (1877), Demonology and Devil Lore (1878), The Wandering Jew (1881), as well as biographies of Edmund Randolph well as biographies of Edmund Randolph (1888), Thomas Carlyle (1881), Emerson at Home and Abroad (1882), and Hauthorne (1890) His edition of the writings of Thomas Paine (4 vols, 1894-96), his life of Paine (2 vols, 1892), his Autobiography (1904), My Prigrimage to the Wise Men of the East (1906), and Addresses and Reprints, 1850-1907 (Boston,

1909), are his most important works

CONWAY, ROBERT SETMOUR (1864— )

An Enghish classical philologist, born at Stoke
Newington He received from Gonville and
Caius College, Cambridge, the degrees of BA
(1887), M.A (1891), Litt.D (1898) He was
fellow of Gonville and Caius College in 1888—94,
classical lecturer in Newinham College in 1888—94,
classical lecturer in Newinham College in 1888—98, and professor of Latin, University College,
Cardiff, Wales, in 1803—1903, when he took the
corresponding chair in Victoria University, Manchester He with the Victoria University, Manchester He with Victoria University

ing, Occasion, and Source (London, 1907) He published also Dialecticarum Italicarum Exempla Selecta in Usum Academicum Latine Readiata (1899) and The Restored Pronunciation of

Greek and Latin (1909).

CONWAY, THOMAS (1733-c 1800) An Irish soldier of fortune He was educated in France, entered the French army, and had attained the rank of colonel when, early in 1777, he came to America with a recommendation from Silas Deane, and offered his services to Congress was appointed a brigadier general in May of this year, served at Brandywine and Germantown, where he led the main attack, and later in the year was made inspector general, with the rank of major general, contrary to Washington's wishes He was the chief conspirator in the "Conway Cabal" (qv), for which, however, he no doubt got more than his share of blame, and upon the discovery of his intrigue resigned from the army in 1778 Soon afterward, on July 22 he was wounded in a duel by General Cadwallader, who challenged him because of his attacks upon Washington Conway then returned to France, reentered the army, and in 1784 was appointed Governor of Pondicherry and the French settlements in Hindustan. In 1792 ne was appointed commander of the Royalist forces in the south of France, but on the success

of the Revolutionists fled from the country
CONWAY, Sir (WILLIAM) MARTIN (1856) An English art critic and mountain climber, born in Rochester, the son of William Conway, afterward canon of Westminster was educated at Repton and at Trinity College, Cambridge, was a university-extension lecturer in 1882-85, professor of art at University College, Liverpool, in 1885-88, and Slade professor of fine arts, Cambridge, in 1901-04 He early became an enthusiastic mountaineer, was president of the Alpine Club in 1902-04, was the first to reach an altitude of more than 23,000 feet-in the Karakoram Himalayas in 1892, and explored Spitzbergen in 1896-97 and the Bo-livian Andes and Tierra del Fuego in 1898 Hc was knighted in 1895 His principal books on art are The Woodcutters of the Netherlands in the Fifteenth Century (1884). tory of Spitzbergen (1906)

CONWAY CABAL', THE In American listory, the name given to an intrigue, organized under the leadership of Thomas Conway (qv), in 1777, during the Revolutionary War, for the purpose of bringing about the supersession of Washington, as commander in chief of the American armies, by Gen Horatio Gates. With Conway were associated such men as Gates, Charles Lee, Thomas Mifflin, and Benjamin Rush, besides several other army officers and members of the Continental Congress, who charged Washington with gross incompetence and favoritism, and in particular endeavored to prove the superconvile

of Cates over Washington as a commande by contrasting the victories of the former at Saratoga with the almost contemporaneous reverses of the latter at Brandywine and Germantown. The faction gained sufficient power to secure the appointment of Gates as head and of Thomas Mifflin as a member of the Board of War and the promotion, against Washington's emphatic advice, of Conway to the rank of major general and to the position of inspector general, but they did not succeed in retaining any considerable following, and in a few months their schemes fell through, and Conway was virtually forced to leave the service (1778) A good account of the intrigue is given in vol in of Fiske's The American Revolution (Boston, 1893)

CON'WELL, RUSSELL HERMAN (1842An American Baptist elergyman He was born at Wothington, Mass, and was educated at Wilhiaham Academy and at Yale and Albany law schools During the Civil War he served in the Union army (1862-65) and rose to the lank of heutenant colonel After the war he devoted himself to the practice of law. He was correspondent in Germany of the New York Tribune and the Boston Traveler from 1868 to 1870. After his ordination to the ministry in 1879 he occupied the pulpit of Grace Baptist Church, Philadelphia (1881-01). COOK, ELIZA (1818-89) An English poet, born in London Hei first volume, entitled Lays of a Wild Harp, she published in 1835, and, after writing considerably for periodicals, pattenularly the Weckly Dispatch, she published Molata and Other Poems (1888) In 1849-54 she edited Bhea Cook's Journal, much of whose contents was republished in Jottings from my Journal (1860). Her unpretentions verse, including, notably, "God Speed the Plough," "The Old Armchair," and "The Star of Glengarry," has been very popular among a wide circle of readers in both England and America. A complete edition of her poetical works appeared in London in 1870 and in New York in 1882.

COOK, FRANCIS AUGUSTUS (1843— ). An American naval oheo: The was born in Northampton, Mass, and in 1863 graduated at the United States Naval Academy. He then served for two years as an ensign in the western Gulf blockading squadron, attained the rank of commander in 1880, was in charge of the department of seamanship at Amapolis until 1883, and was inspector of ordinance at the Boston Navy Yard from 1880 to 1893. He was subsequently assistant to Rear Admired Ramsay, chief of the Burean of Navigation in Washington, and in 1896, with the rank of captain, took command of the causer Brobblyn At the beginning of the war with Spain (1898) he joined the "flying squadrom" under Commodere Solley, and took an important part in the battle of Santago (qv), jursuing the Crietobal Colon until she ian ashore at Rio Tarquino, when he received the surrender of her commander. At the close of the war he was relieved of sea duty at his sown request and

was appointed to the United States Naval Examining Board. He was retired in 1903

COOK, FREDERICK ALBERT (1865- ) An American explorer who claimed to have reached American exporer who channed to have the North Pole on April 21, 1908 He was been at Calheoon Depot, N Y., graduated at New York University in 1890, and was suggeon of the Peary Arctic expedition of 1891-92, and of the Belgian Antarctic expedition of 1897-99 Upon his leturn in 1909 "from the Pole"—as he said-he was received with great honors at Copenhagen, Denmark, and then, hastening to New York, he at once began making large sums of money by his writings and lectures soon began to arise as to the veracity of his story—his companion on the journey he made in 1906 to Mount McKinley, Alaska, made an affidavit that no ascent of that mountain was made as described in Cook's narrative, and the Eskimos who were supposed to have been his companions on the dash to the Pole told the Peary party that they had spent the winter of 1907-08 at Jones Sound This was followed by the sworn statement of a man who had been hired to prepare for Cook a set of observations for latitudes and longitudes on his journey to the Pole, to send with his other data to the University of Copenhagen for examination In the meantime Cook disappeared from view, and the learned scientists at Copenhagen decided that his proofs were not sufficient, but the sale of his book, My Attainment of the Pole (1909, 3d ed, 1913), was very large. In 1913-14 he lectured in England In addition to numerous magazine articles he is author of Through the First Antactic Night (1900). To the Top of the Continent (1908), North Pole and Bradley Land, with E S Balch (1913)

COOK, GEORGE HAMMELL (1818-89) An American geologist, born at Hanover (Morris Co), N. J. Hie graduated in 1839 at the Reinsselaer Polytechnic Institute (Troy, N. Y.), was a piofessor their in 1842-46, and in 1853 became piofessor of chemistry and the natural sciences at Rutgers College. His chain was changed to that of chemistry, natural history, and agriculture in 1875, analytical clemistry, geology, and agriculture in 1876, and geology and agriculture in 1876 and geology and agriculture in 1890. In 1864 he was appointed State geologist of New Jersey, and in 1890 director of the New Jersey Agricultural Experiment Station (Somerville, Somerset County) He published a Geology of New Jersey (1868), a work that is still regurded as a standard of reference

COOK, CAPT JAMES (1728-79). A celebrated English navigator. It is was the son of a farm laborer, was born at Marton, Vorkshirer was meagerly educated at the village school, and at 12 years of age was appromised to a small shopkeeper in the fishing village of Statthes. Disagreeing with his employer, he applied to a firm of Whithly shipowners engaged in the Newasatte, Noiway, and Balte trades, and in their service soon lose to the rank of mater in 1753, at the outbreak of the French wai, he volunteered for the loyal navy. Showing shifty in 1759 he was given a master's warrant, and, in command of the Mercury, proceeded to the North Américan station. During a winter at Halfax he diligently applied himself to the study of mathematics and astronomed navigation. The charts and observations which he made of the coasts of Newfoundland and Labrador, published in 1706-78 and distinguished

for then accuracy even to the present day, introduced him to the notice of the Royal Society, and this society intrusted him with the com-mand of an expedition to the Pacific, to observe the transit of Venus He left Plymouth on Aug 26, 1768, and, after touching at Madeira and Rio de Janeiro, doubled Cape Hoin and reached Tahiti on April 13, 1769, where the transit was successfully observed, June 3 On the return voyage six months were spent in sailing around and charting the coast of New Zealand, which had not been visited by Europeans for more than a century In a similar way the eastern coast of Australia was examined and named New South Wales The entire separation of Australia from New Guinea was determined After a two months' stay at Batavia he returned by the Cape of Good Hope, and arrived in England, June 12, 1771 The important geographical results of this successful voyage won universal recognition, and two months afterward Cook received the rank of commander and an appointment to organize a new expedition for the discovery of the imaginary Terra Australia Incognita He sailed with two ships from Plymouth, July 13, 1772, and, in a three years' cruise of over 20,000 leagues, encircled the Antaictic region from New Zealand to Cape Horn His claim that there is no other great southern continent is not admitted by contemporary explorers, though his maps in many respects are still valuable for Antarctic navigation He returned to England, July 30, 1775 Taught a lesson by a mortality of 46 per cent in his first voyage around the world, Cook had made such excellent hygienic arrangements that only one man out of 118 died during the cruise His detailed account of the measures and precautions adopted were read before the Royal Society, which granted him the Copley gold medal for his important services to humanity and to the maritime world Promoted to the rank of captain, he received an appointment at Greenwich Hospital, but shortly afterward he offered to command an expedition in search of a passage round North America from the Pacific He sailed July 12, 1776, by way of the Cape of Good Hope, and spent the following year in the South Pacific Thence he set sail for the north in January, 1778, and, after rediscovering the Sandwich Islands, reached America, and added to geographical knowledge by making an almost continuous running survey of the coast as far as Bering Strait, where, stopped by impenetiable ice, he returned to winter at the Sandwich Islands Here he was brutally slaughtered, Feb 14, 1770, by the natives in a sudden attack aggravated partly by the cowardice and neglect of one of his officers and Cook's own rashness in dealing with the na-His death occasioned widespread regret, and the King pensioned his wife and children An obelisk erected in 1874 marks the spot where he fell A practical and scientific seaman, a sagacious commander, kind but strict with his crew, Cook was also distinguished by indomitable perseverance and decision An account of Cook's flist voyage appeared originally as part of Hawkesworth's Voyages (1773), the narrative of the second was written by Cook himself, under the title of A, Voyage Towards the South Pole and Round the World, Performed in His Maresty's Ships the Resolution and Adventure, in the years 1772, 1773, 1774, and 1775 (1777), the story of Cook's third voyage, partly written

by Cook himself and partly by Capt James King, appeared in 1784 Consult. Wharton, Captain Cook's Journal during his First Voyage round the World (London, 1897), Synge, Captain Cook's Voyages round the World (ib, 1897), Besant, Captain Cook (ib, 1890), Kippis, Life of Captain James Cook (ib, 1788), Narrative of the Voyages round the World Performed by Captain James Cook (2 vols, ib, 1878), Kitson, Captain James Cook (ib, 1907).

COOK, JOHN (1805–92) A Canadian clergyman and educator He was born at Sanquihar, Dumfinesshire, Scotland, and was educated at Edmburgh University He was ordained to the Presbyterian ministry in 1835, but came to Canada in 1836, and was appointed pastor of St Andrew's Church, Quebec When the Established church of Scotland was divided by the secession of those who afterward organized the Free church, the movement likewise affected Presbyterianism in Canada, but Cook remained a member of the Established church and maintained a mediating attitude, seeking to heal the breach between the two divisions. He aided ne stablishing Queen's University, Kingston, which was founded in protest of sectarian educational privileges, was acting principal in 1857–60, its first chancellor in 1877–80, and for many years a trustee. He was largely instrumental in founding Movin College, Quebec, in 1862, and was its first principal. In 1861 he became an active supporter of Presbyterian union in Canada, and after this was accomplished in 1875 became the moderator of the first general assembly

COOK, JOSEPH (1838-1901) An American lecturer and author, born at Ticonderoga, N Y He studied at Phillips (Andover) Academy and at Yale, and graduated at Harvaid in 1865 He then spent three years at Andover Theological Seminary, preached in various Congregational churches, spent two more years in study in Germany, and then settled in Boston, where in 1873 he began his "Boston Monday Lectures," which became very popular and which he con-tinued until 1880, when he set out on a two years' lecturing journey round the world. In 1883 he resumed his Monday Lectures in Bos-ton In 1888 he founded a religious monthly called Our Day He lectured on many subjects, both in Europe and in America, and had great vogue with a part of the religious public for the reason that all of his philosophical discourses were attempts to harmonize religion and science He published Biology (1877);
Marriage (1878, 8th ed, 1891), Labor (1880), Socialism (1880, 6th ed, 1893), Occident (1884), Orient (1886), The Higher Levels of Arbitration (1900), New Defenses of the Lord's Day (1900)

OOOK, MENVILE THURSTON (1869 — ). An American botanist, born at Coffeen, III He was educated at DePauw, Leland Stanford Junior, Chicago, and Ohio State universities In 1894-95 he was principal of the high school at Vandalia, III At DePauw he was instructor in biology in 1895-97 and professor from 1897 to 1904, for two years he headed the department of plant pathology and economic entomology at the Estación Central Agronómica, Santiago de las Vegas, Cuba, from 1907 to 1911 he was plant pathologist of the Delaware Experiment Station at Newark, N J, and thereafter he served as professor of plant pathology at Rutgers College and State plant pathologist. He is author of falls and Insects

30

Producing them (3 vols, 1902-04) and Diseases of Tropical Plants (1912)

COOK, ORATOR FULLER, JR (1867- ) American botanist, born at Clyde, N Y Αn He was educated at Syracuse University, where he was in charge of the biology department in 1890-01 As agent of the New York Colonization Society he made explorations and investigations in Liberia in 1891-97, and he also served as professor of natural sciences in Liberia College during this same period and as president of the institution in 1896-97 1898 he became custodian and assistant curator of the United States National Museum He had charge of plant importation by the United States Department of Agriculture from 1898 to 1900, when he took up the investigation of tropical agriculture. In 1904 he became pro-fessor of botany at George Washington University He is author of various articles and reports on Laberia and African colonization, Porto Rico, tropical agriculture, botany, zoology, and

EOOK, STANLEY ARTHUE (1873—) An English Ornertalist, born in King's Lynn He was educated at Gonville and Cause College, Cambridge, of which he became fellow and lecturer in Hebrew and Syriac. In 1896–1903 he was on the editorial staff of the Encyclopædia Biblica, in 1902 he became editor for the Palestine Exploiation Fund, and he was the editorial adviser and a contributor on Old Testament and Semite subjects to the Encyclopædia Britannica He contributed to the Jewish Quarteily, the Expositor, etc., and wrote Glossary of Atamaca Inscriptions (1898), The Law of Moses and the Oode of Hammurabs (1903), Critical Notes on Old Testament History Tradations of Saul and David (1907), Relegion of Ancent Palestine (1908), I Esdas (1912).

COOK, THEODORE ANDREA (1867-Δn English journalist and sportsman, born in Exmouth, Devon He was educated at Radley and at Wadham College, Oxford, making a 1emarkable 1ecoid as a scholar and oarsman. He became assistant editor of the St James's Gazette in 1898, and was its editor for the first four months of 1900. COOKE, GEORGE FREDERICK (1756-1811). An English trageduan, born at Westminster II to made his debut on the stage in 1776 and soon became popular in England and Ireland. In 1810 he appeared in New York and other American cities, where his success was equally great Although possessed of fine talents, Cooke numed his cane by intemperance, which also caused his death. His best work was in the characters of Shylock, Iago, and Richard III. Edimund Kean, who admired him as the greatest of actions, erected a monument to his memory in St. Paul's Chunchyand, New York City. Consult Dunlap, Memon's of Yooke (London, 1813).

COOKE, GEORGE WILLIS (1848-). An American elegyman, editor, and authlor, born at Comstock, Mich. He staulied at Olivet Col.

COOKE, GRORGE WILLIS (1848— ). An American elergyman, editor, and authon, born at Comstock, Mich. He studied at Olivet College (Mich.) and at the Meadville Theological School (Pa.) and was in 1872 ordained to the Unitarian ministry Thereafter he held pastorates in Wisconsin, Michigan, and Indianaud in Dedhan and Lexington, Mass., and Dubin, N II. After 1899 he devoted his time principally to lecturing (at the Concord School of Philosophy, the Boston School of Social Science in New York) and to writing. Besides contributing much to the periodical press, including editorials for The Christian Socialist (he became a Socialist in 1902), he is the author of: Ralph Waldo Emosson (1881); George Eliot (1883); Poots

and Problems Tennyson, Rushin, and Browning (1886), The Guide Book to Robert Browning (1891), Unitarianism in America (1902), The Poets of Transcendentalism (1902), bibliographies of James Russell Lowell (1906) and Ralph Waldo Emerson (1908), Woman in the

Progress of Civilization (1912)

COOKE, GRACE MACGOWAN (1863-American writer of stories, born at Grand Rapids, Ohio She was mairied to William Cooke in 1877 In 1897-98 she was president of the Tennessee Woman's Press Club writings include Mistress Joy, with Annie Booth McKinney (1901), Return A Story of the Sea Islands, in collaboration with her sister, Alice MacGowan (1903), Huldah (1904), A Gourd Friddle (1904), The Grapple (1905), Their First Formal Call (1906), Son Riley Rabbit and Little Girl (1907); The Power and the Glory (1910), The Doings of the Dollivers (1910), The Joy Bringer A Tale of the Painted Desert (1913), The Girls of Silver Spur Ranch, with Anne MacQueen (1913), William and Bill, with Caroline Wood Morrison (1914)

COOKE, HENRY (1788-1868) An Irish Presbyterian leader He was boin at Grillagh, near Magheia, County Derry, May 11, 1788, studied at Glasgow and Dublin, entered the ministry in 1808, and from 1829 was pastor in Belfast, and from 1853 professor of sacred rhetoric in Assembly College there He played a prominent part in his denomination's affairs and was especially active and successful in excluding Arians from the Ilish Presbytelian church and in promoting educational movements. He was an orator of a high grade, but he left no publications other than speeches and sermons. For a half-century his life was a large portion of the religious and public history of Ireland A statue of him was erected in Belfast in 1875 For his Life, consult J L Porter (3d ed , Bel-

fast, 1875)

COOKE, JAY (1821-1905) An American banker and financier, born in Sandusky, Ohio He was privately educated and in 1838 entered the banking house of E W Clarke & Co, in Philadelphia, where he developed such rare ability in banking and financial matters that he was made a junior member of the firm in 1842 In 1858 he retired from the firm, and until 1861 was engaged in financing railroad companies and negotiating their bond issues. In the latter year he established the banking house of Jay Cooke & Co, in Philadelphia Dur-ing the Civil War, as the principal financial agent of the Federal government, he performed services of great value to the nation He negotiated the first five-twenty loan of \$513,000,-000, the ten-forty loan of \$200,000,000, the seventhirty loan of \$830,000,000, and others, making a total of over \$2,000,000,000 He was an ardent advocate of the national banking system and was influential in securing its success at the start The failure of his banking house in 1873, through having advanced too largely on Northern Pacific Railroad bonds, was one of the causes of the financial crisis in that year, but the principal and interest was eventually paid on all claims, and the firm continued successfully Consult E P Oberholtzer, Jay Cooke, Financier of the Civil War (Philadelphia, 1907)

COOKE, JOHN ESTEN (1830-86) An American novelist He was born at Winchester, Va, the son of a distinguished lawyer, John Rogers Cooke, and brother of Philip Pendleton Cooke

(qv) He studied law, but showed early a literary bent His best work. The Virginia Comedians (1854), a Colonial romance uneven in merit, was yet full of a promise not destined to be realized He entered the Confederate service on Stonewall Jackson's staff, and on the death of the latter was transferred to the staff of Gen J E B Stuart Later he was inspector general of the horse artillery of the Army of Northern Virginia From the close of the war until his death his pen was rarely idle. Novels dealing with military events in Viiginia and biographies of the great generals under whom he had served were produced with a speed fatal to high excellence, which did not, however, prevent his work from having historical value most popular of his military novels is Surry of Eagle's Nest (1866), which is understood to be partly autobiographical Among his many books may be named the following Leather Among his many Stocking and Silk (1854), The Youth of Jefferson (1854), Henry Saint John, Gentleman (1859), a sequel to Virginia Comedians Wearing of the Gray (1867) and its sequel, Mohin, o, the Last Days of Lee and his Paladins (1868). Life of Stonewall Jackson (1868, 1876), Life of Re Lee (1871), and Virginia A History of the People (1883), an excellent book contributed to the "American Commonwealths Series"

COOKE, JOSEPH BROWN (1868- ) An American surgeon, born at Saratoga Springs, After graduating from the College of Physicians and Surgeons, New York, he became a practicing physician and surgeon in New York City in 1890. He was visiting physician to the Northwestein Dispensary in 1892-94 and to St. Mary's Free Hospital for Children in 1892-96 In 1900 he became surgeon to the New York Maternity Hospital and in 1903 obstetrician to the New York Polyclinic Medical School and Hospital and adjunct professor of obstetrics His publications include Manual of Obstetrical Technique (1900, 6th ed, 1908), 1 Nurse's Handbook of Obstetrics (1903, 6th ed, 1913), Tewtbook of Obstetrics (1905), and a novel, The Mystery of Carney-Croft (1906)

COOKE, JOSIAH PARSONS (1827-94) American chemist, born in Boston He graduated at Harvard in 1844 and soon afterward was appointed to the chair of chemistry and mineralogy at Harvard College. In this capacity he stimulated the scientific study of chemistry at collegiate institutions, urging laboratory instruction, which before his time had not been introduced into the undergraduate course of American colleges It was Cooke who introduced his pupil Theodore William Richards, at the time a graduate student of chemistry at Harvard, into the study of atomic weightsa subject to which Richards (qv) subsequently made a number of contributions The joint communication, by Cooke and Richards, on the relative values of the atomic weights of hydrogen and oxygen, was published in the Proceedings of the American Academy of Arts and Sciences for 1887 and shortly afterward reprinted in the American Chemical Journal and printed in the American Olemical Journal and in the London Chemical News Cooke's other publications include Chemical Problems and Reactions (1853). Elements of Chemical Physics (1860, 4th ed., 1886). First Principles of Chemical Philosophy (1868, rev. ed., 1882), The New Chemistry (1872; rev. ed., 1884), Michigan A History of Governments (1885, rev. ed., 1905), The Credentials of Science the Warrant of Faith (1888)

COOKE, MORDECAI CUBITT (1825-1912) English botanist, born at Horning, in Norfolk When a boy he was apprenticed in the draper's trade, afterward acted as clerk in a law office, and subsequently taught school At the age of 35 he obtained a position in the India Museum, from which he was transferred to the Kew Botanical Gardens in 1880. In 1903 he was awarded the Victoria medal of honor by the Royal Horticultural Society, and the Linnaan gold medal by the Linnaan Society He wrote more than 40 botanical works, dealing chiefly with fungi, and including Manual of Botanic Terms (1862), Handbook of British Fungi (1874), Mycographia (6 vols, 1879), Illustrations of British Fungi (8 vols, 1881), An Introduction to the Study of Fungs (1895), Mushrooms Edible and Poisonous (1903), Fungold Pests of the Flower Gardens (1906), A Manual of Structural Botany (new ed., 1907)

COOKE, PHILIP PENDLEFON (1816-50) An American poet, eldel brother of John, Esten Cooke and first cousin of John Pendleton Kennedy, the novelist He was boin at Mathemany and He graduated at Pinneton in 1834 and, like his more famous younger brother, studied law under his father, but preferred hierary pursuits, and contributed many poems and stories to the Southern Laterary Messenger and other magazines. He was equally devoted to field sports, which in part accounts for the fresh quality of his Prossart Ballads (1847), his only published

COOKE, PHILIP ST GEORGE (1809-95) American soldier, born near Leesburg, Va graduated at West Point and was assigned as second lieutenant of the Sixth Infantity in 1827, served for many years on the frontier, partier-pated in the Black Hawk War of 1832, and became heutenant of dragoons in 1833 During the Mexican War he served from October, 1846, to July, 1849, in California as lieutenant colonel of a battalion of Missoull volunteers and for a short time commanded a regiment in the city of Mexico In 1847 he became major of the Second Dragoons. After 1849 he was reassigned to frontier duty, took part in several operations against the Indians, commanded the cavalry in the Utah expedition of 1857-58, became colonel of the Second Diagoons in 1858, and from August, 1860, to August, 1861, was in command of the Department of Utah He was raised to the rank of brigadier general in November, 1861, and participated as a commander of a cavalry division in the Peninsular Campaign, commanded the Baton Rouge District of the Department of the Gulf from October, 1863, to May, 1864, and from May, 1864, to March, 1866, was general superintendent of the recruiting service close of the war he was brevetted major general He commanded the Department of the Platte in 1866-67, the Department of the Cumberland in 1869-70, and the Department of the Lakes from 1870 until his retirement in 1873. He published. Scencs and Adventures in the Army, or Romance of Military Lufe (1856), The Conquest of New Mewroo and California: An Historical and Personal Narrative (1878); New Cavalry Tac-

tics (1884).
COOKE, RICHARD JOSEPH (1853- ). An
American Methodist Episcopal bishop, boin in

New York He entered the ministry in 1873 and was ordained in 1876, graduated at East Tennessee Weeleyan University in 1880 and studied in Berlin for a year, and was connected after 1889 with Grant University (Chattanoega, Tenn), of which he became professor of New Testament evegesis in that year and vice characellor in 1893 His greatest influence in the Methodst chuich was as editor of the thruch from 1904 to 1912, when he was closen bishop Among Di Cooke's works are Doutrine of the Resurvection (1884), Reasons for Chuich Creed (1888), Christianily and Childhood (1891), The Historic Episcopate (1896), Christ and the Critice (1898), The Insert Episcopate (1896), and Rector Criticism (1907), The Wingless Hou (1911), and Freedom of Thought in Religious Teaching (1913)

COOKE, ROSE TERRY (1827-92) An American poet and writer of short stories, chiefly of New England rural life, whose prominent characteristics are pathos and humor She was born at West Hartford, Conn After her marriage to R H Cooke in 1873 she lived at Winsted, Conn, till 1887, removing thence to Pittsfield, Mass, where she died in 1892 Her first published work was Poems (1860) A second and complete col-lection of her verses was made under the same title in 1888 She then turned to fiction, often defective in form, but spontaneous, fiesh in its humor, and keen in its perception of New England traits and character Her volumes, except for a single novel, Steadjast (1889), are collections of short stories Happy Dodd (1879), Somebody's Neighbors (1881), Root-Bound (1885), The Sphina's Children (1886), Huckle-berries (1891)

COOKE, Thomas (1703-56) An English writer, known as Hestod Cooke In 1725 he published a poem called The Battle of the Poets, in which he attacked Pope and the other wits and was rewarded by a place in the Dunciad (11, 138) He did a Large amount of insecllations literary work and was for a time edition of the Craftsman. He has a deserved place in Herratine as the translator of Hestod (1728) and of Terence (1734)

COOKE, SIE WILLIAM FOTHERGIAL (1866-79). An English electrical engineer, born at Ealing, in Middlesex. He received his education at Durham and Edinburgh, served on the Indian staff from 1826 to 1831, and then standed medicine and the physical sciences in France and in Germany. In 1837 he entered into particularly with Wheatstone, and together with hun rendered services of the highest upportance to electrical engineering, especially to telegraphy. In 1838 he built the first English telegraph line, between London and West Drayton. He published The Electrica Telegraph. Was It Invented by University Wheatstoney (1856).

by the ofesson Wheatstone? (1854)

COOKCERY. The art of preparing food for
the table. In general, the preliminary processes
of cleaning foods, paring vegetables, etc., are included under the term "cookery" as is also the
preparation of foods by chilling or freezing.
Some foods, e.g., fruits, are enten both raw and
cooked, both being wholesome. In the majority
of cases, however, the effect of proper cooking is
to render food more wholesome and pulatable
than in the raw state. The heat of cooking also
sterilizes food if microtrganisms, insects, or their
eggs be present accedentally.

History. Cooking, in one form or another,

has been practiced since immemorial times, and the knowledge we possess of the ancient modes of cooking presents some interest in connection with the study of the customs and habits of the past The Egyptians possessed wheaten flour of the finest sort Then common bread was made of spelt, or of the centre of the lotus dried and pounded Leeks and onions seem to have been common vegetables Fish they salted and dried in the sun, quails, ducks, and small birds they salted and ate raw We read of their roasting

and boiling the flesh of the ox
Fish was a common article of food with all classes of Greeks, but with the wealthier much skill and delicacy was used in cooking it, and choice and expensive varieties were sought after Archestratus writes of "a boiled torpedo done in oil and wine, and fragrant herbs, and some thin grated cheese" (au gratin) Fish, stuffed with forcemeat and fried, boiled in pickle, baked in fig leaves soaked in oil, cooked in hot ashes, etc., are among the recipes that we find recorded The Greeks boiled and roasted the flesh of sheep, pigs, lambs, and goats They had poultry, small birds, and game, and sausage made of blood, partaking of the character of blood puddings (Blut-The bread of Athens was the most celebrated in Greece, it was sometimes homemade, but chiefly bought in the market, and prepared in great variety, as pan loaves, rolls, sweet loaves, etc The bread eaten by the poorer classes was made of barley and was sometimes flavored with oil, honey, poppy seed, etc Athenian cheese cakes were also famous, and there were honey and sesame cakes, which, with fresh and dired fiuits, as figs, almonds, olives, and nuts, seem to have been partaken of after dinner. They consumed vegetable food also in abundance and had cabbage, onions, lettuce, and so on

In the Greek house there was no regular cook, though in the establishments of the wealthy several women were kept to attend to the kitchen The women in general saw to the requirements of the table, and even the mistress of the house was not idle Cooks stood in the market in Athens, ready to be hired for particular occasions The

most celebrated were those of Sicily, they were probably persons of some importance

In the early days of Rome a gruel made of lentils, and called puls, was the common food of the people, and with green and other vegetables was, till later times, the usual fare of the inferior classes-meat being used but sparingly By degrees, however, a taste for better eating crept in, and after the Asiatic conquests luxury was imported The wealthy Romans were fond of elegant service at their tables and studied carefully the quality of the viands, that were placed before them They seem to have been as clever as the French in preparing suiplises and in carrying out disguises in their dishes. The Romans prepared and cooked their food with oil to a great extent. Their meals probably consisted of two courses and a dessert, the first course being intended to excite an appetite; the second was a joint, reasted or baked The Greeks and Romans used honey for the purposes for which we use sugar Cane sugar probably was cultivated in China, and its manufacture understood there, but the Greeks took it for a kind of solid honey and used it only for medicinal purposes

Of ancient British cooking not much is known, it was probably of an extremely rude description. Hares, poultry, and fish are said to have been forbidden as food. The Saxon chronicles make some reference to cooking. The Danes and Germans appear to have paid little attention to the preparation of their eatables The Normans were more curious in these matters; some offices among them were held in right of the kitchen In early English cooking much use was made of the mortar Oil and lard were used instead of butter Many English cookbooks bear an early date, as *The Forme of Cury*, by Pegge (1780), and others date as follows Sir J Elliott's book (1539), Abraham Veale's (1575), and The Widdone's Treasure (1625)

From the writings of early explorers a good deal is known of the cookery of the American Indians. They roasted food, baked it in earth ovens, and boiled it, as did most primitive peoples We owe to them one of our common foods, Indian corn or marze, and some of our corn dishes, eg, succotash (corn and beans cooked together), are of Indian origin The cooking of France was probably of an im-

perfect and rude kind until the introduction of Italian tastes by the princesses of the house of the Medici The great difference between French and English or American cooking consists in the fact that the French cook their meat much longer, knowing that this renders it more tender They are thereby enabled to multiply dishes by altering or annihilating the original taste of the meat and making it a vehicle for foreign flavors. The variety, daintiness, and grace of form which dishes thus acquire are very admirable In the point of economy, the French are commonly said to surpass the Angle-Saxon Great attention is given by the French to the economical use of materials, to seasoning, and to careful cookery Bread and pastry are less often made at home in France than in the United States Jewish cookery is termed "Kosher," i.e., "ceremonially clean," in accordance with the requirements of the Mosaic law The word is used of foods which meet these requirements, especially of meats from animals slaughtered in accordance with Jewish ecclesiastical law, as well as of methods of preparing food.

The art of cooking as a branch of woman's education has latterly engaged considerable attention in America, England, and other countries, and there are in New York, Boston, Philadelphia, Canada, and other places schools where young women can receive this kind of instruc-tion. The preparation of food is an essential part of any course in home economics, a subject commonly found in the curricula of colleges and other schools for women-the colleges and similar institutions specializing commonly on theories of nutrition, of cookery, etc., and the grade schools giving instruction quite largely in the

The principal cooking methods are boiling, steaming, roasting, broiling, frying, and bak-These terms and similar ones are not absolute, but are used somewhat loosely

Boiling consists in cooking food in water at the boiling temperature, 212° F or 100° C., with heat enough to insure vigorous ebullition The water may be seasoned with salt, sugar, seasoning herbs, etc, according to the food used and the object sought

Steeping, infusing, and percolating are special processes akin to boiling, usually employed in the making of such beverages as tea and coffee.

Another special form of cooking in hot water is coddling, in which eggs, eg, are placed in boiling hot water which is allowed to cool gradually without further application of heat

Steaming consists in cooking food over boiling water or in live steam in some special device

Roasting, a process more used formerly than at the present time, is employed chiefly with meats, fish, and fowl The food is cooked in the open air in front of a fire, being suspended or placed on a spit or some similar device so that it can be rotated Frequent basting is desirable A similar method is planking, in which the meat or fish is fastened to a suitable board or plank and placed in front of a fire until cooked Bread, particularly Indian corn bread, may be cooked in the same way. The term is now applied to cooking meat and vegetables in ovens, more properly known as "baking"

Broiling, or grilling, is a process similar in principle, in which the food-most commonly meat, fish, or fowl—is cooked on a gridiron, broiler, or other device over or under the fire When bread or similar food is thus treated, it

is termed toasting

Baking is a general term applied to cooking in hot, relatively dry air in an inclosed space, as an oven, the process being used with meats and fish as well as with breadstuffs, vegetables, and other foods Utensils of various sorts are used to contain the foods during baking Meat baked in open, shallow pans resembles roasted meat in appealance, and in fact is generally termed "loast meat," since true loasting has become an uncommon practice in households.

Frying is of two sorts, viz, deep frying, in which the food is immersed in hot or boiling oil or fat, and sautoing (pan frying, dry frying, or pan broiling), in which the food is cooked in an open shallow utensil in its own fat or nn a small amount of added fat, sometimes only enough to "grease the pan" Frying is a method used with meat, vegetables, batters, and other food materials

There are also special forms of these cooking processes which are very largely determined by the kind of utensil used For mstance, casserole cookery, in which the foods are cooked in a covered vessel, usually earthenware is akin to baking or to sautéing if the food is cooked in a little fat with or without seasoning, or akin to stewing if water or other liquid is added Casserole cooking is essentially the same as the process sometimes termed braising, in which the food, e.g., meat, is browned and then cooked in a moist heat in a closely covered utensil. The term braising is also applied to browning the surface of food, eg, an omelet, by holding a red-hot iion over it

A double bosler, or barn marie, is a common cooking device in which food is placed in a container which in turn is partly immersed in boil-

ing water or in steam

In so-called fireless cookers hot foods are placed in insulated air spaces and cooked by the retained heat alone or by this with the addition of heat supplied by hot stones or iron plates or in some similar way. The principle is similar to that employed in keeping liquids, etc, hot in vacuum jacketed bottles or similar containers See FireLess Cooking

The chaffing dish is a common special cooking utensil It is usually made of silver, copper, or other metal, and foods may be cooked in a pan directly over the flame, usually an alcohol lamp or in a pan over a hot-water pan which is next to the flame. Electric chafing dishes are also common, as are many other special cooking appliances and utensils in which electricity is used as a source of heat instead of the usual fuels-wood, coal, gas, petroleum,

Judging by the results of many careful laboratory experiments, the chief loss of weight in cooking meat is due to the driving off of water. When beef is pan-broiled, there appears to be no great loss of nutritive material, parto be no great ross of material adhering to the pan is utilized for making gravy. When beef is cooked in water, 3 to 20 per cent of the total substance is extracted and found in the broth. This is not an actual loss if the broth is used for soup or in other ways Beef used for the preparation of beef tea or broth, on an average, loses relatively little nutritive material, though much of the flavoring material is removed. The amount of fat in the broth varies directly with the amount originally present in the meat, the fatter the meat the greater the quantity removed In cooking in water, the smaller the piece the greater the amount of material removed, and the longer the time the more material removed Cookbooks generally state that when meat is boiled for the table it should be plunged at once into boiling water, so that the outer layer may be coagulated, and recommend that it should be placed in cold water and slowly raised to the boiling point when used for soup making Experiments show that the amount of material removed is practically the same whichever method is followed In general, soups and broths do not contain much of the nutirtive material of the meat, though they do contain much of the flavoring material originally present

Authorities quite generally agree that when meat is baked it should be submitted at once to a degree of heat which will sear the outside of the roast so that the juices may be retained in it, and that the subsequent cooking should be rapid rather than slow, and at a high rather than a moderate oven temperature. To insure a rare (underdone) or medium well-cooked loast, the cooking should continue 13 to 15 minutes per pound, and 13 to 15 minutes "to the oven", and 20 minutes per pound and 20 minutes "to the oven" for a well-done roast

Experiments have shown that meats of vanous kinds and cuts cooked by the ordinary methods are all very thoroughly assumilated, no marked difference being found which could be ascribed to the kind or cut, or to the method of cooking. There is a common belief, apparently borne out by experience, that for invalid cookery the meats should be cooked in such a way that they are very tender, and similarly that soft-cooked eggs are preferable to hard-cooked eggs Breads and other foods made from flour and meals should be cooked sufficiently to remove the raw or "doughy" taste, i.e, until the starch is well gelatimized. It is a general belief, well borne out by experience, that cereal breakfast foods and similar articles are best when cooked slowly for a long time. Fried foods should not be cooked at a temperature so high that the fat undergoes decomposition, since acrolem, one of the products formed from overheated fat, is very irritating to the nucous surfaces. Very probably the presence of this substance in fried foods impropelly cooked is responsible for the statement often made that fired foods are the cause of digestion disturbances

Vegetables tables are commonly fried, boiled, or Potatoes should be cooked until they are tender and mealy. If boiled, the water is commonly poured off, and the potatoes allowed to stand where they will keep hot in order that they may "steam" or "dry out" Green vegetables are most commonly cooked in boiling salt water, and the process should be continued only until they are tender, as overcooking injures the flavor and color Special directions for cooking fruits and nuts, for making breads, Special directions cake, pastries, bonbons, etc , as well as for pieparing the foods enumerated above, can be found in the numerous books and journals devoted to cookery

Every precaution should be taken to insure cleanliness in the cooking of food. This is important, not only because one wishes to avoid filth, but also because unclean methods make possible the transmission of disease

In the United States and in other countries there is a growing effort to secure cleanliness in markets, food factories, bakeries, hotels, restaurants, and other places where food is handled, prepared, sold, and eaten. With this end in view legislation has been enacted in many places, providing for inspection and for punishment if the law is violated

COOK INLET. A bay of the Pacific Ocean, indenting the south coast of Alaska, between the Alaskan and Kenai peninsulas (Map. Alaska, J 5). It is included between lat 50° and 61° 20' N and long. 149° and 154° W. In shape long, relatively nairow, and crooked, its length is about 200 miles and its greatest breadth 60 miles Sudden storms, fogs, and tidal rips, due to high tides along the broken coast line, make navigation at the northern extremity somewhat dangerous, though steamers ply its waters without serious difficulty during the season From November to May the northern part is locked in ice. It contains several ıslands, Augustine Island, with its volcano Mount St Augustine, in violent eluption during 1883, being the largest The coast scenery is grand, comprising active volcances (of which Mount Ilamma, 12,066 feet altitude, is the highest). snow-clad mountains, glaciers, and green hills. At its northern extremity are the Knik Arm and the Turnagam Arm, branching to the north-east and cast. It was explored in 1778 by the navigator whose name it bears, in the hope of finding a passage to the Arctic Sea It receives the waters from a number of rivers, chief of which is the Sushitna River, coming from the north Coal is found on its shores, along which are a number of small towns Seldovia is the steamship port of call

COOK ISLANDS, or HERVEY GROUP An archipelago of small islands in Polynesia Pacific Ocean, consisting of six large and a number of small islands and reefs, extending from about lat 19° to 22° S and from long 157° to 163° W southeast of Samoa and northwest of the Austral Islands (Map World, West. Hem, M 4). The total area is 150 square miles Rarotonga, with an area of 26 square miles, is the largest island The soil is generally fertile, but water is scarce. The chief products are copra, coffee, and oranges, and the trade is mostly with New Zealand, with which the group mostly with New Zeniana, with which the group has monthly steam communication Pop, 1906, 6708, 1911, 6964, chiefly consisting of Polynesians of the second, or Tongafit, swarm of migration, and all converted to Christianity of evangelical type. The group was discovered by Cook in 1773-77, made a British potertorate in 1888, and annexed in June, 1901, to the Dominion of New Zealand The islanders have a legislature of heads of families and an executive council of the higher chiefs, the acts of the legislature require the approval of the British Resident, whose residence is on Raro-

COOK'S EXCURSIONS A system of travel originated by Thomas Cook in 1841, by which companies of tourists are conducted by a manager or guide, who makes all the traveling arrangements and directs the disposition of the

COOK'S TALE, THE. One of the Stories forming Chaucer's Canterbury Tales

COOK STRAIT. A passage which separates

North Island and South Island, New Zealand (Map · New Zealand, S I, E 2). Its greatest width is 90 miles. It was discovered by Captain Cook on his first voyage in 1769 COOK'TOWN. A town and port of Banks

Co, Queensland, at the mouth of the historic Endeavor River in 15° 27' 20" S lat, 145° 17' E long, 1050 miles northwest of Brisbane, with which and with other ports it is connected by steamship service (Map Australasia, D 4)
It is connected by rail with Lauia in the gold
fields, 67 miles westward It was here that
Captain Cook beached the Endeavor in 1770 after he had got her off a reef outside, having thrown his guns overboard to keep the ship afloat Search has failed to recover the guns, which have evidently been covered up by the strong coral growths of the vicinity A monu-ment to Captain Cook was unveiled in 1889. There are fine public buildings, an admirable hospital, churches, schools, etc. It is the main port for trade with New Guinea, and the port is the outlet for a sugar country and a rich mineral country It has pearl fisheries, coffee Pop., 1901, 1936, 1911 (election district), 3349.

COO'LEY, LEROY CLARK (1833- ). An

American chemist He was born at Point Penınsula, ın Jefferson Co, New York, graduated at Union College in 1858, and from 1860 to 1874 was professor of natural sciences in the New York State Normal School In 1874 he became professor of physics and chemistry in Vassar

His chair was made that of physics only in 1894, and he became professor emeritus in 1907. His works include The New Text-Book of Physics (1880), The New Text-Book of Chemistry (1881), Laboratory Studies in Chemistry (1894), The Student's Manual of Physics (1897)

COOLEY, MORTIMER ELWYN (1855- ).
An American engineer, born at Canandaigua,
N Y. He graduated from the United States Naval Academy in 1878, in 1881 became professor of mechanical engineering and in 1904 nessor of mechanical engineering and in 1904 dean of the department of engineering at the University of Michigan, was chief engineer in the United States navy during the Spanish-American War, and chief engineer officer of the Michigan Naval Brigade from 1995 to 1911. After 1900 he was known as an expert investigator and appraise of public utilities through his work in appraising the railroads and publicservice corporations of Michigan in 1900-01, 1903-05 and 1910-11, and through his municipal investigations in New York, Chicago, Boston, and other cities In 1907 he became chairman of the Block Signal and Train Control Board of the Interstate Commerce Commission

COOLEY, THOMAS McINTYRE (1824-98) American jurist and writer on constitutional law He was born in Attica, N Y, but removed to Michigan in 1843 and in 1846 was admitted to the bar He compiled the general statutes of the State, was reporter for the Supreme Court (1858-64), and published eight volumes of re-ports and a digest of the Michigan decisions He was professor in the law department of the University of Michigan and dean of the faculty in 1859 In 1861 he became professor of constitutional and administrative law in the school of political science in the university, and also dean, and later occupied the chair of American history in the academic department 1864 to 1885 he was a justice of the State Supreme Court, and was Chief Justice from 1868 to 1869 In . 1887 he became chanman of the Interstate Commerce Commission, but resigned Judge Cooley's publications four years later on constitutional law, which are authoritative, are The Constitutional Limitations which Rest upon the Legislative Power of the States of the American Union (1868), Story's Commenta-ries on the Constitution of the United States, with Additional Commentaries on the New with Advitional Commentation on the New Amendments (1873), Law of Taxation (1876); The Law of Torts (1879), General Principles of Constitutional Law in the United States (1880, 3d ed, 1898)

COOLGAR/DIE A mining town in Western Australia, 310 miles cast-northeast of Perth, with which it is connected by rail and telegraph (Map Western Australia, E 10) Gold, discovered here in 1891, has given nich yields since 1893 Lignite and copper are also mined Pop,

4249, 1907, 2829

COOLIDGE, ARGUIBALD CARY (1866- ).
An American professor of history, born in Boston and educated at Harvard University, the University of Berlin, the Ecole des Sciences Politiques (Pails), and the University of Frei-"He was acting secretary to the American legation at St Petersburg in 1800-91 and secretary to the American legation at Vienna in 1893 In 1893-99 he was instructor in history at Harvard, from 1899 to 1908 assistant pro-fessor, and thereafter professor, in 1911 he also became director of the University Library He was a member of the Taft party to the Philippine Islands in 1905-06, Haivard lecturer at various French universities in 1906-07, and delegate to the Pan-American Scientific gress at Santiago, Chile, in 1908-09 In 1913-14 he was American exchange professor at the University of Berlin He is author of The United States as a World Power (1908, French and German translations)

COOLIDGE, CHARLES ALLERTON (1858-An American architect, born in Boston. was educated at Haivard University and the Massachusetts Institute of Technology, and was in the office of H H Richardson, architect, in Boston from 1882 until he became a member of the firm of Shepley, Rutan & Coolidge in 1886 From 1892 to 1900 he had charge of the Chicago From 1892 to 1990 he had charge of the Chicago office of the firm Among the notable buildings planned by him are the Ames Buildings planned by him are the Ames Buildings South Terminal Station, and the new Harvard Medical School buildings at Boston, the Chicago Public Labrary, Chicago Art Institute, and the Law School and Commons of Chicago Thursent Chicago Indiana Chicago Chicago Indiana Chicag University

COOLIDGE, MARY (ELIZABETH BURROUGHS) An American econo-ROBERTS (1860mist, born at Kingsbury, Ind, and educated at Cornell and Leland Stanford Junior universities She was on the staff of the Rural New Yorker (1880-81), taught history in the Washington (D C) High School (1882-84), was instructor in history and economics at Wellesley College (1886-90), and between 1896 and 1903 was assistant and associate professor of sociology at Stanford University For four years she served as research assistant in the Carnegie Institution, and in 1909 she engaged in research for the San Francisco Relief Survey She was mairied to Dane Coolidge in 1906 Wainer's American Charities (1908), and wrote Chinese Immigration (1909), Why Women Are So (1912)

COO'LIDGE, SUSAN. The pen name of Miss

Sarah Chauncey Woolsey (qv) COOLIDGE, THOMAS JEFFERSON (1831-Πe An American manufacturer and diplomat was born in Boston, Mass., and was educated at Harvard and in Europe In 1892 he was sent as United States Minister to France, but was superseded by James B Eustis in 1893 He was appointed member of the Joint High Commission to adjust disputes between the United States and Canada in 1899 He was interested in various banking, manufacturing, and transportation enterprises, as president, manager, or treasurer Consult his autobiography (Boston, 10021

COOLIDGE, WILLIAM AUGUSTUS BREVOORT (1850-(1850- ) An American writer on Switzerland. He was born near New York City and was educated at St. Paul's, Concord, N. II., Elizabeth College, Guernsey, and Exeter College, Oxford. In 1875 he became life fellow of Magdalen College, Oxford, but did not give up his citizenship in the United States. He was pro-fessor of English history at St. David's College, Lampeter, in 1880-81, and modern history tutor at Magdalen in 1881-85. His experiences us a member of the English Alpine Club, together with his knowledge of French, modern history, and jurisprudence, made him the foremost writer m English on Swiss topography, history, government, and biography. In 1908 he received the honorary degree of Ph D. from the University of Bern. He wrote and revised several

guidebooks to Switzeiland and the Alps, edited the Alpine Journal (1880-89), contributed articles on Switzerland to reviews and works of reference, and published The Mountains of Cogne (1893), The Alps in Nature and History (1908), and Alpine Studies (1912)

COO'LIE (Beng lali, Hind qull, laborer, from Tamil kūli, daily hire) A name applied to an unskilled laborer in India and eastern Asia and to contract emigrant laborers sent from India and China to other countries, especially the West Indies and South Africa In tropical countries where white labor is impossible, there arose with the abolition of slavery a need for cheap labor capable of doing the heavy tasks of plantations, factories, and shipping. For this purpose the acclimated cheap labor of the overpopulated Asiatic countries seemed especially adapted The coole trade began about 1834 It was accompanied by abuses which made it little better than a form of slavery, and Great Britain, which had been largely interested in the trade, undertook to put a stop to it in 1855 This threw it largely into the hands of the Portuguese The coolie trade from Macao to Cuba and Peru was little better than the slave trade so far as its conditions were concerned The traffic was regulated by the convention of 1866 between China, France, and Great Britain The requirement by China of a return passage at the end of five years stopped the trade with the West Indies Under the Indian Emigration Act of 1883 emigration under contract is allowed only to certain colonies, where good treatment is assured These are the British colonies of British Guiana, Jamaica, Mauritius, Timidad, St. Lucia, St. Kitts, St. Vincent, Grenada, Natal, and Fij, and the French Guadaloupe and Martinique, as well as Dutch Guiana and the Danish St Croix.

In the Transvaal, after the conclusion of the South African War, the deficiency of native labor in the Rand mines led to the enactment of an ordinance in February, 1904, providing for the importation of Clinese laborers under a system of indenture The terms under which the importation of laborers was to be carried on were set forth in a convention between the Butish and Chinese governments concluded May 1, 1904 The Boer element in the Transvaal was bitterly opposed to the ordinance as tending to introduce a new factor into the al-leady serious racial problem of South Africa The compound system of housing the Chinese miners was not free from violence, and the many serious crimes committed by runaway coolies created a feeling of alarm in the Transvaal and in England, where the Liberal party denounced the system as one equivalent in practice to slavery. The issue was largely responsible for the Liberal triumph in the General Election of 1906, and one of the first acts of the Campbell-Banneiman ministry was an order for the stoppage of coolie importation until the establishment of responsible government in the Transvaal should enable the colony to pronounce on the system By 1906 over 50,000 laborers had been imported, and the result has been that the treatment of these alien Asiatics has become one of the most vital questions in South African politics (See Union of South AFRICA.) Consult Jenkins, The Coolie. His Rights and Wrongs (London, 1871); Hope, In Quest of Coolies (1b, 1872).

COOLIE LABOR See ORIENTAL IMMIGRA-

COOMAS'SIE Sce Kumassi

COON OYSTER An oyster growing wild near shore, where it can easily be obtained by a raccoon The name originated in the southern United States, where these oysters are often called "strap oysters," because then clustered manner of growth makes them long, narrow, and thin

COOMS. A popular name (contracted from raccoon) for members of the Whig party in 1838-45, when the raccoon formed the emblem of the party COON'TIE.

See ZAMIA

COOPER, koop'er or kup'er, Anthony Asu-See SHAFTESBURY.

COO'PER, SIR ASTLEY PASTON (1768-1841). A celebrated English surgeon, born in Norfolk In 1784 he began the study of surgery in London under Mr. Cline and in 1789 was appointed demonstrator of anatomy at St. Thomas's Hospttal. In 1793 he was appointed professor of anatomy at Surgeons' Hall, and in 1800, sur-geon to Guy's Hospital In 1813 he received the professorship of comparative anatomy in the College of Surgeons An essay on the effects resulting from the destruction of the membrana tympani gained him, in 1802, the Copley medal of the Royal Society, of which he was elected a fellow three years afterward In 1804-07 appeared his great work on Herma. His other works include The Principles and Practice of Surgery (1836-37), On Dislocations and Frac-tures (1822), Anatomy and Diseases of the Breast (1829-40); Anatomy of the Thyroid Gland (1832) He was the first to attempt the tying of the carotid artery—an attempt which, though unsuccessful in his hands, has since proved effectual in the hands of other practitioners In 1817 he tried what was considered the boldest experiment ever attempted in surgery-the tying of the aorta-which did not prove successrul. Consult his Life and Correspondence, 2 vols. (London, 1843)

COOPER, COLIN CAMPBELL (1856— ). An

American landscape painter He was born in Philadelphia and studied there at the Academy of Fine Arts and in Paris at the Julian and Delécluse academies After a year as teacher in Drexel Institute, Philadelphia, he settled in New York He was one of the first to give expression to the distinctive beauty of Ameiican cities, with their skyscrapers and manifold activities A close observer, he reminds one, in his color and atmospheric effects, of the Impressionists. He also paints cathedrals and views of quaint German cities, such as Rothenberg, with feeling and chaim Among his best-known works are "Broad Street, New York" (Cincinnati Museum), "The Flatiron Building" (Dallas, Texas), "Quebec Cathedral" (Philadelphia Art Club), "Procession of Briages" (1906, Lotos Club, New York), "View of Pittsburgh", "Beauvais Cathedral" (1912), "The Avenue" (1913), "Cathedral of Siena" (1913)

COOPER, EDITH EMMA See FIELD, MICHAEL COOPER, EMMA LAMPERT An American painter, wife of Colin Campbell Cooper, born at Nunda, N Y She was educated at Wells College and studied art under Harry Thomp-Conlege and studied art under Harry Inompson in Paris, Kever in Holland, and Chase in New York Her principal subjects are street scenes, interiors, and landscapes. Her picture in water color, 'The Bread Winner," was awarded a medal at the World's Columbian Expesition, Chicago, 1893 Other works include "Through the Meadows" (1900), "Morning near Riverdale" (Wells College), water-color views of Wells and Lincoln cathedials, "Courtyard, Verona" (1911), "The Market Stairway, Siena"

COOPER, FREDERIC TABER (1864-American editor and writer, born in New York City and educated at Haivaid and Columbia universities He was assistant in Latin at Columbia (1891-94), associate professor of Latin and Sanskrit at New York University (1895-1902), literary editor of the New York Commercial Advertiser (1898-1904), and editor of The Forum (1907-09) His publications inor the rotum (1997-99). His publications include History of the Nineteenth Century in Carcature, with A B Maurice (1904). The Craftsmanship of Writing (1911), Some American Story Tellers (1911) He contibuted to the first edition of the New International ENCYCLOP.EDIA

COOPER, GEORGE HENRY (1821-91) An American naval officer, boin in Fort Diamond, New York harbor He was appointed a midshipman in the United States navy in 1837 and in 1838-42 was attached to the Constitution, of the Pacific squadion From 1847 to 1861 he was stationed successively on board the receiving ship at Norfolk, Va, at the naval station there, on board the Susquehanna of the East Indian on positi one susquename of the East Indian squadron, again at Norfolk on board the Roamole of the Home squadron, and at the Portsmouth Navy Yard Promoted in 1862 to be commander, he was in charge of several vessels during the Civil War, notably of the monitor Sangamon, which for seven weeks in 1863 was constantly employed in shelling Fort Sumter and Sullivan's Island In 1867-69 he commanded the Norfolk Navy Yard, in 1874-78 that at Pensacola, Fla, and in 1880-82 that at Brooklyn, N Y. He was promoted rear admiral in 1881 and until his retirement in 1884 commanded the North Atlantic squadron, with the flagship Tennessee, and headquarters at New York

COOPER, Heney Ernest (1857- ). An American statesman, born at New Albany, Ind He graduated at the Boston University Law School in 1878 and subsequently became established at Honolulu Upon the outbreak of the Hawanan revolution he was appointed chairman of the Committee of Safety and three days later (Jan 17, 1893) publicly read the proclamation abolishing the monarchy. He was active in the organization of the provisional government and was subsequently appointed Minister of Foreign Affairs (1895-99), Minister of Public Instruction (1896-99), acting President of the Republic of Hawan (Jan 9 to March, 1898), and Attorney-General (1899-1900). He also served as Minister of the departments of the Interior and of Finance, and as first Secretary of Hawanan Territory COOPER, JACOB (1830-1904). An American

elergyman and author. He was born in Butler Co, Ohio, and was educated at Yale University, at Berlin, and at the Theological Seminaly in Edinburgh. He was professor of Greek at Centre College, Ky, from 1856 to 1866, professor of Greek at Rutgers College from 1866 to 1883, and professor of ethics and metaphysics at the University of Michigan from 1883 to 1884. From 1893 until his death he was professor

of philosophy and logic at Rutgers College. His publications include The Eleusinian Mysteries (1854), The Loyalty Demanded by the Present Crisis (1864). Creation, a Transference of Power (1900), The Passage from Mind to Matter (1901)

COOPER, JAMES (1810-63) An American statesman and soldier, born in Fiederic Co, Md. He graduated in 1832 at Washington College (Pa ), studied law in the office of Thaddeus Stevens at Gettysburg, Pa, and, upon his admission to the bar in 1834, began practice in that place In 1839-43 he was a Whig member of the Federal House of Representatives, in 1843-48 of the Pennsylvania Legislatuic, which he was Speaker in 1847, and in 1848 was elected State Attorney-General From 1849 to 1855 he was United States Senator Upon the outbreak of the Civil War he organized the Maryland volunteers, and in 1861 was appointed a brigadier general in the volunteer army He was subsequently assigned to the command of Camp Chase, Columbus, Ohio, where he was stationed until his death

COOPER, JAMES (1846- ). A British theologian, born at Elgin, Scotland After studying at the University of Aberdeen he was minister of St Stephen's at Broughty Ferry in 1873-81 and of the East Parish of St Nicholas at Aberdeen in 1881-96, and then became professor of church history in the University of Glasgow The degrees of DD, Litt D, and DCL were conferred upon him, respectively by Aberdeen, Trinity College (Dublin), and Durham He was president of the Scottish Ecclesiological Society in 1903, 1911, and 1912, edited the Society's Transactions, and wrote and edited various books on ecclesiology, including Reliques of Ancient Scottish Devotion (1913), and a volume of sermons

COOPER, JAMES FENIMORE (1789-1851). An American novelist, boin at Burlington, N J, Sept 15, 1789 His father came of good English and Quaker stock, his mother, Elizabeth Fenimore, was a Swede and also of Quaker ancestry He was the eleventh of 12 children and in his second year was taken by his father, William, to a large estate that he had acquired near Otsego Lake shortly after the Revolution. Here had been already laid out the site of Cooperstown. For some years the family lived in a log house, but the settlement prospered, and, determining to make it his home permanently, Cooper's father, who for many years represented the district in Congress, began in the year 1796 to build a manor house, Otsego Hall, which was for many years the finest residence in that region. That Cooper thus spent his boyhood years on the frontier of civilization, surrounded by primeval forests, and never far removed from the possibility of Indian raids, while in daily contact with the red men who came to Cooperstown for trade, was most important to his future literary development. The environment stimulated his imagination, made him responsive to the sense of mystery, and gave him materials for the most important section of his writings, the Leatherstocking Tales. He passed through the village school and received private instruction in the family of the Rev. Mr Ellison, rector of St. Peter's, Albany, whose refined culture and un-American ideals had a not altogether desirable effect on the style and character of the future novelist, who was something of an aristocrat at heart. In January, 1803, Cooper went to Yale College Here he learned more out of doors than in the classroom Indeed, he neglected his studies with such persistent defiance of academic restraints that he was expelled in his third year His father resented the action of the faculty, but readers may be glad that the future novelist of the sea should have been led to choose a naval career. To fit himself for this, there being no naval academy at that time, Cooper entered the merchant service as a sailor before the mast (September, 1806), and after 16 months' experience on the sea, in London, and at Gibraltar, received a midshipman's commission (Jan 1, 1808) He served for a time on the Vesuvius, then with a construction party on Lake Ontario, where he saw a new aspect of frontier life and became familiar with the details of shipbuilding. He saw also other forms of naval service before his resignation in 1811 Meantime he had been married (Jan 1, 1811) to a daughter of John Peter DeLancey, who came of a conspicuous Tory family The marriage was happy, but Cooper's resignation on the eve of the War of 1812 did not escape criticism, for a Tory connection seemed to imply lack of patriotism. For the next 10 years he lived chiefly in Westchester County, his wife's home, devoting himself to farming and becoming the father of six children before he con-ceived the idea of authorship. As it was, he began to write, less in emulation of the success of others than through conviction of their fail-He had been reading an English novel aloud, when he suddenly said to his wife, "I believe I could write a better story myself," and proceeded to try it But Precaution (1820), dealing with high life in England, about which Cooper knew nothing, was naturally a failure and wholly uncharacteristic of his future work Then, when advised to deal with more local themes, he remembered a story that John Jay had told years before about a spy, and his home in Westchester, the scene of much fighting during the Revolution, furnished a fit stage for the play of his fancy The result was The Spy (1821-22), which achieved a success till then unapproached in America and determined its author to pursue his new-found career proved to a very self-conscious generation that it was not impossible for America to produce a novelist almost worthy of being ranked with the great author of Waverley Even to-day it remains a stilling narrative that deals adequately with important events, and in Harvey Birch, the Spy, it has added to our national fiction one of its few imperishable characters

In 1823 Cooper began what is now known as the "Leatherstocking Series" with The Proneers, for he did not compose the famous five romances in their natural chonological order Early in the next year he published The Pulot, thus practically for the first time joining the ocean to do did not not be suffered by added the backwoods and as he was soon to add the piarie. He also added to Harvey Birch and Natty Bimppo his third great character, Long Tom Coffin He now removed to New York City and shortly after had a serious illness. His next novel was Lonel Lincoln (1825), a story of Boston during the Revolution This was not specially successful, but in 1826 The Last of the Mohocans placed him at the summit of his popularity and probably represented his highest achievement

In 1826 he changed his name, in compliance with the wishes of his grandmother, from simple James Cooper to James Fenimore-Cooper, but soon dropped the hyphen He could not easily get 11d of the misapprehensions caused by his act in a ciude society Immediately afterward he went abroad and resided there for seven years, during which time he was the recipient in foreign capitals of many attentions from distinguished people, but felt called upon, as in The Bravo (1831), to proclaim vigorously the beneficent greatness of republican institu-tions. His pride in the better features of American government and society did not, however, prevent him from being one of the first Americans to perceive how really crude his fellow citizens were, and he told them their faults with a frankness that was not discreet. He exploited his prejudices against New England and in favor of the Episcopal church, and soon became in his native land a synonym of all that was unpopular and snobbish His honest, if overemphatic, strictures outweighed with his comically sensitive critics such fine romances as The Prairie (1827), The Red Rover (1828—the dates of Cooper's books are often hard to determine exactly), and the less interesting, but creditable, Water Witch (1830). But the fault was not entirely on the side of his countrymen, for he took an injudicious part in more or less unnecessary foreign discussions of American political affairs

On his return to America, in 1833, he at first spent his winters in New York City, but soon took up his permanent abode at Cooperstown Here he published several volumes of travels, and still not restraining himself from criticism of his countrymen, especially in his story, Home as Found (1838), he was again embroiled in bitter controversy and exposed to almost incomprehensible vituperation, which was increased through the fact that in 1837 a dispute had arisen with regard to the claims of his townspeople upon a certain tract of the Cooper estate The great author's determination to enforce his plain rights was distorted by the newspapers into a heinous crime And, ironically enough, just at that time this proud aristocrat was being denounced in England for his ob-trusive republicanism But Cooper still plied his pen and produced his History of the Navy of the United States (1839), his Pathfinder (1840), his Deerslayer (1841), The Two Admirals (1842), and Wing-and-Wing (1842). For the admirable English and Mediterranean setting of the last two stories he was as much indebted to his European stay as he was to his return to the home of his boyhood for his equally admirable setting of the two novels pre-ceding Mention should be made here of an "antirent series" of novels, dealing with the well-known demagogic agriation against the proprietors of certain large estates in New York These were Satanstoe, The Cham-Bearer, and The Redskins (1845-46) The first of them contains one of the best pictures that we have of life in Colonial New York

Yet, while Cooper was thus composing novels which have been translated into many languages and have gained him an undying reputation abroad, especially in France, he was bringing libel suits against many of the Whig editors of his native State, among them Horace Greeley, Thurlow Weed, and James Watson Webb He was Quixotic enough to conduct these suits him-

self, and he proved able to win veidicts which finally brought his critics to their senses, although they did little to restore his popularity A later generation smiles wonderingly at the whole matter, but sympathizes with the pugnacious author. The last few years of Cooper's life saw the publication of enough novels to occupy an ordinary lifetime, but they added little to his reputation. He maintained his proud independence to the last, and just before his death forbade his family to give any biographer access to his papers—an injunction which has been obeyed, but which has not prevented the hie written by Prof. T. R. Lounsbury (qv) in the American Mem of Lotters Series (Boston, 1885) from being an adminable piece of work. Cooper died at Cooperstown, N. Y., Sept 14, 1861. Six months after his death a public meeting in New York, addressed by Daniel Webster and William Cullen Bryant, did something to atone for the very greatest

of her writers But even after the lapse of half a century it can hardly be said that Americans are prepared to do full justice to Cooper His great romances are frequently spoken of as if they were, in the His undoubted main, fit leading for boys only His undoubted defects, such as his careless style, his exploitation of his prejudices, his stilted conversations, his mability, as a rule, to draw women who were not distressingly prim, the fact that he wrote entirely too many novels, and that not a few of his men are as wooden as his womenthese grave faults have been put forward, while his greater ments have been kept in the background For, when at his best, as in nearly all the romances named above, Cooper was a great novelist. He had the nariative faculty of carrying his readers along, however much they might grumble at this detail or that In "Leatherstocking" he added a character to the small gallery of the world's fictitious personages-something no other American has ever ages—sometimg no other American has ever done, except Mrs Stowe—and in Harvey Birch, Long Tom Coffin, and other sailors, as well as in Uneas, Climgachgook, and other Indians, he created characters of undying power. His Indians, at whom it was once the fashion to sneer, as the creations of a romantic fancy, are now said by ethnologists to be far from over-He was, as we have seen, drawn portiantures practically the first writer to extend the domain of fiction over the sea, the pilmoval forest, and the prairie If he was in a way a follower of a still greater 10mancer, Scott, he won the enthusiastic commendation of two great writers of fiction, Balzac and Hugo, and he has the unique credit of having written a prose epic of the planting of his native country, which is as spacious and free as the virgin woods and lakes amid which its scenes are laid. In other words, Cooper is a large genius, who ranks well with his fellow romancers It is almost absurd to judge one of Cooper's rapidly written romances by the canons one might legitimately apply to a short story by Daudet or Mau-When the man is judged in the large by the effects of his best works, and when he is compared with his rivals like Simms and Bird, and with his predecessor, Brockden Brown, his full genius and the service he did American power his work has probably had no equal in America; with fewer crying faults he would

ın all lıkelıhood have been our greatest author

A full bibliography of Cooper is not needed here, but to the works already named may be added The Wept of Wish-ton-Wish (1829), The Headenmaner (1832), The Headenmaner (1832), The Headenmaner (1832), The Headenmaner (1838), The Choncices of Switzerland (1835), The Cooperstour (1838), Honeward Bound (1838), Mercedes of Castile (1840), Wyandotte (1843), Nea Augers (1843), Alphaat and Ishore (1844), The Crater (1847), Jack Tier (1848), Oab Openings (1848), The Sea-Lions (1848), The Ways of the Hour (1850) Louisbury's Life Licely and the Hour (1850) Louisbury's Life been devoted to Cooper (1901), Richardson, American Lite atture, vol in (New York, 1887-88), Wendell, A Literary History of America (th, 1909)—the chapter "Cooper", J. Ersking, Leading American Novelists (th, 1910), M. E. Phillips, James Fenumore Cooper (th, 1910), M. E. Phillips, James Fenumore Cooper (th, 1911), M. E. Phillips, James Fenumore Cooper (th, 1912), and essays by Mark Twain, T. W. Higginson, and Brander Matthews.

and Brander Matthews

COOPER, LANE (1875—) An American
educator He was born in New Brunswick,
N J, graduated at Rutgers College in 1896,
studied at Columbia, Yale, Beilin, Leipzig, and
the Collège de France, and in 1902 became an
instructor and in 1906 assistant professor of
English at Cornell University In his special
field—English literature of the early mineteenth
century—he published The Prose Poetry of
Thomas De Quancey (1902), The Power of the
Eye in Coleradge (1910), in Studies in honor of
J. M Hait), and a monumental Concordance
to the Poems of Wordsworth (1911). He also
wrote Theories of Style (1907), A Manual of
American Luterature (1909), in the "Tauchindz
Series," with Theodore Stanton and others), The

Function of the Leader in Scholarship (1911).
COOPER, Myles (1737-85) An English cleigyman, scholar, and educator, second president (1763-76) of King's College (now Columbia University) He was educated at Queen's College, Oxford (MA, 1760), was appointed a fellow of that college, and in 1762, on the recommendation of the Aichbishop of Canterbury, came to America as fellow of King's College, professor of moral philosophy, and assistant to President Samuel Johnson In 1763 he suc-ceeded Dr Johnson in the presidency He strengthened the curriculum and to the academic department and divinity school already existing added a medical school, which was organized in 1768, and in 1769 conferred the first medical degrees bestowed in America In 1771 he visited England on behalf of the college. A true Oxoman, a High-Churchman, and a Tory, he supported the cause of King George against the Colonies, and by such vehement pamphlets as A Friendly Address to All Reasonable Ameras A Printing Autores of our Late Political Con-icans on the Subject of our Late Political Con-fusion (1875), What Thinks 4e of the Congress Noof (1875), The American Querist (1874), made himself confluidy detected. On May 10, 1775, he escaped from a mole attack upon the college and the next day took passage for England. He there received the hvings of Sulhamsted-Abbots and Cowley and afterward became senior minister of the English chapel at Edinburgh. Among those trained under him were Gouverneur Morris, Robert R. Livingston, John Jay, and Alexander Hamilton. He was perhaps the finest classical scholar in eightcenth-century America

COOPER, PETER (1791-1883) An American inventor, manufacturer, and philanthropist, born in New York City He assisted his father in his successive occupations of hatter, biewer, and brickmaker, gained such education as his limited means allowed, and from 1808 to 1812 was apprenticed to a carriage builder He 1nvented a machine for shearing cloth, which was used during the War of 1812-15, then manufactured cabinet ware, was for a time a grocer, and finally established a glue and isinglass factory on Long Island, continuing the business for more than 50 years and acquiring great wealth In 1828 he built large non works in Baltimore, and afterward a rolling and wire mill in New York, and blast furnaces in Pennsylvania In 1830 he designed and built the first American locomotive engine, a rude little contrivance, which he exhibited on the Baltimore and Óhio Railroad, and about 1845 made at Trenton the first rolled-11 on beams for building purposes He was among the earliest to promote the laying of the Atlantic cable and for 18 years was president of the New York, Newfoundland, and London Telegraph Company. He invented a method of propelling canal boats by an endless chain, which, while not adopted at the time, was used later on the Delawaie and Rantan Canal Mr. Cooper served in both branches of the New York Common Council and as a trustee in the Public School Society, an organization formed to advance the cause of public education Upon the union of that body with the Board of Education he became a school commissioner. In 1876 he received the Independent nomination for Piesident Peter Cooper engaged in many forms of mercantile life gratitude for his success and wishing to afford others opportunities which he himself had never enjoyed, he established (1857-59) "Cooper Union" (qv) in New York City Consult Carter, "Life of Peter Cooper," in Contury Magazine (New York, 1883-84), and Raymond, Peter Cooper (ib, 1901).

COOPER, PHLIP HENRY (1844-1912). An American naval officer, born at Camden, N Y. After graduating from the United States Naval Academy in 1863 he served on the Constellation in the same year and on the Richmond in 1863-65, participating in the battle of Mobile Bay and the siege of Fort Morgan He served on the Powhatam in 1865-67, was for two years an instructor at the Naval Academy, took part in the Tehuantepee surveying expedition (1870-71), and from 1894 to 1898 was superintendent of the Naval Academy. During the Spanish-American War he commanded the Ohicago. He was promoted through the various grades to be rear admiral in 1902, and was squadron commander in 1003 and commander in chief of the Asiatic station in 1904. He was retired in the latter

OOPER, SUSAN FENIMORE (1813-94). An American author, born at Scarsdale, N Y Shawas the daughter of James Fenimore Cooper, the famous American novelist Her chief publications include Rural Hours (1850, 6th ed., 1854), a year's journal of country scenes, Rhyme and Reason of Country Life (1854), a volume of selections, Fields Old and New (1854), Mount Vernon to the Children of America (1858).

COOPER, THEODORE (1839-An Amermean engineer, born at Cooper's Plains, N Y, and educated at Rensselaer Polytechnic Insti-From 1861 to 1872 he was an engineer officer in the United States navy and in 1865-68 assistant professor at the Naval Academy He was associated with James B Eads in the construction of the St Louis Bridge, later was superintendent of the Delaware Bridge Company's shops, and then assistant general manager and superintendent of the Keystone Bridge Company, and acted as assistant engineer in charge of the constitution of the first elevated railroads in New York City From 1879 to the time of his retirement he was a consulting engineer on many important bridges, buildings, and aqueducts In 1903 he was a member of the board of experts on the Manhattan Bridge plans His writings include General Specifications for Iron and Steel Highway Bridges and Viaducts (1885, 7th ed, rev, 1909) and American Rail-road Bridges (1889)

COOPER, THOMAS (1759-1840) A British-

American scientist, political economist, educator, and publicist, conspicuous for his versatility and his radicalism in politics. He was born in London, studied for a time at Oxford, and was admitted to the bar In 1792 he spent four months in Paris and while there acted with James Watt, the famous inventor, as a delegate from the Manchester Constitutional Society to the Patriotic Societies of France For this both he and Watt were warmly criticized at home, especially by Edmund Burke, who took them to task in a somewhat intemperate speech before Parliament. To this speech Cooper replied in a caustic pamphlet entitled A Reply to Mr Bunke's Invective Against Mr Cooper and Mr Watt (1792), the circulation of which in a cheap edition designed to reach the lower classes was prohibited by the British government After an unsuccessful attempt, as a bleacher and calico plinter, to apply a secret process learned in France for preparing chlorine from sea salt, he emigrated to America in 1795, and for a short time practiced law in Northumberland Co., Pa He soon began to take an active part in support of the anti-Federalists in current political discussions, and for a violent attack upon President John Adams in the Reading Advertiser of Oct. 26, 1799, was tried under the Sedition Law (see ALIEN AND SEDITION ACTS), was convicted of libel, and, besides being fined \$400, was sentenced to six months' imprisonment He was appointed a land commissioner for the State of Pennsylvania in 1806 and subsequently acted as president judge of a common pleas district until 1811, when he was removed because of his alleged arbiprofessor of chemistry in Dickinson College, Pa, from 1811 to 1814, and of mineralogy and chemistry in the University of Pennsylvania from 1816 to 1819, and from 1820 to 1834 was president of South Carolina College, where he acted also as professor of chemistry and political econalso as professor of enemistry and political economy and for a time of "rhetoric, criticism, and belles-lettres." From 1834 until his death he was engaged, with Dr McCord, in revising the statutes of South Carolina, which were published m 10 volumes (Columbia, 1836-41) Though he was strongly condemned by many for his radicalism in philosophy, religion, and politics, he undoubtedly exercised a powerful influence in the South, especially in South Carolina, and did much to inculcate in the minds of the politicians of his State the doctrine of extreme States' rights, nullification, and free trade In a speech which was widely circulated in 1827 he openly urged both nullification and secession upon South Carolina, and he was unquestionably responsible to a considerable degree for the nullification measures of 1832-33 Cooper was highly esteemed by Thomas Jefferson, who secured for him the appointment as first professor of natural science and law in the University of Virginia-a position he was forced to resign on account of the fierce attacks made on him by the Viigima clergy Besides editing The Emporium of Arts and Sciences at Philadelphia from 1812 until 1814 and writing numerous pamphlets and articles for the press, he published Some Information Respecting America (1794), Political Essays (1800), An English Version of the Institutes of Justiman (1812), A Practical Treatise on Dyeing and Calico Printing (1815), Lectures on the Elements of Political Economy (1826), and A Treatise on the Law of Libel and the Liberty of the Press (1830)

COOPER, THOMAS (1805-92) An English Chartist agitator, poet, and author In youth he was a shoemaker, but at the age of 23, after a hard-gained education, became a schoolmaster He was the leader of the Leicester Chartists in 1841, lectured during the mots of that year, was found guilty of conspiracy and sedition, and was sent to prison for two years While in jail was sent to pison for two years While in Jail he wrote an epic poem, The Pur gatory of Suicide (1845), and a series of stories entitled Wise Saus and Modern Instances (1845) Some time afterward he wrote papers on The Condition of the People and Trumphs of Perseverance and Trumphs of Enterprise (1856) In 1848 he was lecturing, in 1849 he edited a radical penny paper, The Plain Speaker, and in 1850 a freethinking publication, Cooper's Journal Near the close of 1855 he gave up skepticism and afterward lectured in support of Christianity He published The Bridge of History over the Gulf of Time (1871), a Life of himself (1872), several volumes of sermons and Christian evidences, Collected Poems (1878), and Thoughts at Fourscore and Earlier (1884).

COOPER, THOMAS ABTHORPE (1776-1849) An actor who was boin at Hairow, England, but came to this country in 1796 and for many years held a leading place on the American stage He made his debut in Edinburgh and afterward played at Covent Garden, London, before coming to America, where he made his first appearance in Philadelphia, in the rôle of Macbeth quickly won great popularity. Later he went to New York and remained several years, gaining a wide reputation. In 1803-04 he was again in London and had a successful engagement at Drury Lane, in Shakespearean tragedy. A later visit to London, in 1827, met with a less flattering reception, for which he was requited, however, on his return to America, but before he retired from the stage his popularity in this country had greatly declined, as had also, apparently, his artistic talents. Among his best parts were Shylock, Richard III, Othello, Damon, and Virginius In later life he was for a time a customhouse officer in New York, a son of Presicustomiouse omeer in New York, a son of Fresi-dent Tylei having married one of Cooper's daughtens. It was at the home of this daughter in Bristol, Pa., that Cooper died. Consult Ire-land in Matthews and Hutton, Actors and Actresses of Great Britain and the United States, vol. 11 (New York, 1886)

COOPER, THOMAS SIDNEY (1803—1902) An English animal painter, born in Cantebury He was a pull of the Royal Academy in London, and of Veiboeckhoven in Brussels He first exhibited at the Royal Academy in 1833, where he contained to send work for 60 consecutive year le attained considerable reputation as a painter of cattle, and the skill and spirit with which depicted them made his works tery popular, but after 1860 he lost the originality that had been his distinguishing quality. Among his numerous pictures, in some of which Prederick R Lee and Creswick painted the landscapes, are "Ettrick Shepheids" (1842), "Cattle at Pasture" (1843) "River Scene" (1855, National Gallery), "Cow and two Sheep" (b), 1800), "God's Acre" (1875), "Issae's Substitute" (1892), consuit his autholography, My Life (1890)

COOPER, WILLIAM RANSON (1868 – A Bitish consulting engineer He was educated at Central Technical and King's colleges and the Royal University of Iteland In 1895 he joined the staff of James Swinburne as an assistant consulting engineer From 1899 to 1901 he edited Source Abstracts, and in 1006 he became edited of the Electricum He published Primary Enteries (1906), and also scientific papers, including the following Electric Traction on Trainivagis (1902), Alternate Current Electrolysis (1905), Telectricity Supply (1908), Dust Prevention (1909), Heat Tests of Electrical Machines (1913)

COOP'ERAGE (from coop, AS cupa, OS copa, OIIG chuofa, Ger Kufe, vat, from ML copa, Lat cupa, vat, Gk κόπη, λυρέ, hole, Skt kūṇa, well). The art of making vessels of pieces of wood bound together by hoops It is a very ancient art, such vessels having been in use among the Romans at the beginning of the Christian era. The upright preces forming the sides of a bairel, or cask, or other cooper's work, are called starcs, and, as casks are usually larger in the middle than at the top and bottom, this swelling, called the bolly or bulge, is formed by skillfully shaping each stave so that it shall form part of the required double conoid, and so that, when all are built and hooped together, their edges shall coincide perfectly. For this purpose each stave is made broadest in the middle, and narrowed down in a curved line towards each end A skillful cooper can produce this curve so accurately that no further fitting or alteration is needed when the staves are put together The staves are made to meet at then inner edges, and by driving the hoops very hard, the inner part is compressed until the slight gaping outside is closed, and thus slight inaccuracies of fitting are remedied. There are several branches of cooperage. The wet, or tight, cooper makes vessels for holding liquids. The dry, or slack, cooper does inferior work, such as barrels for containing dry goods, where an inferior degree of accuracy is sufficient. The nohite cooper makes churns, palls, etc, which for the most part have straight sides. The best wood to employ is oak, which must be thoroughly dried be-fore the staves are put together. Other woods employed are elm, pine, gum, beech, and bass in the order named. In warm countries the dry-ing of the sun is sufficient, and casks are therefore mounted in summer only, but in northern countries artificial drying is commonly resorted The hoops are hammered down from the narrow to the wide part of the cask, by means of a mallet striking a piece of wood or iron held against the hoop. Iron hoops are sometimes put on hot, in order that their contraction on cooling may bind the work together

Like most other processes of manufacture, the cooper's trade has changed in modern times, with the substitution of machinery for handwork The machinery used is commonly termed "barrelmaking machinery", but it is employed, with suitable modifications, in making casks and kegs as well as banels Barrel-making machinery may be divided into machines for the manufacture of staves, machines for manufacturing heads, and machines for setting up and finishing the barrel For cutting staves a stave cutter with a knife 36 inches in length and 6½ inches in width with a face ground to a circle of 20 inches may be used, or a cylindrical stave saw, the latter being generally used for making slack staves from hemlock, jack pine, pitch pine, spiuce, and other soft woods It is a cylindrical sheet, hav-ing teeth upon one end The bolts or blocks of wood, after having been steamed and cut on the equalizer so that they are of the desired length and square on the ends, are clamped in the usual manner, and the staves fall within the cylinder. They are then laid upon an endless conveyer, which carries them against two circulas saws that cut them a definite length. Each piece is then placed in a pair of clamps, and moved against a lotary wheel provided with cutters, that diess the edge to the required bilge and bevel, the bilge is the increased width midway between the ends, which causes the enlarged diameter of the cask at the middle, the bevel is the angle given to the edge conforming to the radius of the cask The suiface of the stave is smoothed by passing it under revolving cutters, a recent form of machine takes off the surplus wood from liven staves without cutting across the grain, following winding or crooked pieces as they are split from the block The heads are usually made of several flat pieces jointed and fastened with dowels, or pins of wood. The edge of each piece is pushed against the side of a rotary disk, provided with cutters that instantly straighten it, it is then pushed against bits that bore holes for the pins to be afterward inserted by hand. Several boards being pinned together, enough to make a head, the whole is first smoothed on one side and dressed to a uniform thickness, then it is clamped between two disks and, as these disks turn, a saw trims the head into a circle with a beveled edge, if the wood is green, an oval form may be given to provide

against shrinking The barrel has next to be "set up." A sufficient number of staves are set into a frame, their edges refitted if necessary, stout non hoops, called "truss hoops," pushed up from below, grasp the lower ends tightly, and the whole may be lifted from the mold One end of the barrel is formed, but the other end is open and flaring. A rope is passed about the open end and taken to a windlass, and the staves are drawn together by tightening the rope, in this stage the barrel is heated, to cause the staves to yield more easily to their required form The bariel is now leveled by placing it upon a horizontal bed and bringing down upon it a powerful disk that presses upon its ends and forces the staves into A machine is devised their proper position A machine is devised which trusses and levels the barrel at a single movement The slack barrel stands in its truss hoops, two on each end, those of the lower end rest on strong supports, those of the upper end are seized by hooks whose handles pass down through the platform to a common level, when all the parts are in place, powerful machinery pulls the upper trusses down, at once driving the bairel into the lower tiusses, drawing together both ends, and leveling the whole Each end of the shell, thus made, passes under a rotary cutter which forms a croze, or groove, to receive the head, and chamfers, or bevels, the ends of the staves The heads are put in and the hoops set by hand The bairel is then made to turn under a smoothing tool and rapidly finished For the making of slack barrels, consult Wagner, Cooperage A Treatise on Modern Shop Methods and Practice (Yonkers, N Y, 1910) For description of wooden barrels used in transportation of liquids and especially the series of tests to secure better specifications and designs, consult Newlin, "Tests of Wooden Bairels," Bulletin of the United States Department of Agriculture, No 86 (Washington, 1914) Statistical Bulletins on tight and slack cooperage stock are compiled by the U S Census Bureau in cooperation with the finest service of the Department of Agriculture and are published annually. Other bulletins from the Forest Service dealing with cooperage are issued from time to time See BARREL

COOPERAGE (from Dutch hoper, sort of boat, from kopen, Ger kaufen Goth, kaupön, AS cypan, to buy, from Lat caupo, innkeeper) sale of tobacco, alcoholic liquors, or clothing to fishermen in the North Sea, or the barter of these articles for fish, nets, or other such prop-As the goods for sale had escaped duty the business was profitable, but it demoralized the fishermen In 1882 a convention was held at The Hague, and a mission was founded for supplying the fishermen with good clothing, literature, etc., at a fair cost, and in 1887 six nations-Great Britain, Germany, Belgium, Denmark, France, and the Netherlands—signed an agreement to prohibit the sale of intoxicating liquors to fishermen at sea Next year Great Britain embodied the terms of this convention in the North Sea Fisheries Bill This act was repealed five years later and replaced by the North Sea Fisheries Act, 1893, which was more explicit than the former act Consult Mather, Nor'ard of the Dogger (1888)

COOP'ERA'TION (Lat. cooperatio, from cooperari, to cooperate, from co-, together + operari, to work, from opus, Skt apas, work) In
the widest sense of the word, all production is
the result of the cooperation of nature, labor,
and capital, but economists have generally restricted the term to the eclasses of enterprises,
viz. (a) cooperative distribution, (b) cooperative production; and (c) cooperative societies for
banking or loaning money It is sometimes extended to profit sharing, by which the employee
shares beyond his wages to some extent in the
profits of his employer, but this is a misapplication of the term, for cooperation starts with
the worker, while profit sharing starts with the
employer

Cooperative Distribution. This is sometimes called "consumers' cooperation," and is an effort to do away with the middleman and to have the consumers themselves organize distributive stores and reap the profit which would otherwise fall to the storekeeper There can, of course, be no doubt that under existing condi-

tions of production the merchant who serves as an intermediary between the producer and the consumer, or between the wholesale dealer and the retail purchaser, performs an important social service for which he is entitled to a reasonable remuneration, but unfortunately the number of these intermediaries has increased beyond all measure, and, as they all must strive to subsist, there is still, in spite of great improvements in the distributive process, a vast difference between wholesale and retail prices. A French economist, Prof Charles Gide, esti-mates that more than one-tenth of the population of France depends on commerce for its subsistence In other words, every 10 persons sup-port one intermediary The economic waste of commercial competition indicated by these facts aroused, many years ago, the condemnation of such social reformers as François Fourier (qv) and Robert Owen (qv), but the first lasting, successful attempt to dispense with the middleman was made in 1844, by 28 poor weavers of Rochdale, near Manchester They organized, under the name of Equitable Pioneers of Rochdale, to supply themselves with provisions, beginning with flour, butter, sugar, and oatmeal Business was transacted at first in a small room in Toad Lane, with a capital of £28, each member having subscribed an equal share. They overcame all difficulties and outlived not only internal divisions and jealousies, but also external prejudices and opposition. The success of the store led to many imitations, a considerable number of which, however, had only a very short existence, owing in many cases to want of harmony among the members, bad management, insufficient capital, or distionest officials Not-withstanding all difficulties, cooperation con-tinued to increase, and in 1864 no less than 395 societies in Great Britain made returns to the registrar, possessing a share and loan capital of registrar, possessing a suare and none capters, vol. 4774,000, doing an annual trade of nearly £3,000,000, and making an annual profit of £225,000. It was then proposed to form a federation of secreties for the purpose of undertaking the wholesale trade of the movement, thereby protecting the societies from the impo-sition of the wholesale traders and securing the profits of wholesale dealing The North of Engfand Wholesale Society began business in Man-chester in 1864, and in 1871 became the English Wholesale Society This organization has pur-chasing and forwarding depots not only in Eng-land and Ireland, but in New York, Hamburg, Copenhagen, Calais, and Rouen It owns six steamships, which ply between England and the Continent. Following the same lines, the Scottish Wholesale Society was formed in 1868 and commenced business in Glasgow Both of these organizations have prospered and grown and now supply a large portion of the goods sold by the retail societies They not only purchase di-rect from the producers, but produce on their own account, of in connection with other associations. Among the industries in which they engage are the making of boots, clothing, furniture, flour, and butter. In 1912 the productive workers employed by the system numbered 51,972, while the employees engaged in the work of distribution numbered 71,019 The number of societies in 1912 was 1557, with a membership of 2,661,799, the aggregate trade transacted, £111,582,779, with profits of £12,024,481.

In Germany cooperative distribution had its beginnings in the two decades 1850-70. It gained little headway until after 1890, when it came under the influence of British experience. The Geiman cooperative stores, originally foriming a single association, were organized in 1902 in two competing central associations, the Allgemeiner Verband, controlling in 1905 260 stores and doing a business of 58,000,000 marks, and the Zentral Verband, controlling 787 stores, with a business of 188,000,000 marks. The folimer is essentially a middle-class, the latter a working-class originization

In the United States isolated experiments of a similar nature were made as early as the eighteenth century. In 1847 the Workmen's Pro-tective Union of Boston organized a successful store, which was afterward carried on under the name of the New England Protective Union The Patrons of Husbandry, founded in 1867, for a time developed a variety of cooperation by encouraging the local "granges" to form purchasing clubs and to employ agents to buy sup-plies. The Sovereigns of Industry, a secret order with ritual, founded in 1874 to do for the artisan classes what the Patrons of Husbandry were doing for the farmers, founded numerous cooperative stores on lines resembling the Rochdale Pioneers In 1877 the organization was doing a business of \$1,089,372, but by 1880 the order had collapsed No reliable statistics of cooperative stores in the United States are available

The foundation of a cooperative store on a small scale is a simple matter in itself group of consumers meet to discuss rules and regulations for the enterprise and agree to furnish the necessary capital by subscribing, say, five dollars each As cooperative stores almost always do business on a cash basis, the original capital need not be very great. Each share of capital receives a fixed rate of interest, say, 5 per cent The dividends may be credited as payments on additional shares up to the maximum number of shares allowed any one shareholder In this wise the store serves also as a savings bank for the members Usually the money subscribed as share capital need not all be paid at once, weekly payments of 10 cents are customary Whatever profit the store makes after deduction of the interest on loans, the charge for depreciation in the value of the stock and plant, 5 per cent dividend on the capital, a reserve fund, and perhaps a bonus to employees, is divided among the purchasers according to the respective amounts of their purchases. Goods are sold at the usual prices of private stores. Outsiders may buy at the store, but only members receive shares in the gains. These shares are also usually credited as payments on the stock shares until they are paid in full amount of each member's purchase is recorded by means of checks distributed with every sale. The management of the business is in the hands of an executive committee, which appoints the storekeepers and oversees the purchase of goods and the finances It is evident that the success of the society will depend largely on this committee, which must be honest and efficient

Coperative Production. An attempt to solve the more difficult problem of doing away with the employer, the "entherpeneur," by having the workers furnish their own capital. Under our present economic system the distribution of wealth among the agents of production involves a grave conflict of interests, which may lead to industrial warface and jeopardize the welfare

of society by separating laborers and capitalists into distinct antagonistic classes, but the relation between capital and labor is most satisfactory when there is no sharp separation into classes Productive cooperation, therefore, by uniting men in the twofold capacity of workers and capitalists, has been recommended by many social reformers as a cure for our social ills The voluntary union of a number of workers to conduct an enterprise collectively is by no means a modern invention Schmoller and other economic historians have shown that it is, indeed, one of the earliest forms of industrial organiza-Cooperative enterprises were often undertaken by guilds, each member furnishing a share of the small capital required But their conservatism of method led to their displacement by capitalistic industry, and it is not until the nineteenth century that we find widespread attempts to reestablish cooperative productive enterprises, but only a few of them, notably among masons and piano makers, were successful The modern system of cooperative production dates in England from the close of the eighteenth century The oldest-known association is the Hull Anti-Mill Society, founded in 1795 for the production of flour The object of this undertaking was to curb the exactions of private millers rather than to improve the position of labor Societies with the latter object were founded in considerable numbers in the decades 1830-50 under the influence of Owen, and later of the Christian Socialists These enterpuses were only moderately successful The extension of consumers' cooperation in the latter half of the nineteenth century gave a considerable impetus to producers' cooperation, especially in organizations affiliated with the cooperative stores, but also in organizations producing for the open market. In 1910 there were of the latter in England 16 cooperative societies in textile manufactures, 20 in agricultural production, 16 in boots and leather manufactures, 10 in the metal trades, 11 in furniture and woodworking, 14 in printing, and 10 in miscellaneous These 106 societies had a share industries capital of £688,990, and their products were valued at £1,392,237

The first productive association in the United States of which we have any record was that of the Boston Tailors' Associative Union, which was formed in 1849, but did not last long There were many other experiments of a like nature, the most promising of which seems to have been the stove foundry of the Iron Moulders' International Union, started in 1867 in Allegheny County, Pa But the paid-up capital proved insufficient at a critical moment, and the enterprise failed By far the most successful experiment in the United States is found among the coopers of Minneapolis In 1868 a few journeymon coopers made an attempt to manage industry for themselves, they were so successful that in 1874 a strong organization known as the Cooperative Barrel Company was formed, with a membership of about 20 coopers They bought a shop for \$3000, paying \$1000 cash The company became exceedingly prosperous and is still in successful operation. The wages paid are in successful operation equal for members and nonmembers employed; profits are distributed according to stock holdings, but all members hold equal amounts of stock

This example has been followed by others and frequently with success Experience seems to

show that where articles are produced to order and not for the general market, cooperative production may succeed, but that these enterprises fail when they are confronted with the difficulty of adjusting the supply to the variations of the market demands Cooperation has made extensive progress in connection with certain agricultural processes, such as the manufacture of cheese, butter, etc. Such cooperation, however, is essentially an incident in the marketing of products and has no close relation to the above-described forms

Cooperative Credit and Banking Organizations These are founded for mutual financial aid and have been wonderfully prosperous in Germany, where they do a business of hundreds of millions of dollars In 1849 Herr Schulze (Schulze-Delitzsch) founded a cooperative so-ciety to purchase raw material, among 13 cabmetmakers in Delitzsch, his native town the next year he founded the first of his loan associations (Vorschussvereine), which differed from the earlier banks in that the persons to whom loans could be granted must themselves be members of the association, paying regular monthly contributions. They thus themselves indirectly furnished the security for the credit afforded them. While these loan associations While these loan associations put the lender's interest foremost, Raiffeisen, another German, born in the Westerwald, organized a cooperative bank in 1849 which placed the borrower's interest as the keystone of his system Both systems have spread over the especially Schulze-Delitzsch's banks country, The plan has been copied in Belgium with the greatest success, and a few Schulze-Delitzsch banks have been founded in Russia. As a matter of fact, all these "people's banks" bear a close resemblance to our American building and loan associations (qv), whose special and marked development in this country makes the United States one of the pioneer countries and chief homes of this form of cooperation

COOPERIA, koo-pê'ri-a. A genus of two

species of tender, bulbous plants, of the family Amaryllidacee The narrow, elongate, twisted leaves appear with the fragrant solitary flowers in summer. The flowers, which resemble those of the Zephyranthes, but have erect instead of versatile anthers and, unlike other members of the order, bloom at night, are 2 inches or more in diameter, usually waxy white, blushed with pink outside and green-tinged within Those of Coopera pedunculata (gnant fairy flower), the most popular species, are larger, of purer color and longer duration than those of Coopera drummondir (evening star), the other well-known species. The plants are of easiest culture. They do well in garden soil, and, if dug at the approach of frost and stored in dry soil, where the temperature is maintained below 50° F but not so low as 32°, they may be kept over winter without trouble. The genus is named after Joseph Cooper, an English gardener. For Illustration, see Colored Plate of AMARYLLI-

COOPER RIVER A river rising in Berkeley Co, S C It flows south and unites with the Ashley River, below the city of Charleston, in the estuary forming Charleston harbor (Map South Carolina, E 4). It is navigable for 30 miles to the canal connecting it with the Santee

TOODER'S CREEK An Australian river formed by the confluence of the Thomson and the Barcoo in Queensland, flowing southwest through South Australia into Lake Eyic During the rainy season the river rises 20 feet and widens to 2 miles, while in the summer season its lower course is dry (Map Queensland, A 10) On its banks the explorers Burke and Wills succumbed to starvation in 1861. Consult Burke and Wills, Exploring Expedition (Melbourne, 1861), and Wills, Exploration (London, 1863)

COOPERSTOWN A village and the county seat of Otsego Co, N Y, 35 miles (direct) southeast of Utica, on the Susquehanna River, at the outlet of Otsego Lake, and on a branch of the Delaware and Hudson Rairroad (Map New York, F 5) The village is growing in popularity as a summer resort and has a park, "Cooper Grounds," orphan house, hospital, Inbrary, and several hotels and boarding houses. Cooperstown is in a hop-growing and farming region, and contains an ice-craim and cheese factory Cooperstown was first incorporated in 1812 and is now governed under a charter of 1889, revised in 1895 The executive holds office for a very Pon. 1900. 2368, 1910. 2484

fice for a year Pop, 1909, 2368, 1910, 2484

The land on which Cooperstown stands was the site of an Indian town and in 1769 became the property of George Cioghan, who attempted unsuccessfully to found a settlement In 1785 it came into the possession of Judge William Cooper, who in 1786 founded a village and in 1790 moved thither with his family, including J Fernimore Cooper, the future novelist, then an infant. The latter is burned here Consult-Cooper, The Chronicles of Cooperstown (Cooperstown, 1838), Lavelmore, A Condensed History of Cooperstown (Albany, 1862), Halsey, The Old New York Frontier (New York, 1901).

COOPER UNION FOR THE ADVANCE-MENT OF SCIENCE AND ART An institution established in New York City in 1859 for the free instruction of the working classes in applied science, art, and social and political science. The Union embodies the social philoso-

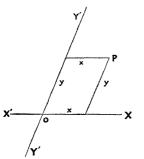

phy of its founder, Peter Cooper (qv), and is unique among educational institutions in the United States Its central idea is to afford working people full opportunity, by means of day and evening classes, to obtain a mastery in art, science, and technical knowledge bearing upon industries and the engineering professions, and also, through the medium of lectures, reading 100ms, and art and scientific collections, to induce a more discerning citizenship and a broader mode of living. To accomplish these purposes, Mr Cooper erected a large building at the point where the Bowery divided into Third and Fourth avenues, and deeded both land and building, valued at \$630,000, to a self-per-petuating board of trustees This board was to consist of not less than five nor more than six members, and upon the board was especially enjoined the establishment of regular courses of evening study, the maintenance of a library, galleries, and collections, the establishment of a school of art for women, in order that those a section of a rot women, in order that they who "might otherwise struggle through a life of poverty and suffering" should be raised to "competence and comfort", and the establishment of a polytechnic school "equal to the best technological schools now established or here-after to be established" By 1864 the trustees had developed this broad scheme of education so far as their funds permitted, but afterward, for many years, the union was unable through lack of endowments adequately to extend in scope and was even obliged to turn away large numbers of its constantly increasing applicants Indeed, except for large sums given by Peter Cooper, and afterward by Edward Cooper and William Cooper, and by Mr and Mrs Abram S Hewitt, the union remained practically unendowed until 1900, when Andrew Carnegre gave \$300,000 and later \$300,000 more These sums, together with considerable gifts made by Mr Abram S Hewitt and others, permitted the final lounding out of the original plans

The scope of the institution now includes, besides evening courses in the various lines of drawing, modeling, and design, five-year courses in civil, mechanical, and electrical engineering and chemistry as well as courses in elocution, oratory, and debate The day courses include a four-year Day School of Technical Science, the Woman's Att School, the School of Stenography and Typewiting for Women, and the School of Telegraphy for Women Degrees are conferred in civil, mechanical, and electrical engineering, and in chemistry In 1912-13 the annual budget of the Union approximated \$205,000, its incomeproducing endowment to about \$3,000,000, and the total value of property in its control to over \$4,000,000 In the same year 3370 pupils were enrolled in the classes, of whom 1240 were in the evening technical courses and 1187 in the night ait classes Visitors to the reading room numbered 488,000 The trustees who were originally appointed in 1859, and to whose untiling efforts the success of the Union must in large measure be ascibled, were Peter Cooper (qv), Daniel F Tremann, Wilson G. Hunt, Edward Cooper, Abram S Hewitt, and John E Parsons. The director in 1914 was C. R. Richards.

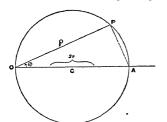

COORDINATES (from ML. coordinare, to coordinate, from Lat co., together + ordinare, to arrange, from ordo, order). Magnitudes which serve to determine the position of an element—point, line, or plane—relative to some fixed figure. For instance, latitude and longi-

tude are arcs (or angles) that define the position of a ship at sea relative to the equator and the prime mendian, latitude, longitude, and elevation above sea level serve to determine the position of a balloon

The method of treating geometry analytically by use of coordinates is due chiefly to Descartes

(1637) and Fermat, although the terms "co-ordinate" and "axes of coordinates" were first used by Leibnitz (1694) For the explanation of rectangular coordinates as used in plane geometry, see Analytic Geometry As there explained, the axes in the rectangular system are at 11ght angles to each other, but it is often more convenient to employ a system in which the axes form oblique angles Coordinates referred to such a system of axes are called oblique coordinates The notation is the same as in the nectangular system, and the lines which determine a point are drawn parallel to the axes, thus the coordinates (x, y) of a point P form the outer adjacent sides of a parallelogram of which the axes form the inner sides system in common use is that of polar coordinates This involves two magnitudes-the linear distance from a fixed point and the angular distance from a fixed line. In the figure the posi-

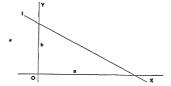

tion of point P is determined by the distance  $\rho$  from O, and the angle  $\theta$  between  $\rho$  and the fixed line OA. O is called the pole and  $\rho$  the polar radius or radius vector. If OA passes through the centre O of a circle, the polar equation of the circle is  $\rho = 2 \cos \theta$ . That is, the values of  $\rho$  and  $\theta$ , which satisfy this equa-

tion, determine points on the circle If C is taken as the pole, the equation of the circle is evidently  $\rho=r$  Rectangular coordinates may be changed to polar coordinates, and vice versa, by means of the equations

$$x = \rho \cos \theta, y = \rho \sin \theta,$$
  
 $\rho = \sqrt{x^2 + y^2}, \theta = \tan^{-1} \frac{y}{x}$ 

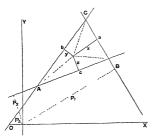

So far we have considered lines as loci of points whose coordinates satisfy given relations, but it is often more convenient to select magnitudes which determine lines passing through a given point. Thus ux+vy+1=0 may be taken as the equation of a straight line in which u is the negative reciprocal of the intercept on the X-axis, and v the negative reciprocal of the intercept on the Y-axis. For if  $y=0, x=-\frac{u}{v}$ , and if  $x=0, y=-\frac{1}{v}$ . The segment a, in the figure, is the intercept on the X-axis, and corresponds to y=0, and b is the intercept on the Y-axis and corresponds to x=0. Therefore,  $a=-\frac{1}{u}$  and  $b=-\frac{1}{v}$ , whence  $u=-\frac{1}{a}$  and  $v=-\frac{1}{b}$ . If w and v are regarded as constants and u,v as variables, the equation ux+vy+1=0 is the equation of all lines passing through the point (x,y)-1e, of a pencil of which the point (x,y)-1e, of a pencil of which the point (x,y) is the vertex. Hence

this equation is called the line equation of the given point, and the system of coordinates one-point intercept coordinates. Two-point or bi-punctual coordinates determine the position of an element in the plane by reference to two fixed points and a given direction. As in one-point coordinates are two kinds, line coordinates and point coordinates, so these classes exist in two-point coordinates. By punctual line coordinates are the distances of a variable line taken in a constant direction from two fixed points. Bipunctual point coordinates are the negative reciprocals of the distances measured in a given direction from one of two fixed points to the line determined by the variable point and the other fixed point.

Although two magnitudes are sufficient to fix the position of a point in a plane, the introduction of if third has the advantage of lendering homogeneous centum equations involved, however, the coordinates of a single element are, in general, connected by a nonhomogeneous relation. Thus, if s, y, z in the figure represent the perpendicular distances of a point from the sides a, b, c of the triangle ABC, they are connected by the relation  $a\omega + by + cz = k = 2$  x area of ABC, or  $\omega$  sin A + y sin B + z sin C = a constant (See Trigonometrix) We may also take x, y, z oblique to a, b, c, each form-

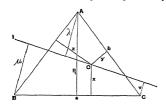

ing the same angle with its corresponding side Equations between the coordinates of two or more points in this system are homogeneous, as nw+py+qz=0, the equation of a straight line. Such coordinates are called trilinear or

homogeneous coordinates These form a special case of barycentine coordinates, the flist homogeneous coordinates in point of time, introduced by Mobius (qv) in his Der barycentrische Calcul (1827) Tetrahedral space coordinates belong to the same class If in the above figure rectangula axes are also assumed, and if P<sub>p</sub>, P<sub>p</sub>. P<sub>s</sub> are the perpendiculars from the origin upon the sides a, b, c, respectively, then

$$\frac{x}{P_1}\!=\!\frac{BPC}{CBA},\quad \frac{y}{P_2}\!=\!\frac{ACP}{CBA}, \text{ and } \frac{z}{P_3}\!=\!\frac{BAP}{CBA},$$

these expressions may be designated by x', y', s', and be employed to determine the position of point P (P denoting the point at which x, y, and x meet). Since they are expressed in terms of areas, they are called areal coordinates. In either the trilinear or areal system a point is determined if the ratios only of the coordinates are known. If lx + my + ns = 0 is the trilinear equation of a straight line (L in the figure), then by making x, y, x constant and l, m, n variable, the equation is called the tangential equation of the point O(x, y, x). Since l, m, n are variable, the equation is called the tangential equation of the point O(x, y, x).

straight line passing through O If  $\lambda'$ ,  $\mu$ ,  $\nu$  are the perpendiculars from A, B, C, upon the line L, and  $p_D$ ,  $p_D$ ,  $p_D$  the altitudes of the triangle ABC, the equation of the point O is

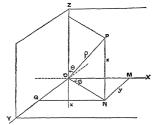

$$\frac{\lambda x}{p_1} + \frac{\mu y}{p_2} + \frac{\nu z}{p_3} = 0.$$

When the perpendiculars  $\lambda$ ,  $\mu$ ,  $\nu$  are taken for the coordinates of the line, the coefficients become the areal coordinates of the points referred

to the same fundamental triangle. Any homogeneous equation in l, m, n as tangential coordinates is expressed in terms of  $\lambda$ ,  $\mu$ ,  $\nu$  by substituting  $\frac{\lambda}{l}$ ,  $\frac{\mu}{l}$ ,  $\frac{\nu}{l}$ , for l, m, n, respectively

substituting  $\frac{\lambda}{p_1}$ ,  $\frac{\mu}{p_2}$ ,  $\frac{\nu}{p_3}$ , for  $l,m,n_2$  respectively. An equation in  $\lambda$ ,  $\mu$ ,  $\nu$  of a degree higher than the first represents a curve such that have a realways the perpendicular upon the tangent. The curve must therefore be the envelope (q v.) of the line  $(\lambda, \mu, \nu)$ . Tangential coordinates are often called "Boothian coordinates," in honor of James Booth, who invented them Bicircular coordinates are magnitudes which determine a point with reference to two series of circles which intersect one another at a constant angle-Generalized, Lagrangian, Eulerian, and Rodrigue's coordinates are special systems used in treating certain problems of mechanics

From the idea of coordinates of an element in a plane we easily pass to the notion of coordinates of an element in geometry of three dimensions. The determination of a point in such space requires three coordinates. In the Cartesian system these are represented by x, y, z An origin being taken (as 0 in the figure), and three axes, OX, OY, OZ mutually at right angles to one another, the point is referred to the

three planes through these axes Here z or PN is the distance of the point above the plane YOX, y or NM is its distance from the plane XOZ, and w or OM is its distance from the plane ZOY. In three dimensions, as in two, the problem may be stated to be Given the law of the motion of P, to express the law of variation of its coordinate, the algebraic expression of the latter law is the equation of the surface traced by the point in moving over all the space it can traverse consistently with the law of its motion Thus, the equation of a sphere referred to its centre O is  $x^2 + y^2 + z^2 = r^2$  As in plane geometry, if the axes are taken oblique to one another, the coordinates are called oblique coordinates Likewise, the polar coordinates in space corresponding to the point coordinates in space corresponding to the point coordinates in a plane are  $\rho$ ,  $\theta$ ,  $\phi$ . In the above figure  $\rho = OP$ , the distance from the origin,  $\theta = \sum_{i=1}^{n} POP_i$ , the angle between OP and  $OP_i$ , and  $\phi = \sum_{i=1}^{n} NOP_i$ , the angle between planes at  $OP_i$  and  $OP_i$ . In plane geometry there are intercept equations for straight lines, and in solid geometry there are intercept equations for planes. And as certain equations of plane geometry are made homogeneous by the introduction of a third coordinate, so in solid geometry certain equations are made homogeneous by the introduction of a fourth coordinate. Thus, in

COOTE

tetrahedral or barycentric four-plane coordinates, the four faces of a tetrahedion (qv) of reference are taken as the coordinate planes The equation of any plane in this system is la + my + nz + nw = 0, in which

$$l \ m \ n \ r = \frac{x_1}{p_1} \ \frac{y_1}{p_2} \ \frac{z_1}{p_3} \cdot \frac{w_1}{p_4}, \ x_1, \ y_1, \ z_1, \ w_1$$

being the perpendiculars upon the plane from the vertices A, B, C, D of the tetrahedion of reference, and  $p_3$ ,  $p_2$ ,  $p_3$ ,  $p_4$ , the altitudes of the tetrahedron from A, B, C, D respectively For the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of n-dimensional distribution of the coordinate systems for space of n-dimensional distribution of n-dimensional distribution of n-dimensional distribution distributio sions, and for the transformations from one system into another, it will be necessary to refer to special works on the subject Consult Carr, Synopsis of Pure Mathematics (London, 1886), Lamé, Leçons sur les coordonnées curvilignes (Paris, 1859); Mobius, "Des barycentrische Calcul" (1827), in his Gesammelte Werke, vol 1 (Leipzig, 1885), Townsend, Modern Geometry of the Point, Line, and Circle (Dublin, 1863-65), Scott, An Introductory Account of Certain Modern Ideas and Methods in Plane Geometry (New York, 1894), Clebsch, Vorlesungen uber Geometrie (Leipzig, 1876-91), Pascal, Repertorium der hoheren Mathematik, German ed (1b, 1902), Weber and Wellstein, Encyklopadie der Elementar-Mathematik (2 vols, ib, 1903), both with valuable bibliographies

COORG, KTOIG, OI KURG A Province of Brit-ish India, west of Mysore Area, 1582 square miles Pop., 1891, 173,055, 1901, 180,460, 1911, 174,976 It was a native principality of amplei dimensions before 1834, in which year it was annexed by Great Britain Nearly the whole of the region is covered with forests, more or less dense. Its chief products are lice, coffee, lumber, and hogs Specially notable are the ancient fortifications The country is intersected by namparts, which are from 15 to 25 feet in height. and by ditches of about 10 feet in depth and about 8 feet in width, while, being in some places double or triple, or even quadruple, they measure in aggregate length upward of 500 miles Capital, Merkara

COORNHERT, korn'hert, or CORNHERT, DIRK VOLCKERTSZOON (1522-90) A Dutch scholar and poet, born in Amsterdam He lived DIRK VOLCKERTSZOON (1522-90) in Haarlem from about 1542, supporting himself by his skill in engraving In 1561 he became notary, and in 1562 secretary to the mumerpality also. Most active as a champion of political and ieligious liberty, he incurred the disapproval of the Spanish government, was imprisoned in 1567, and afterward took refuge at Cleves and Xanten When the states threw off the Spanish yoke in 1572, he was recalled and made scrietary to the States of Holland, in which capacity he rendered important services to William of Orange He was a famous theologian, stoutly opposed the orthodox Protestant party, and by his writings aided materially in preparing the classical period of the literature of the Netherlands. His poetical works include Abrahams uytgang ('The Death of Abraham') and Comedie van de blinde van Jerioho ('Comedy of the Blind Man of Jericho') Of his works in prose, the Zedekunst, dat is wellevens kunst ('Ethics, that is, the Art of Right Living'), which appeared in 1586, deserves special mention Consult Moorrees, D. V Coornhert de Libertijn (1887).
COOSA (koo'sa) RIVER A river formed by

the confluence of the Etowah and Oostanaula

rivers in Floyd County in northwestern Georgia (Map Alabama, C 2) It flows southwest and enters Alabama, where it flows between the hills of the southern extremity of the Appalachian Range and is joined by the Tallapoosa River to form the Alabama River The Coosa is about 335 miles long, is navigable from its mouth to Wetumpka and from Greensport to Rome, Ga,

and drains an area of 10,000 square miles
COOS (koos) BAY. An inverted V-shaped arm of the Pacific Ocean, about 10 miles long, or about lat 43° 45' N, in Coos Co, Oreg (Map Oregon, A 4) On the eastern shore of its western aim (which has an average width of about one mile and runs nearly parallel to the coast) lies Empire City, a small coal-shipping port The eastern arm expands considerably as it extends southward, and on its western shore, near its base, is Maishfield (Pop 1910, 2980), also a coal-shipping port and manufacturing town The bay receives the Coos River and has a depth of 14 feet of water over its bar at high tide

COO'SHIE (native name) ANT A South American leaf-cutting ant (Geodoma cepha-

lotes) See SAUBA ANT

COOS INDIANS See KUSAN.

COO'SY. See Kusi

COOT (probably from Welsh crota, Corn cut, Ir, Gael cutach, bob-tailed) A kind of rail, or "mud hen" (Fuluca), distinguished from other rails (q v) chiefly in having the toes edged with a scalloped membrane Coots have a strong, straight bill, the base of which extends up the forehead and there dilates so as to form a remarkable naked patch The color is generally dark with more or less white, and the length is about 15 inches Coots are aquatic in their habits, preferring lakes, or pools with reedy margins, and retreating among the reeds on any alarm. The American coot (Fulica americana) is found breeding throughout all North America and is migratory in the north, but resident in the south It is dark-slate color, deepening on the head and neck, and the crissum is white The nest is a hollow heap of broken, dead reeds, the eggs (see Colored Plate of Eggs of Water and Game Birds) are usually about a dozen in number, clear clay color dotted with dark brown The young are covered with black down, striped with bright orange red See Plate of RAILS, ETC

The common coot (Fulsca atra) of the Old World is found in most paits of Europe, Asia, and the noith of Africa It is about 16 inches long, black, with a narrow white bay across the wings, and the naked patch on the forehead pure white, on account of which it is often called "bald" coot The crissum is not white, and this is the most important difference between it and its American cousin. It makes a large nest of water plants among reeds or rushes Although not very highly esteemed for the table, the circumstance that many can be killed by a single shot, on the mud banks to which coots resort in winter, as on the south coast of England, makes coot shooting profitable to market gunners Other species inhabit eastern Asia, Africa, and South America The name "coot" is very often incorrectly applied in the United States to certaın ducks, which are properly known as

"scoters" (q v )
COOTE, Sir Eyre (1726-83) A British general, born at Ash Hill, County Limerick, Ireland He joined the first regiment (thirtyminth) sent to India and took a conspicuous COOTE

part in the capture of Calcutta It was by his advice that Clive decided on the immediate and vigorous action which culminated in his victory over Suaj-ud-Daula at Plassey in 1757 On Jan 22, 1760, he defeated Lally at Wandewash, destroying the power and prestige of France in India Appointed commander in chief of the Indian forces in 1779, he began, in 1781, his celebrated campaign against Hyder Ali, whom he vanquished at Porto Novo, thus saving Madras to the English He died on shipboard on his way from Calcutta to Madras There is a monument to him in Westminster Abbey

COOTE, RICHARD See BELLAMONT

COOT'ER A name in the southern United States for the Carolina box tortoise Sec TURTLE COPAIBA, kō-pa'ba (Sp and Portug, from Brazil cupauba), or Copaiva A valuable medicinal substance, consisting chiefly of a resin (resin of copaiba) and a volatile oil (oil of coparba), both of which are used in medicine It flows from incisions made in the stems of trees of the genus Coparfera, such as Coparfera langsdorffit and others, natives of the tropical parts of America Coparba has a peculiar, not disagreeable odor, and an acrid taste It is diunetic when taken in small doses, large doses cause gastiointestinal and renal irritation, and the administration of even a small quantity may give iise to an cruption somewhat like that of measles It impaits a strong odor to the breath and mucous secretions It is principally useful from its powerful stimulating and disinfectant action on the mucous membranes. It is much used in affections of the genito-uninary system, during the subacute or chronic stages, and is also employed in chronic cataiihs, etc The medicinal dose of the balsam is from one-fourth to one fluid drachm Balsam of copaiba is not infrequently adulterated with castor oil wood oil, Guigina or Gurjun balsam of India, the produce of a species of Dipterocarpus, is sometimes sold as balsam of copaiba. See Gur-JUN BALSAM

COPAIS (kô-pā'is) LAKE See BŒOTIA

CO'PAL (Mex copalli, resin) A resinous mineral substance of vegetable origin, chiefly used in the manufacture of vainishes and lacqueis The hardest varieties are used like amber, for making various objects. It appears in commerce in smooth rounded masses, colorless or lemon yellow, translucent or transparent, rather brittle, fusible at a somewhat elevated temperature, and but sparingly soluble in oil of turpentine. In making varnishes copal is flist rendered soluble; for this purpose it is melted and, on cooling, reduced to a powder and exposed for some time to the action of atmospheric an It is then boiled with linseed oil and oil of turpentine, and the resulting solution is fil-Copal is dug in Zanzibar and Mozamtered at several places in western Africa, in New Caledonia, New Zealand, the East Indies, Brazil, etc. The varieties brought from Zanzibar and Mozambique are noted for their hardness and have therefore the highest market value, they are supposed to have been produced by trees like the Trachylobium hornemannianum and Trachylobium mosambicense The copal dug in New Zealand and New Calcdonia is known in commerce as course and dammar, it is the semifossil resin of the Dammara australis and Dammara ovata, trees still abundantly growing in those countries; the natives of New Zealand chew the resin when freshly exuded by the trees.

Anime (qv) is another vallety of copal, in England, however, the name "anime" is applied to all the different varieties of copal A mineral substance resembling copal, and known as fossil

copal, is found at Highgate, London COPALCHE, or COPALCHI (ko-pal'che), BABK A name given to the bank of two species of Croton, natives of Mexico One, the product of Croton pseudo-china, reaches the market in small, slender, ash-colored quills which resemble a light variety of cinchona, for which they may easily be mistaken, but have a taste and an odor, especially when buined, which suggest cascarilla (Croton eluteria), to which the tree is allied, the other in large quills, presumably derived from Croton subgrosus, which is very bitter and yields an aromatic odor upon burning The banks are credited with tonic, aromatic properties and have been used, particularly in Mexico, in intermittent fevers and in cases which seemed to demand a mild bitter barks have been sold for quebracho

COPALM, kö-pam. See Liquidambar COPAN, kö-pam' An ancient ruined city of onduras The buildings are of stone carved Honduras with symbolic designs Good collections of the sculptures made by Saville and others are in the American Museum of Natural History (New York) and other American museums. The city York) and other American museums. The city was captured by Hernando de Chavez in 1530 See ARCHITECTURE, AMERICAN

COPAR/CENA'RY (from co- + parcenary, from OF parceneric, from parcener, partner, from ML partnerius, having a share, from Lat partitio, share, from pars, portion). An estate in England originating in descent to two or more persons, called thence "coparceners" or "parceners" It generally arises under the rule of law which makes the daughters of one dying without male heirs inherit equally, but it may also arise by local custom, as in the case of the descent of lands held by the tenue of gavel-Lind, where all the sons inherit equally though the property remains unsevered, yet each parcener is entitled to a distinct share of it, and consequently there is no benefit of survivoiship, but the right of each descends to his or her hens, who are still called "coparceners" with the surviving original parceners. If one of the coparceners alienates his share, the coparcenary is destroyed, and the estate becomes a tenancy in common (qv) It may also be destroyed by partition, whereby the estate is divided up among the coparceners in severalty This may be effected either voluntarily by an mulerchange of deeds or by an action at law. Such parts of the property as cannot be divided (such as the manor house, etc.) pass to the eldest sister or her issue, but an equivalent in value is assigned to the remaining sisters If the estates in conarcenary are by descent reunited in one person, they become again an estate in severalty

In the United States, where descent is to all the children or to all of a group of heirs equally, without distinction of age of sex, coparcenary was from the beginning the usual form of common ownership of land. Such descendants are now usually declared by statute to take the land as tenants in common See Common, Tenancy IN, JOINT TENANCY, DESCENT

COPE See Costume, Ecclesiastical

COPE. A custom or tribute due to the crown, or lord of the soil, out of the lead mines in Derbyshire, England.

COPE, CHARLES WEST (1811-90). An English historical and genie painter, etcher, and il lustrator He was born in Leeds and studied at Sass's Art School and the Royal Academy, of which he was made a member in 1848 and a professor in 1867 He visited Paris, Munich, and Italy to make special studies of the technique of fresco painting for his series of historical fresco decorations in the houses of Parhament (London) These include "The Embarkation of the Pilgium Fathers in 1620" and the "Builal of Chailes I" His numerous oil paintings include such subjects as "The Death of Cardinal Wolsey" (Osborne Castle), genre sub-jects, as "Maiden Meditation," "Mother and Child" (South Kensington), "Almsgiving" (ib), and potants—all executed in the conventional academic style He also contributed illustrations for de luxe editions of Gray's Elegy (1847), Goldsmith's Poetical Works (1845) Thomson's Seasons, and other works Consult C H Cope, Reminiscences of C W Cope (London, 1891)

COPE, EDWARD DRINKER (1840-97) An American naturalist, born in Philadelphia He received his carliest training in private schools and then studied anatomy at the University of Pennsylvania From 1864 to 1867 he was professor of the natural sciences at Haverford College, Pa On the death of Ledy, in 1891, he was made professor of geology and paleontology at the University of Pennsylvania, where he was also professor of zoology and comparative anatomy, from 1878 until his death he was editor of the American Naturalist He was geologist and paleontologist of the survey of the legion west of the 100th meridian under Capt G M Wheeler and also of the survey of the Territories under Dr F V Hayden He was president of the American Society of Naturalists in 1895 and of the American Association for the Advancement of Science in 1896 He made an immense collection of fossils which he described in his various reports, usually published by the government His most important contributions were to the history of extinct verte-Scarcely less important were his investigations of the herpetology and ichthyology of North America In these fields (and especially in the former) his work was epoch making and laid the foundation for the modern classification of North American reptiles, amphibians, and fishes Cope's contributions to science number about 400 The most important are Systematic Arrangement of Lacertilia and Ophidia (1864), Systematic Airangement of Exthe the straints, Repetits, and Ares of North America (1869-70), Systematic Relations of the Pishes (1871), Oretacous Vertebrates of the West (1877), Tertuary Vertebrates (1885), The Bath salms of North America (1889), The Crocodilians, Lizards, and Snakes of North America (1898) Cope was deeply interested in the questions relating to the subject of evolution He was the leader of the school of American evolutionists, teaching Neo-Lamarckism (q $\mathbf{v}$ ), which considers the changes and variations wrought in the organism by the immediate influence of environment and the inheritance of such variations by the offspring as the most important factors of organic evolution His most important works on evolution are Origin of Genera (1868), Origin of the Fittest (1886), Primary Factors of Organic Evolution (1896) COPE, SIR JOHN ( 9-1760) An English general He was at Dettingen in 1743, but is best known through his ignominious defeat at Prestonpans (qv) by the Highlanders, under Charles Edward Stuart, the "Young Pretender," Sept 21, 1745, and perhaps more widely through the sarcastic Jacobite song, based on the event, "Hey, Johnny Cope' are ye waukin" yet?" In 1732 he headed a committee which made a famous report on revenue frauds and smuggling

COPE, THOMAS PYM (1768-1854) An American morehant He started at Philadelpha the first line of sailing vessels between that city and Liverpool, and made a large fortune during the War of 1812 by taking all the marine risks on his vessels, which were singularly fortunate in their voyages. He was largely instrumental introducing the Schuylkill water into Philadelphia, in the completion of the Chesspeake and Delaware Canal, the construction of the Pennsylvania Railroad, and the foundation of the Meicantile Library of Philadelphia. In 1807 he was elected to the State Legislature

COPE, Walter (1880-1902) An American architect, born in Philadelphia He received his professional training in architects' offices in Philadelphia The work of Cope includes the buildings of Bryn Mawr College, the dorintory system and other buildings of the University of Pennsylvania, several buildings of Washington University in St Louis, and the Pennsylvania Institution for the Blind at Ovelhook Cope was a fellow of the American Institute of Architects

COPECK (Russ kopelka, kopelka, from kopati, OChurch Slav kopati, to dig) A Russian con, the oldest kind in Russia and the first substitute for fus as a medium of exchange It is worth one-hundredth of a silver ruble, or about half a cent

COPEHAN See WINTUN.

COPELAND, EDWIN EINGHAM (1873—), A meneran botanest, botan at Mouroe, Wis He was educated at Leiand Stanford Jumor University and also studied at Leiand Cheago Between 1897 and 1993 he was assistant professor of botany at Indiana University and at the State Normal School at Chico, Cal, assistant professor and pofessor at West Virgima University and instructor at Stanford In 1903—08 he was botanist to the Philippine government, in 1908—09, superintendent of the Philippine Agricultural School, and in 1909 he became dean of the College of Agriculture, University of the Philippine Agricultural School, and in 1909 he became dean of the College of Agriculture, University of the Philippine Agriculture (1908) and Coccount Cultivaction (1912)

COTENNA'GEN (Dan Kobenhown, Merchants' Haven, from kobe, Ger Kaufen, to buy + hawn, Ger Hafen, haven) The capital and largest city of Demmark, atuated on the islands of Seeland and Amager, in lat 55° 41′ N, and long 12° 35′ E. (Map Demmark, F 3) The Kalvebod, or Kallebo, Strand, an inlet of the sound separating the two islands of Seeland and Amager, forms the excellent harbor of the city

Copenhagen is divided into six parts, of which that lying within the former fortifications (now converted into boulevaids) forms the nucleus of the city. The quarter situated on the island of Amager is called Christianshavn. The centre of the city is marked by the Kongens Nytory (Kew King's Market Place), an irregular square with an equestirian statue of Christian V. From this square issue the principal streets, the finest

of which is Bredgade, leading to the esplanade of the citadel. The beautiful national theatre (the Royal, built 1874) and some of the more important commercial buildings are on this square The most interesting of the numerous churches of Copenhagen are the Vor Frue Kirke, the metropolitan cathedral, famous for its statues of Christ and the Twelve Apostles, of a kneeling angel holding a shell for a font, and of other figures, designed and partly executed by Thorwaldsen, the Holmens Kirke, built in the seventeenth century, and containing monuments to the naval heroes, Juel and Tordenskjold, Trinitatis Kirke, with a high round tower, the Vor Frelsers Knike ('Church of Our Redeemen'), with an external winding staircase leading to the tower, and the handsome Frederiks Kirke, begun in 1749 and completed in 1894, whose magnificent dome is one of the most conspicuous objects of the city Christiansborg, the ous objects of the etc. Christianistics of the king's residence and a noted palace (built 1731–45), was destroyed by file (1794), rebuilt, and again burned in 1884. The royal abode was then removed to Amalienborg Plads, a group of four palaces built in the style of Louis XV. The Rosenborg Palace, built at the beginning of the seventeenth century, contains a remarkable collection of jewels, weapons, and regalia The Palace of Charlottenborg (built 1672), situated on the Kongens Nytorv, is now the seat of the Royal Academy of Arts Other notable public buildings are the exchange, erected in 1619-40 in the Dutch Renaissance style, the university, the new city hall, the Glyptothek, containing one of the choicest collections of sculpture and other objects of att in northern Europe, and the new Art Museum, with the Royal Picture Gallery, which ranks high among the minor collections of paintings, including choice specimens of the Dutch and Italian schools, and by modern Dan-ish masters The Moltke Palace contains a col-lection of Dutch paintings The world-renowned Thorwaldson Museum (built 1839-48) contains about 300 of the sculptor's works, together with furniture and art objects bequeathed by him to his native city Within the central court is Thorwaldsen's tomb

The University of Copenhagen (q v) occupies a distinguished place among European institutions of learning Other prominent educational institutions are the polytechnic institute affiliated with the university, the veterinary school, founded in 1773, the military and naval schools, and the Academy of Arts Copenhagen has a number of scientific and art associations, the most prominent of which are the Danish Royal Society, founded in 1742, and the Royal Northern Antiquation Society, founded in 1825. The Royal Library contains about 600,000 volumes and about 20,000 manuscripts, and the National Museum, contained in the Prinsens Palace, includes the Danish, the chinographical, the antique, and the numismatic collections.

The city is administered by a board of magistiates, including the president, appointed by the King, and a municipal council of 42 members.

The cluef manufactures of Copenhagen include sugar, machinery, iextiles, and porcelain ware. Shipbuilding is the principal industry. Over onehalf of the commerce of Denmark passes through Copenhagen, and the chief financial institutions of the country are situated here. There is regular steam communication between Copenhagen and ports of Geimany, Russia, England, France, and the United States. It is the seat of a United States consul general The area of the othy with suburbs is 31 square miles (Copenhagen 28, Fiedeniksberg 3), pop. 1911, 550.398 (Cepenhagen 402,161, Frederiksberg 97,237). 1908, 514,134 (Copenhagen 421,540), 1901, 454,486 (378,235), 1860, 231,860 (234,850), 1860, 163,307 (165,143), 1840, 120,819, 1769, 80,000

Copenhagen was a fishing village until the middle of the twelfth century, it began to grow in importance after coming into the possession of Bishop Absalon, who fortified it in 1167 Owing to its good harbor, Copenhagen soon became a place of commercial importance and received from the Bishop of Roskilde municipal rights about the middle of the thirtcenth century was repeatedly attacked by the Hanseatic towns It was chosen for the capital of the kingdom in 1443 by King Christopher, the Bavanian ing 1658-59 it withstood a severe siege by the Swedes under Charles X, by its resistance probably saving the Danish monarchy In 1700 it was bombarded by the united fleets of England, Holland, and Sweden It suffered heavily from conflagrations during the eighteenth century In 1801 the harbor of Copenhagen was the scene of the destruction of the Danish fleet by Nelson, and in 1807 the city was subjected to a bombaidment by the British, during which the university and a number of public buildings were destroyed Consult Copenhagen, the Capital of Denmark (Copenhagen, 1898), Seelig, Fuhrer durch Kopenhagen (Hamburg, 1895), Nielsen, Kjobenhavns Historic og Beskrivelse (6 vols, Copenhagen, 1877-92)

COPENHAGEN, UNIVERSITY OF The only university in Denmark, and the oldest and one of the most famous in northern Europe It was founded by Christian I in 1478, taking its statutes as well as some of its teachers from statutes as well as some of its ceaturers from the University of Cologne, which up to that time had been the chief resort of Danish stu-dents. This first foundation perished during the civil wars accompanying the Reformation, but was reestablished in 1539 by Christian III, as a Protestant university, on the model of Wittenberg, then at the zenith of its influence. This foundation, destroyed by fire in 1728, was ie-established in 1732 by Christian VI and icor-ganized on its present basis in 1788. Among the distinguished men who have shed lustre on the university are Holberg, in the first half of the eighteenth century, and Ochlenschlager, the poet, Madvig, the classical scholar, Rask, the philologist, Ocisted, the physicist, and Worsnac, the archeologist, in the first half of the nine-teenth century, Hoffding, the philosopher, and Brandes the literary critic, in the latter half. Supported partly by the state and partly by endowment, the university is attended by some 3000 students, has a library of 400,000 volumes, museums, an academy of surgery, and an observatory Instruction is gratuitous, and the courses are open to both seves. The university has five faculties Attached to it are botanical and zoological gardens

COPENICK, or KOPENICK, keppenik. A town in the Prussian Province of Brandenburg, stutated on an island at the confluence of the Dalme and the Spree, 10 miles southeast of Beilin It contains a royal palace built on the site of a sixteenth-century castle of the Elector Friederick William, now used as a seminary for teachers, and a seventeenth-century Rathaus Tho chief manufactures include dyestuffs, sawmill machinery, niks, glass, linoleum, starch, mill machinery, niks, glass, linoleum, starch,

sugar, chicory, and shoddy Pop, 1900, 21,024, 1905, 27,721, 1910, 30,879 The city is mentioned in 1157 as the residence of the Slavre Prince Jaczo It was conquered by the Margiave of Brandenburg in 1240 and plundered by the Russians in 1760 Consult Graf zu Dolina, Kurfustiche Schlosser in der Mark Brandenburg (Bellin, 1890)

COPEP'ODA (Neo-Lat nom pl, from Gk κώπη, λομē, oar + πούs, pous, foot) A large and important order of entomostracous crustaceans, characterized by having the five pairs of feet specially adapted for swimming. There are no branchial sacs on the feet, and there is never any bivalve shell The copepods, sometimes called "water fleas," live in both salt and flesh water in swarms Some species are parasitic on fish and sometimes do great damage in that way, but most copepods are free-swimming and feed on organic matter in the water They thus act as scavengers and must be of great importance in keeping harbors clean Moreover, they serve as food for many species of food fishes Among our fresh-water species, those of the genus Cy-clops are pethaps the best known They are very minute, actively moving creatures The genus Argulus is parasitic on carp, suckers, and They reach a considerable size, freother fish quently half an inch in length Consult publications of United States Fish Commission and National Museum, Herrick and Turner, Synopsis Entomostraca of Minnesota (St Paul, 1895), Calman, The Life of Crustacea (New York, 1911) For further information see Crustacea, ENTOMOSTRACA

COPER'NICAN SYSTEM The system which represents the sun to be at rest and the earth and planets to move round it, in other words, that which we now know, on unquestionable evidence, to be the true system of astronomy. It derives its name from Copernicus  $(q \, v)$ , but, in point of fact, it may be described as being a growth to which he was only one of many contributors The ment of having first formed the general notion of the system seems to be due to Pythagoras, Copennicus has the credit of having, after the lapse of centuries, again drawn the attention of philosophers to it and of having greatly increased the probability of its truth by his calculations and arguments, for the lest, the glory of having matured the idea be-longs to Kepler, Galileo, and Newton, who, through the discovery of the law of gravitation, finally demonstrated its truth effectually Many who have been used to reverence the name of Copernicus in connection with this system would be surprised to find, on perusing his work, De Revolutionibus Orbium Cælestium, how much of error, unsound reasoning, and happy conjecture combined to secure for him in all times the association of the system with his name

De Revolutionabus Orbium Cwiestium, dedicated to Pope Paul III, consists of six books, in which Coperincus undertook to demonstrate his whole system The character of the reasoning which then passed for demonstration must be borne in mind in judging of the author's proedure in establishing his various positions. It was then thought a sufficient demonstration of a phenomenon to make a supposition, in which its occurrence would be intelligible, without attempting to bring the supposition itself, by an induction of facts, within the truth of nature; many abstract propositions, too, which would now appear to be ridiculous, were at that time universally admitted to be of great weight in scientific arguments

Illustrations of both of these peculiarities may be gleaned from the first of the six books of DeRevolutionibus It contains the following propestablished by such arguments as that the sphere is the most perfect figure, etc. 2. The earth is spherical, which flows from the same kind of considerations 3 The earth and sea make one globe 4 The motions of all the heavenly bodies must be uniform and circular, or compounded of uniform and circular motions Here, again, we meet with singular reasons A simple body must move in a circle, and nothing but circular motion could give periodicity to phenomena Supposing the distance of the stars to be immense, there is no reason why the earth should not have a motion round its axis as well as a motion in its orbit 6 The sphere of the stars is immensely distant 7 and 8 The an-cients were wrong in placing the earth at the centre of the universe. The arguments under this head are as imaginary as those which they were designed to refute. The falling of a body to the earth is deduced from the assumption that it is only given to wholes to move circularly, while it is of the nature of parts, separated from their wholes, to move in straight lines That there must be a centium mundi, an entity not recognized by modern science, is admitted, the question being as to its position 9 It is possible for the earth to have several motions 10 Copernicus establishes the order of the planets and draws a diagram of the system much as it is now represented. It may be observed that, following the old systems, such as the Ptolemaic, he lays down a sphere for the fixed stars FIRMAMENT

The most brilliant and valuable part of the De Revolutionibus is that in which he explained, for the first time, the variations of the seasons, the precession of the equinoxes, and the stations and retrogradations of the planets In general, his explanations are collect as to the general nature of the causes of the phenomena But Copernicus had neither mathematical nor mechanical knowledge sufficient to enable him to explain more than the mean motions of the solar system To account for irregularities he was obliged to introduce a system of epicycles enturely resembling that of Ptolemy (See PTOLE-MAIO SYSTEM) This arose from the false notion of his time that all motious must be compounded of circular ones, with the application of which idea, and with the invention of convenient epicycles, the greater part of the De Revolutionibus is occupied It may fuither be added, to rectify the vulgar notion regarding the relation of Copernicus to the system of the heavens, that he had no answer to offer to the mechanical objections to his system. One of the commonest objections was that against the axial motion of the earth, that it was inconsistent with the fact of bodies falling to the points of the earth directly beneath the points from which they are dropped, for this he had no answer, nor could he have, the laws of motion being not yet discovered Consult Wolf, Geschichte der Astronomie (Munich, 1877); Dreyer, History of the Planetary Systems from Thales to Kepler (Cambridge, 1906); also works mentioned under COPERNICUS

COPERNICIA, kõ'pēr-nish'i-a. See Car-NAUBA PALM COPER-MICUS (Latinized form of Koppengh), Nicolaty (1473-1548) A celebiated Polish astronome, boin at Thorn, a Prussian town on the Vistula, at that time belonging to Poliand He was instructed in the Latin and Greek languages at home. In 1491 he was sent to the University of Cracow, where he studied mathematics and other sciences. In 1495 he went to Italy and spent some years in the study of law, astronomy, and medicine, in Bologna and Padua His natural bent, however, was towards mathematics, the study of which he puissed with passion through all its branches.

Having become enamored of the study of astronomy, he projected a journey to Rome in his enthusiastic admiration of Regiomontanus, who resided there and was then the most illustrious of the astronomers On his arrival, in 1500, he was kindly received by Regiomontanus. Here his reputation, and the favor of his distinguished friend, led to his being chosen professor of mathematics He became doctor decretorum at Ferraia in 1503 and in 1505 ictuined to his native country, where, having entered into holy orders, he obtained through his uncle, the Bishop of Eimeland, a canoniy at Frauenburg, in the enjoyment of which he passed the rest of his life His working day, it is said, he divided into three parts-one devoted to the duties of his office, another to giving medical advice gratuitously to the poor, and the third to

study

Soon after his ieturn to Piussia he began, in his thirty-fifth year (1507), to apply his fund of observations and mathematical knowledge to correcting the system of astronomy which then prevailed The result was his De Revolutionibus prevailed The result was his De Revolutionibus Orbium Calestium (Nuremberg, 1543), a biief account of which is given under Copernican SYSTEM. He completed it in 1530, in his fiftyseventh year Twelve years, however, clapsed before he could be persuaded to give his book to the world Perhaps the strongest motive for his icticence was the fear of the unpopularity which the work threatened to bring him, for many who had heard of the views it advocated doubted if these were in harmony with Scripture. At all events, it is pretty certain that it was his desire to conciliate the Church that led him to dedicate his book, when it was published, to Pope Paul III By the time the book was actually printed, however, the author was beyoud the power of the Church An attack of dysentery, followed by paralysis of the right side, had destroyed his memory and obscured his understanding, and he is said to have died a few hours after a copy of the labor of his life reached him

Bendes the De Revolutionibus, may be mentioned among Copennicas' wolks a treatuse on trigonometry, entitled De Laterbus et Angules Triengelorium (Wittenberg, 1542), which was edited by his friend and pupil Rherteus, and Theophylacts Scholaster Simocatra Epistoir Motales, Revales, et Amatoria, cum Versone Latina (Cracow, 1503) He also wide in 1520 a work on money, entitled De Moneto Cudendo Ratione, which was first published in 1816, and several manuscript teatises from his pen are in the library of the bishopric of Eimeland A statue of Copennicus by Thousaldson was placed in the Casimir Palace at Waisaw in 1830; another, by Trick, bearing the inscription Nuclaus Copernicus Thoumensis, Terra Motor, Solis Culique Stator, was erreted at Thom in 1853; and in

1990 his memory was honored by the election of a monument in the countryal of the University at Cracow. In commemoration of the four-hundredth anniversity of his birth a simplicious edition of De Revolutionalus, afterward translated atto Genman by Menzeu in 1879, was published at Thorn in 1873 by the Copenicus Society Consult Gassend, I the Mooding Copenicus Gensell Gassend, I the Mooding Copenicus Copenicus (Paris, 1847). Seriand, Lee Indiators de Vastroname moderne (ib. 1865), Flammation, Vie de Copenicus (University 1872), Wolf, Geschichte der Astroname (Munich, 1877), Wolf, Geschichte der Astroname (3 vols, Bellin, 1883-84; the best account of his life and works), Wolf, Indiatorius (2 vols, Zurich, 1890-83), Muller, Nicolaus Copenicus (Beilin, 1893), Cuitze, Nicolaus Copenicus (Beilin, 1899), Bryant, History of Astronomy (London, 1907).

COPHETUA. An African king who loved and married a beggar manden, Penelophon The story is told in Peter's Reliques and is alluded to in various plays of Shakespeare Tennyson's Beggar Maid gives the legend in modern form

CO'PIAPITE A basic ferric sulphate crystallizing in the monoclinic system. It occurs in yellow crystalline masses or crusts and is found in considerable quantity near Coprapt, Chile

COPTAPÓ, kö'pya-pö' (So Amer Copagaipi) The capital of the Province of Atacama, Chile, situated on the Copiapó, 50 miles by rail from its poit, Caldea (Map Chile, C 9). It possesses a fine parish church, a bionze statue of Juan Godoy, the discovere of the Chafareillo silver mines, and also a provincial high school, a mining school, and a public hibary The town is the centre of a productive mining district and contains machine shops and smelting works Pop. 1805, 9301, 1903, 9128, 1907, 11607.

COPING, knyfing (from cope, variant of cupe, from Lat cupa, cape). The upper or covering course or top of a wall, generally either overhanging or sloping or rounded, so as to shed the water. In the Middle Ages, where the coping was of hewn stone, it was often ornamented with a circular molding along the top, a stepped slope, and a groove under the lower edge.

COPTINGER, WALTER ARTHUR (1847–1910). An English lawyer and writer of varied attainments. He served as president of the Bibliographical Society and became professor of law at Owens College and at Victoru University, Birmingham. He wrote: Index to Precedents (1872). Thie Decds (1875): An Bessay on the Abolation of Capital Punishment (1876): He Abolation of Capital Punishment (1876): Law of Copyright (3d cd., 1891), On the Authorship of the First Hundred Numbers of the "Eduhuhu ah Review" (1895), and Rupplement to Hain's Repertorum Bibliographicum (1895).

COPLAND, köp'land, James (1791–1870). An English physician He was born at Deernest, in the Oriney Isles, studied medicine at Edmburgh, traveled on the Continent, and subsequently undertook a journey to Africa to investigate the nature of epidemic diseases prevalent in tropical lands. He settled in London about 1818 and was made a member of the Royal College of Physicians. In 1822 he became editor of the London Medicial Repository; and, being

COPERNICUS
FROM THE PAINTING BY OTTO BRAUSEWETTER

chosen in that year to deliver the annual oration before the London Medical Association, he advanced in his lecture a new theory of electrogalvanism. His outlines of Pathology and Practical Medicine, in which he especially theated of the ganglionic nerves and their functions and proposed a new and more simple classification of diseases, appeared in 1822, the Elements of Physiology in 1824, and On Pestilential Cholera in 1832 Copland's most important work was in the Dictionary of Practical Medicine (1833–58), four closely printed volumes, to which he devoted the labor of many years

COPLAY A borough in Lehigh Co, Pa, 6 miles northwest of Allentown, on the Lehigh Valley and Ironton railroads, and on the Lehigh Coal and Navigation Canal It has manufactures of silk, eement, and eigars Pop, 1900,

1581, 1910, 2670

COPLEY, köp'li, John Singleton (1737-315) An American portrait and historical painter, along with West one of the two important masters of the early period. He was born in Boston of Irish parentage, July 3, 1737, and received instruction from his stepfather, Peter Pelham, a mezzotint engraver, in which art his first aitistic efforts were made In painting he was plactically self-taught, although influenced by his older contemporaries, Blackburn and Smybert His progress was rapid, and at 17 he was recognized in Boston as a prominent painter In 1769 he married the daughter of a wealthy Boston merchant, purchased a stately house on Beacon Hill, and soon became the recognized painter of Boston society After exhibiting repeatedly and successfully at the Royal Academy, in 1774, on the invitation of Benjamin West, he went to London Through the latter's kindness he received a number of commissions for postsasts, including those of Lord and Lady North and the King and Queen The following autumn he went to Italy, spending almost a year in study, to the great improvement of his drawing Notwithstanding his sympathy with the American Revolution he remained in London He was elected to the Royal Academy in don He was elected to the Royal Academy in 1779, and thi ough three very popular historical pictuics he became one of the most celebrated English artists of his day These were "The Death of Lord Chatham" (1779–80), "The Death of Major Pierson" (1783), and the "Stege of Gibraltam" (1790), all in the National Gallevy, London He lived in considerable state, and his popularity continued until a few years before his death in London, Sept 9, 1815. His son, Loid Lyndhuist, afterward became Lord Chancellor of England

Copley's at falls met two distinct periods—an American, lasting until his removal to London, and a British period In the former his art was somewhat primitive—faulty in his, haid in coloi, and stiff in pose, but the sitters were always distinguished in bearing, determined in expression, and convincing in appearance. His postraits are the most typical representations of the New England society of his day. After his study in Italy and his work in London his ant approached more nearly that of contemporary British painters. His execution became less labored and his technique better, but his art is less characteristic and convincing. The principal portiaits of his early period include those of John Hancock and Samuel Adams (1772), in the Boston Art Museum, Mrs Ford, in the Boston Atheneum, Mrs Thomas Boylston

and several others in Memonal Hall, Harvard University, which possesses other examples of his works, Lady Wentworth and Mrs Robert Harper, in the New York Public Library besides others in private possession, principally in Boston The portrarts of Robert Land and his wife (Boston Art Museum), painted in Rome, represent the transition to his later manner. In London he painted "A Youth Rescued from a Sharle" (replica in the Boston Art Museum), with suprising realism, portiaits of Lord Comwalhs (Corporation Art Gallery, London), the Earl of Mansfield (National Gallery, London), the Copley Family—one of his very best works —and John Quincy Adams (both in the Boston Art Museum). Among his later historical paintings was "The Offer of the Crown to Lady Jane Grey" (1808, belonging to Mr Amory, Boston) (consult Amory, Domestic and Artistic Life of J. S. Copley, R.A. (Boston, 1882), Perkins, Sketch of the Life of Copley (b), 1873), Isham, History of American Painting (New York, 1905).

ork, 1905). COPLEY, John Singleton, Lord Lyndhurst

(1772-1863) A British lawyer and statesman, three times Lord Chancellor of England was the son of J S Copley, R.A., and was born in Boston, Mass, May 21, 1772 While yet an infant, his father removed to England for the plactice of his art He was educated at Trinity College, Cambridge, where he was second wrangler and Smith's prizeman in 1794. In 1795-96, as a traveling bachelor and fellow of his college, he visited the United States, and in company with the French author Volney made a tour which he described in Latin letters to the vice chancellor of his university Called to the bar at Lincoln's Inn in 1804, he chose the Midland circuit, but did not achieve financial success until 1812, when his defense of a Luddite at Nottingham established his reputation. In politics he was at first a Liberal, and long expressed sentiments hostile to the ministry of the day He ably defended Watson and Thistlewood on their tital for high treason in 1817 and obtained their acquittal He entered Parliament in 1818, and a year later became Solicitor-General in the Liverpool administration and was knighted In 1824 he was promoted to the rank of Attorney-General, and held that office until 1826, when he became Master of the Rolls When Canning was charged to form a ministry in 1827, he was raised to form a ministry in 1927, he offered the Great Seal to Sir John Copley, who was raised to the Upper House as Baron Lyndhurst and remained Lord Chancellor from 1827 to 1830 In 1831 he became Lord Chief Baron of the Exchequer, which office he exchanged for the woolsack during the brief administration of Sir Robert Peel in 1834-35 In 1835 he led the opposition to the Melbourne ministry in the Upper House, in speeches of great power and billiancy Lyndhurst's orations and annual reviews of the session did much to reanimate the Conservative party, and pave the way for their return to power in 1841. He then became Lord Chancellor for the third time, and held the Great Seal until the defeat of the Poel government in 1846 After that time he took little part in home politics, but his voice was often heard on matters of foreign policy, and in denunciation of tyranny in Italy and elsewhere He died in London, Oct 12, 1863 Lord Lyndhurst's high attainments as a lawyer have never been questioned, and his judgments have never been excelled for clearness, method, and legal

In the House of Lords he had few equals among his contemporaries as a brilliant orator and debater He delivered his last speech in Parliament at the age of 88 with his usual force and ability Consult Martin, Life of Lord Lyndhurst (London, 1883), and Campbell's Lives of the Chief Justices and Lives of the Chancellors

COP'MANHURST, THE CLERK OF An alias of Friai Tuck in the Robin Hood tales Walter Scott alludes to him by this title in

COPPEE, ko'pa', François Edouard Joa-CHIM (1842-1908) A French poet, diamatist, and novelist He was boin in Paris and for a time was a clerk in the government service Le reliquaire, his first book of poems, appeared in 1866 and was followed by Les intimités (1868) and Poemes modernes (1869), which marked him as a member of the Painassian school He first attracted notice by a one-act play, Le passant (1869), the first of a series of curtain laisers in which he displayed greater talent than in his formal diamas, Le luthier de Crémone (1876), Severo Torelli (1883), Les Jacobites (1885), and Pour la couronne (1895) He also wrote the play Mme de Maintenon (1881) His later lyric work is contained in Les humbles (1872), Le cahier rouge (1874), L'Arrière-sar-son (1890), and Dans la prière et dans la lutte (1901), his namative verse in Une adylle pendant le siège (1875), Oluver (1875), L'Esule (1876), Récits et élégies (1878), and Vingt con-tes nouveaux (1883) His piose tales of the eightes include Fille de insiesse, Hennette, Madame Nunu, and Le coucher de soleil He told his own story in Toute une jeunesse (1890), and published a series of journalistic essays.

Mon franc parter (1893-96) Le coupable (1897) is a novel of criminal psychology, and La bonne souffrance (1898) signalizes the writer's reconciliation with the Church From 1880 to 1884 he was the diamatic critic of the wellknown newspaper, La Patrie He was elected to the French Academy in 1884 Coppée is an accomplished artist in the short story, and here it is the poet in him that lends these brief and finished narratives their distinctive charm He was at first and by instinct an artist in verse, a skilled craftsman, though, perhaps, a little affected, indeed, his verse has often been characterized as poetical prose, owing to the lack of real inspiration in it and his delight in treating countless unimportant details of every-After 1870 his facile suavity yielded sterner notes in the lyine of democracy, of work, poverty, and self-denial, and of the indignant patriotism of defeat To this succeeds the gentle idyllic vein with an occasional tragic touch But whether in prose or verse, he con-tinues the poet of the Parisian workman and the petty trading class He continually harks back to his lost youth in his sweetly melancholy romances, from which much real and delightful local color and Parisian atmosphere can be gleaned He was very aptly called le poète des humbles He has happily described himself as "a man of refinement who enjoys simple people, an aristocrat who loves the masses."

an aussocrat who loves the masses."

COPPÉE, HENRY (1821-95). An American

educator and author, born in Savannah, Ga He graduated at West Point in 1845, served in the Mexican War, and was assistant professor at the Military Academy from 1850 to 1855, when he became professor of English literature and history in the University of Pennsylvania Here he remained for 11 years, after which he was president of Lehigh University until 1875 and a professor there till his death. In 1874 he was appointed a regent of the Smithsonian Instituappointed a legent of uncontrol of the form of the form of Loyic (1857), Gallery of Famous Poets (1858), Gallery of Distinguished Poetesses (1860), Grant and his Campagns (1861), the form of the for The Conquest of Spain by the Arab-Moors (1881), Elements of Rhetoric (10th ed., 1887) He edited two volumes of the Comte de Pails's

Covul War in America (1876).

COP'PER (symbol, Cu), a metallic element, distinguished from all other metals by its peculiar 1ed color The name is derived from the Latin cyprum (from the island of Cyprus),

later cuprum

Physical Characteristics. Specific gravity, (cast) 8 921, (rolled or hammered) 8 952, streak or powder, red, hardness, 25 to 3, heat conductivity, 898 (gold being taken at 100), electic conductivity, 93 08 (silver being taken at 100), melting point, 1981 5° F, malleability and ductility, high

and ductility, high
Chemical Characteristics. Valency, I and
II, atomic weight, 63 57, specific heat, 0 093, electrochemical equivalents, (cuprous salts) 1912 ampere hours per pound, (cupric salts) 382 4 ampere hours per pound Copper 18 easily soluble in nitric acid, aqua regia, and boiling concentrated sulphunc acid, slowly soluble in hydrochloric acid with access of an. Copper combines with oxygen to form two important oxides, cupious oxide (Cu<sub>.</sub>O) and cupric oxide (CuO) It combines readily with various metals forming alloys, the more important of which are bronze (copper with tin), biass (copper with zinc), and monel metal (copper with nickel) (See ALLOYS.) From acid, neutral, and alkaline solutions copper is precipitated by hydrogen sulphide and ammonium sulphide as a brownish-black precipitate, cupric sulphide (CuS) Ammonia added in excess to solutions of cupric salts produces a clear fluid of an azureblue color Metallic non in contact with acid solutions is covered with a coating of metallic

copper Troduction and Prices. The following table shows the world's copper production for the year 1013 as compiled by The Engineering and Missing Journal, New York

THE WORLD'S COPPER PRODUCTION IN 1913

SOURCE	Metric tons
Africa Australasia Bohvia Canada Childe Cermany Japan Mesuco Ferti Span and Portugal Other Countries	20,000 45,300 5,000 34,587 40,195 3,417 25,000 65,000 52,815 24,000 52,300 30,000 557,387
United States	1,000,716

From the foregoing table it will be noted that North America supplies 64.8 per cent of the world's copper, the United States alone produc-

ing 55 7 per cent

The production of the United States is shown
by States in the annexed table, as compiled by
The Engineering and Mining Journal.

COPPER PRODUCTION OF THE UNITED STATES IN 1913

STATE	Pounds
Alaska Arizona California Colorado Idaho Michigan Montana Montana New Mexico Utah Southern States Other	23,360,000 401,223,784 32,206,43; 7,320,000 8,594,72; 161,000,000 284,210,91; 83,829,32; 48,710,000 148,274,656 20,857,844 9,223,839
Total	1,228,811,581
	l

The annual average prices for New York delivery prevailing for the last 10 years are shown in the following table, as compiled by The Engineering and Mining Journal

AVERAGE PRICES FOR COPPER, 1904-1913

YEAR	Electrolytic cents per lb	Standard sterling per long ton	Lake cents per lb
1904	12 823	58 884	12 990
1905	15 590	69 465	15 699
1906	19 278	87 282	19 616
1907	20 004	87 007	20 661
1908	13 208	59 902	13 424
1909	12 982	58 732	13 335
1910	12 738	57 054	13 039
1911	12 376	55 973	12 634
1912	16 341	72 942	16 560
1913	15 269	68 335	15 686

The prices given are for three classes of copper, which may be hiefly defined as follows (1) electrolyte copper, or copper electrolyteally refined, (2) standard, the London term for ordinary commercial brands, (3) lake, applied to the product of the Lake Superior mines (Michigan), which, because of its peculiar occurrence and treatment, is of especial value in plate and tube mills

History. Copper and copper-alloy objects are found in the prehistoric remains of (1) Egypt, dating back to the fourth dynasty (3800 to 4700 nc); (2) Asia Minor, dating probably to 3000 nc; (3) Clima (2500 nc) The remains of the Mycenean, Phæmeian, Babylonan, and Assyrian civilizations (1800 to 500 nc) have yielded a variety of copper and bronze objects. It is probable that the Egyptians obtained their copper from the mines located on the Sinar Peninsula. The copper used by the Greeks and Romans was first mined on the island of Cyprus. Later, during the Roman conquests, copper was found and mined in central Europe, Spain, and Britain

On the American continent copper was known to, and used by, the aboriganal races No dates can, however, be applied to its first use. The Lake Superior deposits were known to the French explorers in the seventeenth century. During the eighteenth century some small shipments of

copper ores were made from the Atlantic seaboard to Europe, originating from mines in Connecticut, New Jessey, and Pennsylvania It was not until 1844 that copper came into prominence as a mineral product of the United States Since that date the increase in production has been plenomenal, until at present the United States is alone credited with 56 per cent of the world's production

Mineralogy The principal copper-bearing minerals are native copper, cupité, or copper caide (Cu,O), malachite, or guenc carbonate of copper (CuCO,Cu(OH)), azuntie, or blue carbonate of copper (2CuCO,Cu(OH)a), chalcopy-lite, or copper pyrite (CuFeS<sub>3</sub>), bornite or peaceck copper (Cu,FeS<sub>3</sub>), chalcecte, or copper glance (Cu,S), chiyscolla, or silicate of copper (Cu,Si,O,2H,O), tetrahedrite, a copper-antimony sulphide (Cu,Sh,Sa), enargite, a copper-arsence sulphide (Cu,AsS<sub>4</sub>), and covellite, or curror sulphide (Cu,AsS<sub>4</sub>), and covellite, or

cupric sulphide (CuS) Geology and Mining The origin and geological occurrence of these minerals is so varied, and so complex as to preclude any detailed description within the scope of this article. Suffice it, therefore, to briefly enumerate and describe the deposits of chief economic importance in America, which are (1) the native copper deposits of Lake Superior, (2) vein deposits, as exemplified at Butte, Mont. (3) contact deposits, as exemplified at Bisbee, Ariz., (4) disseminated or so-called "porphyry" deposits, of which the Utah, Nevada, Ray, Miam, and Chino mines are examples, and (5) pyritic deposits, exemplified at Ducktown, Tenn, and in northein California.

The Lake Supervor deposits The valuable mineral here is native copper, occurring as a cement binding together or replacing the pebbles of a conglomerate, and as a filling in an amygdaloidal diabase. The largest producer of this district, the Calumet and Hecla mine proper, is now deriving the major portion of its ore from the amygdaloidal beds, the conglomerate cres being nearly exhausted. The average yield of copper from the ores mined and milled during recent years is from 14 to 22 pounds per ton The handling of such low-grade ore at a profit has only been possible because of the very unusual and favorable natural conditions.

2 The Butte deposits consist of several series of large and numerous venie in grante. The ories, as mined latterly, yield from 40 to 70 pounds of copper per ton. The ore of the upper part of the zone of secondary enrichment has been largely exhausted, and the present output is made up mainly of ores from the lower horizons, primary chalcocite and similar minerals occurring at a depth of 2000 feet and over.

3 The Basbee deposits have yielded large tonnages of exceptionally high-grade ores. The mann ore bodies have been found on or near a limestone-porphyry contact, the chief tonnages of former years having come from the limestone side of the contact, now, however, the lowergrade ore occurring in the porphyry is being developed with excellent results. For the year 1912 the yield in copper per ton of ore was 122 pounds

4 The disseminated or so-called "porphyry" deposits consist of large areas of altered rocks carrying uniformly disseminated copper values. The yield of copper per ton of ore varies from 20 pounds, as in the case of Utah copper, which is mined by steam shovels, up to 33 pounds at

Miami, which is operated as an underground mine Two South American deposits of this type are worthy of note they are the Braden mine, and the property of the Chile Copper Com-

pany, both located in Chile
5 The pyrite deposits consist of large masses or lenses of cupulferous pyrite occurring practi-cally free from gangue Deposits of this character usually yield copper values ranging from 32 pounds per ton, as in Tennessee, to 60 pounds per ton, as in northern California Their economic importance is largely due to associated recoverable mineral values, i.e., gold, silver, and sulphui Foreign mines of importance of this type are the Mount Lyell mine in Tasmania and the Kyshtim mine in Russia

## METALLURGY

Extracting The methods employed in iecovering copper from its ores may be divided into two general classes (1) mechanical methods, (2) chemical methods Ordinarily a combina-

tion of both methods is used

1 Mechanical or milling methods, piesup-pose that in all cases the material to be treated has been crushed to a degree of fineness sufficient to liberate the particles of valuable mineral from the associated valueless material, and may be subdivided into the following methods (a) wet, (b) dry, (c) magnetic, (d) electrostatic, and (e) flotation Briefly, (a) net and (b) dry milling separate the copper minerals from the associated barren rock (gangue) by making use of the relatively greater weight (for a like bulk) of the copper minerals as compared with the gangue. In the first case water, in the second air under pressure, is used as the working medium (c) Magnetic milling is used at times when the copper minerals are mechanically associated with certain iron minerals which are susceptible to magnetic influence, and which may therefore be removed by passing the crushed ore through a magnetic field, thereby removing the iron minerals with the consequent increase in grade (copper content) of the remaining material. (d) Electrostatio milling makes use of the varying electrical conductivity of minerals, the crushed and dry one being passed by gravity through a field of static electricity, with the result that each falling particle of one is charged with electricity in a degree dependent on its mineral character, and as a result is correspondingly deflected in fall-(e) Flotation methods depend upon the fact that certain minerals (usually sulphides) are buoved up by oil films or attached gas particles, while the associated non-metallic minerals are not so affected, the result being that when the crushed ore is brought in contact with oil or dilute acid solutions in proper receptacles a separation is effected. In all of the above-mentioned methods the valuable mineral is sepalated from the barren material, suitable mechanical means being provided to maintain and to provide for the effected separation. The valuable product is usually termed "concentrate" and is given further treatment as indicated below, while the valueless product is called "tail" or "tailings" and is discarded

2. Chemical methods, adapted for treating crude oie, or, as is now more often the case, using as their base material obtained from some one of the mechanical or milling methods above described, may be subdivided into (1) dry methods, or smelting, and (2) net, or hydrometallurgical

(1) Dry methods, or smelting, as carried on to-day, may be subdivided according to the type of furnace employed into (a) neverberatory smelting, (b) blast-furnace smelting, and (c) smetting, (b) oldst-jurates smetting, and (c) electric smelting. In (a) reverberatory smelting the dimensions of the furnaces employed reach a maximum width of 20 feet by a length, of 120 fect, the height being small as compared with the width The smelting procedure is as follows The one, after having received a preliminary heating or roasting treatment in circular multi-hearth furnaces of the McDougall or Wedge type, is mixed with suitable fluxes (limestone, quartz, or mon ore) and charged hot on the furnace bottom and fused by extraneous heat (usually from oil burners at one end of the furnace) The products of this fusion are slag and matte, which are removed from the furnace while molten The matte, which accounts for the copper of the original ore, is subsequently retreated by processes hereafter described. The waste heat from furnaces of this type is used for steam generation Blast-furnace smelting The ore, either in a crude state or partially roasted as metallurgical requirements may dictate, is mixed with proper fluxes and fuel and charged into furnaces whose height is invaliably greater than their width (dimensions vary, ranging in width from 36 to 60 inches, in length from 36 to 612 inches, and in height from 6 to 24 feet) These furnaces have near their bottom a varying number of air inlets (tuyeres) through which air under pressure is forced with the purpose of giving the oxygen necessary for the burning of the fuel and for the thermo-chemical re-actions incidental to smelting. The products from the fusion of the charge are slag, matte, and fumes. The matte is retreated, the fumes may or may not be treated, for the recovery of the sulphur which they contain (c) elcctric smelting is still in the experimental stage, the basic idea being to do away with the use of carbonaceous fuel as a heat producer, substituting therefor heat resulting from the passage of an electric current

The old Welsh or German methods, consisting of stage smelting in furnaces of small dimensions, are but little used at the present time.

Matte treatment -The matte obtained from the above-described smelting methods consists of a copper-iron sulphide, its composition changing with conditions. Usually the range of copper contained will be from 25 to 60 per cent (in exceptional cases the matte may be as low as 10 per cent copper, as at Ducktown, Tenn, in which case the matte is given a secondary smelting in blast furnaces for the purpose of increasing its copper content). In order to eliminate the iron and sulphur contained the matte may be treated in (a) icverberatory furnaces or (b) in converters. The reverberatory method of treatment, not now generally used, provided for the resmelting of the roasted matte with the addition of silica in small reverberatory furnaces, the iron of the matte combining with the silica forming slag which is removed as formed, the resulting impure copper being subsequently refined. (b) The conventer method of treatment, now practically universal, provides for the treatment of the molten matte in barrel-shaped vessels fitted with air inlets According to the character of

the lining of these vessels they have been called acid-lined converters and basic-lined converters The basic lining has superseded the acid and is now generally used In both types the sulphur of the matte is eliminated by oxidization, while the inon forms a slag—in the first case with the siliceous (and) inning of the converter, or in the second case with silice added through the mouth of the converter—and is poured off at intervals leaving the impure or so-called blister copper (analyzing 96 + per cent copper) to be finally cast as ingots or as

anodes and subsequently refined

(2) Hydrometallurgical methods aim at the obtaining of the copper contained in the oies under treatment in the form of an aqueous solution Basically they are an adaptation of laboratory methods of analysis to commercial ends, and as so applied are a development of the last 50 years The process is in general as follows (a) Rendering the copper as occurring in the ores soluble. This normally means preliminary roasting for those ores containing sulphur in combination with the copper The roasting may be carried on with or without the addition of 1eagents (Fe2S or NaCl) and means the heating of the ore by the use of extraneous fuel to a degree of heat varying from 300° to 800° C (b) Leaching The roasted ore is subjected in suitable vessels to the action of a dilute acid solution (the solvent) Those solvents which have had the most successful application to date are sulphuric acid, ferric sulphate, hydrochloric acid, ferric chloride (c) Precipitating
The copper solution obtained is removed from the ore pulp and subjected to either chemical or electrical treatment. Probably the most used method of precipitating (removing in solid form) copper from solutions is that employing iron (scrap iron), the copper being deposited in a finely ciystalline form, the equivalent non replacing it in the solution Copper thus produced is naturally impure and must therefore be melted down and refined. Hydrogen sulphide has also been used as a precipitant, the copper coming down in the form of a sulphide Carand subsequently retreated and refined. bonate of lime as a precipitant has been tried, the copper being brought down as an oxide, which is further treated for the production of commercial copper

The passage of a suitable direct electric current through a copper-bearing solution, using insoluble anodes and pure copper cathodes, causes the contained copper to be deposited in a finely crystalline form at the cathode, this cathode copper being melted and cast in salable form or subjected to refining, depending on

Refining. Copper, either as produced in the form of "blister copper" or as a product from hydrometallurgical treatment, is usually refined by either of the following methods (1) reverberatory or (2) electrolytic 1 The reverbera-tory method (English process) procedure is to melt the impure copper down in saucci-shaped furnaces by extraneous heat and then subject it to proper oxidizing and reducing action with the addition of small quantities of silica and tine addition or small quantities of silica and iron But a small percentage of the world's copper is now handled by this method 2 Electrolytic refining, now generally used, consists of casting the impure copper in slabs, placing them in suitable tanks as anodes, using as cathodes sheets of refined copper, the tanks being filled with a copper sulphate solution (the electrolyte) showing some free acid. The passage of a direct electric current causes copper to be deposited at the cathode with the ielease of a corresponding quantity of sulphuric acid which attacks the copper of the anode, thus continuously regenerating the electro-lyte This cyclic action is continued until the anodes have been consumed to a minimum of waste. The impulities in the anode not being soluble fall and collect on the tank bottom in the form of a sludge This sludge contains the precious metals and receives a subsequent treat-ment for their separate recovery. The refined copper cathodes are removed from the tanks when built up to a convenient thickness, are washed and dried, and melted down under proper oxidizing and reducing conditions in a special form of reverberatory furnace (casting furnace), the molten copper being cast in shapes adapted for commercial uses, and analyzes ap-

proximately 99 8 + per cent copper

Uses. Copper, because of its abundance in nature and its amenability to metallurgical treatment and consequent low cost, its high electrical and thermal conductivity, its great tensile strength and the ease with which it may be worked, is consumed in large quanti-ties in the manufacture of electrical and mechanical apparatus, alloy metals, munitions of war, coins, shipbuilding, and in architecture and the arts

## TERMINOLOGY

Anode Term used in the electrolytic treatment of copper to denominate that electrode or conductor by which the electric current enters into the solution or electrolyte

Black copper (coarse copper) An impure metal normally ranging from 70 per cent to 90 per cent copper with less than 2 per cent sulphur Usually a product resultant from the smelting of oxidized (nonsulphur-bearing)

The final product of direct Blister copper smelting of copper ores, the copper ranging

from 96 per cent up

Cathode Used in contradistinction to anode and indicates that electrode by which the elec-

Cement copper The copper obtained by pre-cipitating copper from solutions by the use of iron

Concentrate The valuable mineral product resultant from mechanical treatment of an

Converting A special form of treatment for the oxidization and reduction of matte to blister copper.

Electrolytic copper The copper produced by electrolytic refining methods

Flux Any material added in smelting for

the purpose of facilitating the fusion of the

charge A term used in the mechanical treat-Head ment of ores, indicating the material as delivered to the mill, prior to any treatment other than crushing

Matte (coarse metal) The valuable product resultant from smelting sulphur-bearing ores Consisting of copper, iron, and sulphur in vary-

ing proportions

Mill A general term for a plant using mechanical or hydrometallurgical processes of ore treatment

Vol. VI -5

The mechanical treatment of an Milling. ore, having as its purpose the separation of the valuable from the nonvaluable minerals. Ore. A mine product containing minerals

of economic value.

The further treatment of white Refining. metal or blister copper with the purpose of producing a commercially pure copper (99.8 + per cent) and the incidental recovery of any associated precious metals.

Roasting. Subjecting ore or furnace product to heat without fusion with the object of removing or decreasing the contained sulphur. Slag. The valueless scoria produced in smelt-

ing processes.

Smelting. The reduction of ores or concen-

trates in furnaces by heat and fusion.

Tail. (Tailings). The waste or discarded

Tail (Tailings). product resulting from the mechanical treatment of an ore.

A matte containing but a White metal. relatively small amount of iron, the copper

approximating 60 to 75 per cent.

Wire bar. A special form of casting suited in dimensions to the use of wire-drawing machines.

Wire-bar copper. Refined copper cast in

wire bars.

Bibliography. For information on those subjects briefly touched upon in the foregoing article, consult the following books: CHEMISTRY, Fresenius, Manual of Qualitative Chemical Analysis (New York, 1913); Miller, Quantitative Analysis for Mining Engineers (ib., 1907); Min-ERALOGY, Dana, System of Mineralogy (ib., 1913); Geology, Kemp, Ore Deposits of the United States and Canada (ib., 1907); MINING, Opper Mines of the World (ib., 1907); MINING, Hoover, Principles of Mining (ib., 1909); METALLURGY, Richards, Ore Dressing (ib., METALLURGY, Richards, Ore Dresseny (1909); Schnabel, Handbook of Metallurgy (ib., 1007; Greenwalt, Humanouth of Residually (10), 1007; Greenwalt, Hufarmetalturgy of Oopper (ib., 1912); Peters, Principles of Coppor Smelting (ib., 1907); STATISTICS, Mineral Industry (annual, ib.); Engineering and Mining Industry (inches); 31.

Journal (weekly, ib.).
COPPER, IN SHIPBUILDING. A ship which has her bottom sheathed with sheet copper is said to be coppered, or copper-bottomed. The copper so used is in sheets measuring about 48 by 14 inches, and weighs 18 to 32 ounces per square foot. The copper is always applied over wood, to which it is nailed; at ordinary draft the line of the copper is usually well above water. It seems to keep the bottom free of serious marine growth, which readily attaches itself to wood and less readily to iron. Coppering checks the formation of marine growth in two ways—as a germicide (the car-bonate of copper formed is a deadly poison to animal and vegetable life) and by exfoliation, the film of copper salt peeling off quite readily, carrying with it the attached growths. When cheapness is more desired than strict efficiency, alloys of copper are used for sheathing. Iron and steel ships are coppered by first putting on a thickness or two of wood planking; this is to avoid galvanic action, which may be serious if the hull and copper are connected. In the United States navy very few vessels have been coppered, and the Board of Construction in the Navy Department has decided against coppering except for certain small vessels for special service. A wooden ship is copper-fastened

when the bolts used in her underwater body

are of copper instead of iron. Iron bolts rust rapidly when exposed to the action of salt water, particularly when merely damp, or wet-ted and dried alternately. This seriously reted and dried alternately. duces the strength of the ship. Copper bolts

are eaten away much less rapidly.

COPPERAS (ME. coperose, from OF., Fr. couperose, from ML. coporosa, cuperosa, cuprosa, from Lat. cupri rosa, rose of copper). The name given to the commercial ferrous sulphate and also applied to the native mineral melan-

terite.

Any of several COPPER BUTTERFLY. small butterflies, so called in reference to their colors. In England collectors apply the name to those of the family Lycenide in general. In the United States it is restricted to the closely related forms of the genus Chrysophanus, which, however, is found also in the Old World.

COPPER CLIFF. A town in Sudbury District, Ontario, Canada, on the Canadian Pacific Railway, 4 miles west of Sudbury. It is of recent origin, having grown into recognition since 1901. It is dependent upon the mining and smelting of copper and nickel, which abound in the district. Good fishing and hunting are to be had in the vicinity. Pop., 1911, 3082.

COP'PERFIELD, DAVID. See DAVID COPPER-FIELD

COPPER GLANCE. See CHALCOCITE. COP'PERHEAD. A venomous North American snake (Ancistrodon contortrix) of the rattlesnake family. It may exceed 4 feet in length, and has a burnished copper-colored head, hazelbrown (sometimes golden) body, with Y-shaped dark blotches on the sides, which usually meet over the back. The belly is marked with round black spots. The tail is tapered, greenish when young, chestnut in age, and has no rattle; nor

THE COPPERHEAD. (Top of head, and face view.)

does the snake vibrate it against the grass, "and so produce a warning sound not unlike that of the rattlesnake," as is often said, more than is the habit of all snakes when excited. Another unfounded fable is that it waits until you pass and then strikes from the rear. The truth is it is sluggish, moving about mainly at night, and by day seeks to avoid notice and will not bite unless greatly alarmed or provoked; most accidents result from picking it up or touching it with the hand in handling brush or stones in the woods or clearing swamps. Its bite is as deadly as that of any snake of its size, and the absence of rattling makes it especially dangerous. In the fall it seeks some underground den, where occasionally several have been found entangled together in dormancy; these are usually if not always, pregnant females. When aroused in spring, it seeks swamps and wet meadows, where its food (mainly mice) is most abundant, and where the young are brought forth alive in midsummer. This snake is known from Massachusetts to the Rio Grande, especially in mountainous districts, and is still common in the rocky hills of the Hudson and Connecticut valleys It has many names, such as 'pilot," "redeye," "red adder," "copper-belly," and, in the South, "cotton-mouth" and "moccasin"—the last confusing it with its near relative, the true or water moceasin (qv) Consult Stejneger, "The Poisonous Snakes of North America," in Annual Report of United States National Museum for 1893 (Washington, 1895), and Ditmars, The Reptile Book (New York, 1907) See Plate of RATTLESNAKES

COPPERHEADS A name given by their political opponents during the Civil War to those Northern men who, believing the conquest of the South impossible—though not necessarily sympathizing with the Southern cause-strenuously objected to the vigorous prosecution of the war by the administration In some parts of the country the name was uniformly used as synonymous with "Democrats" The most prominent and most obnoxious of the "Copper-heads" was Clement L Vallandigham (qv) The name was taken from the copperhead snake, which gives no warning before it strikes It originated in 1862 and quickly came into general use throughout the North Another explanation of the name is that it came from the habit of the extreme opponents of the war wearing as a badge a button cut out of a copper cent on which was the head of the Goddess of Taberty

COPPER INDIGO A name given to the mineral covellite, especially when found in spheroidal masses of an indigo-blue color, as is the case at various localities in Thuringia and at Vesuvius Covellite is a copper sulphate.

COP'PERMINE RIVER. A river of northern Canada, so named, in common with the mountains to the west of it, from the metallic products of the vicinity It rises in Point Lake, Mackenze Province, and enters Coronation Gulf, in the Arctic Ocean, about lat 68° N. and long 116° W (Map Canada, G 3) The Coppermine River is not navigable, being throughout its course of over 300 miles little better than a series of falls and torrents
COPPER NICKEL. See NICCOLITE

COPPER-NOSED BREAM (so called from the color of the snout) The blue sunfish, or dollardee (Lepomis pallidus), of the Mississippi valley See Sunfish, and Plate of Darters AND SUNFISH

COPPERPLATE ENGRAVING. See En-GRAVING COPPER PYRITES See CHALCOPYRITE

COPPER RIVER. A river of Alaska, whose source is a glacier of the same name on the northern slope of Mount Wrangell It flows at first northward, then westward and southward to the Gulf of Alaska, into which it empties at long. 145° W—just west of Controller Bay (Map Alaska K. 5) Excepting the mountainous icgion in which the stream originates, the topography of its basin reverses the usual rule, for the river's upper course, once it is fairly clear of Wrangell's slope, lies through a broad plain, while its lower course carries it through the Chugach Mountains, which extend almost down to its delta. Its length is about 300 miles, and its basin has an area of about 23,000

square miles. Its fall is about 3600 feet, or at an average of nearly 12 feet a mile. From

Copper Center the fall is nearly 7 feet a mile

Its chief tributary is the Chitna, from the east Consult Mendenhall, "Geology of the Central

Copper River Region, Alaska," in Umited States Geological Survey, House Document No 197 (Washington, 1905)

COP'PERSMITH (translation of the native Philippine tambagut, which is imitative of the bird's cry) One of several barbets (qv) of India and eastward to the Philippines, which are called by the natives by names meaning "coppersmith," "ironsmith," etc., on account of their sharply accented metallic notes A familiar species in Natal is called "tinker bird" They are gorgeously plumaged, sluggish, fruit-eating birds, very numerous and noisy, but keeping in the tops of the trees and making only short, heavy flights The crimson-breasted coppersmith (Megalæma hæmacephala) is one of the best known and most gaudy

COPPET, kô'pâ' A village in the Canton of Vaud, Switzerland, situated on the west bank of the Lake-of Geneva, 9 miles north-northeast of Geneva (Map Switzerland, A 2). The house in which Madame de Stael lived is still standing and contains some excellent paintings and Coppet Pop, 1900, 552, 1910, 581.

COP'PINGER, JOHN JOSEPH (1834-1909). An American soldier He was born at Queenstown, Ireland, and early joined the papal army in the struggle against King Victor Emmanuel Afterward he came to the United States, was appointed a captain in the Fourteenth Infantry in 1861, served throughout the Civil War, being brevetted major and lieutenant colonel for services at Trevilian's Station and Cedai Creek, respectively, in 1864 In 1865 he became colonel of the Fifteenth New York Cavalry He served in several Indian campaigns (1866-68), receiving the brevet of colonel (1868), and was promoted to be major of the Tenth Infantry (1879), lieutenant colonel of the Eighteenth Infantry (1880), colonel of the Twenty-third Infantry (1891), and brigadier general on April 25, 1895. During the Spanish-American War he was appointed major general of United States Volunteers and was placed in command of the Fourth Army Corps, stationed at Camp Wheeler, Huntsville, Ala He was retired from active service ville, Ala E Oct 11, 1898

COPPINO, kop-pē'no, Michele (1822-1901). An Italian statesman and author He was born in Alba, Piedmont, and was educated in Turin, where he became professor of Italian literature in 1861 and rector in 1869 He was Minister of Education in the cabinets of Rattazzi (1867), Depretis, Caroli (1876-79), and Depretis (1884-88), in which capacity he secured the passage of a law regulating compulsory elementary education He contributed largely to the Rivista contemporanca

CO'PRA (Hind. khoprā, from Malayalam Koppara). The dried kernel of the coconut. It is used for the coconut oil which it yields and coconut stearm Copra, either sun dried or kiln dried, contains 50-65 per cent of oil, while list air dried may run as much as 74 per cent

COPRI'NUS See FUNGI, EDIBLE, for article, and Colored Plate

COP'ROLITES (from Gk κόπρος, kopros, dung +  $\lambda \ell \theta$ os, lethos, stone) The fossil excrements of animals found at times in the Paleozoic and Mesozoic strata of the earth's crust Their true nature was first inferred from their occurrence in the bodies of several species of ichthyosaurus, in the region where was situated the intestinal tube. It has been since shown that they are the voidings chiefly of saumans and also of fishes They often contain portions of scales, bone, teeth, and shells, the indiges-tible parts of the food on which the animals lived Occasionally they may be found exhibiting the spiral twisting and other marks produced by the conformation of the intestinal tube, similar to what is noticed in the excrement of some living fishes, and some specimens have been erroneously described as plants. These peculiar markings obtained for them the name, when their true nature was unknown, of "larch cones" and "bezoar stones" Coprolites are found to contain a large quantity of phosphate of lime, and as this forms a valuable manuic, the deposits containing them have been largely quarried, especially in England, where they are found over extensive areas in Norfolk, Essex, Cambridgeshire, and Suffolk The coprolites are extracted by washing the earth and are then treated with sulphuric acid, which converts their lime phosphate into a soluble

Among the most interesting copiolities are those of spiral form from the Waverly group of Pennsylvania and clsewhere, originally described as fossil algo and problematic plants under the generic names of Palwowyris, Spirangium, Spiraxis, and now known to be the dung of ancient sharklike fish such as Cladoselache The silicified copiolites of the Lias of Hanover, Germany, have afforded great numbers of radiolarıan remains which have been described by Rust. (See RADIOLARIA ) Consult Mantell, Petryfactions and their Teachings (London, 1851), and id, Medals of Creation (1b, 1844) COPROPHAGY See BULIMIA

COPSE, or COPPICE (OF copers, from coper, F1. couper, to cut, from OF coup, coup, cop, colp, F1. coup, from ML. colpus, blow, from Lat colaphus, Gk κόλαφος, kolaphos, buffet, from κολάπτειν, kolaptein, to strike) A name given in England and elsewhere to a natural wood or plantation in which the trees are periodically cut before being allowed to attain the size of timber trees, and where new shoots are permitted to grow from their roots or stumps. Some kinds of trees do not send up new shoots, but many-as the oak, birch, chestnut, ash, elm, maple, alder, hazel, and willow-very readily do so, especially when not allowed to attain too considerable a size before being cut over. Copsewoods are sometimes planted to vary and beautify the landscape, but more generally with a view to profit, either owing to a great local demand for their produce, or to peculiarities of soil and situation. It often happens that, owing to scantiness of soil or to unfavorable subsoil, oaks and other trees, after growing vigorously for a number of years, are arrested and remain almost stationary in their growth. In such circumstances it is advantageous to cut them over early and to treat the plantation as a copse, the former vigor being again manifested in the young shoots, and the land yielding in this way a greater return to its owner Oak and birch are much planted as copsewood, in consequence of the demand for their bark, the trees are cut over every 12 to 25 years, dependent upon the character of the soil, climate, etc. The largest pieces of the wood are used for making wheel spokes and for other purposes of timber; the

smaller portions are used for making charcoal and firewood Ash is sometimes planted as copse, with a view to the employment of the wood for handles of implements, huidles, hoops, etc, the wood of the ash, even when very young, being highly valued for strength and elasticity Chestnut copses are planted in England to supply hop poles Hazel is a very common copse-wood, being in great demand for making crates, etc Besides the cultivation of different kinds of willow or osier for basket making, in which they are cut over annually, some of the species are cultivated as copse, and cut every five, six, or seven years, for hoops, crates, etc., the species which is deemed most suitable being Salix cuprea Salix alba is also commonly employed in copse plantations for larger willow wood In some countries copsewood is particularly valued for the regular supply of fuel which it affords.

In cutting copsewood care is taken to dress the stumps so that water may not lodge in them and cause them to rot The size to which the stems are allowed to attain before being cut, and the frequency of cutting differ ac-cording to the different kinds and the uses intended. Stems more than 4 inches thick are generally cut with the saw, but smaller stems with a curved bill or axe cutting upward

COP'TIS (Neo-Lat, from Gk κόπτειν, koptern, to cut, referring to its divided leaves), or Gold-THREAD A genus of plants of the family Ramunculace Copies trifolata, the best-known species, is a native of the north of Europe, Sibeila, Greenland, Iceland, and North America, It grows in swamps and derives its popular name from the golden-yellow color of its long, threadlike rootstocks The lootstocks are very bitter and have some reputation as a tonic. They also contain a yellow dye The leaves of this plant have three wedge-shaped leaflets, and ris leafless stems bear each a solitary, rather pretty white flower, the petal-like sepals of which have yellow bases

COPTS The name given to the Christian descendants of the ancient inhabitants of Egypt The Arabic word Qubt is probably nothing but a mutilation of Raypt (not of Koptos, or Jacobite) The number of the Copts was estimated in 1907 at 706,322, and the total number of Christians, 881,602 They are most numerous in the towns of Upper Egypt, south of Assurt. As they usually live in towns and are raiely engaged in agriculture, they present a certain contrast to the Mohammedan peasants They are, as a rule, of smaller stature than the latter and of a lighter complexion. Most of the Copts still wear the black coat and black or blue turban which they were forced to assume in the time of the Mohammedan persecution They are frequently goldsmiths and money lenders, and they are also excellent clerks and accountants, although few of them attain the higher governmental positions. Their attain the inguet governmental positions. Their character is apt to be marked by sullenness, distrust, and avariee Although the Alabs owed the conquest of Egypt to the asstance of the Copts, they soon began toppress them cruelly, taxing them to the unost, bundering their religious worship, and occasionally even branding them. These persecutives the control of the cutions reduced the numbers of the Copts very considerably. A few of them are at present

adherents of the Roman Catholic church, still fewer of the Greek church The majority adhere to the old National church, which originated in a schism after the rejection by the nated in a senism after the rejection by the Council of Chalcedon (451 AD) of the Monophysitic doctrine, the Egyptians not accepting the decision of the council. A long and bitter struggle against the orthodox Byzantine government arose, lasting until this was replaced by the Arab invasion The Coptic sect is also called Jacobite, after a prominent teacher of the fifth century The highest ecclesiastical dignitary of the Monophysitic church is the Patriaich of Alexandiia, who at present, however, resides at Cairo This patriarch is always chosen from the monks of the convent of St. Anthony By him the metropolitan of Abyssinia is nominated. The lest of the clergy represent orders similar to those of the Roman Catholic church They have 12 bishops The monks and nuns were once very numerous, but they have in the course of time greatly diminished in number The elaborate 11tes of the church present some rather curious features—eg, the celebration of the Lord's Supper with unleavened bread dipped in wine, and the strict division of the sanctuary or chancel from the body of the church The Copts practice circumcision and baptize by immersion. The feasts and fasts, which are very strictly observed, are numerous. Owing to the extreme length of the service and the absence of seats, many worshipers lean on crutches which they bring with The Copts are very bigoted and are especially fanatical against other Christian de-nominations Of late, however, the American Presbyterian mission has worked among them with success At Qus it converted the Coptic Bishop and his whole congregation. The Coptic language, which was spoken from the third to the systeenth century, but has now become ex-tinct as a vernacular, belongs to the Hamitic group of African languages. It is of great importance linguistically as being the descendant of Ancient Egyptian (see Egypt, Language), although its own literature is of comparatively small importance In character Coptic was at first almost monosyllabic, like Egyptian, but it developed at a later period into a highly agglutinate language (q v) The morphological side of Coptic was therefore little developed, but the phonology became the real basis of the grammatical system for variations of meaning gained in consequence a far greater flexibility than Egyptian had possessed, and it also en-riched its vocabulary by many Greek loan words, as well as a smaller number of Latin and Persan terms Anabic words are significantly lacking in the Coptic vocabulary. The language was divided into five principal dialects. These were the Sahidic, or Thebar and Achminic in Upper Egypt, the Boheiric and Memphitic in Lower Egypt, and the Fayumic, or so-called Bashmunc, spoken near Lake Menzalen in central Egypt There were also doubtless a number of dialects of much importance of which no record has been preserved Of the Coptic dialects the oldest is the Sahidic, whose literature dates from the period extending from the third to the seventh century, compusing annals, translations of the Bible, apocryphal and Gnostic books, legends of the saints, and the like This oldest literature has been in great part lost, and only fragments remain The Boheiric dialect, dating from the seventh century, con-

tains by far the greater amount of extant Copte Interature, again in the main translations from the Greek or revisions of the older Sahudic texts, as well as a few translations from the Arabic It is this dialect which is still used in the liturgy of the Coptic church The Fayumic dialect has only very scanty Interary remains, which have been discovered lately by excavations in Egypt The Sahulic is the most harmonious and has more Greek loan words than the Boheric, while the Fayumic stands midway between the two The Coptic script has 31 letters, 24 of which are Greek uncials (see Uncial Letters), while the remaining characters, for § (sh), f, h (German ch), h, \$2 (French 2), c (English ch in child), and ti, are derived from the Egyptan demotic script After the Mohammedan conquest of Egypt, Arabic gradually displaced Coptic, although Coptic is said to have been spoken as late as 1633 by one old man.

Late as 1000 by one out main consult Kircher, Prodromus Coptus sive Egyptiacus (Rome, 1636), Lingua Egyptiacus Grammar of the Egyptian Language (London, 1830, 2d ed, 1863), Rosellim, Elementa Linguage Egyptiaces sive Coptice (Rome, 1837), Peyron, Giammatica Linguae Copticae (Turin, 1841), Schwartze, Koptische Giammatich (Eleping, 1853), Stein, Koptische Grammatica (Lieping, 1853), Stein, Koptische Grammatich (Lieping, 1853), Stein, Koptische Grammatich (Lieping, 1853), Stein, Koptische Grammatich (Lieping, 1854), Stein, Koptische Grammatich (Elein, 1804), Peyron, Lewcon Linguae Copticae (Turin, 1835), Tattham, Learcon Egyptiaco-Latinum (Oxford, 1835), Parthey, Voabulaum Coptico-Latinum et Latino-Copticum (Berlin, 1844), J. Strzygowski, Hollenstische und koptische Kunst in Alexandrue (Vienna, 1902), "Die Entstehung der Koptischen Kirche," introduction to R. Haupt's Katalog 5 (Halle, 1905)

COP'ULA (Lat, bond) A term employed in logic to designate the word which expresses the relation of subject and predicate in a judgment. Thus, in the sentence "Art is long," art is the subject concept, long the predicate concept, and is the copula. The copula is either expressed separately, as by some part of the verb "to be," as in the above sentence, or it is contained in the word expressing the piedicate, as "The flower blooms," i.e, is blooming

CÓPULATIVE (Lat copulations, from Lat copulare, to join together, from copula, bond, from co, together + apere, Gk änreu, hapten, to fasten) A term applied to words and sentences that introduce something which adds to the preceding thought, in the same direction They are sometimes for this reason called "cumulative conjunctions." The principal ones are and (the typical copulative conjunction), also, as well as, likewise, morrocuer

Adversative, marking degrees of opposition of thought in the words and expressions connected, as, but, however, nevertheless, only, still, yet

Causal, introducing a reason or cause, as, consequently, for, hence, then, therefore

Alternative, expressing a choice between two or more things, as, either, else, nor, neither, whether

When two conjunctions connect closely related parts of a sentence, they are called "correlatives", as, either—or, neither—nor, whether—or. The subordinating conjunctions may also

be subdivided, the principal classes being place, time, manner, cause, comparison, purpose See

COP'Y (UF copie, abundance, from Lat copia, from co-, together + opes, riches) In the fine arts, a reproduction of a work, whether painting, statue, or engraving, not by the original artist A copy made by the master himself is called a repetition of replica (in French, a doublette) A copy of a statue, or other piece of sculpture, taken from a mold, is not called

a copy, but a cast (qv)
COPYHOLD A species of estate in land in Ireland and England, the modern form of the ancient tenure in villemage, closely resembling n many particulars the ten rights of Scotland Copyloid is expressed technically as "tenure by copy of court roll at the will of the lord, according to the custom of the manon " This means that it is tenure of land, being part of a manoi, the title being evidenced by the court rolls of the manoi, and the light of the owner being in conformity with the immemorial cus-toms of the manor The addition, "at the will of the loid," serves only as a memorial of the derivation of this species of estate from the estates granted in old times to the bondmen, or villeins, which estates were, in theory at least, iesumable at the pleasure of the lord But the will of the lord has from a very early period been controlled by the custom of the manor, which forms the law of the tenuic, and as this custom must be immemorial, i.e., extending to the reign of Richard I, no new copyholds can be created

The custom of each manor may vary from that of others in important particulars. In some the copyhold lands are held for life only, in some they descend according to particular rules of then own, in most, however, they descend according to the ordinary rules of inhentance of freehold estates But the custom, whatever it may be, cannot be altered by the holder of the copyhold, he cannot, cg, entail his land unless the custom wairants it

One practical distinction of much importance, drawn between freehold and copyhold land, is the mode in which it must be conveyed. An ordinary conveyance is ineffectual in regard to copyhold, and indeed would operate, like other attempts to break through the custom which forms the title, as a forfeiture The owner comes to the steward of the manor and by a symbolical delivery, according as the custom may prescribe, surrenders the land to the lord of the manor, in order that it may be granted again to such person and on such terms as are desired and as the custom authorizes steward, by a repetition of the symbolical delivery, transfers the copyhold to the person in question in terms of the surrender, and the transferee then pays the customary fine, or fee, and takes the oath of fealty. This is called conveyance by surrender and admittance In the case of an heir succeeding there is no surrender, but there is admittance only upon payment of the customary fine, and it is entorced by a customary penalty. A mortgage is effected by a surrender upon condition that the money is repaid and the admittance takes place only in event of failure of payment. A copyloid may in like manner be devised by will, the devisee being admitted on the death of the

The inconveniences and loss accruing through the variety of customs to which copyhold lands

are subject led the legislature to provide for then gradual extinction By consent of the copyhold commissioners, all the services due to the lord of the manor may be commuted for a fixed rent The lord of every manor is also authorized to enfianchise, or convert into free-hold, the copylold lands by agreement with then owners, and either the lord or the tenant may compel entranchisement on payment either of a fixed sum, where it is at the instance of the lord, or of an annual rent, where it is at the instance of the tenant, fixed in both cases by the commissioners See Manor, Tenure, SERF, and consult Elton, Treatise on the Law of Copyholds and Customary Towners of Land (2d ed, London, 1893), and Scuven, Treatise on Copyhold, Customary Freehold, etc (7th ed, ib. 1896)

COPYING MACHINES AND PROC-ESSES The various contrivances for procuring duplicates of manuscripts without the labor of transcribing them may be reduced to two classes. In the one, the writing or typewriting is first made and then copied, in the other, the copy and the original are produced at the same time. The essence of the first method is this. In writing the original, an ink is used that is made for the purpose, or common ink is thickened by the addition of a little sugar or glycerin. If the typewriter is used, a copying libbon or one impregnated with such an ink is employed When the writing is dry, a damped sheet of thin unsized or tissue paper is laid upon it, and over this a piece of oiled paper. The whole is then subjected to pressure, and the damped paper is found to have received an impression of the writing It is of course the reverse of the original, but the thinness and transparency of the paper allows it to be read right on the other side. The machines for communicating the pressure are of various kinds. Some pass the sheets between rollers like the copperplate press, others act on the principle of the simple serew press A simple plan is to wrap the sheets around a wooden roller of about an inch diameter, lay this upon a table, and roll it under a flat board, pressing all the while In the second method of copying, prepared blackened or carbon paper is laid between two sheets of thin writing paper writing is traced firmly on the upper sheet, with a steel or agate point, or common lead pencil, and the lines are found transferred in black from the blackened sheet to the paper adjacent By having several of these blackened leaves, a number of copies may be produced at once, so that the method can be employed in duplicating invoices, newspaper copy, and telegraph messages. The blackened paper is prepared by saturating it with a mixture of lard and lampblack. The manifold uriter of Wedgwood, invented in 1806, was on this plan.

This is, of course, the underlying basis of obtaining earbon copies with the typewriter. A sheet of paper upon which the copy is to be made is placed next to the cylinder, and in contact with it a sheet of earlier paper. Other sheets of paper and carbon paper to the limits of the capacity of the machine and the number of copies desired follow, and finally the original sheet on which the ribbon leaves the mark of the characters when struck by the type. Press copies are being supplanted in large carbon copies for business and official correspondence, as the permanence and indelibility of the ink is not so assured, and the cost of labor and material is much greater The United States government Commission on Economy and Efficiency made recommendations to that effect in 1911

The first suggestion for a copying press is said to have been made by Benjamin Franklin, who sanded the yet wet ink of his manuscript with emery and then passed the manuscript between iolleis in contact with a soft, highly polished pewter plate This received the impression from the emery, from which numerous copies could be made by the copperplate printing process In 1773 James Watt adopted the simple plan of copying by piessing transparent, bibulious paper against the damp manuscript, so that the writing would be transferred as on a blotter and then read from the other side. Watt devised not only the copying process with a special ink but also a lotary and other presses

In the papyrograph a specially prepared paper is used, upon which words are written with a common pen, but with a special ink The sheet is then soaked in water, and the ink corrodes the fabric of the wet paper, leaving open lines in place of the writing. The sheet is then used as a stencil, like that prepared by the electric pen. The mimeograph is an apparatus invented. by Thomas A Edison, by which stencils of written pages are obtained for the purpose of pro-ducing an indefinite number of copies It consists of a fine-pointed steel stylus, moving over the surface of a sheet of tissue paper, coated on one side with a film of sensitive material This paper is placed on a plate of steel, known as the baseboard, upon which are cut intersecting corrugations, numbering 200 to the inch. As the stylus moves over the paper, it presses it down upon the steel plate, and the fine sharp points puncture the paper from the under side on the line of the writing This paper, or sten-cil plate, is then fastened into a frame, which stretches it tight and smooth, again placed upon the baseboard with a sheet of paper between, and an ink roller of peculiai construction is passed over its surface, forcing the ink through the perforations upon the paper be-neath, thus making a print. The patent for this instrument was applied for in 1878, and there have been numerous improvements since, the apparatus being used extensively in connection with the typewriter, where the stencil is made by the type bars striking a sheet of paper laid against a piece of gauze, the resulting effect being exactly the same as described above. Various mechanical devices for printing from

various mechanical devices for primary from stenenis thus prepared are available. A familiar form of copying device uses a gelatin surface against which a manuscript written with a special ink is pressed. The ink is absorbed by the surface, and a number of copies may be secured by simply placing fresh shoets against the surface.

In making copies of insurance policies and other documents where exact reproduction is desired, it is now customary to use a special form of camera and sensitized paper, making a direct photograph, but reversed, in that white is black, which is available for filing

In connection with the typewriter there are many different devices for producing a greater or less number of fassimile letters or circulars, but in the main they all depend upon one or another of the principles mentioned above, unless they make use of some form of movable

type For making copies simultaneously and at distant points a mechanical and electrical device known as the telautograph is available, but this is used more for the transmission of intelligence than to provide an exact copy

The Blue-Print Piocess is peculiarly adapted to the reproduction of drawings and plans, and is used by architects, engineers, and mechanics Two solutions are prepared the first contains one part of citrate of mon in four parts of pure water, the second contains one part of red prussiate of potash in six paits of water When ready for use, equal parts of the solutions may be mixed in a shallow dish and applied to sheets of paper with a sponge or a camel's-hair brush Any paper will serve, but that is best which has but little sizing. The solution should be applied and the paper should be dried and kept in the dark The solutions themselves will keep, separately, in the dark as long as desired. but if mixed soon begin to deteriorate. The drawing or writing to be copied should be made with very black ink, upon thin paper or tracing cloth. A photographer's printing frame, with a plain glass and a back easily removed, is used in the following manner Place the drawing face down upon the glass, the prepared paper with its face against the back of the drawing, put the movable back in place, reverse the frame, and expose to light In direct sunshine 2 to 7 minutes will be long enough, the time to be ascertained by trial, in diffused light, the exposure must be 5 to 10 times as long After exposure the print should be immediately washed in clear water, when the chemicals are removed, the sheet is fastened by its corners to a line to dry, and the surface may afterward be finished by a hot non or by pressure A little practice is needed to secure the best results, and in a good print the lines will be clear white, and the background a deep blue A light blue background indicates a weak solution, or insufficent exposure, overexposure is shown by a grayish tint. Clear, quick sunshine will give sharper lines than can be obtained by slow, diffused light, but in large blue-printing establishments electric lights and special machines are employed. The chemical change is evident, the light causes a reaction between the prussiate of potash and the iron, of which Prussian blue is the product, this occurs wherever the light has not been intercepted by the black lines of the drawing, which therefore appear in white upon an intensely blue and unfading background Copies may be multiplied at will from negatives on glass or films, from engravings in books, from drawings, or from manuscripts

Black Prints on a white ground may be made in the same general way, by using the proper solution in preparing the paper, of which there are now numerous varieties sold ready for use, while the rapid making of blue and other prints from tracings, especially those of large size, is an important industry in large cities where there are many architects and engineers COPYMRIGHT. The exclusive right of re-

COPYERIGHT. The exclusive right of reproducing, by writing, printing, or otherwise, the language and form of a literary or artistic production and of publishing and wending the same. In this broad sense the right is wholly modern, being based upon a series of statutes, beginning with 8 Anne, c 10, in England, and with the first Federal Copyright Act passed by the Congress of the United States in 1790.

Copyright in published works exists in Eng-

land to-day by virtue of the Copyright Act of 5 and 6 Vict, c 45 (1842) With this must, however, be considered the following amendments 1844, international provisions, 1847, Colonial act, 1850, designs and sculpture, 1852, international and engravings, 1862, fine arts, 1875, international, for diamatic works Canada, 1882. musical compositions, 1886, international, 1887, order in council (confirming the Bern convention), and 1888 and 1902, musical compositions In the United States the matter is one for national and not for State regulation, the power "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discov-eries" being vested in Congress by Art I, Sec. 8, of the Constitution The only effective restriction which this clause places upon the power of Congress to legislate concerning copyrights is the virtual prolintion of the grant of a perpetual right of this character. The appaient limitation of the power to a copyright for "writnes" only her her ways a proper to be supposed to a copyright for "writnes". ings" only has been removed by judicial construction, the term "writings" having been held to include maps, chaits, music, prints, engravings, drawings, paintings, and photographs, as well as books, written and printed articles, and the like The power to protect the author of a book in the right to dramatize the same, and the author of a dramatic composition in the right of publicly performing or representing it, is included within the constitutional provision But it is not clear whether the protection afforded by the copyright law to sculptors places them in the category of authors of writings or of inventors or designers. However this may be, there is no dispute as to the authority of Congress to enact general copyright legislation. The law now in force is to be found, in substance, in U S Rev Stat, Tit 60, c 3 The most important modification of this act is the enactment of March, 1891, introducing international provisions Further amendments are 1893, deposit of copies, 1895, limitation of pen-alty for art infringements, 1897, additional penalty for diamatic infingements, 1897, in-stituting the legister of copyrights; 1897, pen-alty for fraudulent notice. Under the Act of 1870 the supervision of the business of copyrights is placed under the control of the Librarian of Congress Under the Act of 1897 the office of Register of Copyrights was created The details of the copyright business are managed by the Register, who remains, however, subject to the general supervision of the Librarian of Congress The statute provides that two copies of the work copyrighted, printed from type set within the limits of the United States (except in the case of musical compositions), shall be deposited in the office of the Librarian of Congress not later than the day of publication of the work in this or any foreign country, except that where the original publication was in a foreign language the amendment of 1905 prevents printing in the United States for 12 months thereafter discrimination against Great Britain has been strongly criticized in that country The original jurisdiction of all suits under the copyright laws rests with the United States circuit courts Under the interpretation of these courts copyright in published works exists only by virtue of the statute

The terms of these acts are very similar to those of the English law and provide that the author, inventor, designer, or proprietor of any book, map, chart, draunatic or musical composition, engraving, cut, print, or photograph, or negative thereof, or of a painting, drawing, chromo, statue, statuary, etc, being a citizen of the United States or a resident therein, or a citizen of any State which grants reciprocal privileges to citizens of the United States, may secure the sole liberty of printing, reprinting, publishing, copyring, executing, and vending them for the term of 28 years, which period may, on the application of the author or inventor, or, if he be dead, of his widow or children, be extended to a further period of 14 years. The time limit of the first American act is that specified (for books thereafter printed) in the English Statute of 1709, and was originally adopted by analogy from the Statute of Monopolies (21 Jac I, c 3)

In order to make clear the claim of a work to copyright, it is necessary that it should be original, but the originality can exist in the form or in the arrangement as well as in the substance Corrections and additions to an old work (itself not the property of the compile) can also secute copyright. The copyright of private letters constituting literary compositions is in the composer, not in the ieceiver. As to the right of property in lectures, whether written or oral, the American courts have followed the English precedents.

It is to be boine in mind that what is thus protected by law, and thus elected into a species of property, is not the ideas, sentiments, and conceptions of the author, a tisk, or designer, but the substantial form in which he has embodied

them There is no property in thoughts and feelings, and there can therefore, in the legal sense of the term, be no theft or puracy of ideas It is the literary or artistic creation, ie, the form, which is protected, and not the substance Hence ideas, whether expressed in conversation, or in lectures, or in copyrighted books, immediately become common property and may be employed by any one who will clothe them in a new and different form from that in which they were communicated to him But the new form must be substantially different from that of the copynighted matter It must not be merely a disguised copy or reproduction of the original, for the law protects the arrangement of the matter as well as the language in which it is conveyed On the other hand, as it is the financial and proprietary interest, and not the pride, of the author which the copyright law seeks to protect, it is no infringement of his rights to make a fair and reasonable use of a book by way of quotation or otherwise, whether for purposes of criticism or for the private use of the reader. Thus it has been held that "extracts and quotations fauly made, and not furnishing a substitute for the book itself, or operating to the mjury of the author, are allowable" Furthermore, as the law is aimed at reproducing a work by printing, publishing, dramatizing, or translating any copy thereof, it is conceived that it is no infringement of the author's copyright to read in public a printed poem or other literary production, though of course it cannot be reprinted in a newspaper or magazine, even as an item of news, without permission. It has, however, been held by the English courts that the presentation, through reading or through singing, of a copynighted work to a public which makes payment for the privilege, constitutes an infringement It is not necessary that matter shall be literary or artistate in form, not even that it shall be original in substance, to be entitled to copyright A translation or dramatization of another's work may be so protected, and so may be an abstract or newspaper report of a speech, a judicial opinion, or a debute. The law extends equally to compilations of the writings of others, to dictionative, gazettees, road and guide books, directories, calendars, catalogues, mathematical tables, and the like, the arrangement of the material being protected even though the matter of which it is composed is common property.

There is in the United States no general principle of law conferring the copyright on all published works, nor does it arise in favor of an author merely by virtue of his authorship. It is a peculiar privilege, which can be had for the asking, but which is not conferred on those who do not seek it It is still possible for an author or an artist to dedicate the productions of his genius to the public Having once done this by publishing his work, he is precluded from setting up an exclusive title to it thereafter In other words, the steps requisite to secure copyright of any work entitled thereto must be taken in advance of publication The process of obtaining a copyright is very simple, consisting only in the deposit in the Library of Congress at Washington, not later than the day of its publication in this or any other country, of a copy of the title-page and two copies of the book or other work to be copyrighted, and printing on the book or other work and on all reproductions thereof a notice that the copyright has been secured, to-gether with the date thereof In Great Britain, on the other hand, copyright attaches, without previous application therefor, in favor of all books, etc, first published in the United King-dom The right does not exist and cannot be acquired in favor of works previously published elsewhere The English statute provides for registration at Stationers' Hall, not as a prerequisite to the existence of copyright, but as a pieliminary to a suit for its infringement

As already stated, copyright is a matter of olv national and local concern. The granting only national and local concern of copyright by one nation to the productions of citizens of another has resulted as a slow development from influences that first began to have effect about the beginning of the nineteenth century (For a historical treatment of this, see LITERARY PROPERTY ) At the present time many of the leading states of Europe have granted international copyright, mostly under specific conditions of time of place of publication In Great Butain, the copyright law now in force is in substance that of 5 and 6 Vict, tanned in the Acts of 1844, 1852, 1875, 1886, and the order in council of 1887, confirming the Bern convention The decision given in June, 1891, by the law officers of the crown that citizens of the United States could secure copyright throughout the territory of the Butish Empire by compliance with the provisions of the British statute, enabled Picsident Hairison to include Great Butain in the proclamation of July 1, 1891, in the list of states the citizens of which could secure copyright in the United States under the Act of March, 1891 The term is for the life of the author and seven years, or for 42 years from the date of first publication, whichever may be the longer The law provides that a copy of the first and of each subsequent edition of every book must be sent, on demand, to the following libraries The British Museum in London, the Bodlean in Oxford, the University Library in Cambridge, the Library of the Faculty of Advocates in Edinburgh, and the Library of Tinity College in Dublin

The term for art copyright is fixed, under the Act of 38 Geo III, at 28 years Copyright in a dramatic production is protected for the same term, of 42 years (or for the life of the author and seven years), as that accorded to a work of literature The copyright in letters vests in the writer, except in so far as any particular circumstance may give to the person to whom the letter is addressed, or to his representatives, a light to publish the same. The per-petual copyright of the authorized versions of the Bible and of the Book of Common Prayer (and possibly, adds Stephen, in the text of acts of Parliament) is vested in the crown petual copyright in books first issued by the following institutions (unless such books came into the control of the institutions for but a limited term) is vested in the universities of Oxford, Cambridge, Edinburgh, Glasgow, St. Andrews, and Aberdeen, and also in each college of the universities of Oxford and Cambridge, in Trinity College, Dublin, and in the colleges of Eton, Westminster, and Winchester The book of registry of copyrights is kept at Stationers' Hall There is no obligation to make registration, excepting that such entry must be made before the owner of the copyright is in a position to take action in regard to any alleged in-fringement. A bill for the reshaping of the British copyright act, known as the Monkswell Bill, was reported to the House of Lords by committee in 1900 but was not passed. It was originally introduced in November, 1886, at the in-stance of the British Society of Authors It was reintroduced, with some material modifications. in 1900 Under this bill the term of copyright is extended to the life of the author and 30 years.

The provisions controlling copyright in Germany, including Alsace-Lorraine, date from 1871 The Statute of June 19, 1901, now in force, made no material changes in the conditions of copyright, but instituted detailed regulations for the relations of authors and publishers, covering the Verlagsrecht There are also Acts of Jan 9, 1876, for sculpture, and Jan 10, 1876, for photographs The copyright relations with the United States are defined in the convention of Jan 15. 1892. The term is for the life of the author and for 30 years thereafter Copyright legistry for the Empire is kept in Leipzig The protection of the law is afforded to the works of German citizens, whether published inside or outside of the Empire Under this same law the works of aliens receive protection provided that they are published by a firm doing business within the Empire In Italy literary copyright rests upon the Statute of September, 1882 term is for the life of the author and for 40 years after his death, or for 80 years from the publication of the work. In Austria the term of literary copyright is 30 years after the au-thor's death In Belgium copyright (formerly perpetual) is now limited, under the Law of 1886, to the life of the author and 50 years thereafter In Holland, under the Law of 1881, the term is for 50 years from the date of publication In Hungary the term is the life of the author and 50 years In Japan, under the Law of March 3, 1899, the term is the life of the author and 30 years In Russia the term is for the life of the author and 50 years. In Spain, under the Act of 1879, the term is for the life

of the author and 80 years

The United States International Copyright Act has greatly narrowed the beneficial operation of the law by a provision that a foreign book or lithograph to secure its benefits must be manufactured in this country Consult Copinger, Law of Copyright (4th ed, London, 1904), Luw of Copyright (4th ed., London, 1904), Done, Treates on the Laws of Property in Intellectual Productions (Boston, 1879), McGillivray, The Law of Copyright (London and New York, 1902), Briggs, The Law of International Copyright (London, 1906), Hamlin, Copyright Cases (New York, 1904), Solberg, Copyright of Copyright (1905), Copyrigh

COQUELIN, ko'klin', Benoît Constant (1841-1909) A distinguished Fiench actor, known as Coquelin Aine, to differentiate him from his younger brother, Coquelin Cadet Born at Boulogne-sur-Mer, Jan 23, 1841, he early showed such diamatic gifts that he was sent to the Paris Conservatorie (1859). The following year he took the second prize for comedy and made his debut on the stage of the Comédie Française in Le dépit amoureux Later he appeared with bulliant success in Le marrage de Figuro, Le malade imaginarie, Le misanthrope, Le barbier de Séville, and other pieces in the classic repertone. In modern plays he was no less effective, and he speedily became the leading comic actor of his time. Among his creations have been rôles in Le lion amoureux, Gringone, Tabarın, Paul Forestrer, L'étrangère, Les faux ménages, Le monde ou l'on s'ennure, and Denise, to mention only a few He was elected a sociétaire in the Théâtre Français in 1864, but in 1886 he retired and made an extensive tour abroad, visiting America in 1888 At the end of 1889 he actumed to the Theatre Français, where, as a salaried member of the company, he where, as a satarred member of not company, he remained till 1802, creating among other parts that of Labussière in Thermidor (January, 1891) In 1893-94 he appeared again in the United States His engagement in 1895 at the Renaissance Theatre in Paris led to a lawsuit from the Comédie Française, in which he was condemned to pay damages In 1897, at the Porte-Sant-Martin, he produced Rostand's Op-sano de Bes gerac, which became his most cele-brated character In 1890 came his Napoleon In Plus que revne In 1900-01 he visited Ametica once more, this time in company with Sarah Bernhardt, to whose Due de Reichstadt he played Flambeau in Rostand's L'Aiglon Coquelin was abundantly endowed for the stage He had a trim figure and expressive face. The large tip-tilted nose was a partial disqualifica-tion for tragedy, but an advantage in comedy. His eye was alert and penetiating, his voice naturally deep and resonant, but it could be exquisitely modulated to express varying moods He lacked Fechter's fervor in love-making scenes, but he had a simplicity and directness that was more appealing; and in his versatility and the mastery of the technique of his art he was without a rival among his contemporaries. He entered into the soul of the character he was portraying and divested himself of every attri-bute that was not in harmony with it. Each of his characters was a new being, differing in thought and action from the others Coquelin was known also as a writer and lecturer. Among

his publications are L'Art et le comédien (1880), which is known in English as The Actor and his Art', Les comédiens par un comédien (1882), L'Arnolphe de Molière (1882), and, in collaboration with his brother, Coquelin Cadet, L'Ast de due le monologue (1884) sult, for biographical matter, E Zabel, "Coquelin im Beiliner Schauspielhause" in Zur modernen Diamaturgie, vol in (Oldenburg, 1903), for criticism, Edmondo de Amicis, "L'attore Coquelin," in Ritratti letterari (3d ed , Milan,

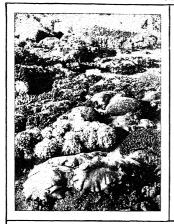

1881)

COQUELIN, ERNEST ALEXANDRE HONORÉ 1848-1909) A French actor, known as "Co-(1848-1909) (1848-1909) A French actor, known as Co-quelin Cadet," to distinguish him from his more famous clder brother, Constant Coquelin He was born May 16, 1848, at Boulogne-sur-Mer, and in youth was for a time in the employ of the Northern Railway, but went, in 1864, to Paris to enter the Conservatoire and make a career upon the stage He was graduated three years later with the first prize in comedy and made his debut at the Odeon In 1868 he appeared with his brother at the Theatre Français, and he continued there till 1875, playing in Les play-deurs, Le barbier de Séville, Les femmes savantes, Le manage de Figaro, L'Avare, and other well-known pieces. In 1875 he went to the Variétés, but returned to the Comédie Française in the following year, and in 1879 he became a member of the company Among the principal plays in which he created parts are Le sphina, L'Am Fritz, Les corbeaux, Denise, and L'Héritiére M Coquelin Cadet owed much of his reputation to the success of the numerous monologues of which he was the author, and in the rendering of which he gained great popularity in the salons of Paris He wrote also, under the pseudonym of Puouette, Le livre des convalescents (1880), Le monologue moderne (1881), Fariboles (1882), Le vire (1887), Pirouettes (1888), and other humorous volumes.

COQUELIN, JEAN (1865 - ) A French actor, son of Constant Coquelin (qv) He studied under his father and in 1890-92 was engaged at the Théatre Francais In 1897 at the Porte-Saint-Martin he created the 161e of Ragueneau in Cyrano de Bergerae He has also played Lubin in Thermidor, Verdelet in Logendre de M Pourier, and Talleyrand in Plus

GOQUEREL, Ko'ki öl', ATHANASE LAURENT CHARLES (1795-1808) A French Protestant theologian He was born in Paris and studied theology at Montauban In 1818 he became pastor of the French church in Amsterdam and in 1830 was induced by Cuvier to return to Paris, where he won high reputation as a pulpit An earnest opponent of the doctrine of on aton predestination, he drew upon himself the violent attacks of the orthodox Calvinists and propagated his opinions in three periodicals founded by him He was elected a member of the Constituent Assembly in 1848 and later also of the Legislative Assembly Among his writings may be mentioned a reply (1841) to Strauss's life of Jesus, which was translated into English (1844), Biographie sacrée (1825-26), L'Orthodowre moderne (1842); Christologie (1858). Ilis son ATHANASE JOSUÉ (1820-75) was a pulpit onator and was prominent as the leader of liberal Protestantism in France. He wrote Libres études (1867); Des Beaux-Arts en Italia (1857; Eng. trans by E and E Higginson, 1859), and Jean Calas et sa famille (1858). Consult

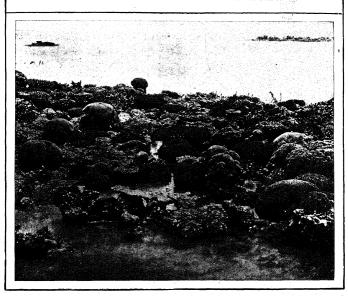

## CORAL

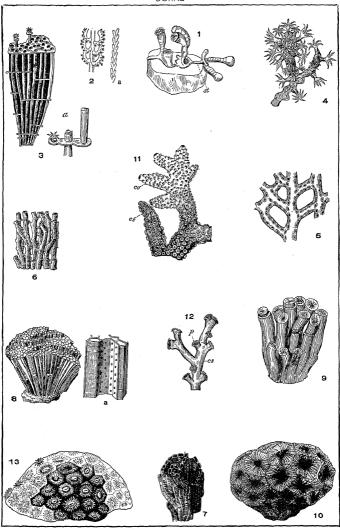

ALCYONARIANS AND MILLEPORES.

LIVING MADREPORES.

For description, see article CORAL.

Stroehlin, Athanase Coquerel, fils (2 vols., Paris, 1886).

GOGUES, kök, or COCX, GONZALES (1618–84). A Flemish portrait painter. He was born in Antwerp and studied under the third Pieter Breughel, and afterward with David Ryckaert the elder. He quickly gained a reputation, received commissions from many of the princes and notable persons of the time, and held several positions of honor. He painted almost exclusively portraits and family groups engaged in different tasks, the backgrounds being often by other artists. They are very small, but a extain elegance of manner has given him the title of "Van Dyck in miniature." In his restricted sphere he attained a rare perfection, and the new style of art he created for the southern Netherlands was continued by Franchoys and Biset. His art is represented in the galleries of Berlin, Dresden, Brussels, Paris, Vienna, etc., and in many private collections, including that of John Wanamaker, Philadelphia.

COULETTE, ko-ket' (Fr. oquette, flirt, fem. of coquet, gallant, little eock, from coq, cock; so called from its fanciful plumage). A kind of humming bird, of which a dozen species are known, constituting the genus Lophornis, and scattered from the lowlands of Mexico to and throughout the Amazon region. The coquettes are small, crested, and exquisitely adorned with spangled frills on each side of the neck; the tail is long and capable of wide spreading; the colors varied and brilliant, and the whole effect of the bird is peculiarly gemilke. See Cross Fertilizaration and Plate of Humming Birds.

OQUI, ko/ke (probably of West Indian origin). A West Indian tere frog (Hylodes martimoemsis), remarkable for undergoing its whole metamorphosis within the egg. "The pairing takes place on land in the months of May and June, when the female lays about 20 eggs, which are enveloped in a foamy mass and glued onto a broad leaf, or hidden in the axillae of irridaceous plants. The mother seems to remain in the neighborhood watching the eggs, which are large, measuring 4 to 5 millimeters in diameter — pale and straw-colored. The embryo develops neither gills nor gill openings, but a large, well-vascularized tail, by means of which, being immersed in the watery fluid contained within the egg, it seems to breathe. After 21 days the tadpole, having used up all the availbursts the eggshell and hops away as a little frog." Consult Galow, Cambridge Natural History, vol. viii (London, 1901).

COQUILLA (kö-kwilla) NUT (Sp. coquillo,

GOQUILIA (kb-kwll'a) NUT (Sp. coquillo, eccount). The fruit of a palm, Attalea funifora. It is exported from South America, being used to a considerable extent in America, in the manufacture of buttons and in turning various small ornaments. It is also called "vegetable ivory. The imports into the United States were in 1913 approximately 30,000,000 pounds, valued at about \$81,000,000, and were chiefly from Colombia, Ecuador, and Panama. The importations of 1913 were nearly double those of a decade earlier. See Attalax; PIASSABA.

COQUIMBITE, ko-kim'bit. A hydrous sulphate of iron resembling copiapite (q.v.) in composition and occurrence, but crystallizing in hexagonal forms. It is found near Copiap6, Chile.

COQUIMBO, kô-kēm'bô. A seaport in the Province of Coquimbo, Chile, about 10 miles south of La Serena, the capital of the province, with which it is connected by rail (Map: Chile, C 10). It has a good harbor, a lighthouse with a revolving light, a customs office, and exports chiefly copper ores and cattle. It is the residence of a United States consular agent. Pop., 1908, 8478; 1910. 12,106.

COQUIMBO. See BURROWING OWL.

COQUINA, kō-kửná (Sp., shellfish, from Lat. connha, Gk. κόγχη, konchễ, shell, Skt. śañkha, conch shell). A porous variety of limestone which occurs in Florida. It is made up of cemented fragments of shells and coral p of cemented fragments of shells and coral that have been cast about by the waves and accumulated in some sheltered basin of the sea bottom. Coquina is extensively used for building stone in Florida and the Bermudas.

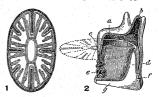

CORA. A group of tribes of the Piman family, occupying parts of the Rio de Jesus María, Jalisco, Mexico. See Piman Stock.

CORABÉCAN. A small linguistic stock the language is long extinct—whose representatives formerly dwelt in the forested region of eastern Bolivia. Rivet thinks that it is a dialect of Otuquian, or Otuké.

COR'ACLE (Welsh corugl, currugl, cornele, from corug, currug, Ir. curachan, skiff). A boat of oval shape with a frame of wickerwork covered with hide or oiled cloth, which covering is removed when the boat is not in use. The ordinary coracle will carry comfortably only one man, but it is so light that he can easily carry it on his back to a place where it may be safely deposited. See CURRACH.

CORAIS, kô'râ', Adamantios. See Coray, Adamantios

CON/AL (OF coral, Lat. covallum, covalius, from Gk. κοράλλων, korallion, coral; of uncertain origin, possibly a loan word from Heb. görül, small stone). A calcareous or horny secretion or deposit of many kinds of polyps of the class Anthozoa, which assume various and often beautiful forms. Millepore "coral" is produced by polyps of the class Hydrozoa. (See MILLEPORE.) The coral-producing polyps form

STRUCTURE OF A SIMPLE CORAL.

 Diagrammatic cross section of a coral: the black part represents the story outer well (thece) and partitions (esepta); the open lines, the Gushy liming and partitions (mesenteries).
 Semi-diagrammatic view of a coral: a, a septum; b, a tentacle; c, position of the guillet; d, theca; e, mesenteric filaments; t, optiheca; p, basal plate.

colonies which increase by gemmation, young polyp buds springing from the original polyp, sometimes indifferently from any part of its surface, sometimes only from its upper circumference, or from its base, and not separating from it, but remaining in the same spot, even when the original or parent polyp has ceased to exist, and producing buds in their turn. The calcarceous or horny deposition begins when the

polyp is single, adhering to a rock or other surface, on which the coral grows or is built up, the hard deposits of former generations forming the base to which those of their progeny are attached One layer of the chambers, of which the greater number of corals are composed, occasionally surrounds another like the concentric cucles in the wood of exogenous trees, one layer is sometimes deposited above another, the whole structure sometimes branches like a shrub, spreads like a fan, or assumes the form of a cup, a flower, or a mushroom Under the common name "coral" are included many species, mon name coral are included many spectra, also designated "madrepores" (q v), and some have received other names derived from peculiarities of their form and appearance, as "biain." coral," etc This last forms into large rounded masses furrowed with winding depressions like the convolutions of a mammalian brain or the windings of a meadow brook, hence its technical name is Meandrina In the greater number of kinds, besides the plates which form and separate the polyp cells, and which are variously arranged, there is a more solid internal or central part, formed by the additional deposition of matter at the bottom of each polyp cell, or from the common living part in which the polyps are united. The calcareous framework is sometimes further strengthened by a greater or less mixture of horny animal matter with the purely calcareous substance

Kinds of Corals -Corals are roughly classed under two heads, the horny corals and the lime or stone corals The former consist chiefly of a or stone corals horny secretion from the polyps, which may include also separate particles of lime, while the stone corals consist almost wholly of lime firmly united in a solid mass. No sharp line can be drawn between these two groups, for all possible gradations can be found The Antipatharia and Alcyonaria as a rule have a horny skeleton, while the millepores and madrepores are almost wholly limestone The polyps of the common red, or precious, coral (Corallium rubrum) belong to the suborder Aleyonaria (qv, for illustration), but the central axis in this and other corals forming the family Corallide is quite solid, and is produced in concentric layers by the living gelatinous substance which envelops it like the bark of a tree, and from which the polyps project like buds, or, when their tentacles are expanded, like little flowers Another alcyonarian coral of more than usual interest is the "organ-pipe" coral (Tubipora) in which no central axis fills in behind the polyps, but the chambers in which they live remain as open, elongated tubes, crowded together side by side to form a solid mass. Its polyps are violet or grass-green, but the coral itself is red or puplish These coals are found in the India and Pacific oceans Many of the madicpores have the whole calcareous framework covered, as in the Corallidæ, by a gelatinous living substance which unites all the polyps The whole living part soon decomposes and disappears, when the coral is taken out of the water, in some species almost immediately running from

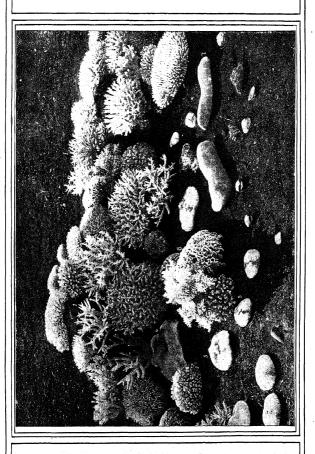

the calcareous part as a watery slime
Utilization—Red coral—so much admired for its fine color and susceptibility to a high polish and much used for oinamental purposesis chiefly obtained from the Mediterranean, in some parts of which extensive "fisheries" are carried on It is brought up from considerable depths by means of a sort of grappling appara-tus dragged after a boat or boats, the pieces being broken from the bottom by beams of wood which are sunk by weights and then entangled among hemp Red coral has a shrublike branching form and grows to the height of about one foot, with a thickness like that of the little finger Much of the coral of the Mediterianean is exported to India, but red coral is also obtained in the Red Sea, the Persian Gulf, etc Black coral (Interpathes), the axis of which is more solid, is still more highly prized Coral was known to the ancients and was used for ornamental purposes by the Gauls

Reefs -The formation of coral reefs and islands is one of the most noteworthy results of the action of coral polyps Many kinds of polyps are conceined in the building of a recf, but the growth is mainly dependent on the stone corals Reof-building corals only flourish in clean, fresh sea water, which is not over 125 feet in depth and never is cooler than 68° F They are consequently confined to the tropics and to shallow water and never thrive near the mouths of rivers Although reef-building corals are not found on the coast of the United States north of Florida, some species of coral occur much faither north Even on the coast of New England there is to be found quite com-monly a true stone coral (Astrangia dana), the polyps of which when expanded are large and very beautiful See CORAL ISLAND AND CORAL REER.

Among the fossil corals only Fossil Forms those belonging to the Anthozoa are of impor-tance, those of the Hydromeduse either not appearing until the Mesozoic, and then but sparingly (for fossil Hydrocoralline and Tubulaine, sec CCLENTERATA), or not being clearly recognized as to their systematic position and only provisionally referred to the Hydrozoa (See STROMATOPORA: GRAPTOLITE) The Anthozoa STROMATOPORA; GRAPTOLITE) The Anthozoa appear in the Cambrian locks with the Archwocyathina, forms of peculiar structure and uncertain iclationships. In the Upper Silurian period they have become the most important fossils, as well in number of individuals as in diversity of structure and importance as rock-building organisms. They continue thus throughout geologic times and are hence of

## REPRESENTATIVE FORMS OF CORALS

<sup>1</sup> Beginning of a colony (of Zoanthus), showing simplest mode of building from a creeping stolon (st). 2. CORAL FISH

great importance to the paleontologist and geologist As they are also objects of great beauty, they are much sought by collectors and dealers Especially rich and famous are the fossil coral faunas of the Silurian of North America and Gotland, the Devonian of the Helderbergs of New York, the Falls of the Ohio, and the Rhenish provinces, the Jurassic formations of middle Europe and the Tertiary beds of noithein Italy

The Anthozoa are divided by Haeckel into the subclasses Tetracoralla, Hexacoralla, and Octocoralla, according to the number of their septa, which were considered to be multiples of these figures The Tetracoialla comprise, together with the Tabulata, the Paleozoic corals, the Hevacoralla and Octocoralla, the Mesozoic and later forms Recent investigations on the embryology of the Hexacoralla and thecal structure of the Tetracoralla (Dr M Ogrlvie) seem to demonstrate that these divisions are artificial, that the tetrameral system is only an ancestral feature strongly marked in certain of the old families (Cyathophyllidæ, Zaphrentidæ, Cyathaxonidæ), while hexameral symmetry is but one of many forms of radial symmetry The Anthozoa are therefore at present divided into but two subclasses, according to Ray Lankester the Aleyonana, or Octooralla, and the Zoan-thana None of the fossil aleyonarians, which with doubtful forms do not appear till the Mesozoic, are of importance, the Paleozoic Heliolitidæ, which are referred with doubt to this subclass, are quite abundant in the Silurian and Devonian 10cks

The subclass Tabulatæ, of Milne-Edwards and Haime, compilising common and important Paleozoic genera, such as Favosites, Aulopora, Syringopora, Halysites, and Chatetes, which was long considered as a distinct subclass characterized by the slight development of the septa and the presence of numerous tabulæ, has now been broken up, it having been recognized that some families belong to the Octocoralla, others (Favostida, Sylingopolida, Halysitida) exhibit close relationships to the Hexacoralla, and others (Chatetida, Monticuliporida) are even placed by some authors, as Ulrich, among the Polyzoa All these very primitive groups of tabulate corals played important rôles as Paleozoic reef builders

COR'ALBERRY. See SNOWBERRY.

CORAL FISH A name given in a general way to various tropical fishes of the families Chatdontida and Pomacentrida, because they frequent submarine coral growths All are much compressed, high-backed fishes of builliant hues, and most of them are marked with vertical black bars, and possess filamentous appendages upon the fins and tail They remain among the branching corals for safety, and are further pro-tected, apparently, by the curious pattern of their coloration Many species abound in the waters from Bermuda to Brazil, where several species are known as "angel fishes" All are small, but excellent eating

CORAL ISLAND AND CORAL REEF. An island or marine ridge formed from the petrified skeletons of coral polyps. They are petrified skeletons of coral polyps numerous in the waimer portions of the Pacific and in the Indian Ocean, where the growth of coral goes on with great rapidity, occurring to a lesser extent in the Gulf of Mexico and along the Atlantic shores of the West Indies The coral islands and reefs may be classed, according to their general form, into fringing reefs, barrier reefs, and atolls Fringing reefs are closely attached to the shore line of an island or land mass and extend outward as a submarine platform Barrier reefs lie at some distance from the land, the intermediate space being occupied by a shallow lagoon of salt Usually some parts of the barrier rise water above the level of the ocean as islets which support a scanty vegetation, while the position of the submerged reef is indicated by a line of breakers An excellent illustration of this type is the Great Bariler Reef of Australia, over 1000 miles long, lying off the east coast of Queens-land Atolls (qv) are of rude circular form, inclosing a lagoon, but without any visible land to which the reefs are attached. Their presence is made known by a girdle of breakers and by wave-formed islets on which the coconut palm and a few other tropical plants grow central lagoon of placid, transparent water is usually less than 300 feet deep, and when there are passages through the reef it constitutes a safe harbor for ships Soundings have shown that the slope of the bottom is gentle in the interior, but very steep on the seaward side of the reef, indeed being sometimes almost perpendicu-The Pelew Islands of the Caroline Archipelago, the Low Archipelago in the Pacific, and the Laccadive and Maldive island groups in the Indian Ocean, exhibit many examples of atolls

Formation of Reefs. The great masses of coral rock have been built up by the continuous growth of various genera and species of corals, which secrete carbonate of lime dissolved in the sea water The coral polyps flourish only under certain conditions, their growth requires clear, warm, salt water, an abundance of food, and a water depth of not more than 20 fathoms They cannot live in muddy or brackish water, or in regions where the mean temperature for any month falls below 68° F The polyp also does not grow above the level of the lowest tides As to the rate of growth of coral many observations and estimates have been made Some species build up a reef as rapidly as three inches per year, others increase less than one inch in the same time Alexander Agassiz estimates that the corals on the Florida coasts would construct a reef from the depth of seven fathoms to the surface in a period of from 1000 to 1200 years

Under the special conditions necessary for the growth of coral it is a matter of interest to discover by what means the reefs and atolls have been formed, that often rise from depths of several hundred and even thousands of feet Darwin, who recognized the fact that shallow water was necessary for the living polyp, inferred that the sites of the reefs must have undergone a gradual subsidence, corresponding to the growth of the reef upward According to his theory, the colonies of polyps first settled along the shores of an island, where after a time a fringing reef would be formed (Fig. 1). Then, if the ocean floor subsided at a sufficiently slow rate to permit the growth of the coral to be con-

Fig. 1

tinued on the outward side of the reef, the water channel would gradually widen and deepen and a barrier reef (Fig. 2) would be formed,

which, after a long interval, upon the submergence of the entire island, would give way to an atoll (Fig. 3). This simple explanation,

Fig. 3.

first advanced by Darwin in 1835 and afterward elaborated by J. D. Dana, found wide acceptance among geologists. It was soon discovered, however, that in certain cases the theory of submergence did not conform with the actual conditions. Semper, in 1868, directed attention to the Pelew Islands, where the sea floor and the reefs built thereon have actually undergone elevation. Later, Murray pursued the study of the question still further and was able to show that recfs do not necessarily require a sinking shore for their formation, but they may grow on a stable foundation such as a submarine bank, raised to near sea level by accumulation of fossil organisms, or the slopes of a volcanic island. After becoming established in such localities the corals continue their growth outward, and at the same time wave action washes down débris from the reef to the bottom, forming a platform for their further activity. In case the original foundation was above sea level the projecting portion may have been cut down by breakers. The solvent action of water would remove the dead coral from the interior of the reef and thus excavate a basin to be occupied by the lagoon. The same conclusions were reached by Alexander Agassiz in his extended investigations of coral islands. Agassiz also explained certain barrier reefs as having been formed by the growth of a thin wall of coral on the outer edge of a wave-cut submerged platform surrounding a volcanic island. In the latter case neither subsidence, elevation, nor solution is necessary for reef development. The several theories of

reef building are probably to be accepted as valid, and each must be tested by actual conditions before its application in any particular instance can be determined. Darwin's theory of subsidence, therefore, has not been displaced by the more recent work, but given a limited field of application.

Bibliography. Darwin, The Structure and Distribution of Coral Islands (New York, 1891); Dana, Corals and Coral Islands (ib., 1890); Agassiz, A Visit to the Great Barrier Reef of Australia in the Steamer Croquon in 1896 (Cambridge, Mass., 1898); Murray, "On Coral Reefs and Other Carbonate of Lime Formations in Modern Seas," in Proceedings of the Royal Society of Edinburgh, vol. xvi (Edinburgh, 1891); id., "On the Structure and Origin of Coral Reefs and Islands," in Proceedings of the Royal Society of Edinburgh, vol. xvi (b., 1880); Agassiz and Pourtales, Monograph of the Corals of Florida (Cambridge, Mass., 1871); Hellprin, The Bermuda Islands (Philadelphia, 1889); Davis, "Dana's Confirmation of Darwin's Theory of Coral Reefs," in American Journal of Science, 4th series, vol. xxxv (New Haven, 1913). COR'ALLI'NÆ, or COR'ALLINE ALGÆ (Lat. nom. pl. fem. of corallinus, made of coral, from corallium, corallius, coral). A group of red alge (Rhodophycee, q.v.), distinguished by the calcareous incrustations secreted by the thallus. The thallus is branching, usually articulated, and forms stony masses like those of the branching corals with which these algae are often associated. Corallinæ are important rockmaking organisms in some formations, especially of Tertiary age, such as the Lower Eocene of Ariège, and the nummulitic Limestone of the Alps. The genus Corallina itself, now abundant, was rare during Terliary time. Lithothamnium, however, appeared in Jurassic time, extending through the Cretaceous, was very abundant during the Tertiary, and has persisted to the present era. See Ata. E. ORAL SEA. That part of the Pacific Ocean off the east coast of Australia, extending between the parallel of 25° S., and Torres Strait (Map: Australasia, 6 4). Its boundaries are indefinite, but it is generally considered to extend from the Australian coast to the irregular line of islands, including the western outposts of the Solomon and New Hebrides groups, from New Caledonia to the Louisiade Archipelago. The coral growths of the Great Barrier Reuf lie along its western boundary.

GORÂT SNAKE. A poisonous serpent of the genus Bilaps, common in tropical America and also represented in Africa, so called because coral red is its prevailing color. There are many species, each marked by some different arrangement of black and yellow rings; the epidermis is also iridescent, probably due to laminations on the scales, and no more beautiful snakes exist. (See Plate with article SNAKE.) All are small, of terrestrial habits, and provided with a poison apparatus sufficient for the

73

## CORBAN

killing of small animals and bilds, but laiely fatal to man A representative species (Elaps fuderus) is well known from Merico to South Carolina and common in Florida, as the "colal snake," "American cobra," "gatter snake," and "harlequin", it is the only poisonous snake, not

CORAL SNAKE OF PLORIDA

crotaine, in the United States, and, though small and gentle, is not safe to handle Coial snakes do not strike, as do other poisonous snakes, but twist rapidly about until the head touches the object of their initiation, when they seize it and chew until their fangs have sunk in These snakes spend most of their time burnowing in the ground, where they lay six or eight eggs Consult Report of United States National Museum (Washington, 1893), and Males and Urich, "Serpents of Timidad," in Proceedings of Zoological Society of London (London, 1894), Ditmais, The Reptile Book (New York, 1907) See Cylinder Snake

CO'RAM, THOMAS (1668-1751). An English philanthiopist, born at Lyme Regis, Dorsethille His father was a merchant captain, and he was probably a shipwright by profession. He settled in Taunton, Mass, in 1694 and returned to England in 1703. He was constantly interested in philanthiopie schemes, particularly in the establishment of the Foundling Hospital, which was accomplished after many years of struggle. The institution was opened in Hatton Garden in 1740. Coram was also a promoter of the English settlements in Georgia and Nova Scotia. In later life he lost most of his fortune and at his death was in possession of an annuity from the government. He was buried in the chapel of the Foundling Hospital. One of Hogarith's best portraits is that of Coram, which has hung in the hospital since its presentation by the painter (1740).

CORAM'BIS In Shakespeare's Hamlet, the name given in the quarto edition of 1603 to the character afterward called Polonius

CORANACH, kör'a-nak, CORONACH, CORANICH, or CRONACH (Gael, Ir. coanach, a crying, from san, to cry out). A funeral diag, formerly in use among the Irish and Scottish Celts "The cies (coranch) are called by the Irish the ulagoline and huldu, two words extremely expressive of the sound uttered on these occasions (funerals); and being of Celta stock, etymologists would swear to be the origin of the ololungon of the Greek, and ululatus of the Latins."—Pennant's Tour

The conanach seems to be identical with the Insile advise, generally written and pronounced been, a dirge for the dead, "according to certain loud and mournful notes and verses," wherein the pedigree, property, the good and great deeds of the deceased, and the manner of his death are recounted, in order to excite so row or revenge in the hearers and to show them the loss they have sustained

The word, in one or other of its forms, occurs in the writings of many of the ancient Scottish authors: "Cryand for yow the carfull corrinoch" Sir D Lindsay "Cryand the corynoch on hie"  $\_$ 

"Be he the correnoch had done shout"

Dunbar.

The conanach has long since fallen into disuse among the Highlanders. The funeral lament performed on the bagpipes, which may be considered as an instrumental conanach, lingered on till the latter half of the eighteenth century

For specimens of the corannel, see Sii Walter Scott's Lady of the Lake and accompanying notes, Crofton Cicker's Researches in the South of Ireland (1824), Blackwood's Magazine, vols Xiii and Xxiii, and Jamesson's Etymological Diotionary of the Scottish Language, revised by Longmuir and Donaldson, vol., p. 494, under corannel (Paisley, 1879).

COR ANGLAIS, ker an'gla' (Fr. Enghab horn) I Awooden wind instrument of the double reed species, the body of which was formerly bent in the form of part of a circle, which accounts for its being called a horn. It is merely a large oboe (called in German Altoboe, i.e., 'alto of the close'), and is usually played by oboe players. Its compass is two octaves and a fithi from e to b' Modern composers employ for this instrument only the G clef. It is a transposing instrument, and muse for it is written a fifth above its real tones. 2 Also the name of an eight-foot organ stop occasionally used in French and English pipe organs. For illustration, see Musical Instruments.

CORATO, kd-ra'th A city of southeastern Italy, in the Province of Bani delle Puglie, about 26 miles west of the city of Bani (Map Italy, L 6) Not fai from Conato are the runs of the Castel del Monte, built by the Emperor Frederick II, in which the sons of Manfred (q v) were imprisoned. The town carries on a trade in cattle and leather, the surrounding country being well adapted for gnazing. A good deal of tartar is manufactured here as well as wine and oil Pop (commune), 1881, 30,652, 1901, 41,573, 1911, 45,307

CORAY, kô-rā', CORAES, or KORAES, AD-AMANTIOS (1748-1833) A Greek classical scholar and patriot He was the son of a merchant in Smyrna He engaged in trade in Amsterdam, but in 1782 went to Montpellier to study medicine and natural history From 1788 till his death he lived in Paris Stimulated by the French Revolution, Coray was one of the first to attempt to revive modern Greek literature, and his political tracts did much to arouse the Greeks to successful revolt against Turkish rule Of his classical works the most important is his edition of Heliodorus' romance, Ethnopian Histories, his commentaries on the writings of Hippocrates, and his editions of Xenophon's Memorabilia, Plato's Gorgias, and Strabo work, Atacta, ou mélanges sur la littérature grecque moderne (1828-35), did much to elevate the modern Greek literary language Consult his autobiography in Greek (Paris, 1833) and a Latin translation of it by Schultze (Liegnitz, 1834), also Sinner, Life and Works of Korais (Zurich, 1837), and Bywater, in Journal of Hellenic Studies, vol 1 (London, 1881) See ROMAIC LITERATURE

CORBAN (Heb. qorban, offering, from qarab, to draw or bring near, to offer) A term used by the Jews to denote things offered or devoted to the Deity In the Priestly Code it is the

regular word for an offering to God of any kind (Lev 11 1, 4, 12, 13, etc.) Such an object was necessarily sacred and could not be applied to profane use Later the word came to be the technical expression for formally setting a thing apart as sacred to God or God's use, but it often was used when there was no real intention of devoting a thing to God Certain of the schools held that the mere pronunciation of it, however rashly, constituted a now Hence it often became a convenient makeshift to avoid a distasteful duty Thus a son might say his money or other property was corban and so escape the obligation to use it for the support or need of a parent This interpretation was rebuked by Jesus (Matt xv 5, Mark vii 11), and also by certain broad-minded and humane rabbis

CORBEIL, kor'ba'y' (Lat Corbulinum) A town in the Department of Seine-et-Oise, France, at the junction of the Essonne with the Seine, 18 miles south-southeast of Paris (Map France, N, H 4). It consists of an old and a new town From the tenth to the twelfth century it was the chief town of a powerful countship, was be-sieged by the Duke of Burgundy in 1418, by the Huguenots in 1562, and by Alexander Fainese in 1590 The Gothic church of Saint-Spire (tenth century) was rebuilt in the fifteenth century The town has flour mills, print works, cotton factories, and manufactures of watches, clocks, etc The Moulins de Corbeil are the largest flour mills in France The Decauville engineering works are near by Pop, 1901, 9362, 1911, 10,746

CORBEL (OF corbel, Fr corbeau, basket, from Lat corbs, basket) A support, usually of stone, projecting from a wall and forming an integral part of it. In France it is not a corbel unless it has parallel sides, but the English usage includes also those forms of support, called in French culs-de-lampe, which project from the wall to carry colonnettes, vaulting shafts, vault ribs, etc. They are often claborately carved with foliage and volutes A row of corbels supporting a horizontal coping or cornice is called a corbel table See BRACKET, CANTILEVER, CONSOLE

The name of a stronghold COR/BENIC. erected by Galafies after his conversion as a shrine for the Holy Grail It is called also the Palace of Adventure, and in it Galafies, chiis-

tened Alphasan, is stabled to death

COR/BETT, JULIAN STAFFORD (1854- ). An English barrister and man of letters, boin in Surrey and educated at Timity College, Cambridge He practiced law until 1882, was special correspondent of the Pall Mall Guzette on the Dongola expedition, 1896, lectured on English history at Oxford in 1903, and was appointed lecturer in history to the Naval War College Besides several romances, his writings include England in the Mediterianean (1904). The Campaign of Trafalgar (1910); Some Principles of Maritime Strategy (1911), The Spencer Papers (1913)

CORBETT, LEE CLEVELAND (1867- )
An American horticulturist, born at Watkins, Y, and educated at Cornell University, where from 1891 to 1893 he was assistant horticulturist. He was professor of horticulture and forestry at the South Dakota Agricultural College in 1893-95 and at the West Virginia University from 1895 to 1901, and then he became horticulturist in the United States Department of Agriculture His publications include Garden Farming (1913), Intensive Agriculture (1913), and the following experiment station bulletins Pruning (1903), Cranberry Culture (1903), The School Garden (1904), Strawberries nne Sanool warden (1904), Strawbernes (1904), Tomatoes (1905), Raspbernes (1905), Beans (1907), Cabbages (1911), Ice Houses (1911), Tomato Growing as Club Work in the

North and West (1913)

CORBIE, kôr'bê' A town in the Department of La Somme, France, 10 miles northeast of Ammens (Map France, N, H 3) It has cotton, woolen, and housely factories Pop, 1901, 4133, 1911, 4408 Corbie owes its fame to the Benedictine abbey founded here in 662 by Queen Balthilde A beautiful statue of the Queen namental A calculus statue of the dueth remains of the abbey, the church of St Pierre alone remains The banished King Desiderius was sent here by Charlemagne in 774 Corvei (qv) owes its origin to Corbie

COR'BIE STEPS, COR'BEL STEPS. CROW STEPS (a Scottish corruption of corbel steps, from OF corbel, corbel, but confused by popular etymology with Scotch corbie, crow, from ME, OF corbin, Lat corvinus, crow, and supposed to mean 'steps for clows') In architecture, the succession of steps with which the gables of old houses are ornamented in Scotland This gable ornament is by no means peculiar to Scotland and France, but is met with in Flanders, Holland, and all over Germany, where it is even more characteristic and general, especially in the brick architecture of north Germany-both of churches and of houses

CORBIN A city in Whitley Co, Ky, about 80 miles (direct) south by east of Lexington (Map Kentucky, F 0). It is at the junction of three divisions of the Louisville and Nashville system and is essentially a railroad town There are some deposits of coal, railway repair shops, and a woodworking plant. Corbin has a Catholic academy and owns its water works

Pop., 1900, 1544, 1910, 2589

CORBIN, HENRY CLARK (1842-1909) American soldier, boin in Cleimount Co, Ohio. In 1862 he entered the Union aimy as a lieutenant in the Eighty-third Ohio Volunteers, but in the following month was transferred to the Seventy-ninth Regiment He was major of the Fourteenth United States colored troops in 1863, Lieutenant colonel in 1864, and colonel in 1865, and remained with the Army of the Cumberland until the close of the war, when he was brevetted brigadier general of volunteers 1866 he entered the regular aimy as a second licutenant in the Seventeenth Infantity and became captain in the Thirty-eighth Infantity in the same year He was appointed major and assistant adjutant general in 1880, heutenant colonel in 1889, and colonel in 1896 After serving at the adjutant general's office in Washington, and on Gorcinoi's Island as chief of staff in the Department of the East, he was appointed adjutant general of the aimy in 1894 During the war in Cuba he was practically the head of the army and was involved in the criticism of the War Department, but in the reorganization of the army it was considered that he displayed industry and ability, and in 1900 he was promoted major general and adjutant general, "this grade to expire with the termination of office of the present incumbent" He was in command of the Division of the Philippines in 1904-06, when he was made a heutenant general, and retired

CORBIN, JOHN (1870-) An American dramatic critic and author, born in Chicago. He was educated at Harvard University From 1897 to 1900 he was assistant editor of Harper's Magazine, during part of this time acting also as diamatic critic for Harper's Weekly, in 1902 he wrote the dramatic notices of the New York Times and in 1905-07 those of the Sur From 1908 to 1910 he was literary manager of the New Theatre, during the short life of which his efforts contributed much towards notably artistic productions Besides magazine stories and articles on the drama, he is author of Time Sur Martine Maintenance (1895), Schoolboy Life in Eingland An American At Omero (1902), A New Porthat of Shake-speare (1903), The First Loves of Perilla (1903), The Cave Maintenance (1903), <math>The Time T

GORBOULD, kor-bold, EDWARD HENRY (1815—1805) An English painter and illustrator, born in London. He studied at Sass's Art School and the Royal Academy, and when only 19 painted at 19 painted and 19 painted and 19 painted and 19 painted a gold medal from the Society of Arts. Nearly all his paintings are large historical or romantic compositions in water color, academic in style He was appointed instruction in water color to the royal family in 1851, and many of his pictures are in their possession Some of his best-known pictures are "Lady Godiva" (National Gallery, Sydney), "Canteibury Pilgrims," and "The Heiress" (British Museum) Among his poit airs are those of the Princes Alice and the Prince Consoit. He illustrated Percy's Reliques, The Book of Bittsh Ballads, etc.

COR'BULO, GRAVED DOMITTUS ('-c 67 AD)
A Roman general under Claudius and Nero, brother of Cæsoma, wife of the Emperor Caligula In Nero's reign he conducted a successful campaign against the Parthans under Turidates (61-63) His successes and his popularity excited the jealousy of Nero, who gave orders for his execution Upon hearing the Empero's orders, Coluble committed suicide His account of his experiences in Asia, which is mentioned by the Elder Pliny, has been lost Consult Schoonover, 4 Study of Cn Domitus Corbulo (Chicago, 1999)

CORCHORUS, kôr'kô-rus (Neo-Lat, from Gk. κόρχορος, λοι choros, a wild plant of bitter taste) A genus of plants of the family Tiliacem, containing about 30 species, both shrubby and herbaceous, natives of the warm paits of the globe Corchorus olitorius is widely diffused in tropical countries and introduced into America. It is an annual, with a smooth, more or less branching stem, varying in height from 2 to 14 feet or upward, according to soil and climate smooth, stalked, alternate, oval, or ovate-lanceo-late leaves, and small yellow flowers, solitary or in pairs It is much used as a pot herb and is called Jews' mallow, from being much cultivated by Jews in Syria and other parts of the East It is still more valuable for the fibre of its inner bark, as is also Corchorus capsularis, a species very similar, but distinguished by its capsule, which is short, globular, and wrinkled in Corchorus capsularis and clongated and slender in Corchorus olitorius Both are much cultivated in India, yielding the greater part of the jute (q v ) of commerce, and of the fibre employed in making gunny bags (qv.) Corchorus capsularis is sometimes called Chinese hemp Corchorus silguosus is a small American shrub, occurring from the West Indies southward It is of little value In Panama an infusion of its leaves is used instead of tea See Colored Plate of Fibre Plants with article Hemp

COR'CORAN, MICHAEL (1827-63)American soldier He was born at Carrowkeel, Ireland, emigrated to the United States in 1849, and enlisted in the aimy He lose to colonel in the regular service, and in 1860 was court-martialed for refusing to parade his regiment in honor of the Prince of Wales Before he was sentenced the hostilities of the Civil War began He was sent to the front, was wounded, and was taken prisoner at the first battle of Bull Run Upon his exchange he was commissioned brigadier general in 1862 and organized the Corcoran Legion, which in 1863 checked the Confederate advance on Norfolk and was subsequently attached to the Army of the Potomac He died as the result of a fall from his horse. Consult his book, The Captivity of General Corcoran (Philadelphia, 1864)

GORORÁN, WILLIAM WILSON (1798-1888). An American financer and philanthropast, boin in Georgetown, D C He was educated at Georgetown College, became an exchange broker in Washington, and in 1840 formed a partnership with George W Bages At the through the Mexican War he took a large part of the Mexican War he took a large part of the Mexican War he took a large part of the Mexican War he took a large part of the Mexican War he took a large part of the Mexican War he food a large part of the Mexican War he food and the order of the Journal of the Was the founder of the Louise Home for impovernshed gentlement, the took Hill Cemetery at Georgetown, and the Cororan Art Gallery, and made many liberal gifts to colleges and herevolent associations.

Grandfather's Legacy (Washington, 1879) CORCORAN ART GALLERY An I An impoi tant public collection of painting, sculpture, and ceramics in Washington, D C Its nucleus was the private collection of William Wilson Corcoran, which he presented to the city of Washington in 1869 with an endowment fund of \$900. 000. It was opened to the public in 1874 and was originally situated on Pennsylvania Avenue, but in 1897 it was transferred to a new structure on Seventeenth Street, designed by Ernest Flagg in the Neo-Grecian style The gallery contains, among other treasures, fine specimens of early American painters, an admirable collection of Barye bionzes, and the well-known "Greek Slave" by Hiram Powers There is a free school of art connected with the institution, and biennal exhibitions of contemporary American painting contribute greatly to its usefulness Consult Hendelson, The Art Treasures of Wash-

ington (Boston, 1912)
CORCOVODA, kör'kö-vö'nä (probably Peruvan in origin) A cranelike bird, known as the "white-backed trumpeter" (Peophia leucoptera) of Peru and the upper Amazon, closely related to the trumpeter (q v ) It is domesticated and has some curious and friendly habits, described at length in American Museum of Natural History Bulletin, vol 11 (New York, 1887-90)

CORCY'RA. See CORFU

COR/DA, AUGUST KARL JOSEPH (1809-49). An Austran botanast, born in Reichenberg, Bohemia At the age of 20 he published his Monographia Rhizospermarum et Hepatronum, and in 1834 was made one of the keepers of the Museum in Prague In 1847 he came to Texas, where he collected a large number of valuable botanic specimens, but on his voyage home, in 1849, he

was shipwiecked and drowned. His works include the following Icones Fungorum hucusque Cognitorum (6 vols, 1837-54), Prachtflora europuischer Schimmelbildungen (1839), Bertrage zur Flora der Vorwelt (1845)

CORD'AGE (from cord, F1 corde, ML corda, Lat chorda, from Gk χορδή, chorde, string connected with Lat haru-spex, inspector of entrails) A name applied chiefly to the running

trails) A name applied enterly to the running rigging of a ship and to the rope of which the rigging is made See Rigging, Rope CORDAITES, Kôrdaitez (Neo-Lat nom. pl. named in honor of A J Conda) A genus of fossil plants, of the family Cordaite, that shows intermediate characters between the conifers and the cycads The genus appeared in Devonian time, leaching its maximum during the coal-measure period, when it was an important forest tree of the coal-swamp flora, and declined during the Permian The tiee grew to a height of 30 to 50 feet, with a trunk that branched freely, and it had dense foliage of parallel-veined leaves of lanceolate or linear form These leaves are found in great abundance in some coal-measure shales, where they often he packed in layers as do the fallen leaves of a modern forest In the Middle Devoman of New Brunswick, Canada, a formation is called the "Cordartes shale," because of the number of Cordaites leaves it contains The inflorescence of Cordaites was separate as in the cycads, and the male and female elements were arranged in catkins placed in the axils of the leaves fructification is nutlike, resembling somewhat that of the yew or that of Cycas revoluta (a cycad), and has been described under the names Cardrocarpum, Trigonocarpum, etc. The trunk had a large pith, which often decayed to form a cavity of which the casts, known as Artesia and Steinbergia, are found on the dumps of some coal mines The wood of the trunk, described partly as Araucaroxylon, has a microscopic structure remarkably like that of the confers Consult H Graf zu Solms-Laubach, Fossil Botany, pp 104-122 (Oxford, 1891) See Carboniferous SYSTEM, CYCADACEÆ, CONIFERÆ

CORDAY D'ARMONT, kôr'dh' dar'man', Marie Anne Chualottie (1768-93). The assassin of Maiat, generally known as Chrallotte Comday She was born at Saint-Satumin in Normandy Her youth, passed in a convent, was spent in the reading of Plutarch, Rousseau, Raynal, Voltaire, and Corneille Though she was noble by birth, she sympathized ardently with the cause of the Revolution in its early phases, but when the fall of the Girondists ushered in the Terror, she swung immediately to the oppo-site pole She was convinced by Barbaroux that Maiat and Robespierie were the enemies of France To the fervent student of the classics the 10le of Brutus seemed a noble one, and she determined to save the nation by muider ing her father that she was bound for England. she journeyed to Paris (July 1, 1793), inquired there for the house of Marat, pretending to be the bearer of a message, and bought a knife on the way Twice delayed, she found Marat at last in his bath, writing (July 13). He had asked that morning, in the Ami du Peuple, for 200,000 heads, and Charlotte told him she could give him those of the Girondists at Caen. As he was setting down the names she uttered, one by one, she drove the knife up to the hilt into his heart, then made a futile attempt to escape Maiat cijed out, "à moi, ma chère amie" and

then died immediately, and the gul, quickly captured, and saved with difficulty from the mob, was taken to prison Brought to trial and speedily condemned, she died calmly (July 17, 1793) Consult Dubors, Charlotte Condey (Paris, 1838), Vatel, Charlotte Corday et les Guondins (Paris, 1872), Bibliographic des femmes célebres (3 vols , Turin and Rome, 1892-1905), Defrance, Charlotte Corday et la mort de Marat (1909)

CORDEIRO, kôr-dã/e-rō, João Ricardo (1836-82) A Portuguese dramatist He was born in Lisbon and in 1863 became secretary in the Conscho de Beneficencia. He was the founder of the periodical Futuro His reports on charitable work contain much of value concerning the problem of poverty In 1877 he obtained a government position under the president of the ministry, Luciana de Castro His plays include Fernando (1857), Amor e arte (1860), A sociedade clegante (1862), A familia (1869), Os

pararzos conjugaes (1882)

CORDELEY. A city and the county sent of Crisp Co. Ga, 65 miles south of Macon, on the Georgia Southern and Florida, the Scaboard Air Line, the Atlanta, Birmingham, and Atlantic, and the Georgia, Southwestein, and Gulf iail-10ads (Map Georgia, C 4) It is the commeicial centre of a cotton-growing region, and manufactures cottonseed oil and lumber There are a Carnegie library and a samtarium Cordele was settled in 1887 and is governed under a charter of 1904 which provides for a mayor, elected biennially, and a unicameral council The water works are owned and operated by the

municipality Pop, 1900, 3473, 1910, 5883 CORDE'LIA. In Shakespeare's King Lear, the youngest daughter of the King

CORDELIERS, kor'd'-lyà (Fr, cord wearers), or Society of the Friends of the Rights of Man and of the Citizen The name given in France to the most austere branch of the Franciscan Friars on account of the guide of knotted could they wore After 1790 the name was applied to the members of a political club which assembled in the abandoned chapel of a Franciscan monastery and exercised great influence on the progress of the Revolution in Pails Its leaders were men of various opinions, Danton, Camille Desmoulins, Marat, Hébert, and the picturesque Anachaisis Clootz It drew its strength from the very lowest classes of Paris and always had an armed mob at hand ready for insurrections The members of the Cordeliers were the first to demand a republic, vitalizing the motto "Liberty, Equality, Fiaternity," and took a very prominent part in the events of the 10th of August, 1792, and chiefly contributed to the overthrow of the Girondists (q.v.) While the club was at the height of its influence, Desmoulins began the publication of his popular journal Lie Vieux Cordeher Later, the spirit of the Cordeliers became so violent as to out-Jacobin the Jacobins, and men like Danton and Desmoulins abandoned it In 1794 the Cordeliers awakened the enmity of Robespierre. On March 24 and April 5 most of the leaders were guillotined, and the club practreally came to an end Consult Bougeart, Projet d'organisation des Cordeliers (Paris, 1870); also Les Cordcliers, documents pour servir à l'histoire

de la Révolution (Carn, 1891) CORD'ER, FREDERICK (1852-). An English musician, born in London He studied at the Royal Academy of Music, London, gained the Mendelssohn scholarship in 1875, and, after studying in Cologne under Ferdinand Hiller, 1eturned to London and in 1880-82 was conductor of the orchestra at the Bughton Aquarium In 1890 he became professor of composition at the Royal Academy of Music He was one of the earliest English champions of the cause of Wagnei, and, together with his brother Henry, translated the later music diamas of Wagner into English His compositions include three operas, Morte d'Arthur (1877), Philomet (1879), Nordisa (1887), three operettas, the cantatas, The Cyclops, The Bride of Triermain, Dreamland, The Sword of Arganty, several works for declama-tion with orchestra, two suites for orchestra, In the Black Forest and Roumanian Suite, two overtures, Ossian and Prospero, incidental music to Shakespeare's Tempest, Parker's The Termagant and The Black Tulip He also wrote several works on the theory of music

CORDERIUS, or CORDIER, kor'dya', MATHURIN (1479-1564) A French schoolmaster, especially skiliful as a teacher of children He taught in Paris, where he had as one of his scholars John Calvin, who dedicated to him the commentary on the First Epistle to the Thessolomans Later he taught at Geneva, and died there He wrote, besides philosophical works, a number of books for children, one of which, Cotto-quorum Kohloatstoorum Latin Quattura de Pueros in Latino Sen one Exercendos (1564), appeared in numerous late editions and was trans-

lated into English and French

CORD GRASS (Spartina) A genus of grasses having compound spikes, the species of which are found in wet places, many of them in salt of brackish tide marshes. The spikelets are arranged on one side and have only one perfect floret and very unequal glumes The species are perennial, rigid, from creeping rootstocks, and have long, tough leaves, hence the name grass" Spartina stricta, found in muddy salt marshes on the east and southeast coasts of England, and in America, although remarkable for its extreme stiffness and rigidity of habit, is used for making ropes on account of the toughness of its fibre Spartina cynosuroides and Spartina patens are common in the United States, the former along the ocean and lake shores from Maine to the Pacific, the latter species is common in salt marshes, and this and Juncus gerards furnish the best of the marsh hay Spartma cynosuroides has been successfully used in the manufacture of twine and paper

COR'DIA'NI. See SANGALLO

CORDIER, ko'rdy'', HENRI (1849—) A French Orientalist, born in New Orleans He studied in France and England and in 1869–76 lived in China He became professor of the School of Political Science in Paris in 1886, and professor of history, geography, and Eastern legislation at the School of Living Oriental Languages He wrote on China for La Grande Encyclopédee His works include Bubliotheca Sincide His works include Bubliotheca Sincide His works include Bubliotheca Sincide Oriental Languages et de documents pour servir à l'historie de voyages et de documents pour servir à l'historie de la géographie depuis le XIII estelle jusqu'et le fin du XVIe siècle (1882–85), an Atlas sincocréen (1896); Historie des relations de la Chine avec les puissances condentales, 1860–1992 (3 vols, 1901–02); and L'Expedition de Chine de 1857–58 (1905)

CORDIER, MATHURIN. See CORDERIUS. CORDIERE, kôi'dyâr', La Belle (Fr., the

beautiful 10pemaker) A nickname of the poetess Louise Labé, wife of Periin, a ropemaker

CORDIERITE, kô1'dĭ-ē1-īt See Iolite

CORDITLERA A term applied to the system of elevations that extend along or near the Pacific coast of North and South America from northern Alaska to Cape Hoin The Cordillera of North America includes the mountain ranges in Mexico, the Rocky Mountains, the Sierra Nevadas, the Coast and Cascade ranges in the United States, and the several ranges in British Columbia and Alaska The whole western part of the continent traversed by these ranges is commonly called the "Cordilleran region" In South America the term is sometimes used as a synonym for the Andes, on the two may be united, i.e., Andean Cordillera, and is also applied to definite portions of the Andes, as in Colombia, where the three mountain ranges are known as the Eastern, central, and Western Cordilleras The term, originally Spanish, is used in America by geographers to signify an extensive system of eleva-

ions See America, Andes, etc

CORD'ITE (from cord, because it is made in the form of a cord instead of being granulated) A form of smokeless gunpowder used in England and some other countries The original cordite was composed of 58 parts of nitroglyceiin, 37 parts of nitrocellulose, and 5 parts of It gave excellent ballistic results per vaseline unit of weight and volume of space occupied but it caused excessive erosion of the bore of guns using it Moreover, at temperatures of over 90° F, there was an exudation of nitroglycerin Moreover, at temperatures of over and this could be readily detonated. These defects resulted in its condemnation. The next type devised was called Cordite, M. D., and carried less than 30 per cent of nitroglycerin, with a corresponding increase of nitrocellulose latest type is said to contain about 15 per cent of nitroglycerin and over 80 per cent nitrocellulose In preparing condite the introcellulose is dissolved in a solvent, incorporated with the other ingredients, and the solvent evaporated While still in a plastic state it is pressed through holes in a plate which form it into a cord of any size desired Cordite is very easy to handle as the charges are put up in bundles of convenient length. In its early form it required a powder chamber very much smaller than that necessary for a charge of pure nitrocellulose of equal power When its excessive erosion was fully realized the nations using it were unable to turn at once to pure nitrocellulose as the chambers of their guns were too small They have therefore been gradually reducing the amount of nitroglycerin and increasing the chamber capacities of their new guns so that both old and new pieces could use the same powder. Very few guns designed for the original type of cordite are now in existence except on unimportant ships. See Explosives, Smokeless Powder; Guns, Naval

oʻGRDOBA, kor'dò-na, or COB'DOVA The flourishing capital of the province of the same name in Argentina, on the Rfo Primero, a tributary of the Parana, northwest by rail 246 miles from Rosario and 535 from Buenos Aires (Map Argentina, E 10) It is situated at an elevation of about 1200 feet, and is regularly laad out and well built, except on the surrounding heights, which are inhabited mostly by the poorer classes. The city has a fine park, or

promenade, and plazas, in the principal of which is situated the cathedial, an imposing structure of composite architecture with a fine cupola, dating from the seventeenth century A massive Jesuit church, the fine old government house, and the national observatory are worthy of mention Among the educational institutions are the university-founded by the Jesuits in 1613, thus ranking in age next to that of Lima-a national college, two national normal schools, an episcopal seminary, and a public library Other features of Cordoba comprise a well-equipped general hospital, asylums for orphans and the poor, etc The city is an episcopal see Though a part of the surrounding country is rendered feitile only by irrigation, Cordoba is an important commercial centre, owing to its geographical position. Live stock, wool, and hides are the chief exports of the vicinity, and beds of calcute are worked. The city has some industrial interests, principally manufac-tures of building material, lime, bricks, and flour About 12 miles above the city a great dam stictches across the Rio Primero, this insures a water supply and furnishes irrigation and power for an electric light and power plant The population, which is increasing, was about 62,000 in 1900 and 95,000 in 1910. Coldoba was founded in 1573 by Luis Geronimo de Cabrera The vicinity had been visited some 30 years before by an officer of Pizario The town became the capital of the Spanish Intendencia of Tucuman. and lose to prominence as an educational centre and as the headquarters of the Jesuits in that region It suffered to some extent in the revolutionary struggles In 1871 Cordoba was the seat of the first national exposition of Aigentina The Province of Córdoba, of which the city is the capital, has an area of 62,000 square miles and a population of approximately 500,000. The atmosphere of Cordoba is scholastic, and the city, unlike other large Argentine towns, is of special interest as an academic and scientific ecutre The national meteorological station here supplies the time for Aigentina.

CÓRDOBA A town of Mevaco, in the State of Vera Cruz, on the nailroad to the city of Mexico (Map Mexico, L S). It manufactures woolen and cotton goods and has a trade in sugar and coflee It is famous for its scenic attractions Pop., 1900, 8136, 1910, 9600.

CÓRDOBA, GONSALVO DE. See GONSALVO DE CÓRDOBA

CÓRDOBA Y FIGUEROA, à 18'gh-ri'a, PEDRO DE (1692-e 1770) A Chilean historian, born at Concepcion. He entered the army in 1725 In 1739 by order of President Velasco, he founded Los Angeles, the capital of Araucania About 1745 he wrote a history of Chile from the conquest until 1717 It has been published in the Colección de historiadores de Chile

CÓRDOBA Y VALCÁRCEL, FERNANDO
FERNÁNDEZ DE SCE FERNÁNDEZ DE CÓRDOBA Y
VALCÁRCEL, FERNÁNDO
COR'DON (Fr cordon, from corde, cord) A

COR/DON (Fr cordon, from corde, cord) A multary term for a line of sentries, nosted within view of each other, and designed to prevent forbidden contact or communication letween one side of the line thus guarded and the other. When large separate bodies of troops are so disposed as practically to shut in a sec-

tion of country, they are spoken of as a "cordon of troops" Country inclosed by a series or system of blockhouses, as in South Africa under General Kitchener (1901), is described as "cordoned" A cordon instituted to prevent contagion from an infected place or district is a cordon expansion.

CORDON. A system of taining by which a plant that is naturally diffusely branched is dwarfed to one or two stems in order to induce large funts. These trained as cordons with two stems are usually carried horizontally in opposite directions about 18 inches from the ground. Single-stem cordons are carried obliquely, horizontally, or vertically, the laterals of such branches being kept spuried. Any plant which bears its finit upon spurs will therefore lend itself to this style of trianing In parts of Europe fruit tices are frequently trained, by a series of superimposed cordons, on the walls of houses or other buildings.

CORDON BLEU, kordon' bla (Fr. blue ribbon) Knights of the ancient French Order of the Saint Espirt, or Holy Ghost, were so called because the jewel of the order was suspended on a blue ribbon. In late times the term was degraded to mean a "first-rate cook". The cordon, the decoration being suspended by a broad ribbon.

CORDOVA, kôr'dô-va, or CÓRDOBA, kôr' do-Ba (Lat Corduba, from Phænician Kartatuba, Great City) A city of Spain and capital of the Province of Cordoba, situated on the Guadalquivir, 120 miles by fail north of Malaga (Map Spain, C 4) It has at an altitude exceeding 390 feet at the base of the Sierra de Condoba In appearance the city is less char-acteristically Moorish than might be supposed, its aspect being one lather of heterogeneity arising from the conglomerate architecture of various periods, it retains but few marks of the Saracen period and but faintly recalls the grandeur of the former metropolis of Mohamgrandeur of the former metropoins of Monanimedan Spann The streets are with few exceptions narrow and crooked, and the houses gloomy The finest edifice is the cathedral, once the chief mosque of the "Infidelis" and one of the most splendid examples of Moorish achitecture Together with the court, it occupies a site 570 feet by 425 feet, with a bell tower 300 feet in height. It is surrounded by a wall with strong buttresses and was originally both mosque and fortress. The interior is almost a labyrinth of pillars, for they number some 850, n various styles and mostly of maible, por-phyry, and pasper The building has suffered considerably through the changes of different epochs, made in the endeavor to convert the mosque into a Christian cathedral. A short distance from the cathedral, to the south, stands the marble triumphal column, erected 1765, of San Rafael, the patron saint of Cordoba. Among the Moorish remains are the ruined city walls, part of the Alcazar, and the old bridge of 16 arches, 739 feet long, connecting Córdoba with its suburb, Campo de la Verdad. The bridge, originally built by the Romans, was reconstructed on the same foundations by the Saracens. Cordoba contains a large number of churches and convents, a bishop's palace, a theatre, and a bull ring. The educational institutions include a lyceum, a theological semmary, a veterinary school, and a library.

Once a great centre of commerce, Cordoba is

in a state of decline The railroad connection with Seville, Malaga, and Madrid brought in a little new life, but Couloba is still a city of the Middle Ages Their are manufactures of leather (the eelebrated "Cordovan" leather), liquors, hats, cloth, silk, and paper, besides the ancient silver-flignee industry for which Cordoba has long been famous I ion is mined in the vicinity Pop. 1900, 58,275, 5, 1010, 65,160

Coldoba is said to have been founded by the Phoenicians, but was acquired 152 BC by the Romans It rose to be the second city of Spain, the seat of a piætor, and a supreme tribunal Taken by the Goths in the sixth century, it fell in 711 into the hands of the Saracens it was subject to the Caliphate of Damascus, but in 756 the city became independent under Abderrahman I, the founder of the dynasty of the Omayyades, whose rule continued till 1031 and embraced all Mohammedan Spain From 912 to 961 it was the capital of the Caliphate of Cordoba, and the metropolis of Moorish Spain, ivalling in splendor the Eastern Caliphate of Bagdad From the ninth century to the twelfth Córdoba was one of the greatest centres of commerce in the world According to Arabian historians the city at the height of its splendor contained 200,000 houses, 1,000,000 inhabitants, 600 mosques, 80 institutions of learning, and a public library with 600,000 volumes. Such accounts are doubtless exaggerations, but ceitainly when all was dark over the rest of the Occidental world Cordoba held aloft the light of civilization After the fall of the caliphate the decline was rapid, the city was taken by Ferdinand III of Castile in 1236 Cordoba was plundered by the French under Dupont in 1808 It is the birthplace of the two Senecas, the poet Lucan, and the philosopher Averroes

GOR/DOVAN, or CÓRDUAM Originally a Spanish leather prepared from goatskins or split horsehide, and used throughout Europe during the Middle Ages for the boots of the wealthy. It was originally made by the Moors of Cordova. The modern application of the term is to a grain leather from the best and strongest portions of a horsehide and used for heavy boots, as for walking or hunting

CORDUBA See CORDOVA

COMDUROY (probably for Fr corde du ro, king's cord) A cotton material having a cut pile like velvet, but with the surface ribbed. The gut which separates the ribs was produced by binding the pile weft to the cloth, but these ribs are now cut on the face of the fabric by a special form of kinfe operated at regular intervals during weaving cotton corduroy is woven upon a plush loom

CORDUROY ROAD A road built of straight logs, round or spltt, land sude by side across the roadway Such roads-are used in swampy ground, where they make travel, partoularly in the rainy season, less difficult.

The logs are laid on a level foundation of natural soil, and placed together as close as possible to avoid big joints. They may be left loose or secured in position by two stringers, parallel to the axis of the road, which are spiked down to the logs. Sometimes the joints are filled with wooden wedges to reduce the shock to passing vehicles. COR/DUS, CREMUTUS. A Roman historian,

COR/DUS, CREAUTIUS. A Roman historian, who in 25 a d was, according to Tacitus (Annales, 1v, 34, 35), accused before Tiberius of having praised Cæsar's assassin, Brutus, and of

having termed Cassius the 'last of the Romans'. The true cause for this accusation, however, was his free expression of opinion regarding Sejanus, the influential minister of Tiberius (q v). Having prinounced an apology, he starved himself to death. Of his works, one of which was a history of the period 4-3B BC, only a few fragments remain, preserved in the Suasories of Seneca Consult Rathlef, De Crematio Cook of Dona Listo). Heter, Die Geschichtliche Literatus über die Romische Kaiserzeit (1897).

COR'DYLINE. See TI

CORE (OF cor, Fr ccur, from Lat cor, heart) 1 In masonry, the inner portion of any heavy part of the structure, such as pier, buttiess, main wall, etc, which is not visible, but is covered with a sheathing or surface of another material Roman buildings have a concrete or rubble core, with a facing of brick or coursed-stone construction, sometimes of marble slabs or stucco In mediæval structures the core is sometimes of brick, oftener of rubble, with facing of cut stone In modern work, especially in America, the core, or backing, is generally of brick, even in buildings externally of cut stone Concrete is now coming into more frequent use to form the core of buildings externally faced with blick or stone (See Ma-SONRY) 2 The mold by which the interior of a hollow casting is shaped 3 The cylindrical mass brought up by a hollow drill in boring through strata of earth and 10ck

COREA See KOREA

GOREAL, ko'rà-al', Francisco Probably the pseudonym of an author who in 1722 published a book entitled Voyage aux Indes. According to the statements of the author, he was born in Cartagens, Spain, in 1648 and spent more than 30 years in travel, chiefly in the Caribbean region and in South America The work passed through several editions, one of the most important of these being published in Brussels in 1736. The numerous errors which it contains and the doubts which have been cast upon its authenticity justify the belief that it was a pseudonymous publication.

COREL/LI, ARCANGELO (1653-1713). eminent Italian violinist and composer, surnamed Il Divino. He was born at Fusignano, near Bologna, and studied in Rome under Bassanı and Matteo Simonelli He is said to have been in Paris in 1672 and subsequently passed several years in Germany in the service of the Elector of Bavaria In 1681 we find him settled in Rome, where he found a generous patron in Cardinal Ottoboni, and soon acquired fame as a virtuoso, teacher, and composer According to Georg Muffat, he is the originator of the concerto grosso (qv) He was especially admired for the beauty of his tone and expressive execution and laid the foundation for the development of superior violin technique His compositions rank among the best of his time and continue to this day models of classical study in instrumental music. The finest and most famous among them are 12 Concerts grosss, op, 6 His complete works were edited by Josehim

CORELLI, MARIE (1864— ) An English novelist, whose talent runs to the romantic, sensational, and melodramatic The adopted daughter of Charles Mackay, of English and Italian parentage, she was born in Italy and was educated in London and in France. The

Romance of Two Worlds and The Vendetta (1886) made her reputation, and many successes followed these two books Secure in popular favor, she carly came to regard with disdainful pity the severe literary criticism that cavaliely dismissed her from serious consideration. She made Stratford-on-Avon her home Miss Corelli's books, all showing real story-teller's grf, include Thelma (1887), The Sorrows of Satan (1895), The Mighty Atom (1897), The Master-Christian (1900), Temporal Power (1902), God's Good Man (1904), Woman or Suffragette (1907); Holy Orders (1908), The Devil's Motor (1910), Zisha, the Problem of a Wicked Soul (1911), The Strange Visitation (1912)

CORENTYN, kö'rën-tën' (Dutch Corantyn) A river of Guiana, South America It rise It rises near the boundary of Brazil, flows in a northerly direction, and empties into the Atlantic Thioughout its length it forms the boundary line between British and Dutch Guiana (Map. Guiana, F 3) It is navigable for a distance of over 40 miles for large steamers, while light vessels can ascend as high as 170 miles from its mouth, where navigation is interrupted by cataracts, which occur at a number of points on its middle and upper course Its total length is

about 400 miles

CO'REOP'SIS (Neo-Lat, from Gk κόρις, kons, bedbug + δψis, opsis, appearance). An herbaceous annual or perennial plant of the family Composite, nearly all natives of castein North America, and popularly known as tickseed, the furt being in the shape of a small tack It is often raised for its showy yellow or rose-purple flowers with yellow or brown disks. The perennials are grown in hardy borders, the annuals in the garden in almost any soil For illustration, see Plate of Cran-BERRY

CORESPONDENT. See DIVORCE. COREY, WILLIAM ELLIS (1866-) American capitalist and steel manufacturer, born in Biaddock, Va. and educated at Duff's College, Pittsburgh When 16 years old, he entered the chemical laboratory of the Edgar Thomson Steel Works, and five years later he went into the Homestead Steel Works, where, in 1889, he became superintendent of the plate mill, in 1893 superintendent of the aimor-plate department, and in 1897 general manager (succeeding Charles M. Schwab) From 1901 to 1903 he was president of the Carnegre Steel Company and from the latter year to 1911 president of the United States Steel Corporation He was one of the circle of men associated with Andrew Carnegie in the development of his great steel industries

CORFE (kôrf) CASTLE. A village of Dorsetshire, England, in the middle of Purbeck Islo or Peninsula, 24 miles east-southeast of Dorchester (Map England, D 6) In the vicin-ity are stone and marble quarries, and clay works for potteries. Pop (parish), 1901, 1449, 1911, 1406 The runs of a castle, giving the name to the village, stand on a neighboring hill. Founded in the tenth century, it was long one of the strongest fortresses in the king-Here King Edward the Martyr was murdered by his stepmother, Elfrida, in 979, and King John, during his disputes with his barons, kept his regalia here for safety. In 1642 Lady Bankes defended the castle for six weeks against Charles I It was dismantled by Fairfax in

1645 Consult T Bond, History and Description of Corfe Castle (London and Bournemouth, 1883)

CORFLAM'BO In Spenser's Faerie Queene,

giant representing licentiousness

COR/FU (Gk Κόρκυρα, Korkyra, or Κέρκυρα, COURTO (G. Κορκυρα, Πονείσια, οι Κερκυρα, Κεν kyy α, Lat Corogy α) The most northerly of the Ionian Islands (q v), in lat 39° 20' to 39° 50' N, long 19° 40' to 20° 10' Ε (Map. Greece, A 2) It has a length of about 38 miles, with a breadth varying from 3 or 4 to 20 miles.
Area, 275 square miles Pop, 1907, 99,571 Like the rest of the Ionian Islands, it is mountainous, and the mountains sie generally naked and dry, the highest summit, Pantokrator being about 3000 feet above the sea The valleys, however, are very fertile, and yield olive oil, wine, honey, oranges, figs, etc Salt is alloo produced in some quantity. The chmate is generally mild and healthful. The principal town, Corfu, on the east, situated on an elevation, has some good streets and a fine esplanade. It has (1907) 28,254 inhabitants and a considerable trade. It is the seat of a Greek archbishop and of a Catholic bishop. The early history of the island is purely mythical, the later unhabitants identified it with the Homeric Scheria (Phæacia) About 734 BC the Corinthians are said to have colonized the island, which, however, soon attained such wealth and maritime power as to assert its independence After the Persian wars, in which Coleyra took no part, a further dispute with Corinth led the Corcyrcans to ally themselves with Athens (435 B.C), and the intervention of the latter city was one of the factors which contributed to the outbreak of the Peloponnesian War ternal dissensions and varying foreign control marked the history of the island until it was taken under Roman protection in 229 B c Duiing the greater part of the Middle Ages it belonged to the Byzantine Empire, later, it passed into the possession of the Venetians, who Turks, until 1797 Since that time Confu has shared the fortunes of the other Ionian Islands At present it forms, with some minor Islands, a nomarchy of Greece Consult. Riemann, Corfou (Paris, 1870); Partsch, Dio Insel Konfu (Gotha, 1887). Schmidt, Korkyrursche Studien (Leipzig, 1890)

CORI, kö'rê. A city in the Province of Rome, central Italy, 36 miles southeast of Rome (Map. Italy, G 6) Important to the antiquatian are the huge polygonal blocks that formed the walls of the ancient Cora-a city that was an early member of the Latin League and that had for traditional founder the Trojan Dardamis, or Coras, also the rums of a temple of Castor and Pollux, an old bridge, the churches of Sant Olivia and San Pietro, and of a so-called temple of Hercules Its chief trade is in tobacco, oil, and southern fruit Pop (commune), 1881, 6300, 1901, 6709; 1911, 7308 Consult G B. Piranesi, Antichita di Cora (Rome, 1770), and A. Nibby, Inglisi della carta dei dintorni di

Roma (Rome, 1848)

CORLANDER (Lat corrandrum, Gk. koplar-vos, koriannon, kópior, korion, coriander, pos-sibly from kópis, koris, bedbug, referring to the smell of the leaves), Coriandi um sativum. An annual or biennial plant of the family Umbellifere, with branching stem, 1 to 2 feet high, the lower leaves bipinnate, the upper leaves more compound, divided into very narrow divisions, and with globose fruit It is a native of the south of Europe and of the East and has long been cultivated for the sake of its fruit It has thus become naturalized in some parts of England and the United States, where its fruit, comander seed, is much less used than in Germany and some other European countries The whole plant, when fresh, has a very offensive smell, due to an essential oil, but the ripe and perfectly dry fruit has an agreeable aromatic smell and a sweetish aromatic taste is used in medicine as a carminative and in domestic economy as an aromatic, being very often mixed with bread in the north of Europe, spirituous liquois are flavored with it, and confectioners cover it with sugar, to make a well-known kind of confection. In the south of England it is common to sow corrander and caraway together, the cornander yielding a crop in the first year and the caraway in years following Coriander delights in a rich soil and is much cultivated and used in India It is little used in the United States

CORIGLIANO CALABRO, kô/rē-lya/no ka-A city in the Province of Cosenza, south Italy, 4 miles from the Gulf of Taranto and 70 miles southwest of Taianto (Map Italy, L 8) It has a castle and an aqueduct, and markets a high quality of manna from the ash trees of the surrounding country, as well as some oil It was destroyed in 1806 by the Firench. Pop (commune), 1881, 13,272, 1901, 13,320, 1911, 16,338

COR'IN In Shakespeare's As You Like It,

a shepherd who offers his services to Rosalind

CORIN'NA (Gk Kópivra, Korinna). A Greek lyric poetess, nicknamed "The Fly" (Mvla, Myia), famous alike for her beauty and for her genius She was born at Tanagra, in Bœotia She was an elder contemporary of Pindar and according to tradition, his rival Æhan and Suidas speak of her five victories over him, and Pausanias saw at Tanagra a picture of her wearing about her head a fillet of victory. which he supposes she gained in a contest with her younger rival Her poems were all in the Brotian dialect The older fragments were Beedian dialect The older fragments were edited by Beigk, Poetæ Lyrici Græci (Leipzig, entire by Berry, Poeter Lyrus traces (Leipzig, 1900), Smyth, Greek Melie Poets (London, 1900). In 1907, in a papyrus of the second century AD, were found considerable remains of two poems attributed to Corinna Consult The Year's Work in Classical Studies (for 1907), and Edmonds, New Fragments of Corinna (1910).

CORINNA 1 A name given by Dryden to Mrs Elizabeth Thomas, with whom he had a She afterward made the accorrespondence quantance of Curll, the notonous publisher, and funnished him with a selection of letters interchanged between heiself and Dryden. They were probably fictitious 2 The daughter of Gaipe in Van Brugh's comedy The Confederacu.

CORINNE, OU L'ITALIE, kô'rên' oo lê'ta'le' (Fr, Corinna, or Italy) The most important novel of Madame de Stael, published in 1807, named from its heroine, who pines and

dies after her lover proves false
COR/INTH (Gk Kópudos, Kormthos, said to
have been called in early times "Ephyra") An ancient city of Greece, situated at the south end of the 1sthmus connecting the northern division of Greece with the Peloponnesus. Its citadel was the Acrocorinthus, an isolated hill 1886 feet high, with precipitous sides, commanding one of the finest views in Greece At the northern foot of this hill lay the city of Corinth, on a broad terrace nearly 200 feet above the level of the 1sthmus In the Homeric epic Ephyra 1s mentioned as the home of Sisyphus and Bellerophon (see also Medea), but the city does not seem to have played a great part in the heroic age, and appears in dependence upon the rulers of Mycenæ, with which place it was connected by a very early system of roads Discoveries of pre-Mycenzan pottery in graves show that there was a settlement at the foot of the Acrocorinthus in very early times, but as yet few remains of the Mycenæan age have come to light The growth of the city seems to have occurred after the Dorian conquest of the Peloponnesus and to have been especially favored by the development of intercourse with the West, for this its situathe Saionic gulfs gave it peculiar advantages, which were further enhanced by alliances with Samos and Chalcis on Eubeea, and by the building of an arrangement by which vessels could be hauled across the isthmus By the end of the eighth century BC Corinth was the chief trading city of Greece, and the extent of its trade is shown by the number of Corinthian vases found in Italian graves as well as by the testimony of ancient writers. Among the colonies founded by Corinth at this period were Syracuse and Corcyra (See Corru) ernment was a strict oligarchy under the leadership of the family of the Bacchiadæ, but when, early in the seventh century BC, Colcyra successfully maintained her independence of the mother city, a revolution occurred, and Cypselus became tyrant (c 657 BC) Under his rule and that of his son, Periander (qv), the prosperity of the city increased, Corcyra and Epidaurus were reduced, and the establishment of Potidea on the northern coast of the Ægean gave Corinth a share in the rich trade of Macedon and Thrace About 582 the tyaants were overthrown, and a moderate oligarchy established, which seems to have remained the usual form of government, though occasionally interrupted by democratic revolutions. With the other cities of Peloponnesus (except Argos), Corinth became a member of the Lacedemonian League and played a large part in the Persian wars The great development of Athenian power was a serious blow to the commercial interests of Corinth, accordingly we find the city active in promoting the Peloponnesian War (See Cor-FU ) After the fall of Athens the Corinthians became jealous of the Spartan rule and formed an alliance with Thebes and Athens, which led in 395 to the Counthian War Later, Counth returned to the Spartan alliance and supported the city in the war waged with the Thebans under Epaminondas Three years after the battle of Charonea (338) it was garrisoned by the Macedonians, who held it until 196, with the exception of 242-223, when it was occu-pied by Aratus (q v ) for the Achean-League When the freedom of Greece was proclaimed by the Romans, Corinth was restored to the Achean League Having become the centre of the last uprising of Greece against the Roman mower, it was utterly destroyed (146) by L Mummus, the Roman general, and for a whole century it continued in ruins In 46 B.c. Julius Casar rebuilt it, and it afterward became the capital of the Roman Province of Achaia; al-

though it never again attained its early importance, it became both prosperous and powerful St Paul planted a Christian church here, to which he addressed two epistles In 1458 AD it was conquered by the Turks under Mo-hammed II, was taken by the Venetians in 1687, and retaken by the Turks in 1715, who held it till 1823 Reduced to ashes in the Greek Revolutionary War, and again utterly destroyed by an earthquake in 1858, Counth is now rebuilt in a more convenient position on the shore of the Gulf of Counth Ancient Counth was surrounded by walls, having a circuit of about 41/2 miles, or, including the Acrocorinthus, of 8 miles It had two harbors—Lechæum, on the Gulf of Counth, and Cenchea, on the Sarone Gulf, opening into the Agean The former was connected with the city by two parallel walls The wealth and prosperity of Counth made it the seat of luxury and licentiousness Besides the sea deities Poseidon and Amphitrite, Aphrodite claimed a large share in the religion of the city, and her temple alone is said to have had 1000 courtesans as sacred The Corinthian hetara were famous throughout Greece In the carlier period Connth was noted for its work in clay and bronze, and even in later times "Corinthian bronze" was almost as precious as gold. Though devoted to art, and filled with costly paintings and statues at the time of its capture by Mummius, the city does not occupy a prominent place in either art or literature, and but few Corinthians except Periander and Timoleon appear among the fa-mous names of Greece Before 1896 the clucf remains of ancient Counth were the foundations on the Acrocorinthus and the seven columns of a very early Doric temple, probably of the time of Periander In 1806 excavations were begun by the American School of Classical Studies at Athens, and although few works of art or inscriptions have been found, the discoveries have furnished a sure basis for the topography of the ancient city, of which the traveler Pausanias (qv) gives a detailed description The chief sites determined are the Theatre, the Fountains of Pirene and Glauce, the road to Lechmun, the Propylea, and the Agora to which it led, and the identification of the old temple with the Temple identification of the old temple with the Temple of Apollo The mediaval walls are still in a fair state of preservation Consult E Curtus, Polopomicsos (Gotha, 1851-32), Whish, Betrage zur wineren Geschichle des alten Kornith (Zittau, 1887), id, Geschichte Korniths von den Perserhiegen bis zum deussignibigen Frieden (Zittau, 1896), these pamphlets contain also a bibliography of Cornitian history. The proports of the American executions are The reports of the American excavations are published in the American Journal of Archeology (2d series, New York, 1897 et seq) For a popular account, consult Richardson, in the Century Magazine (New York, 1899) and Cooley, in Records of the Past, vol 1 (Washington, 1902)

CORINTH, or New Corinti An episcopal city and scaport of Greece, situated on the north coast of the 1sthmus of Cornit, 37½ miles northcast of the ancient city (qv.) and 1½ miles southwest of the northern terminus of the Counth Canal (Map Greece, D 4), and about 55 miles west of Athens. The town was founded in 1858 after the destruction of the vestiges of old Cornith by an earthquake. It is wholly modern and has a good harbor. It has been prospering since the Corinth Ship Canal was

opened in 1893 Among its exports are oil, honey, silk, corn, and currants It is the capital of the District of Corinth Pop, 1896, 4188, (commune) 12,667, 1907, 3340, (commune) 14.867

ORINTH. A city and the county seat of Amore as a country and the seat-southeast of Memphis, Tenn, on the Southern, the Illinois Central, and the Mohle and Oho rail oads (Map Mississippi, J 1) It contains a national cemetery, a park, and a museum There are machine shops, and manufactories of spokes, lumber, etc. The water works are owned by the city Pop, 1890, 2111, 1900, 3661, 1910, 5020.

At the outbreak of the Civil War Corinth, being at the junction of the Mobile and Ohio Railroad running north and south and of the Memphis and Charleston junning cast and west, became a point of great strategic importance It was fortified by the Confederates, and immeduately after the battle of Shiloh (April 6, 7, 1862) General Beauregard with 50,000 men re treated thither, followed by General Hallcok at the head of a force of over 100,000 men leck advanced with great caution, being more than a month in covering a distance of only 23 miles, and when he approached Corinth, Beauregaid, after slight skirmishes, quietly evacuated the place during the night of May 29, Halleck taking possession the following day On Oct. 3, 4, 1862, a force of 22,000 Confederates under Generals Van Dorn and Price attempted to recapture the place, then defended by General Rosecians with 20,000 troops But the assailants, notwithstanding the heroic valor displayed, were repulsed with great loss. The Union loss was 315 killed, 1812 wounded, and 232 missing, while that of the Confederates (estimated) was 592

Killed, nearly 2000 wounded, and 2225 prisoners CORINTH, GULF OF, or GULF OF LEPANTO. An arm of the Mediterianean extending from west to east through the centre of Greece and dividing the Peloponnesus from the northern mainland. The outer portion extends from the promontory of Araxus (now Kalogria) in Achaea to the narrow strait (11/4 miles) between Rhion and Antirrhion (south and north shores), the inner portion stretches from this point to the isthmus, a distance of about 80 miles The gulf has the appearance of an inland lake, and the scenery is remarkably attractive, since the shores show striking contrasts of rocky promontories and fertile plains, while the background is everywhere marked by lofty mountains The narrow neck of land which separates the Gulf of Corinth from the Salonic Gulf and unites the Peloponnesus to the mainland is called the Isthmus of Corinth. (See Istumus) It is about 10 miles in length, and about 4 miles in width at its northern extremity, near Mount Geraneion In ancient times a wall was built across the isthmus to prevent invasion from the north On the Sarone Gulf, at the point where this wall terminated and where the Isthman games were celebrated, is situated the modern town of Isthman. Excavations by the French School in 1889, hencits of the School in 1889, hencit 1883 brought to light remains of the ancient 1883 prought to light terminal sanctuaries and houses on a fortified hill; near by are scanty rums of the old Stadium isthmus is pierced by a canal, completed in 1893 See Corntu Canal.

CORINTE CANAL The construction of a canal across the Isthmus of Corinth was begun by Nero, but the undertaking proved too vast and

was abandoned In 1881 a French company obtained a concession to construct such a canal, and in 1882 work was begun In 1889 the work was transferred to a Greek company and was brought to completion by Matsas, a Greek engineer, in 1893 The canal, uniting the Gulf of Corinth with the Saronic Gulf, shortens the journey from the Adriatic to the Piræus by 202 miles It is 4 miles long, 70 feet wide, and 26 feet deep The difficulties of navigation, however, in the Corinthian and Saronic gulfs have led large steamships to prefer the longer voyage around Cape Malea At its western extremity a new town, Poseidonia, has sprung up, and at its eastern end is the modern town of Isthmia

CORIN'THIAN ORDER. The latest developed and most elaborate of the three orders of Greek architecture See Column, Orders of ARCHITECTURE

CORINTHIANS, EPISTLES OF PAUL TO THE The two writings in the New Testament addressed by Paul to the church at Corinth represent what remains of a larger body of correspondence between Paul and this church, which he had founded in 51 AD Paul left the young church of Corinth in a flourishing condition the next year (52 AD) and soon after, in 53, began his great missionary work in western Asia Minor with headquarters at Ephesus (Acts xix) the meantime the church at Corinth had been visited by the eloquent Apollos (Acts xviii 24xiv 1) and probably by other prominent Christhan evangelists. It grew rapidly in numbers and complexity of membership. Divergent views appeared, a disputations and divisive spirit was manifested, and some members were even guilty of serious immorality

Sometime in 55 Paul sent Titus to Corinth to ask the church there whether it would be willing to contribute to the great collection he was planning for the poor brethren in Judea (2 Cor viii 6, 10 f, 16 ff, ix 1 ff) Titus was well re-ceived, but may have reported the case of immorality to Paul on his return This was prob-

ably the leason why Paul wrote the letter referred to in 1 Cor v 9 This letter is now lost Somewhat later Paul sent Timothy, by a roundabout loute, to Corinth (1 Cor xvi 10 f), but before his arrival there a deputation from the church of Counth had arrived at Ephesus (1 Cor xvi 17.f) with a letter from the church asking advice on a number of matters It was this letter and the information Paul received from the members of the deputation and from others (cf 1 Cor 1 11) that led Paul to write the long letter now known as 1 Counthians, written before Pentecost of 55 AD (1 Cor xvi 5-8)

In this letter he deals first with the reports brought to him of the grave disorders in the church, especially the party factions, gathering around the names of certain Apostles and their workers and Chiist (chaps 1-iv), the grossly immioral practices (chap v), and the contentious spirit which resulted in bringing one another before the courts of law (chap vi), all of which things the Apostle steinly rebuked The letter brought by the deputation showed Paul that the church had misunderstood his earlier letter, taking him to mean that he had forbidden them all ing him to mean that he had forbided them all companionship with any and all persons of bad character. The practical impossibility of complying with this command they had doubtless laid before the Apostle in their letter, in view of which protest he explains that his intention was to prohibit Christian companionship with such persons in the membership of the church (v 9-11 "I wrote unto you in my Epistle to have no company with fornicators, not at all meaning with the fornicators of this world if any man that is named a brother be

a formicator, or covetous, or an idolater, or a ieviler, or a drunkard, or an extortioner, with such an one no, not to eat")

The Apostle next replies to the questions on which his advice had been asked (chaps vii-xvi) These questions regarded marriage (chap vii), the eating of meat offered in sacrifice to idols (chap vii), the proprieties of public worship (chaps vi-xiv)—chiefly as to the use of the charismata, or spiritual gifts (chaps xii-xiv), the doctrine of the resurrection (chap xv), and the collection for the saints in Jerusalem (chap xv1)—possibly also the return of Apollos to work among them (xv1 12)

The writing known as 2 Corinthians presents a complicated problem as to its composition and Strong leasons appear for viewing it as made up from two (or parts of two) separate letters of Paul to the church of Corinth written at different dates There are passages in 2 Corinthians which make it impossible to avoid the impression that the Apostle made a visit to Corinth which is not recorded in the Book of Acts, and that he wrote more letters to the church than are distinctively preserved in the New Testament. The passages referring to the visit are the following (n 1) "But I determined this for myself, that I would not come again to you with soriow", (xii 21) "Lest again when I come my God should humble me before you", (x111 2, 3) "I have said beforehand. as when I was that, if I come present the second time again, I will not spare" From these it is clear that the Apostle had made a visit to Corinth which was of a sorrowful kind This cannot possibly be the only previous visit of which we ave record in the Acts-the visit in which he founded the church, since, while at that time he was discouraged regarding his gospel work in Corinth, there had been no sorrow between him and his people such as these passages necessarily imply This inference is confirmed by the remaining passages (xii 14) "Behold, this is the thind time I am ready to come to you", (xii 1) "This is the third time I am coming to you," from which it is clear that the visit which he was about to make was, to the Apostle, his third visit to this place. The passages referring to the letter are the following (n. 3, 4) "Out of much affliction and anguish of heart I wrote much amiceion and angusa or neart I wrote unto you with many tears", (va 8, 9-12) "For though I made you sorry with my Epistle, I do not regret it. So although I wrote unto you, I wrote not for his cause that did the wrong, nor for his cause that suffered the wrong, etc., from which it is clear that the Apostle has in mind some other letter than that which we know as 1 Corinthians, since, while 1 Corinthians might be called a letter of censure, whose object was to shame its readers, it could not in any way be termed a letter of "affic-tion" and "anguish of heart" and "many tears" The only reasonable explanation of these in-

timations is to be found in the theory that the facts were somewhat as follows Timothy's mission (see above) had resulted disastrously. He had not quieted the disputes in the church and had noticed that even Paul's authority was set at naught Some members were even insinuating that Paul was actuated by unworthy motives. Timothy neturned to Paul with a gloomy report, probably having left Counth before the return of the deputation bearing 1 Corinthians It was then that Paul decided to make the visit referred to in 2 Cor in 1, xii 21, xiii 2, 3, which was a painful visit and, for some reason, fruitless (cf. 2 Cor x 10). Returning to Ephesus, he writes to the church out of the fullness of his mortification and grief a letter bearing upon his experience in this visit and upon the general situation in the church, a letter which might easily have been one of many tears'

In such a case however, it is quite certain that we have a portion of this painful letter preserved in the last four chapters of our second The evidence for this Epistle (chaps x-x111) statement lies in the following facts I Between chaps 1-1x and chaps x-x111 there is a marked and otherwise unaccountable difference in the feelings of the Apostle The earlier chapters are full of cheer and satisfaction, the later of dissatisfaction and distress 2 Between these two groups of chapters there is, further, a marked and otherwise unintelligible difference in the condition of the church's affairs In the earlier chapters the church is manifestly loyal to the Apostle, in the later it is as manifestly dis-loyal 3 Between these two groups of chapters there is a peculiar set of closs references. It is found in the following passages
I (11 3) "And I wrote this very thing, lest

when I came, I should have son our from them of whom I ought to rejoice", (xiii 10) "For this cause I write these things while absent, that I

may not when present deal sharply," etc.
II (1 23) "But I call God for a witness upon my soul, that to spare you I forbare to come to Corinth", (xiii 2) "I have said beforehand, and I do say beforehand . that, if I come again, I will not spaic"

III (n 9) "For to this end also did I write, that I might know the proof of you, whether ye are obedient in all things", (x. 6) —— being in readiness to arenge all disobedience, when

your obedience shall be made full."

From these passages it would appear (1) that the actions or states of feeling described in the later chapters as future are in the earlier chapters described as past, (2) that between the future references to these states and actions and the references to them that are past there had come over the situation to which they apply a change for the better. These two phenomena are condered the more significant by the fact that the passages in the earlier chapters are all of them from a portion of the letter (1 23-11 11) in which reference is made expressly to the painful letter (11 3, 4) and most probably to the experiences of the soriowful visit (11 5-11), while two of the three passages in the later chapters are from a portion of the letter (MIII. 1-10) in which reference is made specifically to a contemplated visit which has in it the possibilities of being one of unpleasantness between the Apostle and his people

These internal evidences are confirmed by the fact that 2 Corinthians does not seem to have been known as early in the post-Apostolic Church as 1 Corinthians This is especially evident as I Corinthians This is especially evident from the fact that Clement of Rome, in writing to the Cormthian church (95 A D.), though there was in the situation of the church that which would have made references on his part to 2 Counthians most apt and forceful, apparently confines all his references to the less applicable

There seems to be no allusion 1 Counthians to it before Polycarp's letter to the Philippian church (116 AD), while, generally speaking, references to it by the Fathers are few and not over clear But if 2 Counthrans was thus so much later in coming to the notice of the church, this period of obscurity would involve necessarrly a harsh usage for the first copies of both the letters of which it is composed, and this may easily have resulted in a loss of the closing portion from Paul's last letter (chaps 1-ix ) and, conrespondingly, of the earlier portion of his painful letter (chaps x-xiii) Inasmuch, however, as both these fragments, when finally discovered, gave evidence of having been written by Paul (cf 1. 1, 2, which gives the apostolic greeting in the name of Paul "Paul an Apostle," etc, and x 1, which presents Paul by name as the writer "Now I, Paul, myself entreat you," ctc), and as one showed itself clearly to be the beginning, while the other as clearly showed tiself to be the close, of one of his letters, it would be not at all unnatural were the two fragments placed together as one Epistle and so received generally in the church

In view, therefore, of the facts presented in the Epistles, we recognize three visits of Paul to Corinth (a) at the founding of the church, (b) in response to the urgency call, (c) at the close of his mission work in the East We recogmize also four letters of Paul to the church (a) the letter of prohibition (cf. 1 Cor. v 9), (b) the canonical 1 Counthians, (c) the painful letter (2 Counthians x-xiii), (d) the canonical

2 Corinthians (chaps 1-ix).

Together with the Epistle to the Galatians and the Epistle to the Romans, the Corinthian Epistles have been almost universally received as genuine letters of Paul The Tubingen school (1845) made these four Epistles the standard for their criticism against the remaining New Testament writings Recently a school of Dutch critics (1880-90) has sought to disprove their apostolic origin Other continental critics (1875-90), while admitting their substantial genuincness, have attempted to redistribute their contents among various documents. Still other critics (1880-87) confine their efforts to the elimination of certain minor interpretations. Apart, however, from the two-epistle theory for 2 Corinthians, as advanced in this article, the letters are not only unmistakably genuine products of Paul, but are clearly integral in their contents

CORIN/THIANS, THIRD EPISTLE TO THE. See APOCRYPHA

CORINTO, ko-Fen'to (Sp. Cornnth). A seaport in the Department of Chinandega, Nicaragua, situated on the island of Aserradores, between Realejo Bay and the Pacific (Map Central Ameua, D 4) It has an excellent harbor and is the chief Nicaraguan port of the west coast, having supplanted Realejo It is the iesidence of a United States vice consul Corinto was founded in 1899 Pop, 3000.

CO'RIOLA'NUS, GAIUS, or GNÆUS MARCIUS. A Roman patrician According to the legend, he was surnamed Corrolanus on account of his capture, 493 BC, of the town of Conoli, belonging to the Volser Of a proud and haughty spirit, he was strongly opposed to the pleberans, on one occasion, during a time of famine, he argued in the Schate that grain which had arrived from Sicily should not be distributed gratuitously to the pleberans, unless they should give up their tribunes, an office lately instituted For this he was impeached and banished. He took refuge among the Volscians, whom he aided in their war with the Romans His victories at the head of his Volscian troops alarmed the Romans, who, on his approach to their city, sent a variety of deputations to plead with him He was deaf to every entreaty At last the noblest mations of Rome, headed by his old mother and his wife, Volumnia, leading her two children, came to his tent. His burning desire to be revenged on those who had dishonored him was cooled by the tears of his relatives, and he led back the Volsci to their own territories, where he lived to an advanced age. To this

story numerous objections have been raised by the scientific modern historians of Rome

CORIOLANUS 1 A tragedy by Shakespeare, produced probably m 1609 and published in 1623 The plot is derived from *Philatoch's Luves*, and some speeches are taken verbatim from Sir Thomas North's translation of that work, published in 1579 2 A tragedy by James Thomson, published, after his death, in 1749 o 1740

CORIFYDUS, PLAYUE CRESONIUS (sixth century A D) A Latin author, native of Africa He wrote a panegyric on Justin the Younger, Byzantine Emperor (565-578 A D) Computs was also the author of Johanns, an epic poem celebrating the exploits of a proconsul of that name in Africa in Justinian's time, in overthrowing the Moors The poem, in 8 books and 5000 hexameters, is of importance for the history of Africa and for its accounts of contemporary manners and customs For editions of Corippus' poems, consult Partsch, in Monumenta Germanne Historica (1879), and Petschenig, Berliner Studien für Massische Philologie, vol in (1886)

CORIS'CO An sland belonging to Spain, situated off the coast of Guinea, Africa, at the entrance to Corisco Bay, in lat 0° 55' N, long 9° 20' E It has an area of about 5½ square miles, and its surface is very diversified. The sland is densely wooded, chiefly with ebony and logwood, which, with the invery obtained from the mainland, constitute the chief articles of trade

CORK (OIr Corack-Mor-Murham, Great March of Munster) A maritime county in Munster, the southernmost and largest of the Irish counties (Map Ireland, C 5) Area, 2800 square miles Cork is hilly, with a great diversity of surface The western part is rocky, mountainous, wild, and boggy, the east and south, rich, ferble, and picturesque The Munster coal field occupies 400 square miles in the northwest section of the county, some iron is also mined, and Coik is rich in Ilmestone and sand-stone deposits The dairy industry is extensive The population is less than half what it was in 1850, due mainly to emigration to the United States The capital is Cork Pop, 1841, 583,100, 1891, 4384,382, 1901, 404,611, 1911, 315,431

CÓRK. Á ctty, port, and parliamentary borough, capital of county Cork, Ireland, on the Lee, 11 miles above its discharge into the sea, and 165½, miles southwest of Dublin by rail (Map. Ireland, C 5). It stands in the centre of a picturesque velley, partly on an island, formerly a swamp, which the word "Cork," or "Coreally" implies, and partly on the north and south banks of the river. Several bridges span the river to the central island The situation is picturesque from the uneven ground, irregular streets, intersecting river, and overhanging heights. Cork is the seat of a Roman Catholic bishopin: Its finest building is the Anglean cathedral of St. Finn Barr, in Early French style, completed in 1879 on the steep of the saint's seventh-century foundation. The Roman Catholic cathedral, also dedicated to St. Finn Barr, dates from 1808, but was subsequently restored. There are four monasteries and two numeries. Notable Protestant churches, besides the cathedral, are St. Luke's, St. Nicholas, and St. Anne Shandon. The last named has a high tower of party-colored stones and a noted peal of bells, it is near the site of the Shandon.

Castle, once an important stronghold Roman Catholic churches include those of St. Patrick, St Mary, Sts Peter and Paul, St Vincent de Paul, and Holy Trinity The principal educa-tional institution is University College, founded as Queen's College in 1849, it was rechartered under its present name in 1908. It occupies a fine building, in Tudor style, on the site of a seventh-century abbey. There are a school of science (1885), an agricultural school, and various parochial and industrial schools. Besides the public library (1790), there are several private collections of importance public park of 240 acres, with a well-known race There is also a handsome public y The banks of the Lee, above and cemetery below Cork, are studded with villas The estuary contains several islets rising abruptly from the water, with narrow channels between them It is a landlocked basin, having an entrance one mile in width, which is defended by batteries on Spike, Haulbowline, and Rocky islands, which are also occupied by a convict prison, govern-ment repairing dock, ordnance depots, and ar-tillery barracks. On the shores of the estuary are the towns of Passage and Queenstown, formerly Cove of Cork The Lee is navigable for a considerable distance above the city, and on the improvement of navigation the harbor commissioners have expended large sums. The har-boi, formed by the Lee estuary, is noted for its size and safety and has been the main source of the rise and progress of the city. It has dry docks and patent slips. It has a large export and import trade, but of a fluctuating and latterly declining character. The chief manufactures of the city are leather, metallic goods, woolen and linen goods, beer and whisky. The United States is represented by a consul Founded in 622 by St Finn Bair, during the ninth century Cork was frequently devastated by the Danes, who early in the eleventh century made it a trading station and built the city walls Desmond Macarthy, King of Munster, suirendered it to Henry II in 1172 During the Civil War it held out for the King and was taken by Cromwell in 1649 In 1690 it was again besieged and taken by Marlborough. Pop, 1901, 76,122, parliamentary borough, 100,022, m 1911, 76,673, parliamentary borough, 102,-274 The great majority of the inhabitants are Roman Catholics Colk returns two members to Parliament Consult Cusack, History of the City and County of Cork (Dublin, 1875)

COEK (Sb. corcho, cork, from Lat cortea, bark) The unusually developed epiphlacum (see Bark) of the balk of the cork tree, or cork oak (Querous suber), the alcornoque of the Spannards, a species of oak (q.v.), a native of southern Europe and nothern Africa Theophrastus, in bk ii of his Historia Plantarum, speaks of the cork tree as a native of the Pyrences, and Plutarch mentions cork jackets, or life pieservers. Spain and Portugal chelly supply the world with cosk, while in addition Algeria and Tunis, southern Fiance and Corsea, and Flaty, including Sandma and Sicily, are also sources of supply Some parts of the United States have been deemed favorable for the culture of the coik tree, and attempts in this direction were made in 1858, but were not vigorously prosecuted.

in 1888, but were not vigorously prosecuted.

Seventy per cent of the world's cork is produced in Spain and Portugal The cork production of Spain during 1912 was, approximately, 78,000 tons, of which 54,780 tons came from

the Seville district, 12,650 tons from Catalonia and Castellon, 7100 tons from Galicia, and 3460 tons from the two Castile provinces the finest colk is grown in various parts of the provinces of Seville, Badajoz, Caceres, Cadiz, Huelva, Córdoba, Gerona, Barcelona, Castellon, Crudad Real, Toledo, Malaga, and Salamanca, the greatest part of the finest supplies, however, is grown near Barcelona Most of the low-grade is grown near harceiona dost of the low-grade cork is produced in Sevile The total number of colk factories in Spain was 892, distributed through 107 towns, and these produced for export 8964 tons of cork, 746 tons of small squares, 583 tons of other manufactured cork, and 50,198 tons of cork wood and cork waste. About 5500 tons of cork sawdust are used in Spain annually in packing fruit for shipment Some 40,000 persons were employed in some manner in the cork industry in Spain, with an average wage of about 67 cents per day. Planted tires are said to be inferior to the nat-The cork tree is not of great size, ural forests generally 20 to 40 feet high, with ovate-oblong evergreen leaves, which are sometimes entire and sometimes sharply serrated. It lives to a great age, in some instances 300 or 400 years, and is as much as 15 feet in circumference It blos as much as in level in circumstance in Soons of April or May, the fruit ripens from September to January, falling on the ground as soon as ripe

The acorns are edible and in taste resemble chestnuts. The bark in trees or branches from three to five years old acquires a rough appearance, new layers of cellular tissue being formed, and the outer parts cracking from distension until they are finally thrown off in large flakes, when a new formation of the same kind takes place

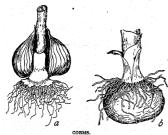

Cork intended for the market is generally stripped off a year or two before it would naturally come away, or when, according to the Spanish regulations, it measures 40 cm. (15 inches) in circumference This first, or viigin, colk is taken off when the tree is about 20 years old and has little commercial value process is repeated at intervals of about nine years, according to the vigor of the tree removal of the cork does not require the removal of the whole bank, but only of external layers of spongy cellular tissue, all or the greater part of which has ceased to have any true vitality and has become an incumbrance to the trees Consequently, instead of being injurious, the taking of the bank, when done with proper care, rather promotes the health of the tree, which yields its best bark at about the age of 40 years and continues to yield crops for 150 years or more. In stripping off the cork longitudinal and transverse incisions are made to the proper depth, and each piece is then cut away from the tree. The average yield for one tree is about 45 pounds, although as much as 500 pounds may be secured. The slabs, after drying for a few days, are placed in boiling water for one hour. This process enables the useless outer coating of the slabs to be sciaped off and increases their bulk one-fourth and also their clasticity, besides dissolving the tannin and other substances Steam is sometimes employed instead of hot water. The cork is then scraped either by hand or by scraping machines, in which process it loses from 20 to 30 per cent of its weight. The cork is then cut crosswise into strips of the proper length, then lengthwise, and finally into pieces of the proper shape, or the strips of a given quality may be shipped direct to the point of manufacture. In many Spanish districts the manufacturing industry is carried on in the homes by hand, but there are also cork-cutting machines, especially in the United States, of great efficiency, which handle the strips imported in bales. The United States in 1913 imported unmanufactured cork valued at \$3,152,670 and manufactures of cork valued at \$2,350,684. The cork, after being cut, is washed in oxalic salt, or some other solution, and then dried. It is now ready to be sorted and packed for the market. In Spain the corks, after being sliced and cut, are packed in lots of 30,000 in bagging cloth and called bales.

Besides its use for stopping bottles, casks, etc., cork is largely used, on account of its lightness, for floats of nets, swimming belts, etc.; and, on account of its impermeability to water, and its being a slow conductor of heat, inner soles of shoes are made of it. All these uses are mentioned by Pliny; but the general employment of corks for glass bottles appears to date only from the fifteenth century. It is also used for smokers' mouthpieces and many other modern devices. The bits that are left in the process of manufacture are ground to powder and used in the manufacture of linoleum, for the loose filling of refrigerators or other heat insulation, and for many other purposes. The Spanish black used by painters is made by burning cork in close vessels.

CORK, EARLS OF. See BOYLE.

CORLEONE, kôr'lå-ō'nå (It., lion heart). A city in the Province of Palermo, Sicily, situated 1950 feet above the sea, at the foot of Mount Cardellia and 21 miles south of Palermo (Map: Italy, H 10). Little industry of any kind is carried on, but Corleone has a splendid old carried on, but Corleone has a splendid old church (restored). The ancient Korlium was founded by the Saracens and colonized with Lombards by Frederick II in 1237. Pop. (com-nune), 1881, 15,686; 1901, 14,803; 1911, 19,072. CORLISS, GEORGE HENRY (1817-88). An American engineer and inventor, born at Easton,

N. Y. In 1844 he removed to Providence, R. I., where he engaged in the manufacture of steam engines and in 1848 established the Corliss Steam Engine Company. He made and patented many improvements in steam engines and in 1876 furnished the "Corliss engine" of 1400 horse power to Machinery Hall in the Philadelphia Centennial Exhibition.

a, Colchicum; b, Arisema (Indian turnip).

CORM (Gk. κορμός, kormos, the trunk of a tree, with boughs lopped off, from kelpeir, keirein, Lith. skirti, OHG. sceran, Ger. scheren, Icel. skera, AS. sceran, Eng. shear). A compact subterranean stem which is related both to tubers and bulbs. It is very short and fleshy, usually more or less rounded or depressed, and in this feature is related to the tuber. It is related to the bulb, however, by the fact that this short and compact fleshy stem is invested by thin scale leaves. Corms are sometimes spoken of as "root bulbs," and in popular usage are constantly spoken of as "bulbs." Common illustrations are found in the Indian turnip,

crocus, gladiolus, cyclamen, etc.

CORMENIN, kor'me-nan', Louis Marie de
LA HAYE, VICOMTE DE (1788-1868). A French jurist and publicist, born in Paris. He was educated for the law, and as auditor of the Council of State, after 1810, drew up several of the Council's most important reports. He was a deputy from 1828 to 1846. His extensive knowledge of jurisprudence and of the practical affairs of government, and the clear and logical force with which he presented his ideas, soon secured for him great influence in public affairs. His famous Lettres sur la liste civile began to appear in 1831 and passed through 25 editions within 10 years. He was elected to the National Assembly in 1848, was made president of the commission appointed to remodel the constitution, and strongly advocated universal suffrage. Although he had opposed the admission of Louis Napoleon to the National Assembly, and afterward had protested against the coup d'état, he was appointed, in 1852, a member of the reconstituted Council of State. In 1855 he was elected a member of the Institute. Besides his numerous political pamphlets published under the pseudonym of "Timon" and subsequently collected as Pamphlets de Timon (1848) -all models of political satire-Cormenia wrote Etudes sur les orateurs parlementaires (1838), which passed through nearly 20 editions, and a valuable Droit administratif (1822), summing up French administrative law in aphorisms.

CORMON, kôr'môn', FERNAND, properly Fernand Piestre (1845-). A French decorative, figure, and portrait painter. He was born in Paris, and studied under Cabanel at the Ecole des Beaux-Arts, then in Brussels under Portaels, and finally under Fromentin and Busson in Paris. He exhibited constantly in the Salon after 1868 and was made a member of the Institute in 1898. Many of his works are of an archæological character, the most important of these being a series of 10 mural paintings and a ceiling in the Natural History Museum, Paris (1898), some of the cartoons of which were exhibited at the St. Louis Exposition in 1904. They represent prehistoric men and animals and the development of the human race, are excellent in design, and show deep scientific knowledge. He came to enjoy high reputation as an instructor and met success also in painting portraits, which include those of President Loubet (Luxembourg), Gérôme, and Carrier-Belleuse. Other important works are: "Cain" (1880, Luxembourg); "The Victors of Salamis" Rouen), and "The Roman Legion" (1887 (1909) Leipzig)

CORMONT, kôr'môn', Thomas and REYNAUD DE. Father and son; French architects of the thirteenth century; prominent among the build-ers of the cathedral of Amiens, following Robert de Luzarches (1223-69).

CORMONTAIGNE, kôr'môn'ta'ny', Louis de (c 1695-1752) A French military engineer, who took part in some of the most important sieges in the Wai of the Polish Succession and that of the Austrian Succession He had charge of the line of fortification from Calais to the Rhône, and he built new defenses at Strassburg, Metz, and Thionville His improvements of Vauban's system of fortification are embodied in his Architecture militaire, par un officier de distinction (1741) For his biography, see Von Brese-Winiari, Ucber Entstehen, der neueren

Befestigungsmethode (Berlin, 1844) COR/MORAN A Coinish giant in the story

of Jack the Grant-Killer

COR'MORANT (Fr cormoran, It. corvo marino, from corvo, crow, and marino, marine, cf Bret morvian, commorant, from mor, Lat mare, sea + bran, crow) A group of web-footed birds comprising the steganopode family Phalacrocoiacide, characterized especially by a bare dilatable membrane beneath the lower mandible, but not in the form of a sac under the throat as in the pelicans, a compressed bill, rounded above, and with a strong hook at the point of the upper mandible, the nostrils linear and seemingly impervious to air, the claw of the middle toe scrated, used in trimming the plumage, the wings of moderate length, the tail rounded, the feathers stiff and rigid and used to aid in walk-ing or climbing. The species are distributed over the coasts of most parts of the world, some of them ascending rivers and even visiting freshwater lakes in pursuit of fish, on which all of these birds subsist exclusively

Cormolants are plovelbially volacious. They do not take their prey by diving, when on the wing, but pursue it by swimming and diving, using their wings in progress under water, and sometimes descending to a great depth, a British species has been caught in a crab pot fastened 120 feet under water When the prey has been taken in a manner inconvenient for swallowing, they toss it in the air and adroitly catch it as it descends The behavior of cormorants in fishing and towards each other in their colonies has been described at length by E. Selous in Bird Watching (London, 1901) Some of the species frequent high tocks, others low islands, on which they make rude nests, chiefly of seaweed and almost always in colonies, some perch and even build their nests on mangroves and other seaside tices. Their gicenish-blue eggs are covered with a calcarcous inclustation. The flesh of all the species is dark and of a fishy taste, but is sometimes used as food, particularly that of young birds

There are described about 25 well-defined species, of which seven are found in North America The commonest is the double-crested cormorant (Phalacrocoraw auritus, or dilophus), so called from the lateral erest of eurly feathers on the sides of the head, and present in some one of its four subspecific forms throughout North America. The "common" cormorant (Phalacrocorax carbo) occurs abundantly on both sides of the Atlantic, especially northward, while on the Pacific coast three species are numerousthe tufted, or Brandt's cormorant (Phalacro-coraw pomerllatus), the red-faced cormorant (Phalacrocorax bieristatus, or unite), and the violet-green cormorant (Phalacrocoraw pelagious. or violaceus), the two latter are especially characteristic of Alaska. The British species are the "common" cormorant, which is about 33 inches long and almost of a black color, but during the breeding season exhibits a sprinkling of elongated white and almost bristly on the head and back of the neck, and the green commonant, or "shag" (Phalacrocorax graculus), which is smaller and dark green. Two notable species are Pallas's cormorant, now extinct (see EXTINCT ANIMALS), and Hairis's, the suif-fishing, flightless species of the Galapagos Islands, which is exceedingly rare, of great size, and has wings useful only as fins See FLIGHTLESS

Fishing with cormorants is a very ancient practice, still regularly followed among the Chinese and Japanese and lately revived as a sport in Great Britain The birds are taken from the nest when young and are easily tamed and trained, or old cormorants may be trapped and taught to serve They are kept for a while and fed meat, etc , until accustomed to their master and the feeding methods Then a line is fastened to one leg by a leather anklet, and they are taken out in a boat to fish and drawn in after each capture After a time they may be set free A ring or strap collar is fastened about their necks, so that no fish can be swallowed, but only pouched, and they return to the boat to be relieved of their buiden. After a suitable time the ring is removed, and they are allowed to fish for themselves or are fed These birds make a living for many families on the Chinese coast, and well-trained ones are highly valued. The modern use of cormorants in this way in England was described and illustrated in The Field (London, October, 1890) See Plate of FISHING BIRDS and Colored Plate with WATER

CORN (Lat. cornu, horn, connected with Ir., Welsh coin, Gk κάρνον, Larnon, Goth haurn, AS, Eng, OHG horn, Ger Horn, also with Gk. κέρας, λοτας, Skt. srūga, horn) A small hard growth resulting from an increase in the thickness of the cuticle or epidermis, which is generally caused by irritation, excessive pressure or faction on the part. Corns occur most commonly on the toes, as a result of tight shoes Three varieties of corns are described, viz. I. Laminated coins, or callosities, in which the hardened cuticle is arranged in layers, frequently of a dark brown color, from the effusion of blood in the deeper layers 2. Fibrous coins (clavi), which are not only fibrous in their early stages, but have convex surfaces and, as time goes on, sink into the skin, sometimes producing great pain. Frequently a bursa, or small bag containing serum, is formed beneath, and if this should inflame, our speedily forms, and the pain and constitutional irritation become severe, at other times the pressure may cause absorption of the ends of bones, and serious alterations in the condition of a joint. 3 Soft corns occur between the toes and cause much annoyance, they are generally small, and as they are constantly bathed in perspiration, the cuticle does not harden, as in the other varieties. They sometimes give rise to painful ulcerations and should never be neglected. The treatment of corns consists in the removal of all undue pressure or friction, either by removing the shoe altogether, or protecting the corn by surrounding it with a ring of felt or "corn plaster"; or the hardened cuticle may be softened by the application of water of ammonia and then scraped or filed away; or it may be extracted by using a dull instrument. A soft corn should be treated by putting small rings of absorbent cotton around it and between the toes, and keeping it dry till it becomes a hard corn, and then treating it as such Most druggists keep a 'corn cure' composed of salicylic acid dissolved in collodion, several applications of which will remove a hard corn In all serious cases application should be made to a surgeon or chropodist

Coins affect hoises as well as man foot of the horse they occur in the angle between the bars and outer crust and are caused by a bluise of the sensitive secreting sole of feet are especially subject to them-those with deep, narrow, slanting heels, in which the sensitive sole becomes squeezed between the doubled-up crust and the shoe, and wide, flat feet, which, by the senseless cutting away of the bars and outer crust, allow the delicate interior parts to be pressed with all the force of the animal's weight on the unyielding iron shoe Serum and blood are poured out, while the secreting parts, being weak and uritable, produce a soft, scaly, unhealthy horn Corns constitute unsoundness, cause a short, careful, tripping gart, are a very frequent source of lameness among roadsteis, abound in badly shod horses, espe-cially those with the kind of feet alluded to, and usually occur in the inside heels of the forefeet, these being more especially subjected to weight and hence to pressure The discolored spot indicating the recent corn must be carefully cut into with a fine drawing-knife, any serum or blood being thus allowed free vent If the bruise has been extensive, a poultice will have the twofold effect of allaying irritation and relieving the sensitive parts by softening the hard, unvielding horn When the injury has been of long standing, and soft faulty horn is secreted, a drop of diluted nitric acid may be applied On no account must the bars or outer ciust be removed, they are required for bearing weight, which may be further kept off the injured part by the use of a bar shoe In horses subject to corns the feet should be kept soft by dressing with tar and oil, or any suitable emollient, the corn should be pared out every fortnight, a shoe with a wide web on the inside quarter should be used, and should be nailed only on the outside, and, if the sole is thin and weak, leather pads should be employed In bad cases the shoes may be removed and the horses tuined out to pasture for a few weeks with good results

CORN, INDIAN See MAIZE

CORNARO, kôr-na'rô, CATERINA (1454-She was born in 1510) Queen of Cyprus Venice, of a patrician family She was married to James II, of Lusignan, King of Cyprus, in 1472, and succeeded him on his death, only eight months later. When her son had also died, in 1475, the Republic of Venice assumed the goveinment, and in 1489, fearing the conclusion of a marriage between her and Alfonso, the hereditary Pinnee of Naples, forced her to abducate and leave the island She was received in Venice with great point and thereafter resided at Castle Asolo, near Bassano Caterina has been the favorite subject of romances and the heroine of several operas. Of her life in Venice her cousin, Cardinal Pietro Bembo, has left a vivid descrip-tion in Gli Asolam There is a famous portrait of this Queen by Titian in the Uffizi gallery in Florence Consult Hare, Most Illustrious Ladies of the Italian Renaissance (New York, 1904) and McCurdy, Essays in Fresco (London, 1912). CORNARO, Lodovico, or Luidi (1467–1566) A Venetian nobleman and hygnemst. Up to his fortieth year he so wasted his forces, originally but feeble, in dissipations of every kind that his life was despained of He thereupon adopted strict rules of frugality in eating and drinking, with general care of his health and gentle exercises, and in consequence lived for almost a century. To promote those habits which had noved so advantageous in his own case, he wrote, in his eighty-third year, his celebrated treatise, Discorsi della vita sobria (Tessay on Temperate Living,'), which was first published at Padua in 1558 and has been translated into many European languages. The work is mentioned with approval by Addison in No 105 of the Spectator. There is a translation, The Art of Livina long (Missakes 1963).

of Living Long (Milwaukee, 1903)
CORN'BURY, EDWARD HYDE, LORD, third EARL OF CLARENDON (1661-1723). An English politician, Governor of the colonies of New York and New Jersey from 1702 to 1708 He was a member of Parliament for Wiltshire from 1685 to 1695, and for Christchurch from 1695 to 1701, and in September, 1701, was appointed Governor of the Province of New York by King William, to whose side he had treacherously deserted in 1688, from that of his uncle, James He reached New York in May, 1702, was confirmed in his office by his cousin, Queen Anne, on the death of King William, and later in the year was also appointed first royal Governor of New Jersey In both New York and New Jersey his arbitrary policy, his religious intolerance, his administrative incapacity, and his dissolute habits soon made him extremely unpopular, while in New York the dislike of the people was considerably intensified by his fraudulent appropriation of public funds and his attempts to override the Legislature, which insisted on its right to appoint a treasurer of its own for the "receipt and disbursement of any moneys the Legislature might order to be raised for public purposes," and contended that "the Assembly as representatives of the people of this province are entitled to the same privileges and have a right to the same powers and authorities as the House of Commons enjoy" Finally, as a result of lists of grievances passed by the legislatures of both colonies, Cornbury was removed from office in 1708 and was immediately thrown into pilson in New York by his creditors, but, on his becoming third Earl of Clarendon by the death of his father in 1709, he was enabled to pay off his debts and returned to England He became a Privy Councilor in 1711 and was Envoy Extraordinary to Holland in 1714 During his term as Governor of New York and New Jersey, he was fond of appearing in pub-lic dressed as a woman, and Lewis Morris, a contemporary, wrote "He diesses publicly in women's clothes every day and puts a stop to all public business while he is pleasing himself with that peculiar but detestable maggot" William Smith, in his History of the Late Province of New York (New York, 1829-30), speaks of him as follows "We never had a governor so universally detested, nor one who so nichly deserves the public abhorrence In spite of his noble descent, his behavior was trifling, mean, and The indignation of the people was extravagant kindled by his despotic rule, savage bigotry, insatiable avarice, and injustice not only to the public, but even his private creditors." Consult Wilson, Memorial History of the City of New York, vol 11 (New York, 1891-93), and Gordon, A History of New Jersey (Trenton, 1834)

STATES, POPULAR NAMES OF CORNCRAKE See CRAKE

CORNEA, kôi'nē-a (Neo-Lat, fem of Lat. corneus, horny, from cornu, horn, so called from its resemblance to horn) The transparent anterior portion of the outer coat of the eye. It contains no blood vessels and obtains its nutrition by means of a system of spaces filled with lymph The cornea is subject to inflammation, known as heratitis, ulcer of the cornea is very common, resulting most often from injury. inflammations of the conjunctiva, phlyctenular keratitis, various disturbances in nutrition, etc A number of forms are seen attacking different portions of the cornea Aside from inflamma-tion of other portions of the eye accompanying the ulceration, there may result adhesion and prolapse of the iris, closure of the pupil, and opacity of a portion or the whole cornea Staphyloma (qv), a protrusion of a part or the whole of the cornea, may follow Kenatoconus occasionally occurs in young adults, especially females, the coinea protrudes at the centre from weakness and intraocular pressure See Eye, Eye, Diseases of the

CORNEILLE, kôr'na'y', PIERRE (1606-84) One of the greatest tragic poets of France was born at Rouen, June 6, 1606, the son of a lawyer and magistrate of worth, ennobled in 1637 He was trained by the Jesuits, took the advocate's oaths in 1624, and held minor legal offices until 1650 His first play, Mélite, presented in Paris (1629), was popular and was followed by Chitandie (1632), a tragi-comedy, La veuve (1633), his first comedy, La galeries du palais (1633) and La suwante (1634), both comedies. These early plays are full of the insipid love in fashion at the time, and the title of one of them will suffice alone to show their realism In 1634 he met Richelicu, composed a Latin clegy on his visit to Rouen, and was enrolled among the five poets of the Cardinal statesman, of whom Rotrou alone was at all worthy of his company He soon incurred Richelieu's displeasure for too frank criticism of his literary work and wrote, uninfluenced by the Minister's favor, La Place Royale, Médée, his first tragedy (both 1635), and L'Illusion comique (1636). But all this earlier work was completely eclipsed by the triumph of his epochmaking Cid (1636), though we may not leave these earlier dramas without recording that they are far superior to anything that had preceded them in vigor and in truth to nature, and that to them we owe the happy invention of the southette. Such promise as they gave, however, pointed less to the held of Corneille's great achievement than to the drama of intrigue and to the comedy of contemporary society, for some of them are full of rather coarse stage business and a battledore and shuttlecock repartee, and are written in a style that he felt needed apology for its familiar simplicity Still, we must admit that in them Corneille created the comedy of manners as well as the beginnings of character comedy.

The tragi-comedy of Le Cid was so different from Corneille's earlier dramas that it hardly seems the work of the same hand It gave him a preeminence over contemporaries and prede-

cessors, questioned only by interested rivals and the Academy, which Richelieu summoned to support them, and which it did with studied halfheartedness Among the conservative critics passion ran as high as in the famous battle over Hugo's Hernam Scudéry, a critic of repute, asserted that Le Cid's subject was ill chosen, its structure unpardonable, its action clumsy, its versification bad, and that its undeniable beauties were stolen from a Spanish play by Guillen de Castro, which was indeed its ac-knowledged source But the public spoke with no uncertain voice, and though Le Cid may lack the ethical depth and tragic force of some of Corneille's later dramas, it was and has remained the most popular on the stage of them all Modern French drama dates from Le Cid In the controversy that raged around Le Cid

Corneille's position was delicate. He was not by nature a tactful disputant, being indeed inclined to arrogance, as he showed on this occasion by his Excuse à Artiste, he could not afford to lose the favor that Richelieu continued to show him, and he could not secure a full hearing without imperiling it. He therefore withdrew for three years to Rouen. When he returned in 1639 to Paris, it was with a matured genius that almost immediately asserted itself in unparalleled splendor and fecundity the theme of Le Cid, the struggle between honor and love in the hero, between duty and love in the heroine, remains typical of the later trage-Typical of them all are also the five acts and the three "unities" the time limited to 24 hours, the scene to a single town, and the action to a central interest-self-imposed fetters worn with even greater complacency by Racine The Spaniaids knew nothing of these unities, and the effort to force their romantic drama into this rigid mold had, by the improbabilities, material and psychie, that it involved, given occasion for most of the criticism that had befallen Le Cid Corneille therefore, in 1639, turned to classical subjects that would lend themselves more readily to the episodical treatment which the unities demanded What survived of iomance in him was the invariable intermingling of love with sterner themes

Horace (1640) sets the love of man and woman against the love of race and fatherland in fourfold treatment of a single theme. In the more modern Cinna passion twists love of fatherland to its purpose and is opposed at once to the magnanimity and the patriotism of Augustus Polyeucte (1642) opposes Christian to marital duty in a story of Christian martyrdom, which was a bold venture, for many thought, with Boileau, that the mysteries of the faith should be kept out of literature These three, with Le Cud, mark the height of Corneille's achievement—the climax of the development of the elements of love and willsave that he touches for a moment a greater intensity of terror in Radagune (1646). other tragedies are more or less pale imitations of the merits of these. Among them it is worth while to name La mort de Pompée (1643), which is but a series of dialogues and narratives; Théodore (1645), an even more dubious venture in Christian martyrology than Polycucte had been, Héraclius (1647), followed by Corneille's election to the Academy; Nicomède (1651), Pertharite (1652). The last was an unmistakable failure which led Corneille for a time to withdraw altogether from the stage. During these years he had written also two comedies on Spanish models, Le menteur, the best comedy written in France before Molière, and Suite du menteur (1644-45), and a good tragi-comedy, Don Sanche d'Aragon (1650), which, as the name implies, was Spanish also

Disappointed by the failure of Pertharite, Corneille withdrew to Rouen, where he lived from 1652 to 1659, and turned his talent to versifying Thomas a Kempis's Imitation of Christ (1656), and to the writing of very frank critical essays on his own plays and the drama in general. He was recalled from this by a visit of Molière's company to Rouen in 1658, and between 1659 and 1674 wrote 11 tragedies of unequal mediocrity, though in each of them there were verses "with necks in thunder clothed and long resounding pace," such as he alone has known the art to create The time to regret had passed, the time to cry halt had come, when Boileau wrote his famous epigram, Après Agésilas hélas (1666); Mais après Attila holà (1667). A new conception of dramatic art had been introduced by Boileau and Racine, and when Corneille was beguiled into a contest for court favor, he was fated to see his young rival's court havor, he was nated to see his young rivan see files of the second from the control of the present of the second from the control of the present of the second from the chérie (1672) and Suréna (1674) He had written some devotional poetry between 1665 and 1670, and among his last compositions were some beautiful verses of thanks addressed to Louis XIV in 1676 Corneille's last years were passed in pecuniary straits, "satiated with glory and hungry for money," as he said, and when, at the uigent request of Boileau, the King sent him 200 pistoles, it was already too late. He had no time to spend them, and two days after he was dead (Oct 1, 1684)

Corneille's works show him, as his friends describe and as his portraits paint him, a man of serious, rugged, and almost stern temper. A pious churchman, he was ill at ease in society, and awkward and unsuccessful when he attempted to flatter The only touches of romantic sentiment revealed in his verses are found in those addressed to an actress of Mohere's company, Mile du Parc, who scorned his attentions. Whether from pride or shyness, he never curried favor, nor took his place with courtiers at a time when this was almost necessary to literary prosperity. His public manners were not gracious, though he was an affectionate husband and brother. His best work never lost popular favor, and the most cminent of his literary contemporaries always did him justice The greatest of them, Molière, spoke of him as his master, and Racine pronounced at the Academy a culogy on his rival at once just and generous, that later critics have in the main confirmed

The first impression made by an attentive reading of Corneille's work is its remarkable unevenness. Judged by his best, he ranks with the greatest. No dramatic poet rises to grander heights. Hence no poet is more quotable and few more quoted, for he has hundreds of lines that cling to the memory by their crash of sound and startling fullness of suggestion—
"the most beautiful," says the French critic

Faguet, "that ever fell from a French pen" And the same critic says of Corneille's language that it is "the most masculine, energetic, at once sober and full, that was ever spoken in France "

Corneille's tragedies arouse admiration rather than tragic fear His interest is not in the fate of his characters, but in the unconquerable mind with which they meet it, their haughty disdain of destiny He is of the school of the emphatics, delighting in extraordinary situations and subjects, in whatever will challenge the will to its utmost utterance. There is no fine-spun sentiment even in the love of Le Cid But tragedy with the limitations of the "unities" involves much talk and little action, and Corneille's disdain of the endless subject of talk allows the interest to flag for scenes and even acts. There is monotony even in his nobility, and that in spite of the lyric and epic elements which he found in the drama and from which Racine was to free it Yet his declamations-the tirades of Camilla, Augustus, Cornelia, and many another-are supreme in their kind and will thrill audiences as long as the antinomies of love and patriotism, honor

and duty, perplex men's souls

The best edition of Cornelle is Marty-Laveaux's (12 vols, 1862-68) For bibliography, consult Picot's Bibliographic Cornellenne (1865), and Le Verdier and Pelay, Additions & la Bibliographie Cornélienne (1908) The best translated biography is Guizot's Corneille and his Times (1857), a good modern study, Faguet's "Corneille" (Paris, 1886), in the series Classiques Populaires. Le Cid, Horace, and Polyeucte have been done into English blank rougewore nave been done into English blank verse by Nokes, and (with Chuna) into English prose by Mongan and McRee (1878-86) Consult Saunte-Beuve, Nouveaus lunds, vol. vii (Paris, 1863-72), Guizot, Corneille et sont temps (7th ed. ib., 1880), Lemative, Corneille et la poérque d'Aristote (ib., 1888), Liéby, Consulte (b., 1892). Rrunchiere Encouse du et la poètique d'Aristote (10, 1888), Lieoy, Cornelle (1b, 1892), Brunetière, Epoques du théâtre français (1b, 1892), Lanson, Corneille (1b, 1898); Segall, Corneille and the Spanish Diama (New York, 1902); Huszar, Pierre Cornelle et le théâtre espagnol (Paris, 1903), Canfield, Corneille and Racine in England (New York, 1904), Faguet, Propos de Théâtre (3 vols., 1903-06), Raab, Pierre Corneille in deutschen Uebersetzungen (Heidelberg, 1911), Wendt, Pierre Corneille und Jean Rotrou (Leipzig. 1911). The three-hundredth anniversary of the poet's birth was celebrated with prolonged festivities in May and June, 1906

CORNELLLE, THOMAS (1625-1709). A
French dramatist and miscellaneous writer,
whose productions are obscured by the genius of his older brother Pierre He was born at Rouen, Aug 20, 1625 His 42 plays are for the most part of a facile mediocrity, but he has to his credit the longest run of the century for his Timocrate (1656), the largest price for his La Devineresse (1679), and one of the most sensational failures in his Baron des Fondrières (1686) He was given his brother's chair in the Academy after the latter's death (1685), and published a dictionary supplementary to the Academy's, and a complete translation of Ovid's Metamorphoses, as well as a Dictionnaire universel, géographique et historique (1708) He was blind from 1704, but his literary activity continued uninterrupted until his death at Les Andelys, Dec 8, 1709). Arrane (1672)

VOL. VI .-- 7

and Le comte d'Essex (1678), an historical drama, are among his plays the best worthy His dramatic Works are edited of memory by Thierry (Paris, 1881) Consult Revnier, Thomas Corneille, sa vie et son théâtre (Paris, 1893), and Altied de Vigny, Fragments médité de critique sur Pierre et Thomas Corneille (published in 1905)

COR/NEL (OF cornille, from Lat cornolium, cornel tree, Lat cornus, a cornel cherry tree, from cornu, horn, so called on account of the hardness of the wood) A term applied in America to various plants of the genus Connus In Europe the name seems to be restricted to Cornus mas, known as "cornel" or "coinchian It is a common shiub and was formerly much cultivated as a fruit tree It has oval leaves, small heads of yellow flowers appearing before the leaves in spiing. The fruit is oblong in shape, a little larger than the sloe, shining ied, iarely yellow or white, and when perfectly ripe has an agreeable vinous acid taste It is either eaten as it comes from the tice or is made into a preserve When gathered green, it is pickled like olives. In America none of the plants to which the name is applied bears an edible fruit of value. Cornus canadensis, dwarf cornel, or bunchberry, is not properly edible, and, so far as known, has been httle used by man See Dogwood

CORNE'LIA. A celebrated Roman matron, vounger daughter of Scipio Africanus the Elder, and mother of the great tribunes Therius and Gams Gracchus and of Cornelia, the wife of Scipio Africanus the Younger On the death of her husband, refusing numerous offers of marriage, including even one from King Ptolemy, she devoted herself to the education of her 12 children, a task for which her lofty spirit, careful education, and wide attainments rendered her adminably fitted, and which had extraordinary results On her death a statue was erected to her memory bearing the inscription "Cornelia, Mother of the Gracchi" The base, with the inscription, is now in the Capitoline Museum at Rome To a Campanian lady who asked to see her jewels, she is said to have presented her sons as the only jewels of which she could boast After the muider of Gaius, the second of her sons, she return to Misenum, where she devoted herself to Greek and Latin literature and to the society of men of letters

CORNELIA GENS. A distinguished clan of Rome, partly patrician, partly plebenan. The names (cognomina) of its patrician families, from which came more prominent men than from any other Roman gens, are Arvina, Blasio, Cethegus, Cinna, Cossus, Dolabella, Lentulus, Malugnensis, Mammula, Mercnda, Mer Kufinus, Scapula, Scipio, Sisenia, and Sulla CORNE/LIAN CHERRY See CORNEL Mei ula.

CORNELISZ, kôr-nā'līs, or CORNELISSEN, called Cornells van Haarlem (1562-1638). A Dutch historical and portrait painter He studied in Hanilem under Pieter Pietersz and in Antwerp under Conguet, but finally returned to Haarlem, where he occupied a very influential position until his death. He is best known for his "Banquet of the Archer's Guild" (1583) in the Haailem Museum. This painting is remarkable for the natural poses and clever grouping of the figures and undoubtedly influenced Frans Hals. His portraits are excellent, but his Instorical and mythological compositions, painted in the Italian style, are full of exaggerations and mannerisms. In his two large paintings of the "Massacre of the Innocents, in Amsterdam and The Hague, he displays great Consult Wedekind, skill in foreshortening Consult Wedekind, Cornelis Corneliss ian Haarlem (Leipzig, 1911).

CORNE'LIUS. Bishop of Rome, 251-253 He ranks as the twenty-first pope His lement course respecting the lapsed (q v ), those who under persecution had renounced Christianity, led to the opposition of Novatian and to the Novatan schism When persecution was re-newed in Rome by Gallus, he fled to Civitavecchia, and there met a martyr's death, in June, 253 His day is celebrated with that of St Cyprian on September 14 His correspondence with St Cyprian on the question of the lapsed is of great historic interest and value, especially on the question of the position of the Roman see. Consult Hartel's edition of the Letters of Cyprian, vol 11 (Vienna, 1871)

CORNELIUS, kor-nā'lē-oos, Karl Sebastian (1819-96) A German physicist, born at Ronshausen in Lower Hesse He studied the exact sciences at Gottingen and at Marbuig and from sciences at Gottingen and at Marbuig and from 1851 to the time of his death taught physics and physiography at Halle His published works include: Die Lehre von der Elektrichtat und dem Magnetismus (1855). Theorie des Schens und raumlichen Vorstellens vom physikalischen, physiologischen, und psychologischen Standpunkte aus betrachtet (1861, followed by another work on the same subject in 1864), Meteorologie (1863), Ueber die Bedeutung des Kausalprinzips in der Naturiussenschaft (1867), Ueber die Entstehung der Welt (1870), Ueber die Wechselunkung zwischen Leib und Seele (2d ed, 1875, followed by another work on the same subject in 1880), Grundress der physikalischen Geographie (6th ed, 1886), Abhandlungen zur Naturussen-schaft und Psychologie (1887)

CORNELIUS, Peters (1824-74). A German composer, nephew of the painter Peter von Cornelius, boin at Mayence, Dec 24, 1824 He studied for the stage, but, not meeting with success as an actor, he turned his attention to music. He became intimate with Liszt, who In 1858 produced his opera, Der Barbier von Bagdad, in Weimar, where, however, it failed He then moved to Vienna, where he composed his second opera, Der Cid, produced in Weimar in 1865. In the same year he followed Wagner to Munich, where he was appointed to a professorship at the Konighische Musikschule Although he devoted much of his time to fighting for Wagner's art, he produced his great choral works, op 9-14, between 1868 and 1872. In 1869 he began his opera Gunlod, which, however, progressed so slowly that when the composer died, Oct 26, 1874, the work remained a frag-ment His pupil C Hoffbauer completed it from the sketches E. Lassen reorchestrated it and produced it in Weimar in 1891. Cornelius' masterpiece is Der Barbier von Baqdad, which was completely rescored by Mottl and Levi and produced again in Munich in 1885. Its success was instantaneous and overwhelming, so that to-day it is in the regular repertoire of all German opera houses In 1890 Seidl brought it out with great success at the Metropolitan Opera House, New York. Besides these works Cornelius wrote 60 songs for one voice and 7 duets, many of which are worthy to be ranked with the best songs of the great masters of song. Quantita-tively Cornelius' musical output is rather meagre, consisting of only 20 opus numbers, not including the operas. According to his own confession his close association with Wagner is to some extent responsible for this. His administration of the Bayieth master was so great that it almost suppressed his own creative impulses. Furthermore, Cornelius was a lyric poet of no mean order, a writer on music of nunusual acumen, and a masterly translator. The chief characteristics of his music are no-bulty, refinement, and power of characterization. The more one studies it, the greater appears its charm. Cornelius' complete works were published in 1905 by Breitkopf and Hartel (5 vols), his literary works and letters in 4 vols. Consult E Istel, Peter Cornelius (Leipzig, 1904), and E Sulger-Gebing, Peter Cornelius als Mensch und Dichter (Munich, 1908).

CORNELIUS, PETER VON (1783-1867). A German historical painter, the founder of the Munich school He was boin, Sept 23, 1783, in Dusseldorf, where his father was inspector of the gallery From him the lad learned the rudiments of art, and from about 1795 he re-ceived instruction in the Dusseldorf Academy under Langer His earliest works are unimportant, but after his removal to Frankforton-the-Main, in 1809, he acquired some celebrity His first work of importance was his 12 drawings of Goethe's Faust, now in the Stadel Institute of Frankfort In 1811 he went to Rome, devoting himself to the study of the art of the Cinquecento, especially to that of Raphael and Michelangelo He was associated with the so-called Nazarene painters, among whom he found a lifelong friend in Overbeck, but he was too independent to follow their footsteps During this period he executed his famous drawings for the Nibelungenhed Together with Overbeck, Vert, and Schadow, he received a commission to decorate a room in the house of the Prussian Consul at Rome, with scenes from the "History of Joseph." In executing this task he revived fresco painting, which had been almost forgotten since the days of Raphael Mengs His work and that of his associates excited the greatest admiration, and they were engaged to decorate a room in the Villa Massimi, opposite the Lateran, with frescoes from the works of Dante, Allosto, and Tasso He had scarcely begun his work when there came a double call to return to Ger-The Prussian government invited him to become head of the Dusseldorf Academy, and Crown Prince Louis of Bavaria chose him to decorate the new Glyptothek in Munich

Cornclius arranged to pass his winters in Dusseldorf, where a great crowd of students soon gathered about him, and his summers in executing the frescoes in Munich to Germany in 1819, and in 1820 he began his work upon the frescoes, which were carried out by his pupils, painting after his designs I two great halls of the Glyptothek he represented the myths of the Greek gods and heroes in works which are masterpieces of drawing and composition. In 1825 he became director of the Academy of Munich and was raised to the nobility by King Louis I of Bavaria. He finished the frescoes of the Glyptothek, representing in the third hall scenes from the Iliada All of this work, however, was executed by his pupils and may best be studied in the original cartoons by Cornelius, which are now preserved in the National Gallery of Berlin In 1830 he be-

gan the decoration of the Ludwigskirche in Munich, with frescoes representing the "General Confession of Faith of the Christian Church" Contrary to his usual custom, he himself painted upon the large altai wall (62 × 38 feet) a fresco of the "Last Judgment" During the same time he made the designs for the 'History of Christian Art" for the 25 logge of the old Pinakothek, which were painted by Zimmermann

After a disagreement with the King of Bavaria he was called to Berlin by Frederick William IV in 1841 and given a commission to decorate the proposed Campo Santo, a burial place for the royal family of Prussia four cartoons executed for this purpose, now in the National Gallery in Berlin, surpass all his previous work This is especially true of the one containing the "Four Apocalyptical Riders," which is a masterpiece of conception, dramatic life, and boldness of drawing. On the other hand, the "Beatitudes" show appreciation for the beautiful and compact in outline Until nearly the time of his death Cornelius was occupied with cartoons He resided mostly in Rome, but returned to Berlin in 1861 remaining there until his death, which occurred March 6, 1867. During this last period he executed his design for a silver shield, which was a christening present of the King of Prussia to the Prince of Wales, his godson, representing the "Expansion of the Church" He also painted his dramatic picture "Hagen Casting the Nibelungen Treasure into the Rhine," now in the National Gallery, Berlin

More than any other man, Cornelius domi-nated German art of the early nineteenth century For decades his "cartoon style," with its emphasis of design and neglect of color, pre-vailed in mural decorations, especially at Munich, where his influence has only recently disappeared His contemporaries held him in high repute, echoing the opinion of Crown Prince
Louis "There has been no painter like Cornelius since the Cinquecento" Modern critics, on the other hand, are not equally favorable, some of them, as Muther, going to the opposite extreme of considering his activity harmful is true that he imitated Michelangelo, and that imitation can never produce the healthnest and greatest art, that Cornelius' work is of an intellectual character, requiring study for appreciation, that his colors are poor, and that he is sometimes deficient even in drawing But, on the other hand, his works were certainly great in composition and in conception His tendency, like Michelangelo's, was heroic, in-deed Titanic, but he was not insensible to grace and was capable of expressing the tender-est emotion He was more of a designer than a painter, and his work must be judged by his cartoons And certainly no painter exercised greater influence upon German art and imagination that did Cornelius in his great cycles of frescoes in Munich and in his cartoons in Berlin Among his pupils were Wilhelm Kaulbach (qv), Carl Hermann, Eberle, and many others

Consult the monographs of Von Wolzogen (Berlin, 1867), Riegel (Hanover, 1870), Forster (Berlin, 1874), Koch (Stuttgart, 1905), and Eckert, in Kunstlermonographien (Bielfeld, 1906), Grimm, Neum Essas (Berlin, 1865), Valentin, in Dohme, Kunst und Künstler des neumenhinten Jahrhunderts (Lepzig, 1883);

Muther, History of Modern Painting (Eng trans, London, 1895)

CORNELIUS À LAPTDE (1568-1637) A Roman Catholic commentaton, whose name was Van den Steen He was born at Bocholt, near Liège He became a Jesuit and lectured on the Scriptures in Louvain and in Rome, where he died His fame rests upon his commentary on all the Bible except Job and the Psalms, the first complete edition of which was published in 10 vols, folio (Antweip, 1681) The best edition appeared in Lyons (1838), in 11 vols, and an English tianslation of parts of it has been published (3 vols, London, 1876-87)

CORNELLY, ALDAZO BARTON (1832-1904)
An American politician, son of Ezra Cornell
(qv) He was boin at Ithaca, N Y, became
a telegraph operatol, and from 1855 to 1859
was manager of the Central Telegraph Office
in New York City Afterward he was first
vice piesadent of the Western Union Telegraph
Company In 1868 he was the Republican candidate for Leutenant Governor of New York,
and from 1889 to 1873 was surveyor of customs
in New York By calling to order a Republican
State convention he was held to have violated
President Hayes's order that officieloiders refrain from politics, and as a consequence he lost
the surveyorship He was chairman of the
Republican State Committee from 1870 to 1878
and was three times Speaker of the New York
Assembly From 1880 to 1883 he was Governor
of New York, after which he became connected
with large financial interests. He wrote The

Life of Exia Cornell (1884) Late of Eva Cornell (1884)
CORNELL, Ezra (1807-74). An American
capitalist and philanthropist, the founder of
Cornell University He was born in Westchester Co, N Y, of Quaker parentage, removed with his father, a potter by trade, to
De Ruytei, N. Y, in 1819, received a scant
education and for some time taught a district
school, besides assisting his father in farming
and the making of noticery. He also bearned and the making of pottery He also learned the carpenter's trade, spent a year as a mechanic at Homer, N X, and in 1826 removed to Ithaca, where for eight years he managed a flour mill. In 1839 he joined his brother in the lumbering and farming business, but his attention being turned accidentally in 1842 to the project of constructing a telegraph line from Baltimore to Washington, he invented a machine for laying the wres underground and was subsequently put in charge of the work. The insulation being poor, however, the plan had to be abandoned, and on Cornell's suggestion the wires were strung on poles, and the line was thus speedily completed. Subsequently Cornell devoted his attention almost wholly to the construction of telegraph lines and the organization of telegraph companies, and was instrumental in forming the Western Union Telegraph Company in 1855. In 1858, having accumulated a large fortune, he settled on a farm at Ithaca. NY He was a member of the first Republican National Convention in 1856, was president of the New York State Agricultural Society in 1862, and was a member of the State Assembly in 1862-63, and of the State Senate in 1864-67.
After the passage of the Morrill Land-Grant Act in 1802 he succeeded in getting a bill through the Legislature assigning the whole of New York's land scrip to one institution, and in addition contributed an endowment of \$500,-000 towards building such an institution at

Ithaca, N Y He subsequently (in 1866) bought up the scrip then remaining unsold and located it with great care in the timberlands of Wisconsin, of which the later advance in value greatly merased the endowment of the university In 1868 "The Cornell University" so founded, was formally opened Cornell also built a public library at Ithaca Consult The Late of Exra Cornell, by his son. A B Cornell (New York, 1884)

CORNELL COLLEGE An institution of higher learning founded at Mount Vernon, Iowa, by members of the Methodust Episcopal church in 1853. It was not organized as a college until 1857, the includes an academic department and a department of ovil eigeneering and as coeducational. The degrees are BA, BS, and BS in C E The emollment in the college in 1913 was 704, and the faculty numbered 41 Besides the college proper, the organization includes an Academy, a Conservatory of Music, a School of Art, and a School of Oratory. The principal buildings of the college are the Libiary and College, Science, Chapel, Bowman, and Conservatory halls. The endowment amounted to about \$900,000, and the annual income to about \$900,000. The libiary contains about 39,000 volumes. The president in 1914 was James Elliott Hailan, LLD

CORNELL UNIVERSITY An institution of higher education, situated at Ithaca, N Y The university owes its existence to the combined wisdom and bounty of the United States, the State of New York, and Ezra Cornell (qv) Under the Morrill Act of 1862 the State of New York received scrip representing 980,920 acres of land as its share of the public lands granted by the Federal government to the several States for the purpose of establishing colleges of agriculture and mechanic aits Cornell offered \$500,000 as an endowment fund for a university on condition that the State should set aside the proceeds of the sale of its public lands for the same purpose, and that the nanower purpose of the Act of Congress in establishing colleges of agriculture and the me-chanic arts should be enlarged to the breadth of his own memorable ideal "I would found an institution where any person can find in-struction in any study." After much wran-gling in the Legislature, this offer was accepted, with the stipulation, however, that the university should offer free tuition to as many students residing in the State as there were Assembly districts. Cornell University was incorporated in 1865 and was formally opened in 1868, with a registration of 412 students plan of the whole institution was modeled with a view to the practical tendencies of the times, though classical and humanistic studies were provided for as amply as science and technol-Its liberal programme was warmly welcomed by such men as James Russell Lowell, Louis Agassiz, Theodore D Dwight, John Stanton Gould, Goldwin Smith, George William Curtis, and Bayard Taylor, who signified their interest in it by accepting nonresident professorships on its faculty. Andrew D. White gave up for a while the prospects of a political career to become its first president. This auspicious beginning, however, was not maintained. From 1868 to 1882 the university was engaged in a struggle for existence that seriously diminished its students, disheartened its trustees, and brought the whole structure to the verge

of bankruptcy Mr Cornell, seeing that the State's land scrip, on whose proceeds the university was solely dependent except for the original endowment of \$500,000, was selling at about 50 cents an acre, a sum far less than its ultimate worth, bought up all the unsold "scrip" and located and transferred to the university before his death over 500,000 acres of the finest timberlands in Wisconsin But the anticipated advance in forest values did not take place, taxes and cost of administration amounted to over \$60,000 a year, and the university was soon obliged to trench heavily on its capital to meet current expenses A way of escape that offered in 1880 was blocked by Henry W Sage, chairman of the board of tustees In that year a New York syndicate proposed to buy 275,000 acres of the Western lands for \$1,225,000-an amount that would have released the trustees from their troubles But Mi Sage, believing that the lands would go still higher, refused his consent, and the bargain fell through Less than two years later his faith was vindi-cated, 140,000 acies were sold for \$2,320,000, other sales were made later at increasing prices, and the university up to 1905 realized a net profit of some \$5,765,000 Besides its income from these sources Cornell received large piivate gifts Henry W Sage gave altogether \$1,175,000, Andrew D White, \$200,000, O H. Payne, \$970,000 for the New York branch of the Medical College, W. H. Sage, \$270,000, Hiram Sibley, \$155,000, D. B. Fayerweather, \$340,000, J D Rockefeller, \$250,000, Dean Sage, \$235,000, John McGraw, \$140,000, and H W Sibley, \$160,000

Out of the 2704 students enrolled in the first five years, 2347 entered on the minimum entrance requirements. In 1872 the university became coeducational, and in 1877, in spite of the constant decrease in attendance, the entrance requirements were somewhat raised In 1882 the faculty, including instructors and assistants, numbered but 49. The additions made to the library were few During this anxious period in the history of the university the members of the faculty, ill paid and overworked, loyally stood by it and pursued their work notwithstanding all difficulties New courses were offered in the departments of civil and mechanical engineering, architecture, agriculture, the sciences, humanities, and military science After 1882 the university developed and expanded in accordance with the original idea of the founder Law School and the Andrew D White School of History and Political Science were organized in 1887. The Sage School of Philosophy, which has become known for its work in mental and moral philosophy and in experimental psychology, was organized in 1890 President Schurman appealed to the State in 1892 for further aid, on the ground that Cornell, although not a State institution in the strict sense of the term, was educating 512 students free of tuition, and that the State was especially interested in education, agriculture, and allied subjects, for which, like the Western States, it should supply the necessary funds. The Legislature generously responded to his appeal by establishing at Cornell University the State Veterinary College in 1894, the State College of Forestry, the first institu-tion of its kind in the United States, in 1898, and the State College of Agriculture in 1904, for the maintenance of which large legislative appropriations are annually made The situa-

tion of Coinell University in a small town prevented it from adding a medical school to its departments, although a medical preparatory course has existed since its inception. In 1898 this problem was solved by establishing a medical college in the city of New York, with a branch at Ithaca, where the first two years of the course may be taken. In the same year the entrance requirements, which had been much ransed since 1892, were put on a footing equivalent to those of the leading universities in the United States.

Cornell University comprises the following departments and colleges (the attendance given is in all cases that of 1912-13) 1 The Graduate Department, having charge of all students pursumg graduate work at the university under the several faculties This department offers courses leading to the degrees of AM, Ph D, etc. It numbered 395 students Twenty-four fellowships, ranging from \$500 to \$600 a year, and 17 scholarships, of the annual value of \$300 a year, are available for students 2 The College of Arts and Sciences offers elective courses leading, whether sciences, letters, or the classics are mainly chosen, to the degree of AB The attendance was 1112 3 The College of Law offers courses leading to the LLB degree and num-bered 297 students 4 The Medical College, partially conducted at New York City, confers the degree of M D and numbered 150 students 5. The College of Agriculture offers courses leading to the BSA degree and numbered 1849 students. Connected with this college is an agricultunal experiment station, established by the Federal government in 1887 6 The New York State Veterinary College confers the degree of D V M., testure confers the degree of D Architecture confers the degree of B Arch and had an attendance of 144 8 The College of Civil Engineering confers the degree of CE and numbered 503 students 9 Sibley College of Mechanical Engineering and Mechanic Arts, consisting of the departments of mechanical, electrical, experimental engineering, the department of mechanic arts, etc., confers the degree of ME, its total registration was 956

Undergraduates are required, except for special reasons, to take a course of military drill, extending over one year, under the supervision of a United States army officer

The government of the university is vested in a board of 30 trustees, the university faculty, composed of the professors and assistant professors. having charge of educational matters concerning the university as a whole, and the faculties of the several schools and colleges, who have charge of their respective divisions.

The number of regular students in 1912–18 was the added an enrollment of 1392 in the summer session and 597 in the winter school in agriculture. The staff of instruction numbered 750 The principal buildings of Cornell University include the \$300,000 Library, the grif of Henry W Sage, Sage College and Prudence Risely Hall, dormitories for women, Boardman Hall, Simson Hall, Sibley College, Franklin Hall, Lincoln Hall, Rockfeeller Hall, Morrill Hall, McGraw Hall, White Hall, Goldwin Smith Hall, Rand Hall, Auditorium, Home Economics building, and the several buildings of the veterinary and agricultural colleges. The campus, situated on a hill looking down upon Cayuga Lake and surrounded by gorges, falls, and cascades, is considered one

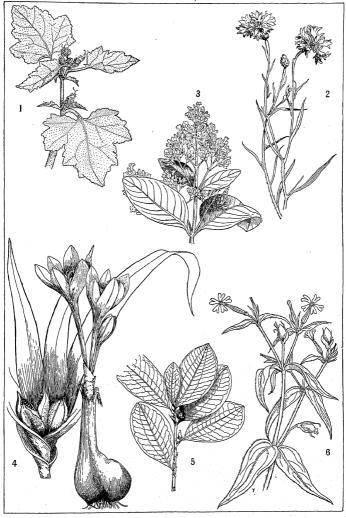

of the most beautiful in the world Barnes Hall and Sage Chapel represent the religious life of the university. The libraries, including the famous Andiew D White collection on the Post-stant Reformation and the Friench Revolution and the Friske Dante, Petrarch, and Icelandic collections, contain 427,000 volumes, besides 64,000 pamphilets. The meome of the university about \$82,487,510 a year. The presidents since its conception have been Andiew D White, LLD (1865-85), Charles Kendall Adams, LLD (1892-). Jacob Gould Schurman, LLD

A commercial term originating COR/NER in the United States, and denoting the operation, -or, more properly, the resultant effect-of acquiring contracts for the delivery of so much of a commodity, or of the stock or certificates of in debtedness of a corporation, as to raise abnor mally the values thereof, to the advantage of the buyers A corner is "effective" when those who have contracted to sell and deliver the stock or commodity are forced, for lack of other supply, to buy it, or the certificates or warehouse receipts representing it, from the buying or cornering pool at the pool's prices Conversely, a corner is "smashed" when the buyers, finding then means madequate to their operations, are forced to throw their holdings on the open market, or when those who have contracted to deliver the stock or commodity are able to obtain it independently of the pool For the latter reason, because the total supply is not strictly determinable nor all obtainable, attempted coiners in wheat and other actual commodities are seldom successful On the other hand, corners in stocks and certificates having definite total issues may be carried just to the point where they bankrupt the seller, 1e, to a point where, if the prices are put any higher, the sellers repudiate their contracts and the corner is smashed for lack of a market. The possibility of any considerable corner arises from buying and selling on margin. In this usual and speculative form of stock dealing the broker or commission house lends the buyer or seller the money needed for the deal, demanding, however, for his own pro-tection, a deposit of 5, 10, or 20 per cent of the face value of the contracts made. The dealer is thus enabled to buy or sell stock to a value of from 5 to 20 times the amount of his actual capital, and a combination of large dealers can without difficulty buy or sell the whole stock issue of the largest trusts or railroads If, now, such a combination sells, i.e., agrees to deliver, practically the entire issue of a road, they may find when they attempt to buy the stock to fill their contracts that it is already held by the very persons to whom they contracted to sell it That is, a rival combination has been secretly working against them, and the sellers of the stock are forced to buy the stock at exorbitant prices and then sell it back to those for whom they bought it. This is the process technically known as "squeezing the shorts" Until recent years nearly all corners of importance were manipulated for speculative reasons, i.e., for the immediate gain of the operators and without any view to investment. Of such a nature was the famous gold corner, organized in New York by Jay Gould and his associates. This corner, culminating on "Black Friday," Sept 24, 1869, was smashed by the release of government gold by the Sccretary of the Treasury—thus rendering the "shorts," or sellers of gold, independent of the cornering syndicate that held the gold which the 'shorts' had agreed to sell Latterly, however, many corners or coiners in effect have resulted, incidentally and often to the regret of all conceined, from the effort of rival combinations to buy the control of some large trust or nailroad for permanent investment and administrative purposes. Of this kind was the coiner in the Nothern Pacific Railroad in May, 1901, when the price of the stock rose abruptly to 1000 bid For an account of the gold coiner of 1869, consult Boutwell, Reminiscences of Starty Pears in Public Affairs (New York, 1902). For an interesting account of the actual manipulation of a coiner, consult Frederic, The Market Place (London, 1899). See MAROIN DEALS, SHORT, SPECH ARION TERISS.

Speculation, Tours's Council, from ML cornetium, cornetia, lugge, dim of cornu, hoin) A stop or series of pipes in an organ, intended to imitate the tone of an obsolete wind instrument which has been superseded by the obee The Connert-A-Fiston (Fr. cornet with pistons), a modern brass or silver wind instrument of the trumpet kind, has two or three valves and in brass bands takes the soprano and contrational parts. Its range is from c't oc'. It was first introduced in France as an orchestral instituent The cornet-k-piston produces very penetrating tones, though less powerful than those of the trumpet The rapidity of execution in runs, trills, staccatos, etc., which can be attained on this instrument, combined with the pealing quality of its tones, has made it the favorite, solo instrument in open-air band concerts, but this very resonance will most likely keep it out of the symplomic orchestra

CORNET (Fr connette, standard, so called as having two points of horns, dim of corne, from Lat comm, horn) Formerly the lowest commissioned rank in the British cavally, so called because the cornet carried the standard Its equivalent tank in the infantry was the ensign (qv) In 1871 the titles of cornet and ensign were changed to second heutenant

CORNETO, kôr-nữ tô, or Corneto Tarquinia (from It. 20120, horn) A town of central Italy, about 12 miles north of Civitavecchia, occupying a commanding eminence on the loft bank of the Marta, and 2 or 3 miles from the Mediterranean, over which it has an extensive view arose near the ruins of the Etruscan city of Tarquinii, and was built in part from its remains It was crected into a city by Pope Eugenius IV in 1432, but the picturesque old battlemented walls and towers which surround it are said to belong to an earlier period. During the wars of the Guelphs and the Ghibellines this city maintained a firm allegrance to the popes Pop. (commune), 1910, 6617 The scanty remains of Tarquini he about 11/2 miles from Corneto Tarquinii was regarded as one of the most ancient and important of the Etruscan cities and took part in the wars with Rome in the fourth century B.C., but later, with the rest of Etruria, came under the Roman dominion It seems to have been destroyed by the Saracens. The Necropolis of Tarquinii, which is far the most important relic of the ancient city, is on the same hill as the modern city and extends into the neighboring plann It is of great extent and has been said to cover 16 square miles Many tombs have been opened, but most of them had been plundered in early times. The most important tombs are those decorated with paintings on the walls, noteworthy are the Grotta

- COCKLEBUR (Xanthium strumarium).
   CORNFLOWER (Centaurea cyanus).
   CALISAYA (Cinchona calisaya), var. Ledgeriana.
- 4. COLCHICUM (Colchicum autumnale).
  5. COCA (Erythroxylon coca).
  6. NIGHT-BLOOMING CATCHFLY (Silene noctifiora).

delle Iscrizioni (piobably one of the earliest), Grotta del Barone, Grotta Quercioli, Grotta del Convito Funchie, Grotta del Trione, and Grotta dell' Ocro Consult Dennis, Cities and Centeries of Etiura (London, 1907). Dasti, Noticie di Taquinia e Coneto (Rome, 1878), and the periodical Noticie degli Scavi (1908, 1907)

GORN FLAG See Ints
GORN/FLOW/ER, or BLUEBOTTLE (Centaurea (yanus) A plant of the tamuly Composite, indigenous to Europe, where it is a common weed in grainfields and whence it has spread to other countries. Its long, slender, branched stems, which reach a height of from 1 to 2½ feet, bear terminal flower heads about 1½ inches in diameter during summer and autumn. These flower heads have a wreathlike appearance, due to the neutral ray florets, and from early times have been favorites for making garlands. Being hardy and of easiest culture, the conflower has become one of the most popular annuals in American flower gadens and has developed many varieties, which range through various shades from deepest blue to white. In the United States it has at least 15 names, the commonest of which is perhaps "bachelor's-button," a name also applied to two other plants, Ranunculus acris and Gomphrena globosa

CORN/HILL. An important London street, named from a corn market formerly held there The Tun, a prison, and the Standard, a water conduit, stood upon it in mediaval times

CONTE DI (1742-1813). An Italian literary historian, boin at Orzi-Nnovi (Bresoia) In his youth he studied law and wrote for the theatre, but afterward he became connected with the College of Brescia and published some works on agriculture In 1797 he was made one of the Tribunal of Cassation for the Cisalpine Republic The work for which Cornian is best known is a literary history of Italy, I secol della letteratura stalasana (1804-13, new ed. by Ticozzi, 1832, each by Ticozzi, 1832,

and by Ticozzi-Predaii, 1854-56) COR/NICE (OF, It cornice, ML border, from Gk κορωνίς, horonis, garland, from κορωνός, korōnos, curved, connected with Lat corona, crown, Ir cor, circle) In architecture, the projecting cope or coping at the top of a wall, the crowning member of an entablature Its origin is to be found in the decora-(q v) tion of the caves or projecting edge of the 100f, its earliest forms recall primitive caves construction, but, like so many forms derived from structural devices, it early became a decorative feature, quite independent of the eaves and even of the The Egyptian cornice, invariably a high projecting cavetto and fillet above a round bead or torus, was probably derived from the overhanging eaves of papyrus stalks and earth in primitive huts The Greeks developed two chief types of cornice in the Doric and Ionic orders, both recalling early eaves construction in wood To these the Romans added a third, the Cointhian, of more ornate design than either, and these types have persisted through all the ages since, though with endless variations of detail In all cornices of classic type the essential feature is the corona (q.v.), the broadly projecting square-edged member which casts the wide shadow which is one of the most important decorative effects of a cornice A group of moldings, called the bed-mold, supports this shelf, and it is usually crowned by a cymatrum or crown molding, which generally forms the front of the gutter or eaves trough. This, however, is wanting on the Greek-Dolic coince, except upon the sloping or inling cornices of triangular pediments. The bed-mold may be plain or adorned with dentils, and the cornice may be further enriched with modillons or brackets, as in the Cointhian and Composite orders, or with mutules, under the corona, as in the Doric

In Syrian-Christian and in Byzantine architecture the classic types were greatly modified, and in early Christian or basilican buildings the cornice gradually lost its importance The Romanesque builders in Italy devised a new type, the arcaded, borne on small arches resting on corbels, in the West they more often employed the corbel table-a plain stone shelf or cope resting on corbels without arches of moldings Gothic art, emphasizing vertical lines, subordinated the cornice as an architectural feature Gothic cornices are little more than groups of vigorous moldings under a bevel-topped coping, but in some cases a deep hollow under the coping is filled with nichly carved vines, leafage, or rows of crockets The Renaissance revived the classic types, which are in general use to-day As the top member of an entablature, the cor-nice is used not merely to mark the edge of the roof, but also as a band between successive stories, and as the topmost feature and finish in furniture and many forms of minor architecture See Entablature, Orders of Archi-TECTURE

CORNICHE, kör'nèsh', Route de La (Fr, cornice road) A renowned carriage road following the coast line of the Riviera between Nice and Genoa It is noted for its striking views, particularly between Nice and Mentone, and is much traveled in preference to the railway.

CORNIDES, kör'nê-dês, DANIEL VON (1732-

CORNIDES, kör'né-dēs, DANIEL VON (1732-87) An Hungaran historian, born at Szent-Miklös He studied philosophy and theology at Erlangen, Germany As the companion of Count Joseph Teleki, he visited Italy, Germany, and France, and while in Germany contributed greatly to the enlargement of the Hungarian department in the University of Gottingen and other institutions. In 1734 he was appointed librarian and professor of heraldry and diplomacy at the University of Pest. His principal works include. Regum Hungaria, qui Saculo XI Regimere, Genealogia (Pressburg, 1778), Bibliotheca Hungariac (Pest, 1792), Commentatio de Religione Veterum Hungarorum (Vienna, 1791), Vindicia Anonymi Belæ Regis Notarus (Buda, 1802)

CORNIFEROUS SERIES (from Lat cornus, horn + forre, to bear) In American geology, the second of the four great divisions of the Devonian system, so named on account of the hard cherty nodules found in many of its limestones. The necks of the Corniferous series—mostly sandstones and limestones—are found along the Appalachians, in Ohio, and in Canada, where they inclose valuable deposits of petroleum. See Devonian Nystem.

CORNIFICIUS, ko'ne-fish'r-is. A Roman, minnown, save for Quintilian's references to him as author of a work on rhetorical figures, and, perhaps, of a general work on rhetoric We still have four books entitled Rhetorica, and dedicated ad Herennum Since many passages quoted by Quintilian from Cornificius appear in the Rhetorica ad Herennum, it was long held that Cornificius was author of the treatise. Re-

cent opinion, however, is against this view. Consult the editions by Kayser (Leipzig, 1854), Friedrich (part i, vol. i, of the Teubner Cicero, Leipzig, 1884), and Marx, who refuses to recognize the authorship of Cornificius and has published the text under the title Incerti Auctoris de Ratione Dicendi ad C. Herennium Libri IV (Leipzig, 1893); Kröhnert, Die Anfänge der Rhetorik bei den Römern (Memel, 1871). Schauz, Geschichte der römischen Litteratur, § 197 a (3d ed., Munich, 1909), has also ceased to regard Cornificius as the author of the treatise ad Herennium. For further discussion of the question of authorship and a good account of the contents of the treatise, see the introduction to Wilkins's edition of the De Oratore of Cicero, vol. i, pp. 51-64 (2d ed., Oxford, 1888).
CORNIFICIUS, QUINTUS (?-c.40 B.c.). A

Roman general, a contemporary of Cicero. During the Civil War he supported Cæsar, by whom he was appointed Governor of Syria and afterward of Africa. After Cæsar's death he maintained the latter province for the Senate, but on the establishment of the Second Triumvirate was defeated and slain in battle by T. Sextius. Cornificius appears to have been distinguished also

for his literary abilities.

CORN'ING. A city and the county seat of Adams Co., Iowa, 77 miles east-southeast of Council Bluffs, on the Burlington Route (Map: Iowa, C 4). It has a public library and a fine Masonic Temple. Agriculture and stock raising are the chief industries, and brick and tile are manufactured. Corning was incorporated under a State Law of 1871. It was formerly the seat of an Icarian settlement. The government is administered by a mayor and a unicameral council. The city owns its water works. Pop., 1910, 1702.

CORN'ING. A city and the county seat of Steuben Co., N. Y., 18 miles by rail west-northwest of Elmira; on the Chemung River, and on the New York Central, the Eric, and the Lackawanna railroads (Map: New York, C 6).

Among the more prominent buildings are the city hall, free academy, public library, Corning Hamiltonian Country and Country Countr Hospital, courthouse, city club, and St. Mary's Orphan Asylum. Corning has extensive manufactures of cut and flint glass, railway supplies, pneumatic drills, air compressors, terra-cotta goods, building and paving brick, lumber, sash and blinds, etc. Corning was incorporated as a city in 1890. Under the revised charter of 1905 the mayor holds office for two years and the council is elected. The board of public works, police, fire, and civil-service commissioners, and the board of health are appointed by the mayor and council. The water works are owned by the city.

Pop., 1910, 13,730.

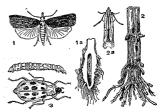

CORNING, ERASTUS (1794-1872). An American capitalist, born in Connecticut. In 1814 he settled in Albany, N. Y., where, as owner of the large ironworks there and later as a banker, he accumulated a large fortune. He was largely interested in the formation of the New York Central Railroad, of which he was president for 12 years. He was also active in promoting popular education and, taking part in public affairs, served as a State Senator in 1842-45 and as a Democratic Representative in Congress in 1857-

59 and again in 1861-63.

CORNING, J(AMES) LEONARD (1855-An American neurologist, born at Stamford, Conn., and educated at the universities of Heidelberg and Würzburg. He is known as the dis-

coverer of spinal anæsthesia and as the first to inject liquid paraffin into the tissues, there to solidify; he also demonstrated that the action of stimulants, sedatives, and certain other medicinal substances may be increased if the subject remains in compressed air. As consulting neurologist he served various New York hospitals and, besides his contributions to the medical press, wrote: Carotid Compression (1882); Brain Rest (1883); Brain Exhaustion (1884); Local Anasthesia (1886); Hysteria and Epilepsy (1888); A Treatise on Headache and Neuralgia (1888; 3d ed., 1894); Pain in its Neuro-Pathological and Neuro-Therapeutic Relations (1894); and also a romance, The Princess Ahmedée (1900).

CORN INSECTS. Insects affecting Indian corn are numerous and varied.—Plant Lice: An aphis (Rhopalosiphum maidis) is widely distributed by means of its migratory winged

INSECTS INJURIOUS TO INDIAN CORN.

Larger cornstalk borer (Diatraa): a, boring larva within the base of the stalk.
 Smaller borer (Panyleia): a, root-destroying grub.

swarms; it lays its eggs on the stems of the corn beneath the ground, and the young attack the roots; the ants assist this injury by carrying females heavy with young and colonizing them upon the roots. (See Insect Life, vols. i, iii, Washington, 1888-90.)—Beetles: Certain weevils attack the roots and stems, especially bill bugs of the genus Sphenophorus, the grubs burrowing in the bulbs of the young plants and eating the roots of the tender leaves near the surface of the ground; their work is sometimes confounded with that of a cutworm (larva of Hadena stipata). Fall plowing is useful against both. The larvæ of several flea beetles (Diabrotica) are often styled corn rootworms. adult beetles, closely related to the cucumber, melon, and squash beetles, feed on the pollen and silk of corn and the larve on the roots, and both do great damage in the Mississippi valley. tation of crops is the most effective remedy. corn silvanus (Silvanus surinamensis) is prominent as destructive to grain. From an economic standpoint this is the most important member of the family Cucujidæ. It is a flat beetle with the edges of the prothorax saw-toothed. Besides Indian corn, wheat, and other grain, it infests dried fruits and other foodstuffs. Another member of the same family, a bright-scarlet beetle, of the genus Cucujus, also infests stored grain.— Moths: The larvæ of moths, "cutworms" and "webworms," do much damage. The worst species, however, is the "corn worm," or "corn bud worm," the caterpillar of a noctuid moth (Heliothis armigera), which destroys the flower buds.

(See Cotton Insects ) The large "stalk borer," often highly injurious in Southern fields, is the larva of a phalænid moth (Diatræa saccharalis), which perforates the stems at their base, where, in the axils of the starting leaves, the parent moth lays its eggs in spring. This insect is better known as the "sugar-cane borer" of the American tropics. Tidy methods of farming are the best preventive. Other smaller borers the other strengthen that is the strengthen that the same than the strengthen that the same than the strengthen that the same than are the caterpillars of the moths Pempelia lignosella and Gortyna nitela The cinch bug (q v) Is also an enemy of Indian corn. Consult Riley, "Insects of Missouri," in *United States Department of Agriculture, Division of Entomology, Reports I and 3* (Washington, 1881), Luntner, "Insects of New York," in Agricultural Experiment Station, Report 1 (Albany, 1882), Comstock and Slingerland, "Wileworms," in Comstock and Singerland, "Wileworms," in Agricultural Experiment Station, Bulletin 33 (Ithaca, 1891), Myrick (ed.), "Corn Pests and Diseases," in The Book of Corn (New York, 1904), Chittenden, "Corn Root-Worms," United States Department of Agriculture (Washington, 1905), Webster, "The Corn Leaf-Aplis," United States Entomological Bureau (Washington, 1907), Forbes, "Experiments with Repellants against the Corn Root-Aphis, 1905 and 1906," Illinois Experiment Station (Uibana, 1908), Garman, "The Corn Root-Worms," Kentucky Agricultural Experiment Station, Bulletin No. 130 (Lexington, 1907), 4d, "Corn Pests," Bulletin No. 145 (1909), Vickery, "Papers on Cereal and Foiage Insects," United States En-Correta and vage masses, Onset a stress Live tomological Bureau (Washington, 1910), Turner, "Bud Worms in Corn," Alabama Experiment Station, Circular No 8 (Opelika, 1911), Kelly, "The Maise Bill-Bug," United States, and the Correct States of Entomological Bureau, Bulletin 95, part in (Washington, 1911), Fulloway, "Insects Injurious to Corn," United States Entomological Bureau (1b, 1912).

CORNISH LANGUAGE AND LITERA-TURE The Cornish language belongs to the British subdivision of the Celtre family and stands, on the whole, nearer to the Old Breton than to the Old Welsh (See CELTIC LAN-GUAGES) It ceased to be a living language in the eighteenth century, although a small number of Cornish words are still used in the English dialect of Cornwall

Only a small quantity of Cornish Iterature has been preserved. For the Old Cornish period, of which the language is practically the same as Old Breton, nothing exists but a few proper names in old records for Middle Cornish we are somewhat better off A vocabulary of the twelfith or thriteenth century has been preserved, which appears to be a copy of a more ancient original, and also a few texts dating from the fourteenth century to the seventeenth. The Middle Cornish literature, like the Middle Breton, consists almost entirely of religious poetry and drama. These monuments scarcely go beyond the fifteenth century.

For Old Cornish, consult Stokes, "The Manussions in the Bodmin Gospels," Revue celtique, vol. 1 (Paris, 1870), and Urkeltscher Sprachschatz (Gottingen, 1894), Henry, Leanque éty mologique du breton moderne (Rennes, 1900), Pedersen, Veryleichende Grammatik der keitischen Sprachen (Gottingen, 1909-13). The Middle Cornish vocabulary is printed in Zeuss, Grammatica Celtica, ed by Ebel (Berlin, 1868-71). For the other monuments, consult Norns, The Amoent Cornish Drama (Oxford, 1859).

Stokes, "Pascon Agan Arlith," Transactions of the Philological Society (London, 1861-62), Beunans Heriasek (h, 1872), Jonner, The Cornish Language (th, 1873-74), Jago, The Ancient Language of Cornial (Trure, 1882) For grammars, consult Jennet, Handbook of the Cornish Language (London, 1904), which treats of the language chiefly in its latest stages, with some account of its history and hierature Dictionances. R. Williams, Lexicon Conubitationic (Llandovery, 1865), Loth, Remarques et confections au leance de Williams (Palis, 1902), further corrections and additions in the Relief College (vol Xxiii, pp. 237-302, Paris, 1902), Stokes, Cornich Glossary (London, 1868-09), Jago, English-Cornish Dictionary (th, 1887), Loth, "Etudes corniques," in Revue Celtique, vols Xviii-xxvi (1897-1805), Les mots latins dans les langues brittoniques gallos, annoream, cornique (Paris, 1892).

CORN LAWS A name given in England to the long series of statutes dating as far back as the reign of Edward III and terminating only in the year 1846, which had for their object the regulation of the trade in grain. The tenor of these laws varied with the idea which was uppermost in the minds of the legislators At one time designed to secure a proper supply of grain, the exportation of grain was prothe exportation of grain was pro-hibited, or allowed only when a surplus of the home supply revealed itself in the low price for grain. Later the underlying principle was frankly the encouragement and support of the agricultural interests, resulting in the prohibition of the importation of grain, or permitting it only when the price of grain was extremely high and importation seemed unavoidable to prevent famine At times, moreover, in the long and varied history of this legislation, resort was had to bounties as means of encouraging and promoting home production The shifting of legislation attracted little comment and less agitation until the beginning of the nineteenth century At that time the manufacturing interests grew restive under the restrictions which were placed upon the trade in grain, and early in the century something in the nature of a compromise was made by the adoption of a sliding scale in the duties on importation The object of this device was to reduce the import duties in proportion as the price of grain increased, so that at famine prices grain might be imported duty free By the Act of 1828, at the price of 62s a quarter for wheat, the import duty was £1 4s 8d For every shilling less in the price, a shilling was added to the duty, but when the price rose above this point the duty decreased by a larger ratio than the rise in price At the price of 69s the duty was 15s. 8d, and at 73s. the duty sank to its minimum of 1s Such an arrangement not only promoted speculative operations, but also prevented foreign countries from furnishing grain habitually for the British market

This legislation was obviously in the interest of the landowners, but as the tendency of Great Britain to be an importing rather than an exporting country had already become manifest, it seemed clear that the effort to increase home production by restrictions on importation was virtually an attempt to aggrandize the landed interest by a tax upon the food of the people The manufacturing interests, which were now rapidly coming into power, devoted their energies to combating this principle, which increased

the cost of living, and, through wages, the cost of manufacturing But the public at large, though vaguely conscious that the laws were at variance with the principles of political economy, did not, till the very last, cainestly unite in calling for repeal There was a powerful party who represented with wonderful plausibility that these restrictive statutes were identified with the best interests of the country. Their arguments might thus be summed up 1. Protection was necessary, in order to keep certain poor lands in cultivation 2 It was desirable to cultivate as much land as possible in order to improve the country 3 If improvement by that means were checked, England would be dependent on foreigners for a large portion of the food of the people 4 Such dependence would be fraught with immense danger, in the event of war supplies might be stopped, or the ports might be blockaded, the result being famine, disease, and civil war The advantage gained by protection enabled the landed proprietors and their tenants to encourage manufactures and trade, so much so, that if the corn laws were abolished, half the country shopkeepers would be ruined, that would be followed by the stoppage of many of the mills and factories, and no one would venture to say what would be the final consequences. It cannot be uninstructive to put on record that these arguments exercised a commanding influence over the laboring classes, the small town shopkeepers, almost all the members of the learned professions, and a considerable section of both houses of Parliament Yielding at length to the continued agitation, and iecognizing that England's prosperity lay in the development of her manufactures rather than in the further encouragement of agriculture, Sir Robert Peel, in 1846, at the time of the Irish famine, effected the repeal of the Corn Laws By this energing and the Corn Laws by this act the maximum duty on foreign wheat was immediately reduced to 10s per quarter when the pince was under 48s, with lower duties as prices rose above that figure, these duties to cease on Feb 1, 1849, after which the duty child he has proposed as the control of the contr should be is per quarter (See Anti-Corn Law LEAGUE, COBDEN, RICHARD.) The area devoted to wheat cultivation in England is less to-day than it was 50 years ago, although the popula-tion has greatly increased Modern methods of communication, however, have opened up new areas of supply, and the development of manufactures and commerce has amply compensated for the loss in agricultural production.

The following tables show the trade prior to and following the repeal of the Corn Laws

years imports are measured in hundredweights The inclease in grain imports is shown in the following table

YEAR	Wheat and wheat flour in cwts	Value of all breadstuffs	
1860 1870 1880 1880 1900 1910	31,841,926 39,906,115 58,459,814 82,381,591 98,597,450 119,056,653 123,724,589	£ 31,676,353 42,502,252 62,857,269 53,484,584 50,929,313 65,362,000 73,428,538	

In the meantime the aggregate value of all British imports and exports has risen from £376,000,000 in 1860 to £698,000,000 in 1880, £896,000,000 in 1905, and £1,232,000 000 in 1912. The growing dependence of Great Britain upon foreign sources of supply for breadstuffs is re-flected in the decline of the area sown in grain crops, which in 1874 was reported as 9,431,276 acres, 6,953,034 acres in 1904 and 7,154,742 in 1912 Russia and other European countries contribute to the British imports, as does also India, but the principal sources whence imports are drawn are shown in the following statement

	IMPORTS	OF	WEDIT	TN	1912

CORNOY'ER, PAUL (1864-An Ameiican painter He was born in St Louis and studied there at the School of Fine Arts and in Pails under Lefebvie, Benjamin Constant, and Louis Blanc In 1899 he came to New York, where he devoted himself principally to city scenes of a tranquil character A subtle sense of values and iare atmospheric qualities constitute the great charm of his pictures His favorite subjects are snow and rain effects, and he is at his best in such paintings as "Morning, Madison Square" (W M Chase collection, New York), "A Rainy Day, Madison Square", "Late Afternoon, Washington Son Square", "After the Rann" (Brooklyn Museum), "Hazy Morning, Fifty-ninth Street" (1911), "Old New York" (1912), "Library Lane" (1912)—all interpretations of a highly poetic character Cornoyer was elected in 1913 an associate member of the National Academy of Design

CORN'PLANTER (1732-1836) A celebrated half-breed chief of the Seneca Indians, the son of a trader named John O'Barl During the French and Indian War he led a war party of the Senecas which had joined the French against the English, and took part in the defeat of Braddock in 1755 During the Revolutionary War he joined the English, took an active part in the border conflicts in New York, and seems to have been present at the massacre of Wyoming Afterward, however, he became a steadfast friend of the whites and, with Red Jacket, directed the affairs of his tribe for many years. He spent much time and energy in exhorting his nation to avoid intemperance His Indian name was Garyan-Wah-Gah sult Snowden, Historical Sketch of Cornplanter

CORN SALAD, or LAMB'S LETTUCE (Valenancila). A genus of plants belonging to the family Valenianacem. The species are annual plants of humble growth, with repeatedly forked stems and very small flowers, native in Europe Some of them are frequently used as spring salads, and sometimes as a substitute for spinach, particularly the common corn salad (Valer-tanella olitoria). For early spring plants the seed is sown in September and cultivated, mulched, and wintered like spinach salad lacks pungency as a salad plant, but comes early in the spring when other salad plants ale scalce For illustration, see Salad Plants CORNSHELLER See Maize

CORN SMUT See SMUT
CORN SNAKE (so called from its color,
which resembles that of red Indian corn).

CORN SNAKE (Coluber guttatus) (Plates of the top and side of the head )

It climbs easily and feeds upon young birds

and small rodents. 2 The mill snake (qv)
CORN'STALK (c1720-77) A celebrated Shawnee Indian chief He commanded the Indians in the stubborn battle of Point Pleasant (qv) on Oct 10, 1774, during Lord Dunmore's War, and won the praise even of the whites by his great bravery and address. After the battle he made a treaty of peace with the Originians, in spite of the opposition of a part of his tribe, and kept it loyally until 1777, when, the Shawnees being incited to ienew hostilities, he appeared at Point Pleasant in person and notified the settlers that he might find himself forced "to run with the stream" The settlers decided to detain him and his son as hostages, and soon afterward, while still in confinement, the two were treacherously murdered by some whites infuriated by continued Shawnee outrages

CORNSTALK DISEASE A fatal disease that affects cattle, and occasionally horses and sheep, when turned into the fields in the fall after the corn has been gathered for the utilization of the stalks The cause of the disease is still undetermined By some investigators it has been considered as due to corn smut or to the organisms of the Burrill disease of corn Others have believed that a poisonous principle is sometimes present in cornstalks which causes the death of animals The name towemia maids for the disease was based on this theory. In some localities the disease has been supposed to be due to the combined action of indigestion and some poisonous substance absorbed by the corn, eg, saltpetre. In a case of cattle poisoning in Kansas from eating dried cornstalks, an investigation revealed the presence of large quantities of potassium nitrate. This substance had formed in small white crystals which resembled mold, but was readily recognized by tasting By cutting a cornstalk in two and tapping it on a table a considerable quantity of powdered nitrate of potash was jarred out A chemical analysis showed that this substance constituted 18 per cent of the div weight of the cornstalks. Feeding experiments with potassium nitrate showed that 500 grams would kill an adult animal weighing 1200 pounds. It has been suggested that hydrocyanic acid may form in the stalks and be the cause, but sufficient evidence of this is lacking

The symptoms are those of violent digestive disturbances followed by delirium and complete unconsciousness A pronounced weakness of the hind parts is usually observed, which finally leads to paralysis

Corn smut has been extracted with alcohol and injected into guinea pigs with negative results, and no poisonous alkaloid has been iso-lated by chemical means. Corn affected with the Burrill corn disease has been fed to cattle without producing any poisonous effects Some investigators consider cornstalk disease to be a form of hemorrhagic septicemia. There is no medicinal treatment that seems to be of any benefit. The disease may be prevented by cutting the stalks early and feeding them only after they have been carefully cured and re-moved from the field

CORNU, kôr'nụ', JULIUS (1849-Swiss philologist, born at Basel He was educated in Paris, taught Romance philology in his native town, and in 1877 became professor in the University of Prague, later accepting the same chair at Giaz Among his works are Phonologie du Bagnard (1877), Glanures phonologiques (1878), Etudes sur le poème du Cid (1881-1900), and the Portuguese grammar in Groeber's Grundriss der romanischen Philologie

COR'NUCO'PIA (Lat, horn of plenty, from conu, horn + copia, plenty). The horn of plenty (regarding the origin of which several fables are told by the ancient poets) is generally placed in the hands of figures emblematical of Plenty, Liberality, etc, who are represented as pouring from it an abundance of finits, corn, etc. It is frequently used in both architecture and heraldry. On the arms of banks and other public institutions it is often represented as

pouring forth coins See AMALTHEA

CORNU'TUS, Lucius Annæus A Stoic philosopher of the time of Nero He was a native of Libya, but a resident of Rome He was the teacher and fixed of the poet Persius Flaccus, who left to him all his books and a large sum of money He took the books, but gave the money to the sisters of the donor he was a friend of Neio, the tyrant banished him because he did not like his advice about the number of books in which he (Nero) proposed to write the history of the Romans. Coinutus was a voluminous writer, both in Latin and in Greek, but little is known con-cerning his works. His treatise in Greek, On the Nature of the Gods, is extant, it deals with popular mythology as expounded by the Stoics It is edited by Lang (Leipzig, 1881) Consult Ainold, Roman Storersm (Cambiidge,

CORN'WALL (AS. Cornweallas from Welsh, Ir , Biet corn, hoin, Lat. cornu, Gk κέρας, keras, Goth hauru, Eng horn + AS weallas, strangers, Welsh, Wealh, Ger, welsch, foreign, Lat Volca, name of a people) A maritime county forming the southwest extremity of England (Map England, B 6) Its area is 1357 square miles, most of which is arable or in meadow and pasture The mining of tin and copper is an important industry, and there are extensive pilchard fisheries. The chief towns are Bodmin (the county town), Launceston, Penzance, Falmouth, and Truro Pop., 1901, 318,591, 1911, 325,283. Cornwall is very rich in remains of some an-cient culture. These complise cromlechs or dolmens (q v.), found chiefly in the Land's End district; uninscribed monoliths, circles, and avenues of stone, caves, cliff and hill castles. The products of the Cornish tin mines were famous in the ancient world, and furnished the Phænicians with one of their chief articles of trade The absence of Eastern corns and inscriptions, however, has seemed to some to indicate that the Phonicians never set foot in Britain, but carried on their trade indirectly through Gaul Consult, however, Holmes, Ancient Britain and the Invasions of Julius Cosar (Oxford, 1907). After the Saxon Conquest Cornwall constituted part of the British King-dom of Damnovia, which held out against the kings of Wessex till 926, when Athelstane cap-At the time of the Norman tured Exeter Conquest the Saxons were in full possession of the land Christianity was introduced from Ireland, probably as early as the fifth century, there are numerous Christian remains, especially from the seventh and eighth centuries. The inhabitants maintained an independent priesthood till the tenth century, when the country was annexed to the see of Canterbury William the Conqueror gave nearly the whole of Cornwall to his half brother, Robert of Montain, who was followed by a line of powerful earls, of whom the most celebrated was Richard, the second son of John, elected in 1257 King of the Romans In 1337 Cornwall was created a duchy for the Prince of Wales, by whom it has continued to be held During the civil war the inhabitants of Coinwall were intensely loyal and supplied Charles I with some of his bravest soldiers Royalist victories were won at Braddoc Down (Jan 19, 1643) and Stamford Hill (May 15, 1643) From Sudeley Castle Charles I, on Sept 10, 1643, issued a proclamation to the people of Cornwall, thanking them for their great devotion Copies of this letter are still to be seen in a number of churches See Cornish Language and LITERATURE

A port of entry and the capi-CORNWALL ital of Stormont Co, Ontario, Canada, on the St Lawrence River, the Cornwall Canal, of which it is the terminus, and the Grand Trunk and the Ottawa and New York railroads, 56 miles east-southeast of Ottawa (Map Ontario, K 3). It has steamship connections with the principal Canadian ports The public buildings include the town hall, a commercial college, and a high school There are three parks. The town owns the water and sewerage systems and is supplied with electric light and gas. Electric and water power is available for manufacturing The products of the manufacturing industries include cotton, furniture, bedsteads, chairs, paper, and lacrosse supplies Cornwall hes in a mixed farming and dairying district. Good fishing and hunting abound, and there is a summer resort 8 miles distant, at Stanley Island The town's lacrosse club is one of the foremost in the Dominion The United States is represented by a consular agent. Pop, 1901, 6704, 1911, 6598

CORNWALL. A village in Orange Co., N Y 52 miles by 1ail from New York City, on the west bank of the Hudson River, a little north of the Highlands, and on the New York, Ontario, and Western and the West Shore railroads (Map New York, B 1). It is in a picturesque legion, much frequented as a place of summer resort. Idlewild Park and Storm King Mountries and the storm of the st tain are among the prominent points of interest Just outside the village limits there is a large carpet mill, which employs some 500 persons. There are also municipal water works and a public library Pop, 1900, 1966, 1910, 2658.

Cornwall was settled about 1684, became a

precinct in 1764, a township in 1778, and was incorporated in 1885 From the original township, Highlands, Blooming Grove, and Monice, besides parts of Chester and Hamptonburg, have since been taken. Consult Eager, History of Orange County (Newburgh, 1846-47), and Beach, Connealt (Newburgh, 1873). CORNWALL, BARRY. See PROCTER, BRYAN

WALLER.

CORNWALL, EARL OF. See GAVESTON, PIERS CORNWAL/LIS, CAROLINE FRANCES (1786-1858). An English author, who was a linguist and a student of wide reading in various fields, and whose first work, Philosophical Theories and Philosophical Experience, by a Pariah, appeared in 1842. It was the first of a sories entitled "Small Books on Great Subjects," which she had formed the idea of writing with the help of a few friends Of the 22 volumes of this series, which appeared between 1842 and 1854, all the most important were written by herself The subjects discussed were various science, ragged schools, grammar, criminal law, Greek philosophy, etc. In 1864 appeared her Letters and Remains

CORNWALLIS, CHARLES, first MARQUIS and second Earl (1738-1805) An English general and statesman The son of the first Earl Coinwallis, he was born in London, Dec 31, 1738 After an education at Eton and Cambridge he entered the aimy and served as aid-de-camp to the Marquis of Granby in the Seven Years' War In 1760 he was elected member of Parliament for Eye, in 1766 received his promotion as colonel, in 1770 was made governor of the Tower of London, and in 1775 became major general Though personally opposed to the war with America, he went with his regiment thither, and the first successes of the British arms were, in the main, due to him After the battle of Long Island, in which he took a prominent part, he pursued Washington through New Jersey A detachment of his army, consisting of Hessians, was captured by Washington at Trenton, Dec. 26, 1776, and part of his forces suffered a defeat at Princeton, Jan 3, 1777 He had the principal share in the victory of the Brandywine, Sept. 11, 1777, after which he secured for the British the command of the Delaware River. In disgust at Howe's failure to grasp the critical situation of affairs and to attempt operations on a large scale, Cornwallis sent in his resignation, which the King refused to ac-cept. He served under Clinton at the reduction of Charleston in 1780, achieved a great victory over Gates at Camden, S C, on August 16 of that year, and defeated Greene at Guilfold Court House, N C, March 15, 1781. He was in the end outgeneraled by Greene and withdrew into Virginia, where he carried on a vigorous campaign against Lafayette, but without Finally he was shut up in Yorktown by Washington and Rochambeau, aided by a Fiench fleet under De Grasse, and was compelled to surrender on Oct 19, 1781 With the surrender of Cornwallis the triumph of the American cause was virtually achieved Although the disaster resulted in the resignation of the British ministry, Cornwallis escaped censure owing to royal favor. In 1786 he was appointed Governor-General of India and commander in chief and distinguished himself by his victories over Tippu Sahib and by his indefatigable efforts to promote the welfare of the natives. He returned from India in 1793, when he was raised to the rank of Marquis Appointed Lord Lieutenant of Ireland, he succeeded in quelling the rebellion of 1798 and established order in a manner that gained him the good will of the Irish people As Plenipotentiary to France he negotiated the Peace of Reappointed Governor-General of India in 1804, he died at Ghazipur, in the Province of Benares, Oct. 5, 1805, on his way to assume the

command of the army in the upper provinces Consult Marshall, Memour (Gateshead, 1806) Constitt Antriani, Amono Gatesiaai, 1900), Lord Cornwallis' Correspondence, ed. by Ross (London, 1850); Seton-Karr, "The Marquess Cornwallis," in Eulers of India (Oxford, 1890). OORO, RO'ro, or Sanna Ana de Coro A city of the State of Falcon, Venezuela, situated east

of the Gulf of Coro (Map: Venezuela, D 1) It

is engaged in cattle raising and is a centile for interior commerce Coro contains several churches, interesting for their antiquity, though they either have been rebuilt or lie in ruins. La Vela, its port, which is 6 miles to the east, has a good harbor and a trade with the Dutch West Indies and is the residence of a United States consular agent Population, 9452. Coro, one of the oldest cities in Venezuela, was settled by Juan de Ampués in 1527 and for a time was the Spanish capital of Venezuela It was created the first bishopric of Venezuela in 1531, but subsequently the see was removed. Its decline dates from the transference of the govenumental and ecclesiastical authorities to Caracas It was the objective point of Miranda's first descent upon Venezuela in 1805, when he led an abortive expedition against the Spanish in the hope of precipitating the revolution of the Spanish-American colonies

COROADO, kō'rō-a'dō (Portug, crowned, in allusion to a peculiar style of wearing the hair). A name without ethnic significance, applied by the Portuguese to several Biazilian tribes. The name "Coroados" (also Bugres) is now ap-plied to the people formerly called "Zuayanas" (of Tapuyan stock), and known also as "Caingangs" These are "the dread Bugres of South Brazil," who inflicted such destruction upon the settler of the interior. They are to be distinguished from the "real Coroados" of the

states of Minas and Matto Giosso

COROL'LA (Lat., garland, dim of corona, own). In flowers, the inner one of the two tts of floral leaves The individual parts are crown). sets of floral leaves called "petals," and they are usually delicate in texture and variously colored, forming the showy part of the flower In case they are absent the flower is said to be "apetalous" The corolla is supposed to serve as an attraction to insects, so that the flower may secure cross pollination. See Flower

COR'OLLA'RY (Lat corollarum, deduction, gratuity, money paid for a garland, from corolle, garland) A proposition the truth of which appears so clearly from the proof of another proposition as not to require separate demonstration. For example, having proved that the angles at the base of an isosceles triangle are equal, it follows as a corollary that an equilateral triangle is equiangular

COR'OMAN'DEL COAST (Skt. Coramandala, from Cōra, or Cōla, name of a people + mandala, circle, kingdom). A region in British India in former times comprising the poition of the east coast of Madras lying between Point Calimere, in about lat 10° 17′ N, and the Calimere, in about lat 10° 17′ N, and the mouths of the Kistna, in about lat 16° 40′ N (Map India, D 6) The name is sometime applied to the whole of the west shore of the Bay of Bengal The coast has numerous inlets, but possesses no safe harbors Ships are compelled to anchor several miles off the coast, which is visited by the northeast monsoon from October till April The districts along the coast were the battlefields for supremacy in India between England and France in the eighteenth century

COROMANDEL GOOSEBERRY. See CA-

CORO'NA (Lat, crown) In astronomy, the name given to the faint outermost luminous ap-In astronomy, the pendage of the sun, seen only during total solar eclipses, when the brilliant central disk is obscured See Sun. 104

CORONE, in meteorology, are colored rings seen around the moon through peculiar forms of cloud. See Halo.

CORONA. In architecture, the upper part of the classical cornice; especially the shelf-like portion between the bed-molding and the cymatium. (See Cornice). The term "corna" is also applied, especially by ecclesiastical writers, to the apse or semicircular termination of the choir, as in the case of "Becket's crown," at Canterbury. Corona is also applied in ecclesiastical nomenclature to a chandelier, in the form of a crown or circlet, suspended from the roof of a church, or from the vaulting of the nave or of chapels, to hold tapers which are lighted on solemn occasions. Famous mediaval examples are those in Charlemagne's Palatine Chapel at Aix-la-Chapelle and in St. Michael's, Hildesbeim.

CORONA. In plants, a word applied to any crownlike appendage at or near the summit of an organ. It is usually restricted, however, to appendages which occur in connection with corollas. For example, in the species of Stene and allied forms, members of the pink family, there is a two-lobed outgrowth at the junction of the claw and blade of each petal. Taking the petals together, these outgrowns form a 10-lobed crown at the base of the blades. In the passion flowers there is a very conspicuous corona consisting of many rows of filamentous outgrowths. Similar outgrowths are found in the flowers of other families, but are most notable in sympetalous corollas, where they form folds or projections in the throat, as in ole-ander, various borages, etc. In the several species of Narcissus the corona which rises from the throat of the corolla is often very conspicuous. In all cases these appendages are out.

CORONA (p) OF NARCISSUS

growths from the inner face of the petals, and it has been suggested that they are the equivalents of similar outgrowths from the inner face of grass leaves, at the juncture of the blade and sheath. In this latter case the appendage is called a "ligule."

GORONA. A city in Riverside Co., Cal., 48 miles southeast of Los Angeles, on the Sunta Fe and the Pacific Electric railroads (Map: California, H 9). The city contains a Carnegic library, Woman's Improvement Club, and fine

high school and city hall buildings. There is also a splendid circular boulevard on which big automobile races are held annually. Corona is an important shipping point for lemons and oranges. Citrus fruit growing, alfalfa milling, and the manufacture of clay products and crushed rocks are the chief industries. Pop.,

1900, 1434; 1910, 3540. In ministries. 1919, 1934; 1910, 3540. (Lat., Southern Crown). A small southern constellation, described by Ptolemy and consisting of stars of moderate brightness. It is situated between

Scorpio and Sagittarius.

CORONA BOTREATIS (Lat., Northern Crown). A small and bright northern constellation between Hercules and Boötes. The arrangement of six of its principal stars, the brightest of which is of the second magnitude, in the form of an almost perfect semicircle renders it easily recognizable. In 1866 a nova, or temporary star, known as "T Corome," was discovered by Birmingham in this constellation. At first of the second magnitude, nine days after its discovery it was again invisible to the naked eye; it still exists as a star of the tenth magnitude. It is worthy of note as the first nova to which the then novel methods of stellar spectrum analysis were applied.

CORONACH, kör'ö-näk. See CORANACH. CORONA CIVICA. See CROWN.

CORONA CONVIVIALIS. See CROWN.
CORONADO, Kô'rō-nāi'rō (Sp., crowned).
The name among Spanish-speaking fishermen
of the West Indies and Mexico for the amber

fishes of the genus Seriola. See AMBER FISH. CORONADO, FRANCISCO VÁSQUEZ (?-c.1549). A Spanish explorer. He came to the New World about 1535, and, by marrying Doña Beatriz, the daughter of Estrada, the royal Treasurer for New Spain, secured preferment at the viceregal court in Mexico. He was appointed Governor of the Province of New Galicia, and in 1539 secured the command of an expedition for the conquest of the "Seven Cities of Cibola," which the friar Marcos de Niza claimed to have discovered on a preliminary expedition earlier in 1539. On Feb. 23, 1540, Coronado started from Compostela with a large force of horsemen, infantry, and native allies, supplied with artillery and abundant munitions and food. He followed the western coast of Mexico till some distance beyond Guaymas and then crossed the mountains into southeastern Arizona. On July 7 he reached and stormed the chief city of Cibola, the stone pueblo of Hawikuh, now represented by large ruins a short distance west of the pueblo of Zuñi, in New Mexico. Making this his headquarters, Coronado sent expeditions to the West, which explored the country as far as the Moqui villages of Tusayan, and to the Grand Canon of the Colorado, which was first seen by Europeans when the soldiers under Lopez de Cardenas reached it early in September, 1540. Other parties explored towards the east, and in September, Coronado moved his forces to the Rio Grande, camping in the village of Tiguex, near Bernalillo, New Mexico. During the winter the natives of the river villages were subjugated after a fierce resistance. In April, 1541, Coronado led his whole army across the mountains into the great Buffalo plains of Arkansas and Indian Territory. Finding that he was being misled by a native guide, he sent his foot soldiers back to the Rio Grande, while he, with 30 horsemen, pushed northward, hoping to find a country rich in treasure In July he reached a group of tepee villages, somewhere near the boider line between Kansas and Nebraska Convinced that the country contained nothing of value for him, although he recognized its splendid agricultural possibilities, Coronado returned to Tiguex A severe fall from his horse induced Coronado to turn homeward in After several months of deprivation the spring he reached Mexico with such of his army as had not deserted along the route. The Viceroy not deserted along the route The Viceroy received him coldly and allowed him to resign the government of New Galicia Coronado lived quietly on his ample estates until his death, about 1549 The original documents describing Coronado's journey, which contain much information concerning the southwestern United States at the time it was first visited by Europeans, are translated in Winship, "The Coronado Expedition," in the Fourteenth Report of the United States Bureau of Ethnology (Washington, 1896) Consult also Winship Journey of Coronado (New York, 1904)

CORONA FUNEBRIS See CROWN

CORONA MURALIS See CROWN

CORONA NATALITIA. See CROWN CORONA NUPTIALIS See CROWN CORONA OBSIDIONALIS See CROWN CORONA SACERDOTALIS. See CROWN CORONA SEPULCHRALIS. See CROWN COR'ONA'TION (from Lat coronare, to crown, from corona, crown) The act or ceremony of crowning the sovereign of a monarchical country The use of clowns in antiquity. as a mark either of honor or of rejoicing, will be explained under Crown It was, no doubt, as an adaptation of this general custom to a special use that the practice of placing a crown on the head of a monarch at the commencement of his reign was introduced. The practice is very ancient, as we may learn from the fact that Solomon and Ahaziah were crowned, and it has been followed, in one form or another, in most civilized monarchies The ceremony is religious as well as political and is usually performed by a high ecclesiastic, as a recognition that "the powers that be are ordained of God" Generally it has been accompanied by what was regarded as the still more solemn rite of anointing with oil—a ccremony which, from the time of the ancient Hebrews to our own, has been peculiarly significant of consecration or devotion to the service of God The term employed tion to the service of God The term employed for "crowned" in the Saxon chronicle is gehalgod, hallowed' or 'consecrated', and it would seem that the ceremony as then performed at Kingston-on-Thames or Winchester was the same in all essentials as that which now takes place

in Westminster Abbey. In the early days of the European monarchies coronation was an indispensable rite, without which no accession to a throne would be recognized by the people, but in our day, the line of succession being clearly established, the ceremony is often deferred without prejudice to the loyalty of the subject. In most countries a solemn pledge, known as the "coronation oath," is exacted from the new sovereign as an indispensable preliminary to coronation There are very early traces of this, both among the Jews and among the rulers who established them-selves upon the rulns of the Roman Empire Before the principle of hereditary succession was firmly established, the consent of the people was an important factor in a transfer of sover-

eignty and was purchased by the solemn pledge to rule justly and to preserve every man's rights The present English coronation oath is the most definite and carefully considered agreement of the kind After the revolution of 1688 it was made more explicit than ever, including an express engagement on the part of the sovereign to maintain "the laws of God, the true profession of the Gospel, and the Protestant reformed religion as it is established by law" The terms of this declaration were long resented by Roman Catholics in England, and finally, in 1910, the Accession Declaration Act was passed, which substituted a short formula for the objectionable clauses The formula now runs "I, —, do solemnly and sincerely in the presence of God, profess, testify, and declare that I am a faithful Protestant, and that I will, according to the true intent of the enactments which secure the Protestant succession to the Throne of the Realm, uphold and maintain the said enactments to the best of my powers according to law" The oaths of other countries are neither so claborate nor so specific as that of England

For a learned treatment of coronation usages in general, as well as for a typical modern instance, consult Pascoe, The Pageant and Coremony of the Coronation of their Majesties King Edward the Seventh and Oueen Alexandra (New

York, 1902)

CORONATION, THE A play licensed by Shirley in 1635 It was, however, wrongly included in the earlier editions of Beaumont and

Fletcher, as theirs

CORONATION CHAIR. The ancient throne used at the coronation of English kings since Edward I It is kept in a fair state of preservation in Westminster Abbey Beneath the seat rests the famous Lia Fail, the Stone of Destiny, on which Scottish kings were crowned. The stone is said to be the one used by Jacob as a pillow and to have been taken to Tara in Ireland in the fifth century BC, whence it was brought to Scotland and removed to England by Edward I

CORONATION GULF. An inlet of the Arctic Ocean, penetrating the continent of North America, north of the Arctic circle, and included between long. 107° and 116° W, Bathurst Inlet being an extension towards the southeast. It is connected with other Aictic channels by Dease Strait on the northeast and Dolphin and Union Strait on the northwest (Map America, North, G 3) It is studded with islands and receives the waters of the Coppermine River from the south

CORONATION OATH. See CORONATION CORONEL, kō'rō-nēl' (Sp., from Lat. coro-nalis, pertaining to a crown, from corona, crown). A port in the Province of Concepción, Chile, situated on the Bay of Arauco (Map Chile, C 11) It is the commercial centre for the highly productive coal-mining district in the vicinity and is a coaling station. Pop, 1895, 2292, 1907, 5,258 CORONELLI, kö/rő-něl/lé, Marco Vincenzo

(1650-1718) An Italian geographer, born in Venice He became a monk and devoted himself to cosmography in Venice He then went to Paris, where he was commissioned by Louis XIV to construct two large globes 4 meters in diameter, which are in the Bibliothèque Natio-nale in Paris They are considered among the greatest curiosities of the science of the seven106

teenth century. In 1685 Coronelli returned to Venuce, was made geographer of the Republic in 1702, and in that capacity published a number of maps and histories His works include Isola dr Rods, geografica, storica, antica e modcrna (1685-1702), and Memorie istorico-geografiche del regno della More a (1685)

CORONER A very ancient and important county officer in England, it leand, and Wales, whose original duty appears to have been that of keeping, as distinguished from holding, the pleas of the crown, for coroners are designated in the earliest charters alluding to the office as custodes placation in coronac and coronactors. The exact date of origin of the office is not known, but the better model in view is that it was fimily established under Henry II in the twelfth century. From England the office of coroner has found its way to the United States

and the self-governing English colonies

The chief duty of the coroner was described by Lord Chancello. Campbell as follows "The coloner, next to the sheriff, is the most important envil officer in the county, and he performs the duty of the sheriff when the sheriff is disabled from doing so, and there are peculiar duties prescribed to him, more particularly to inquire into the manner in which persons have come to their deaths where there is any reason to suppose that it may not have been by natural means, and, on the inquiry, the jury being swonn, the jury have all the rights of a grand jury to find a ved det of muider, and on that finding the accused may be tried and may be sentenced to death." The conone's duties in respect to this inquiry as to suspicious deaths has haidly varied at all from the fourteenth century to the present time, except as regards the methods of procedure, such as summoning jurors, witnesses, etc.

Besides his duty of inquiring into causes of suspicious deaths, his other peculiar duties inclined that of inquiring concerning various classes of personal property, such as treasure-trove, wrecks. The goods thrown away by a third in his flight (known as "waits"), to which the crown laid claim, the holding of inquests on certain felonics, such as the breaking of a house and the sudden jury of a person under suspicious circumstances. Until 1888, in England, the coloners were chosen by the freeholders at a county court held for the purpose, but by the Local Government Act of that year the coroner is also ex officio a conservator of the King's peace, and in this capacity may act as a magistrate; his ministerial office is excreised only when he acts in place of the sheriff

In the United States and in some of the colonies of Great Britain the duties and powers of coroners have been enlarged or restricted, and in some cases the office has been entirely abolished. The coroner is vested by statute in some jurisdictions with the power and duty to investigate into the causes and origins of flies which appear to be of meendary origin or of such a mature as to require investigation, but ex officio the coroner has no authority to inquire into the cause or origin of a fire except when death has resulted from it

For a fuller description of the manner of choosing coroners and of their duties and powers, the statutes of the jurisdiction must be consulted

Consult. Encyclopædia of the Laws of Eng-

land, vol 11 (London, 1897), Binmore, Instructions for Sheriffs, Coroners, and Constables (2d ed, Chicago, 1894), Bordern D Smith, Powers, Duties, and Lashitives of Sheriffs, Coroners, and Constables (2d ed, Albany, 1897); Jarvis, Office and Duties of Coroners, with Forms and Piecedents (5th ed, London, 1888), Stephen, History of the Chiminal Law (th, 1883), Pollock and Maitland, History of English Law (2d ed, London and Boston, 1899), Boys, Treatise on Corones (Toionto, 1893), CORCONET A Special errown worn by princes

and nobles on state occasions and always represented above their coats of arms Coionets were apparently intended originally as fillets to confine the hair, and during the reign of Edward III. when they were not yet used as distinctions of rank, were ornamented with leaves Later they came to be recognized as distinctions of nobility, but were assumed arbitrarily without royal warrant or restriction as to use In more modern times they have been strictly regulated, especially in England. The following fules apply to that country the coronet of the Prince of Wales that country the coronet of the Prince of Wales differs from the crown of England only in having a single instead of a double aich, a duke's coronet has on the rim eight strawberry leaves of equal height, that of a marquis, four strawberry leaves and four pearls or balls of silver, alternately, that of an earl, eight pearls set on lofty spikes, alternating with strawberry leaves set lower, that of a viscount has 14 or 16 pearls close together, that of a baron, six pearls The privilege of wearing coronets was first granted to viscounts by James I and to barons by Charles The French rules are essentially the same

The French rules are essentially in same CORONINI - CRONBERG, Kö'ıö-ne'ne'kirön'-berk, Franz, Count von (1833-1901) An Austrian statesman, son of the following, and one of the early companions and schoolmates of Emperor Francis Joseph After studying philosophy and law, he entered the aimy in 1850, served in the campaigns of 1859, 1864, and 1866, and was promoted to the rank of colonel in recognition of his distinguished services at the buttle of Komignatz. He was President of the Chamber of Deputies from 1879 to 1881 and in 1882 founded the Coronin Club (Liberal Centie). He became a member of the Upper House in 1897.

ALEXIUS, COUNT VON (1704-1880) An Austinan general, father of the foregoing, born at Gorz lie entered the army in 1819 and particular of the campaigns of 1813 and 1814. After serving for several years in Italy, he was in 1836 appointed chamberlain of the Archeduke Francis Charles, in which capacity he became preceptor of the Emperor Francis Joseph. As major general he defended the passes of the Tirol against the Italians in 1848, and in the Crimean War (1854) was intuisted with the chief command of the army of occupation in Wallachia. He was commanding general in Upper and Lower Austria, Salblurg, and Styria in 1860, and in 1861 was appointed to the same position in Hungary. He returned in 1865.

agy. He retard in 1865.

GROT, kô'rô', Jean Baptiste Camille.

GROT, Lis father was a petty collected who married a milliner and by strewd management of her business gained a competence. Camille was educated in the college in Rouen and at a school in Poissy, and on his return to Paris was appienticed to a draper,

in accordance with his father's wishes But trade had no charms for him, and in the meanwhile he had acquired a taste for painting. After seven years of apprenticeship with the draper he resolved to be a painter. Upon the death of his sister his father made over to him her allowance, upon which Camille managed to subsist until financial success crowned his efforts He first studied with Michallon, and upon the latter's death with Victor Bertin, a Classicist and an apostle of the historical landscape vears 1825 to 1827 he spent in Italy, and in the latter year he made his début at the Salon with two Italian landscapes—a "View of Narni" and the "Campagna at Rome" He again went to Italy in 1834 and in 1843, besides traveling in France, Switzerland, the Netherlands, and England But the greater part of his life was passed in Paris and Ville d'Avray, in the forest of Fontamebleau and the valley of the Seme In these places he found subjects for his most beautiful pictures

It was some time before his works were recognized, but in his later life honors were heaped upon him He received medals in 1848, 1855, and 1857, in 1846 he received the cross of the Legion of Honor, and in 1867 he was made a commander. The younger artists almost worshiped him, and in 1874 his friends gave him a gold medal to atone for the neglect of the Salon. Dealers sought his pictures, and it is said that in the time of his prosperity his income from sales alone amounted to 20,000 francs a year But Corot never cared for money except to help his friends, which he did with a lavish hand He was gentle, joval, and kind, and the figure of Père Corot, in his blue blouse and woolen cap, with his long white hair and the inevitable pipe, brought joy and sunshime He never married, but was devotedly attached to his sister and his mother. He died in Paris on Feb 22, 1875

Cord's art naturally falls into two periods, divided from each other by about the year 1843. During the first of these he painted like the contemporary Classicists, very detailed, with careful and severe drawing, but not without a certain charm of color. The influence of this classical taining may be seen in the nymphs with which he loved to people his landscapes, and the absolute mastery over technique which we see in his second period. This may be said to have begun with his return from Italy in 1843, when he adopted the method of painting in the open air, which had been introduced from England by Constable and others. The works of his second period are the works from which we chiefly know hum and which made him famous

Corot was the great lyric poet of the Barbizon school, as Rousseau was the epic, and Dupré the As Rousseau portrayed the strong dramatic and vivid side of nature—the oak of all the trees, the plains, the hills, the river, and the forest—so Corot painted the tender, the wavering, the feminine side-the poplar, the birch, the willow, the wild flowers, sweet and shrinking. He was a painter of the misty morning and of the shadowy evening, of the hazy springtime A light mist or a haze of atmosphere usually envelops his pictures. As with Rousseau drawing was the most important feature, so with Corot it was the tone and values of color. His pictures are always in a low key browns, pale greens, and silvery grays are among his favorite colors, but in this sad setting the occasional Vol. VI —8 touches of bught color appear all the more effective His values are perfect, and, above all, each picture is an expression of deep sentiment—"the confession of a beautiful soul" His works have well been called 'painted music," and it is no accident that he was himself a gifted musician

His landscapes have often been criticized because of their similarity, but they are only similas in theme, the treatment is infinitely varied It has also been uiged that his works are too even; that they do not contain certain acid tones and Little defects which are found in nature and add to the effect of the picture blemishes might indeed have made his work more realistic, but they would not have har-monized with the softness and delicacy of effect, which it was his chief effort to obtain. As regards the figures which usually form a part of his picture, whether they be nymphs and god-desses or French peasants, they rather heighten the effect of the landscape than otherwise, and with it they are always in perfect harmony So great was his technical ability and so vivid his imagination that his usual method was to paint his works in his studio from sketches and notes taken from nature

Corot has left a large number of works on a great variety of subjects. During his early period he painted many Italian landscapes and even religious subjects Of these landscapes there are two good examples which he himself bequeathed to the nation, viz, the "Roman Fo-rum" and "The Coliseum", the latter is now in the Louvie, which also possesses "The Bridge of Narni" (1827) Of his religious pictures the "Baptism of Christ," in the church of St Nicolas du Chardonnet in Paris, is a good specimen, and the Walters Gallery, Baltimore, the Havemeyer collection, New York, and the Boston Art Museum contain examples of his historical compositions. The landscapes of his later period are incomparably his best works Among the best known is the "Dance of the Nymphs" (Louvre), a fresh morning scene of a peculiar blue tone, and the incomparable "Paysage," in the same collection, showing his marvelous treatment of a lake with overhanging foliage There are about 80 of his overnanging ionage There are about 80 of his pictures in the Louvre, including, besides those mentioned, "Morning" (1850), "Souvenir of Castelgandolfo" (1855), the "Road of Sin-le-Noble" (1874), and "The Fisherman' Other good examples are in the provincial museums and private collections of France and indeed of all Europe. Corot is especially well represented in the United States The Metropolitan Museum in New York possesses three good examples, including "Ville d'Avray," a fine specimen of Corot's dainty treatment of water, foliage, and distant buildings in the early morning light. The faint rose of the sky suggests the coming dawn, and the touches of yellow and blue in the garb of the woman lend a soft brightness to the There are other good examples in the Vanderbilt collection (Metropolitan Museum) and the Corcoran Gallery at Washington, in the Art Institute of Chicago, and the Walters Gallery, Baltimore But not until the centenary exhibition in Paris in 1889 did men know what modern art possessed in Corot, "the greatest poet and the tenderest soul of the nineteenth century "

Bibliography. The principal authority for Corot is the monumental work of Robaut, L'Œuvre de Corot (4 vols. fol, Paris, 1905),

with admirable illustrations and a complete list of his paintings Briefer biographies, with account of his work, are by Rousseau (ib, 1884), Roger Milès, in Les artistes celebres (ib, 1891), Robinson, in Van Dyke's Modern French Masters (New York, 1896), Michel (Paris, 1905), Hamel (ib, 1905), Coinu (ib, 1911) Consult also Alexandre Geoffroy, Corot and Millet, with critical essays (New York, 1903), Meyer-Graefe, Corot et Gourbet (Leiprig, 1905), Gensel, Corot and Troyon (Bielefeld, 1906), Meynell, Corot and his Friends (New York, 1910), Mithler, History of Modern Panting (London, 1907), and the bibliography under Barbizon, PAINTERS OF

COR'PORAL (F1 caporal, It caporale, corporal, from capo, head, from Lat caput, head, influenced by popular etymology with corporal. bodily, or corps, body of troops) A military title of similar relative noncommissioned rank throughout the armes of the world. In the United States it is the lowest noncommissioned rank It may be preceded by the appointment of lance corporal, given to private soldiers de-sirous of and selected for promotion. In the Butish navy the term "ship's corporal" is applied to a petty officer who takes orders from the master at arms

CORPORAL (Lat corporale, from corpus, body, because the host or sacramental body of Christ rests upon it) A square linen cloth which is spread upon the altar during the mass and upon which rest the chalice and paten It was originally large enough to be folded over the chalice, but this was later displaced by a separate piece, now known as the pall (q v). The older usage was long preserved in the French church and is still the custom in the Carthusian Order Both corporal and pall must be blessed, and when not in use are carried in the burse, a square pocket of cardboard covered with silk. none except those in holy orders being allowed to touch them when they are in use

CORPORAL, THE LITTLE (Fr, Le petit caponal) A term of familiarity and affection applied by the French soldiery to Napoleon I, who began his military career as a sous-heuten-

ant in Coisica.

CORPORAL PUNISHMENT Punishment by the infliction of pain or haidship upon the body, as by confinement in the stocks, branding, or flogging. Ordinarily the term is understood to refer only to flogging or whipping of the

hody

Much has been said for and against this last kind of punishment, as a means of both public and private correction The contention of those who oppose its use and deny its value is that it degrades the one punished and the one who executes the punishment, and that it tends to deteriorate the character of the person punished by taking away his self-respect. Those who favor it generally admit that severe floggings which lacerate the body or which are so contrived as to cause extreme agony, as in the bastinado, do cause a degeneration in the moral character of the victim which increases his tendency to repeat his offense or commit others in spite of the danger of the second punishment, and that this is especially the case when such pun-ishment is inflicted publicly. But the practice is supported by the argument that whipping which produces stinging but transient pain, without mangling the body and without such public disgrace as to destroy the sense of shame,

is an efficient corrective for those ciuel or brutal or intractable offenders, such as wife and child beaters, who are insensible to the punishment of confinement or other ordinary penalties Corporal punishment at the hands of public officers as a punishment for crime is usually inflicted by flogging in prison or at the public whipping post. The practice has generally been abandoned in civilized communities, though it still States as a means of discipline of convicts confined in prisons Further information will be given under the titles CAT, FLOGGING. WHIPPING

The authority of the husband, parent, guardian, and schoolmaster to inflict corporal punishment upon the wife, child, or pupil will be considered under Husband and Wife, Guar-DIAN, WARD, PARENT AND CHILD, SCHOOL-MASTER, ETC. See also APPRENTICE For a bibliography of corporal punishment as a punishment for crime, consult the authorities referred to under Penology, Criminology

CORPORAL TRIM. An old soldier, the servant of Uncle Toby in Steine's Tristram Shandy CORPORAL VIOLET, or FATHER VIOLET A name given to Napoleon Bonaparte by his adherents in France when he was in exile The violet typified the Empire, which, in the person of Corporal Violet, it was predicted, would

return in the spring CORPORATION (Lat. corporatio, from cor-

tas or partnership.

por are, to embody, from corpus, body, the classical terms were corpus, universitas, collegium)
Roman and Civil Law — The legal conception of the corporation was clearly worked out at Roman law As a ship remains the same ship, although all its parts be gradually renewed by successive repairs, as a human body remains the same body, although waste and repair penodically change all its minutest particles, so a body of human beings, like a bench of judges, a legion, or the Roman people, remains the same body in spite of all changes in its composition In all cases in which such a body of persons is recognized as a separate legal entity-in all cases, ie, in which the body itself is regarded as owning property, holding claims, and owing debts—a corpus or universitas exists, where, on the other hand, the members of an association are treated as joint proprietors, joint credit-

ors, and joint debtors, all that exists is a socio-

The Roman law recognized both private and public corporations Private corporations (at least in the Imperial period) could not be established except by special authorization or under certain general statutes. In the field of public law the towns (municipia), or, rather, the town councils (collegia decurionum), were regarded as corporations and the Imperial treasury (fisous) was recognized as an entity distinct from the Empire From this latter theory was derived the valuable conclusion that the fiscus could be sued by private persons to recover property or enforce contractual claims. Chairtable corporations were recognized, when the Empire became Christian, churches and monasteries received the rights of corporations, but where property was devoted to a permanent charitable use (pia causa) it was not necessary to give it to an existing charitable corporation nor to create a new corporation to hold it The Roman law did not treat the persons who administered such property as titular owners subject to a trust, nor was it usual, as at English law, to incorporate boards of managers and to treat the corporations thus created as owners of the property The Roman law, in its final development, treated the foundation itself as a legal entity, and viewed the persons who managed the property as mere officers and representatives of the foundation

Modern civil law uses these Roman concep-tions without substantial change The German jurist Gierke, indeed, maintains that mediæval German law developed, and modern jurisprudence is bound to recognize, a third type of association, intermediate between corporation and partnership, which he terms the fellowship (Genossenschaft), but his theory has obtained no legislative of judicial recognition. The German civil code (1896) declares that "societies which are not incorporated are governed by the

rules relating to partnership"

As regards the theory of the "juristic person," modern civilians generally regard corporations and foundations as persons only by virtue of a legal fiction This legal fiction is generally regarded as useful and indeed necessary, but a few writers regard it as unnecessary and harmful These assert that a corporation is nothing but a plurality of natural persons acting under special rules as regards presentation (ie, agency) and governed by special rules as regards succession, and they assert that harm is done by obscuring the fact that the private corporation is simply a particular method in which natural persons hold property and do business Still another school maintains that permanent associations, public and private, have a character and a will which are not the sum or the resultant of the characters and wills of the individuals who compose them, and that such associations have thus a true personality which the law does not create, but merely recog-This is sometimes described as the an-

thropomorphic theory

English Common Law—Three distinct factors are to be recognized as essential to the existence of a corporation (1) one or more natural persons, who are the incorporators, or so-called members, (2) one or more trustees, managers, or directors, who have the general control of its affairs and may or may not include all, and be coincident with, the incorporators, and (3) the corporation, or artificial person, created by the fiat of the law, and always separate and distinct from both its members and its trustees or managers It is this separate existence, as a legal entity, which distinguishes it from a partnership and from a joint-stock company

Classification - Corporations are classified as to either the number of members, or the objects for which they are formed, or the fullness and completeness of their powers With regard to the number of members, they are either aggregate or sole An aggregate corporation has more members than one and is the more common form A sole corporation consists of a single member and his successors, who are by law invested with the same capacities as an aggregate corporation Thus the King of England, or a bishop, is a sole corporation. A very few sole corporations exist in the United States. New York, eg, a joint-stock company composed of seven or more members may sue and be sued in the name of its president, and the president is for this purpose a sole corporation

With respect to the purposes of their existence corporations are classified as ecclesiastical and lay, and the lay are subdivided into civil and eleemosynary Ecclesiastical corporations are conceined wholly with religious matters, including the management of ecclesiastical property, and are composed wholly of spiritual persons, as distinguished from laymen There are none such, properly so called, in the United States An eleemosynary corporation is one formed for purposes of charity, in the legal sense of that word, 1e, general public benefit and utility Examples are found in schools, colleges, and hospitals Civil corporations are those that are formed for temporal purposes They are either (1) public, or municipal, ie, created for governmental purposes, such as cities and villages, or (2) private, including others of a civil nature, such as railroad companies and manufacturing and general business corporations Since municipal corporations are part of the machinery of government, they may be dissolved, restricted, or modified at the will of the legislature, but an act which creates a private corporation has in the United States been deemed to be in the nature of a contract. and (because of that provision of the United States Constitution which forbids the States to pass any laws impairing the obligation of contracts) cannot be repealed or materially al-tered or impaired without the consent of the corporation This doctrine of the inviolability of a corporate charter rests upon the authority of the celebrated Dartmouth College Case (q v ) The operation of this rule is obviated in some States by constitutional provisions, or by special clauses in the acts creating corporations, to the effect that the legislature shall have power to abrogate or modify such acts The divisions of corporations with reference to their powers is into complete and quasi. Those are quasi is into complete and quasi which possess some, but not all, of the ordinary powers of a corporation Counties, school districts, and in some States, as New York, towns, afford examples of quasi corporations

Corporations are created by charter or letters patent from the crown, by legislative act, and by prescription Some corporations which trace their origin to royal charter exist in the United States, while others may be found which derive their franchise from immemorial usage or prescription, but the most common mode of forming them is by act of the legislature This latter method is either by special act or charter, or by a general law which enables persons so desiring, by conforming to prescribed conditions and formalities, to become ipso facto a corpora-The formation under a general law is most favored, and is made mandatory by the constitution of some of the States

Corporate Powers -The powers of a corporation are those given by its charter, or the general law under which it is organized, or fixed and determined by usage when it exists by prescription, together with those which are implied by law as reasonably necessary or proper to enable it to exercise its express powers and to realize the objects for which it exists They generally include the power to make contracts, to sue and be sued, to hold property, to have a corporate seal, to make by-laws, and to elect and remove members and officers If a corporation exceed its proper functions, it is said to act ultra vires An ultra vires act is, according to the weight of authority, void, but money paid, or the value of property given, to a corporation unden an ultra vires contract may be
recovered. In a few jurisdictions, e.g., New
York, if the person dealing with a corporation
has performed on his past an ultra vires contract, the corporation is held to be estopped
from setting up its wan have been held liable
for toris resulting from their negligent performance of an act, whether authorized or unauthorized, and it is now generally held that a
corporation may be liable for any tort, the
malice or negligence of the agent being imputed
to the corporation to the agent being imputed
to the corporation could legally perform no act except
under its corporate seal, but it may now act
without a seal where natural persons may do so
The quantity of land which a corporation may
hold is usually fixed by its charter, or a general
law, and is commonly restricted in this country
to so much as is necessary for the proper performance of its authorized functions
Public Control of Corporations—The right

Public Control of Corporations—The right of essiting a corporation, conferred by charter or legislative appointment, is that of exercising legal superintendence and control over its actions. It is an absolute, summary power which is not reviewable by the courts, unless its arbitrary exercise would result in gross injustice. It is strictly applicable only to ecclesiastical and eleemosynary corporations, the visitor of the former being the bishop of the diocess, and of the latter, the founder and his hens, or persons appointed by the founder. In the United States the visitors of chanitable corporations are usually their trustees, the right of visitation being determined wholly by statute. Civil corporations are subject to the general law, and are amenable to the piocess of the courts, and for misuse of powers or flagrant wrongs may be dissolved by proceedings instituted in behalf of the State

A corporation may be dissolved by legislative act, by judicial decree, by surrender of its fanchise and acceptance of the same by the State, or by the death of so many members that enough are not left to elect new members pursuant to its charter. The power to dissolve by legislative act is unlimited in England, but in the United States it is cestracted as pointed out above. A judicial decree dissolves for the violation of the conditions of the charter or the law under which it exists. Upon dissolution the property of the corporation becomes a trust fund for the bonefit of the State or the stockholders, usually the latter. If the mistrution were charitable, this fund is administered by new trustees appointed by the court

Stirctly speaking, a coiponation can have no legal existence outside the jurnsdiction of the sovereignty under which it was created. By a legal fiction, however, and by the comity of nations and states, a corporation is held to exist legally wherever it is doing business, and it may sue and be sued, acquire property, etc., outside of the state of its creation by authority of the foreign state in which it is operating and subject to such restrictions as the latter may see fit to impose.

Citizenship of a Corporation.—Under the Constitution of the United States a corporation is deemed not to be a citizen of a State, so that it cannot as a foreign corporation claim equal protection of the law with the citizen of a State other than the State of its creation. It follows

that a State may impose any terms as a condition of a foreign corporation doing business within the State, provided it does not interfere with the corporation's constitutional right to carry on interstate commerce A corporation, however, is a citizen within the meaning of the clause of the Constitution conferring jurisdiction on the Federal courts, and it may sue or be sued in the Federal courts, and may in a proper case remove a cause from a State to a Federal court Consult Angell and Ames, Treatise on the Law of Private Corporations (Boston, 1882), Cook, Treatise on the Law of Corporations Having a Capital Stock (Chicago, 1898), Thompson, Commentaries on the Law of Corporations (San Francisco, 1895-99), Clark and Marshall, Treatise on the Law of Private Corporations (St Paul, 1901), Purdy, Treatise on the Law of Private Corporations (Chicago, 1995) See CHARTER, CERTIFICATE, DARTMOUTH COLLEGE CASE, CONTRACT, CITIZEN, ETC., MU-NICIPAL CORPORATIONS and its bibliography, and for the treatment of the subject of corporations in its relation to civil and Roman law, see article on Civil Law Consult also such general treatises as those of Kent and Blackstone.

CORPOSANTS. See CASTOR AND POLLUX

CORPS, kör (Fr. corps). A military term denoting a body of officers, or officers and men, generally a distinct military organization, as the signal corps, coips of engineers, and the coast at illery corps, in the United States army, and the various battalions of volunteers throughout England, locally known as the volunteer corps More specifically it applies to the coips d'armée, or aimy coips, which in the United States formeily consisted normally of about 25,000 men, divided into three divisions, each of three bigades of three regiments of infantry, with cavality and artillery in proportion, commanded by a leutenant general or major general. The term "army corps" was abolished in the Bitish army in 1906 In the United States army the corps has been replaced by the field army, consisting of two or more divisions, and is the appropriate command of a heutenant general. Some European armies are organized by combining army coips of varying strength and composition (See Amay Organizations). In the navy it is used in the first sense, as the medical corps, the pay corps, the manine coips, etc. See Navy

CORPS DIPLOMATIQUE, ker då'plô'ma'-tak' (Fr, diplomatic body). The entire body of ionegin ambassadors and diplomatics assembled at the court, or the capital, of a country

CORPSE (OF, Fr. corps, bedy, from Lat. corpus, body) and Adad lumnan body is not property in the ordinary commercial sense of the term. In the absence of a statute authorizing it, a contract for the sale of such a body is void, as tending to outrage decency, humanity, and sound public policy, and an officer who seizes or holds the body under any legal process issued against the person while living is guilty of a criminal offense. But while a dead body is not properly, it is the object of certain well-defined rights. The possessor of these rights is the surviving husband or wife, or the next of kin of the deceased, unless the deceased has made a valid disposition of his body by will. Accordingly, if one mutilates a dead body, or prevents its burial, or unlawfully interferes with it after burial, he may not only be punishable criminally.

but be hable in an action for damages to the husband or wife, or next of kin, of the deceased

Controversies between persons as to the place of burial of a dead body, or as to its proper treatment, are writing the jurisdiction of a court of equity in the United States and are not subject to ecclesiastical decision, as has from an early period been the case in England This is upon the theory that the rights in a dead body are in the nature of a sacred trust, in the proper performance of which all are interested who were allied to the deceased by family trees

Not only is a dead human body the object of legal rights, but it is also the object of legal duties on the part of the living. The husband or the write, or the nearest of kin, or, in the absence or poverty of these, a stranger under whose roof a death occurs, is bound to give the body of the deceased a decent burnal. Any one who casts it away without funeral rites or indecently exposes it is liable to climinal punishment. On the other hand, the expenses of a proper burnal have priority over every other claim against the estate of the deceased Consult the authorities referred to under Sale (of personal property). See Burlal, Bony Snatching

CORPS LÉGISLATIF, kör' lá'zhe'sla'tél' (Fr., legislative body). The name of the Lower House of the French national legislature from 1852 to 1870 The number of members was 251, elected by universal suffrage for a term of six years. They were laigely the creatures of Napoleon III Consult the histories of the period by Granier de Cassagnae, Taxile Delord, Beaumont-Vassy, and De la Gorce See France, Nadordon III

CORPULENCE. See OBESITY

COR-PUS CATHOLTICO'RUM and COR-PUS EVANGELTICO'RUM (Lat, body of Catholies and body of Evangelicals). The names given in Germany after the Peace of Westphalia (qv) to the Roman Catholic and Protestant divisions of the empire respectively. The Elector of Mainz was at the head of the former as president. It generally held its meetings in a convent of that city in which the Diet happened to meet. The Elector of Saxony was at the head of the latter. When the Electoral House of Saxony became Roman Catholic, the control was given to the Pitry Council, which was a Protestant body. Both were extinguished by the dissolution of the German Empire in 1806

CORPUS CHRISTI (Lat. body of Christ). An important festival of the Roman Catholic clurch, in honor of the sacrament of the Euclarist. It was first celebrated in Liege in 1245 and decreed for the whole church in 1294 by Urban IV, partly in consequence of the vision of a Flomeis nun named Juliana, and partly because the anniversary of the sacrament's institution fell at the most solemn and mounful time of the Christian year, when services of a festal character were impossible It was assigned to the Thuisday after Trinity Sunday, and this day is still observed in most parts of continental Europe by magnificent processions through streets decked with flowers and green boughs. In the United States and some other countries the solemnties are celebrated on the Sunday after Trinity. The office of Corpus Christi, composed by St. Thomas Aquinas, is one of the most beaufful in the breviary.

GORPUS CHRISTI. A city, port of entry, and the county seat of Nueces Co, Tex, 130 miles (direct) south by east of San Antonio, on Corpus Christi Bay, and on the National of Mexico, the San Antonio and Aransas Pass, and the St Louis, Brownsville, and Mexico railroads, and on the line of the Texas and Gulf Steamship Company (Map Texas, D 6). Corpus Christi is a popular health resort, has fine boating and bathing facilities, hotels, and boarding houses, and the viennity abounds in ducks, geese, and other game It contains a public library, sanitarium, and a fine county courthouse The city is the centre of a malket. There is a good harbor, attracting considerable coasting trade Corpus Christin adopted the commission form of government in 1909. The city owns its water works Gen Zachary Taylor encamped heie during the Mexican War, and his intrenchments are still preserved Pop, 1900, 4703, 1910, 8222.

CORPUS CHRISTI COLLEGE (Cambridge) In 1352 the two guilds of Corpus Christi and St Mary in the town of Cambridge united to found a hall or college for educating clergy to fill the places of those carried away by the recent visitation of the black death. The master and two fellows of this new foundation served as chaplains of the guild and officiated also in St. Benet's Church, at which the members of the fellowship of Corpus Christi worshiped and which was impropriated to the college. The college was known as Benet College down to 1827, when the present and more offi-cial title was adopted In the sixteenth century the patronage of Sir Nicholas Bacon, who was a member and a benefactor of the college, together with the mastership of Archbishop Parker, brought the foundation much profit and honor The unrivaled collection of manuscripts, collected by the latter at the dissolution of the monasteries and bequeathed to the college, are among its chief treasures Besides this and the Lewis collection of printed books, the college owns the most interesting collection of plate in the university. Christopher Marlowe and John Fletcher were members of Corpus Christi. The buildings are of much interest, including the earliest closed quadrangle in the university, standing almost unaltered since its erection in the fourteenth century. The college consists of a master, 11 fellows, and 22 scholars, besides undergraduates, who in 1913 numbered 103. Consult H P Stokes, Corpus Christi (London, 1898).

CORPUS CHENSTI COLLEGE (Oxford). One of the smaller colleges in the university. It was the first of the Renaissance foundations, and its establishment marks an epoch in the intellectual history of the university. It was founded in 1516 by Richard Foxe, Bishop of Winchester, and Lord Privy Seal, the principal Secretary of State and chief counselor and diplomat of Henry VII, partly at the suggestion and cost of Hugh Oldham, Bishop of Exeter, and founder of the Manchester Grammar School in 1515 In Corpus Christi College we find the first noteworthy attempt to depart from the older educational tradition of the university, in the establishment of an endowed chair of Greek, the first in Oxford, and in throwing open the professorial lectures to all members of the university. The honor of founding the

professorial system Foxe shares with Bishop Waynflete and Margaret of Richmond, whose executor he was The statutes of his foundation contain the most stringent rules for life These, with the liberal provisions for the study of Latin and Greek, and humanistic studies in general, called forth the high plaise of Erasmus Though his prediction of the future preemmence of the college in the university has not been fulfilled, Corpus Christi has always maintained an excellent reputation for scholarship It has counted among its members John Keble, Thomas Arnold, "the judicious Hooker," his patron Bishop Jewell, Nicholas Udall, the author of the first English comedy, and, for a very bilef period, Oglethorpe, the founder of Georgia, Chief Justice Coleildge, and Thomas Day, author of Sandford and Mer-The buildings of the college are among tonthe most harmonious in Oxford, and in this, armonous in Oxford, and in this, as in its size, character, and standing, it has been aptly reckoned among the three typical colleges of the university. Its statutes were revised in 1881, and the new provisions are not as yet fully carried out. It consists on the needs to the control of the control of the needs to the control of the needs to its present foundation of a president, 14 fellows, of whom 3 are professorial fellows, 27 scholars, and 5 exhibitioners, besides undergraduates In 1913 the latter numbered 89 Consult T.

Fowler, Corpus Christi (London, 1898) CORPUS CULAR THEORY OF LIGHT.

See LIGHT

CORPUS DELIC'TI (Lat, body of the offense) In cumual law, the essential element of the alleged cume. If a person is charged with murder, the possecution must prove the death, as by the finding and identification of the corpse, or by evidence of criminal violence adequate to produce death and to account for the disappearance of the body. In other words, the corpus delete in such a case consists in the death of the person alleged to have been nurdered and the criminal agency of the alleged murderer in producing that death. The same doctrine is applicable to other officaces if one is charged with larceny, the prosecution must prove that the crime of larceny has been actually committed. See Criminal Law, and consult the authorities there referred to

CORPUS DOCTRIVNE (Lat., body of doctime). A collection of writings intended to have authority in the Protestant churches of Germany The chief of such collections was the Corpus Philippianm (Lenpig, 1660), containing the Apostolie, the Nicean, and the Athansian creeds, the Augslung Confession, and Melanchitlon's Loca Communes. This and similar the Apostolie of Communes.

lar collections were superseded by the Formula Concordia. See Concord, Book of. CORPUS INSCRIPTIO'NUM LATINA'-

CORPUS INSCRIPTIO'NUM LATINA'RUM (Lat, body of Latan inscriptions). A
great collection of Latan inscriptions, geographically arranged in 15 volumes, published by
the Royal Academy in Berlin. The first volume
appeared in 1863, the last in 1891. This work
is the most important authority in the study
of Roman epigraphy. Consult Egbert, Latin
Legentities, New York 1890).

appeared in 1803, the mas in 1891. This work is the most important authority in the study of Roman epigraphy Consult Egbert, Latin Inscriptions (New York, 1896).

CORPUS JUELS (Lat., body of law). A comprehensive collection of the entire body of law of a given jurisdiction. The phrase has been specifically applied to two great compilations of law, both based on the jurisprudence

of the Roman Empire, viz.

1. The Corpus Junes Civiles, or body of the

civil law known, by way of eminence, as the Corpus Juris, is made up of the Code, the Pandects, or Digest, and the Institutes, compiled and promulgated by the authority of Justinian (528-534 AD), and the Novels (Novella Constitutiones), subsequently promulgated by him to collect errors and defects in the previous work The first instance of the use of the expression Corpus Juris Civilis to describe the collection is found in the year 1583 As a whole, the work became the textbook of mediæval law, was the basis of instruction in the great law schools of the Middle Ages, and is the foundation of the scientific study of law in all the universities of continental Europe to-day. It has been truthfully said that, "with the exception of the Bible, no book was ever more widely studied by the Caucasian races" edition is that of Mommsen (who edited the Digest), Kruger (Institutes and Code), and Schael (the Novels) It has been translated into German, but never as a whole into English, though the Institutes and some portions of the Digest have been made available for English readers. See Civil Law, Coder, Digiest, and consult Lee, Historical Jurisprudence (New York, 1900), Hadley, Roman Law

2 Copus Juris Canomici.—The collesponding body of the canon law of the Church of Rome had a slower growth. The first compilation to which the name was applied was the Corretime of Gratian, a learned professor of the canon law at the University of Bologna, published about 1150 AD. This was a private, unofficial collection of synodical canons and papal decretals, made for use as a textbook in the law school, but it at once became a leading authority in the Church. Subsequent official collections—principally the Libra Eastra Decretim of Pope Gregory IX, the Libra Eastra Decretim of Pope Gregory IX, the Libra Seature of Bomiface VIII, and the compilation of Clement V, known as the "Clementine Decretals"—were embodied in the Corpus and became parts of it. Thus completed, the entire work has continued to be the standard of the canon law. The best editions are those of Bohmen (1747) and Richter (Leipzig, 1833, 1877–81). See Cutt. Law, Canon Law, and consult Lee, Historical Intercretal Control of the canon law.

Ju isprudence (New York, 1900).

CORRAL, kör-ral', PONGIANO (c.1810-55) A Cential Almerican general, bein in Costa Rica He settled in Nicaiagua early in his youth and became Minister of State in 1853 Subsequently he became identified with the Legitimist government and commanded the armywhich defeated William Walker (q.v.) at Managua (1855). Shortly after the battle of La Virgen (Sept. 3, 1855) and the occupation of Granada, he made terms with Walker, who, however, afterward accused him of treasonable negotiations with leaders of the Legitimist Party After a brief court-matial Corral was shot. Nov. 8, 1855 There seem to be no grounds for Walker's accussation. See the life of Corral by Cortés.

"OURNEA DA SERRA, kör-nä'n da söi'ri, José Francisco (1750-1823). A Porbuguese politician, scholar, and botamst, who was educated and took orders in Rome. With the assistance of the Duke of Laffee he founded the Portuguese Academy of Sciences in Lishon and was made its perpetual secretary. He soon came into conflict with the Church, through the Inquisition, and fied to France, where he remained until the death of Pedro III, when

he again took up residence with Lafōes Later he was obliged (because he aided a French Girondist) to flee to England, where he became secretary to the Portuguese embassy In 1813 he eame to New York, and in 1816–20 he was Portuguese Minister at Washington In this latter year he was called back to Portugal to become a member of the financial council, and he was elected to a seat in the Cortes He had high rank as a botanist, but his principal work is the exceedingly important and well-edited Collecção de livios ineditos da historia portugueza (4 vols. 1790–1816)

CORREC'TION See CRIMINOLOGY, PENOLOGY, CHARITIES AND CORRECTION, THE NATIONAL

CONFERENCE OF

dependence.

CORREGGIO, kor-rēd'jo A city in the Province of Regio nell' Emilia, north Italy, situated on a canal connecting with the river Seccline, 27 miles east of Paima (Map Italy, E 3) In the Piazza is a statue of the painter Antonio Allegri, known as Coireggio (q V), who was born here in 1494 The town was once the capital of a principality belonging to the Duchy of Modena, and the princely castle still remains Pop (commune), 1881, 12,587, 1901, 14,487, 1911, 16,996

CORREGGIO, properly ANYONIO ALLEGIT (c 1494-1534) A Lombard painter of the Renaissance, the greatest master of the Emilian school His family name was Allegri, but he is usually called Correggio from his birthplace, a small town near Modena We are less informed about his life than about that of any other of the chief Italian painters According to the traditional accounts, as given by Vasari and the local historians, Correggio was humble and poor and passed his life in drudgery He made an unbappy second marriage and died under distressing circumstances. But in contemporary documents it appears that his parents were tradespeople in comfortable circumstances, that he inherited property from his uncle, and was well paid for his work For his frescoes in the cathedral of Parma alone he received 1000 gold ducats, besides materials If he did not seek the courts of princes, where he might have gained high pinces, it was because of his financial and motal in-

Allegn's earliest years were passed in his native town. The lords of Correggio at that time maintained a number of artists and seientists at their court, and it was in this atmosphere that the young artist grew up. It is generally believed that he acquired the indiments of painting from his under, Lorenzo Allegri, an unimportant local painter. It is also supposed that he was a pupil of Francesco Bianchi-Ferrari at Modena, but late research has pointed out that this is unlikely, because his carliest work hears no resemblance to Bianchi's Moreover, the latter died in 1510, when Correggio was not over 16 years old. On the other hand, he may have learned anatomy and optics, in which he excelled, from Gambattista Lombardi, head of the academy at Correggio, the seems ere this to have attracted the attention of Lady Veronica Gambara, of Correggio, about whom the scientific and artistic culture of the little court centred. A probable tradition represents him as having gone with the to Mantua during the plague in 1511. Certain it is that his first works show the influence of Andrea Mantegna, particularly in his taste

for mythological subjects, his love for illusions of perspective, and in the beautiful nude figures of children and genn which abound in his works It is also likely that he studied under Lorenzo Costa (qv), who was at that time head of the school of Mantua, and perhaps under Dosso Dossi (qv), who was for a time in Mantua In Correggio's earlier works we also find traces of the influence of Leonardo da Vinci This influence appears in the handling of light and the modeling of figures, and is particularly evident in two paintings now considered to be early works of Correggio, viz, a "Holy Family," in the Malaspina Gallery, Pavia, and a "Madonna," in the Museo Civico of Milan, both of which were formerly in pos-session of Milanese families But it is not necessary to assume, as Ricci, the chief authority on Correggio, does, that he must have therefore studied in Milan He may have become acquainted with Leonardo's work in some A similar supposition is made by Thode, that because of resemblances of Correggio's frescoes in the convent of San Paolo, Parma (1518-19), with Raphael's in the Farnesiana and elsewhere in Rome, the former must therefore have visited Rome in 1517-18 Even granting this resemblance, which is not generally conceded, this conclusion seems unwarranted An artist of Correggio's merit could not have visited Rome in 1517 without attracting some attention, and Vasari's relations with the artists in Rome were such that Vasarı could not have been misinformed when he made the statement that Correggio never visited the Eternal City Correggio united in himself the tendencies of all the Lombard schools—of Mantua, Milan, Bologna, and Ferrara—but it is unwarranted to infer that he studied in all of them

In 1513 he returned to Correggio, and in 1514 he signed a contract to paint an altarpiece for the Franciscan church in that town In 1518 he removed to Parma in response to an invitation to decorate with frescoes the chamber of the Abbess of San Paolo In this city he passed the greater part of his remaining life and painted his greatest works; here also he founded his school Besides numerous easel works and altarpieces, he was engaged from 1520 to 1524 in painting the frescoes of the cupola of San Giovanni in Paima, and from 1526 to 1530 he adorned the great cupola of the cathedral In 1530, probably because he was displeased with the criticisms of this last great masterpiece, he returned to his native town and there passed the remainder of his of Veronica Gambara, occupying himself with mythological subjects. He died on March 5, 1534 He was married in 1520 to Girolama Merlim, a maden of 17 She may have been the inspiration of three of his most charming Madonnas, which seem to have been suggested by domestic scenes She bore him four children, of whom a son and a daughter survived This son, Pomponio, was a painter, but, unlike his father, a very mediocre one died in 1529.

Correggo's individuality is so marked, and his mastery of technique was developed at such an early age, that it is impossible to divide his work into distinct periods such as in the case of Raphael We may, however, distinguish two periods separated by the year 1518,

when his great decorative works began. His earliest works are those executed before 1514, of which, according to the researches of Morelli, there are nine in all, to which modern critics add six more. A characteristic example is a charming "Madonna" in the Uffiza in Florence. She sits enthroned in the douds, with two angels making music on either side. The general disposition of the picture resembles Mantegna's, but the execution and the delicate transitions from light to shadow, the soft, round figures, and the dreamy, magical tone are characteristics of Correggio. The two paintings mentioned above as showing the influence of Leonardo also belong to this period.

fluence of Leonardo also belong to this period. In his large altan piece for the Franciscans of Correggio (1514), now in Diesden, the painter appears before us with a style already developed, showing the influence of Mantegua and the Emilian school. The Madonian sits on a high Renaissance throne, with two saints on either hand. The most interesting figure of the composition is St. Francis, whom she is blessing. He seems the incarnation of the happy and gentle spirit that softened and changed the Middle Age. A number of other works of a religious nature belong in the period of 1514-18, among which is the charming "Zingarella" of the Naples Gallery

The frescoes in the convent of San Paolo (1518) form an epoch in Corregito's career, for they were his first monumental efforts, and with them he may be said to have begun the school of Parma. They reveal him as a master of mythological representation, the peer of Raphael himself On the principal wall of the Abbess's chamber is the figure of Diana returning from the chase, in a car diawn by white stags. The ceiling is decorated with a trelliswork of vines, from which peer 16 little cupids, bearing attributes of the chase—the most bewitching figures imaginable. Lower on the walls are 16 lunctes filled with the mythological figures, like the Fates, the Graces, and Satyrs.

In the cupola of San Giovanni of Parma Correggio attempted a grander style of composi-tion (1520-24). This was the first example of a cupola to be treated with frescoes, and Correggio had no precedents to follow He treated the cupola as if it were the heavens, portraying Christ and the Apostles amid the clouds In the centre was Christ in glory, a specimen of keenest foreshortening. The Twelve Apostles, rapt in deepest wonder, are seated upon the cloud below, and in the pendentives are the four Evan-gelists and four fathers of the Church in groups of two-all figures of the utmost nobility of conception. The decorations of the cupola of the cathedral of Parma (1526-30) are grander still and constitute his most ambitious effort. Their subject is the "Ascension of the Virgin." In the upper half of the cupola Christ goes forward to meet the Madonna, who is borne upward by a host of angels. In the lower part stand the Apostles gazing in rapt wonder upon the scene, and behind them are a large number the scenc, and benind them are a large number of beautiful genin with candelabra and the like, as if preparing for a great celebration. The numuerable hosts of the angels seem to float beneath the Madonna, and the whole picture is animated with ecstatic joy. The color is beautiful and soft—the great freeso has well been termed an apotheosis of color.

These three series of frescoes were his great-

est works But in addition to these Correggio painted many other pictures during the period 1520-30 The famous "Marriage of St erine," in the Louvre, was painted in 1522 It is impossible to conceive more beautiful and expressive heads than these, or hands and hair more perfectly painted. Conleggio's works of this period may best be studied in the galleries of Parma and Dresden Foremost among them is a series of five great altarpieces, the best of which are the so-called "Night" and "Day" The latter, which is in Parma represents the Madonna and a very beautiful Magdalen, painted in the full light of the day, which is wonderfully diffused. The famous "Night," in Dresden (ordered in 1522, but not painted until 1529), is in reality a birth of Christ, in which the light issues from the new-born infant, lighting with wondrous radiance the Madonna, and the faces of the two women and the shepherds, which stand out in vivid contrast to the darkness above. Never were light and shade better handled than in these two pictures On the other hand, Morelli has conclusively shown that the well-known "Reading Magdalen" of the Diesden Gallery is no Coireggio at all, but probably a copy by Adrian van der Werff, or, as later critics assume, by an Italian painter.

The last period of Correggio's life was chiefly

The last period of Correggio's life was cluedly spent in painting mythological pictures Earthly love was the theme he sought to portray, and none could portray it better than he. His work is sensious, but not sensual. His "To" and his "Leda" are as innocent and charming as the Greeks themselves conceived them. Perhaps the finest of these productions are the "Jupiter and Antiopo" in the Louve, and the "Danae" of the

Borghese Gallery, Rome

Correggio's canvases are peculiarly impressive because of his wonderful treatment of light and shade, of which he was the greatest master among the Italians He generally represents the chief figures in high light, which is vividly contrasted with the surrounding gloom His colors are soft and harmoniously blended, and the values are accurately given; his carnation is perfect. His figures are faultlessly modeled, and with him a picture is no longer a flat surface. Another chief characteristic of his work is the dramatic action of his figures, which is sometimes so pronounced that their movements seem exaggerated, as was also the case with those of Michelangelo. But in the case of Corego the effect is softened by the mystic lightwhich envelops the picture. His drawing is said to be maccurate, but such cases are certainly exceptional. Correggio drew with his brush, so to speak, and the general effect of the pictures is most charming. In the strength of his individuality, in the subjectivity of his pictures, he is second only to Michelangelo His place in the history of art is among the five great Italian painters, with Michelangelo, Leonardo, Raphael, and Titian. The school of Parma which he founded was not of great importance, Parmigiano (q.v.) being the only pupil of note. But Correggio exercised great influence upon the Carracci in the following century and was the great model of the Baroque painters.

Bibliography. The researches of Morelli, cpoch making for Correggio, are still an authority. Of the earlier monographs the most important was the comprehensive work by Landon (Paris, 1803-20). By far the most unportant work is that of Racci (Eng trans, London)

"HOLY NIGHT," FROM THE PAINTING IN THE ROYAL MUSEUM, DRESDEN

don, 1896) Others are by J Meyer (Eng trans, 1b, 1876), Heaton (1b, 1882). Thode, "Colleggio" in Kunstler-Monographien (Bielefeld, 1898), Sturge Moore (London, 1896), and Gronau (Stuttgart and Leipzig, 1907) Se also Berenson, Studies in Italian Art (London, 1901)

CORREGIDOR, körrey't-dör, Sp pron körlå'nit-dör' (Sp corregudor, Portug corregedor,
corrector) The Spanish and Portuguese title
of the puncipal magistrate of a town The
term is sometimes applied also to certain provincial magistrates in Spain

CORREGIDOR ISLAND, Philippine Islands. hes in the entrance to Manila Bay (Map Luzon, D 9), and divides the entrance from the China Sea into two channels-the Boca Chica to the north, 3 miles wide, parting the island from Bataan on the mainland of Luzon, the Boca Giande, 6½ miles wide, from Cavite The island is 4 miles in its greatest dimension, from east to west, its area is 2 square miles, and 5 dependent islands cover 2 square miles The greatest elevation is 639 feet, near the western end. Three springs afford an abundant supply of water conveniently placed for shipping There are four lighthouses San José is the only town, its fixed population is about 500 The dependent ıslands are El Fraile, Horadada, La Monja, Pulo Caballo, and Santa Amalia The island is the first post of the inner line of defense of Luzon and is heavily fortified In the stormof Lizon and is heavily fortified. In the storming of Manila Bay, May 1, 1898, Admiral Dewey steamed safely past the island, which was supposed to have been strongly fortified by the Spanish, containing the base operations for the submarine defense of the bay.

CORTRELATION (ML correlate, from Later com., together + relatus, p p of referre, to refer, from re, back + ferre, to bear). The recuprocal influence of plant organs. The removal or unusual development of one organ may affect the mode of development of others. For example, if the terminal shoot of a pine be cut away, one or more neighboring laterals will grow erect and in a measure take its place, and branches will be formed on all sides of the new leader. Otherwise it would have grown almost horizontal and become branched only in a horizontal plane. See

CORRENTI, kôr-rěn'tě, CESARE (1815-88) An Italian statesman and revolutionist, born in Milan and educated in that city and in Pavia He originated several important statistical works and the almanac Nipote del Vestaverde As one of the strongest opponents of Austrian domination in Italy, he contributed materially towards the establishment of unification. In the work entitled L'Austria e la Lombardia (1845) he set the popular sentiment against Austria, and during the insurrection at Milan (March 18-22, 1848) was appointed Councilor of War and Secretary General of the provisional government, of which he eventually became in some respects the central figure In 1860 he was appointed Councilor of State, in 1866 he was intrusted with the organization of the Venetian Provinces, and subsequently he served as Minister of Education in the Ricasoli (1866) and Lanza (1869-72) cabinets Correnti had exceptional oratorical power and marked literary ability. The publications with which he became identified, either as editor or as collaborator, have advanced statistical science in Italy.

COR'RESPOND'ENCE (Lat com-, together

+ respondere, to answer, from re-, back + sponder e, to promise). A term used in mathematics to express certain reciprocal relations If each individual of one group of objects bears a certain relation to a definite number of individuals of another group, and a definite number of in-dividuals of the first group bears the same relation to each individual of the second group, there is said to be a correspondence between the objects of the groups. If 1 of the first group corresponds to B of the second, and 1 of the second group corresponds to A of the first, the relation is called an A to B correspondence A = B = 1, it is called a 1 to 1 ( = 1) correspondence, eg, two numbers are said to be equal when there exists a 1 to 1 correspondence between their units In geometry the simplest cases of 1 to 1 correspondence, or "conformal representation," are furnished by two planes superposed one upon the other Here to every point of the first figure there corresponds one and only one point of the second figure, and to every point of the second figure there corresponds one and only one point of the first simplest case of Chasles's (qv) correspondence formula may be stated thus: If two ranges of points R1 and R2 lie upon a straight line so that to every point w of R, there correspond in general a points y of R2, and again to every point y of  $R_2$  there always correspond  $\beta$  points  $\chi$  of  $R_1$ , the configuration formed from  $R_1$ and  $R_2$  has  $(\alpha + \beta)$  councidences, or there are  $(\alpha + \beta)$  times in which a point  $\chi$  corresponds with a point  $\omega$  From these linear transformawith a point w From these linear transforma-tions Poncelet, Plucker, Magnus, Steiner, passed to the quadratic, where they first investigated 1 to 1 correspondence between two separate planes The "Steiner projection" (1832) employed two planes E1 and E2 together with two straight lines  $g_1$  and  $g_2$  not coplanar If we draw through a point  $P_1$  or  $P_2$  of  $E_1$  or  $E_2$  the straight line  $w_1$  or  $w_2$  which cuts  $g_1$  as well as  $g_2$ , sand determines the intersection  $X_2$  or  $X_1$ , with  $\Sigma_1$  or  $\Sigma_2$ , then are  $P_1$  and  $X_2$  and  $P_2$  and  $X_3$  corresponding points. In this manner to every straight line of the one plane corresponds a straight line of the one plane corresponds as conic section in the other. In 1847 Plücker had determined a point upon the hyperboloid of one sheet, like fixing a point in the plane, by the segments cut off by two fixed generators upon the two generators passing through the point was an example of a uniform representation of a surface of the second order upon the plane Correspondence relative to surfaces has studied by Chasles, Clebsch, Cremona, Cayley, and others In space of three dimensions, only a beginning has been made in the development of this theory. Consult Schubert, Kalkul der abzahlenden Geometrie (Leipzig, 1879); Klein, Vergleichende Betrachtungen über neuere geo-metrische Forschungen (Erlangen, 1872), Mobius, Der barycentrische Calcul (Leipzig, 1827), Holzmuller, Theorie der isogonalen Verwandtschaften (1b., 1882), Riemann, Ueber die Hypothesen, die der Geometrie zu Grunde liegen (ib. 1854), Pasch, Vorlesungen über neuere Geometrie (ib. 1882) CORRESPONDENCE SCHOOLS Institu-

CORRESPONDENCE SCHOOLS Institutions for the provision of instruction in all branches of education by mail to those who are unable to avail themselves of the opportunities of attending ordinary schools and colleges. The system aims to provide plans of work, outlines, and exercises by correspondence. The method probably originated with the University Extension movement in England, there organized in 1868 and introduced in America in 1873 In 1883 a Collespondence University was established in Ithaca, N Y The system received its greatest extension through the work of Pres R Harper in connection with the Chautauqua Institution, which abandoned this function when it was taken over by some of the universities, notably Chicago and Wisconsin, and many private institutions established for this purpose, notably the International Correspondence Schools Almost every branch of at Scranton, Pa knowledge, both for self-improvement generally or in connection with the trades or vocations, can be studied in this way

CORRESPONDING STATES, THEORY OF See CRITICAL POINT

CORREZE, ko'1ez'. A south central department of France (qv), formely part of the Province of Limousin, taking its name from an affluent of the Vezere, the Correze, which traverses the department from notheast to southwest (Map France, S, F3). Area, 2278 square miles, pop, 1896, 310,134, 1901, 318,422, 1006, 317,430, 1911, 390,646 The surface of the department is mountainous, especially in the north and east, where it is broken in upon by offsets from the Auvergne Mountains, which lange from 2500 to 3320 feet (Mont Beason) above the sea. It produces wheat, oats, barley, rye, mazze, and potatoes, though not in quantities sufficient for its own needs Grazing is also carried on Coal, iron, lead, antimony, and copper are found in considerable quantities, shoes, chairs, paper, and leather are manufactured. Capital, Tulle

CORPAIS, Lorest A lake with an area of 68 squane miles, which divides Galaway, in the westein part of Ireland, into an eastein and a western section (Map Treland, into an eastein and a western section (Map Treland, B) From its outhern end, 4 miles north of Galway, it discharges its surplus waters by Galway, it discharges its surplus waters by Galway, River into Galway Bay If receives the waters of the Clare and smaller rivers, and those of Lough Mask, subternaneously through the Pigeon Hole and other caves at its northern end. On its sides are metamorphic rock, Carboniferous Imestone, and marble. Near it are many monumental heaps and megalithic circles It contains 300 slets, and to the west are mountains 300 slets, and to the west are mountains

CORRIENTES, kon-ryan'tas A city of Argentina and capital of the province of that name, situated on the Panana, just below the mouth of the Paraguay and not far below the mouth of the Bernejo (Map Argentina, F 9). It has several plazas, hespitals for men and women, a poorhouse, a national college, a normal school, a theatre, and a library The natural-history museum was at one time managed by the naturalist Bompland. The city is the centre of a feinhe district and has considerable trade in lumber and oranges. Its chief industry is ship-building, but there are also meat-cuming establishments and a foundry. Pop., 1909, 23,904. Cornentes was founded in 1588. It occupied a place of considerable prominence in the revolutionary movements during the latter half of the nuncterth continy.

OCKRIGAN, MIGHAEL AUGUSTINE (1830-1902) An American Roman Catholic prelate, born at Mewark, N. J. He graduated in 1859 at Mount St. Mary's College (Emmitsburg, Md.) pursued a theological course at the American College of Rome as one of the 12 students with whom that institution was begun, was ordained priest in 1863, and from 1864 to 1868 was professor of dogmatic theology and sacred Scriptures in the Diocesan Seminary of Seton Hall College (South Orange, N J) From 1868 to 1873 he was president of the college and in 1873 was appointed Bishop of Newark During his administration of the diocese he greatly increased the number of churches, introduced religious communities, and founded charitable institu-tions In 1880 he became coadjutor (with right of succession and the title of Archbishop of Petra) to Cardinal McCloskey, Archbishop of New York, and from that time directed the larger part of the work of the archdrocese He entered into the office of Archbishop of New York in 1885 and received the pallium in 1886 His administration was marked by the prolonged controversy between Dr Edward McGlynn (q v ) and the Roman Catholic church He effectively developed the aichdiocese, which at the time of his death was one of the largest and most im-portant in the world Although personally retiring and unobtiusive, he became known, through his many activities, as one of the most prominent Roman Catholics in the United prominent Roman Catholies in the United States He was a scholar of high attainments Consult J A. Mooney, Michael Augustine Coigan A Memorial (New York, 1902) GORROYOREE (Australian). A sort of ceremonial dance, of a more or less public characteristics.

CORROBOCKEE (Australian). A sort of cenemonal dance, of a more on less public character, in vogue among the Australian aborigines. The corroborce is held at night, and various types of it occur all over the country, or are borrowed from tribe to tribe, some of a warlike, some of an instorical, others of a lascivious character Generally the men do the dancing, and the women furnish the accompanying music The songs that go with the corroborce give scope for individual and tribal invention. The corroborce combines in itself the elements of the opera of to-day. It is the nearest approach to a national institution among these primitive people. The corroborce serves also as a peace ratification and as a means of intercommunication, etc. Consult Roth, Bithaologual Studies among the Northwest-Central Queensland Aborigines (1897).

CORRODI, A Swiss poet and draftsman, torn a Zurich. He studied theology, but became a painter and from 1802 to 1881 taught drawing in Winderthui. In his poems, many of which are written in the popular dialect, he mirrors the life of his native canton, celebrating its customs and reviving many of its best traditions. His works, which are generally distinguished by a fine sense of humor, includence of the stanguished by a fine sense of humor, includence of the stanguished by a fine sense of humor, includence is sudermal sieben Jahren (1855). Walleben, a lyrical novel (1857). The works of Coirodi written in the dialect of Zurich include. De Herr Professer, an idyl (1858). De Herr Vaharu (1858); De Herr Dokter, an idyl (1800, diamatized by the author in 1872); Wie & Warret.

wurkt, a comedy (1887); and a translation of the works of Robert Burns into Swiss German (1872). Corroda illustrated several of his own books CORROSIVE SUBLIMATE. See MERCURIO

Chloride. CORROZ'OZO NUTS. See Ivory, Vegetable

COR/RUGATED IRON COR'RUGATED IRON A name given to sheet iron or steel in which grooves and ridges have been produced by passing the sheet between rollers, the surfaces of which are formed into rounded grooves and 11dges, the ridges of one roller filling the grooves of the other By corrugation the stiffness of the metal sheet is greatly increased, and it is adapted for use in many places where a metal covering of lightness and strength is required, such as roofs, awnings, and the side walls of sheds and factory build-Corrugated iron is frequently galvanized with a thin layer of zinc to make it less liable to corrode or rust, a small percentage of copper is also alloyed with iron before corrugating for the same purpose It is manufactured in a variety of thicknesses and with corrugations varying in size

CORRUPTION OF BLOOD. The blasting of inheritance one of the consequences of an attainder for treason or felony under the old common law, whereby the offender was cut off, or outlawed, from all of his blood relationships and so rendered incapable of inheriting lands or of transmitting them by descent to his natural heirs, lineal or collateral The effect of the corruption of blood being the extinction of the line of heirs of the person attainted, his lands at once, upon his execution, became subject to the law of escheat and became vested in his superior lord In cases of treason the principle of forfeiture gave the lands to the king absolutely, and in cases of ordinary felony they went to the crown for a year and a day before escheating to the lord This barbarous penalty survived in England, nominally at least, until 1870, when it was abolished by the Forfeiture Act It has never been tolerated in the United States and is expressly forbidden by the Constitution, which declares (Art III, Sec 3, n 2) that "no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted" The constitutions of the several States contain similar provisions See At-

TAINDER, FORFEITURE, TREASON
CORRUPT PRACTICES. Dishonest methods employed with the intent to influence the results of public elections The practices, to which the expression refers are the use of bribery, treating, undue influence, personation of voters, making false election returns, and knowingly making a false declaration as to election expenses Of these, bribery, personation, and making false returns are common-law offenses and render the offender liable to indictment, and so, it has been held in England, is the giving of entertainment to voters with the corrupt intention of influencing an election. Any of the acts enumerated above, excepting that of making a false declaration as to election expenses (which is purely a statutory offense), whether criminally punishable or not, will at common law vitiate the result produced by them, and, if the corruption be general, will have the effect of nullifying the election itself

The prevalence of bribery and other corrupt practices at parliamentary elections in England, and at all partisan contests in the United States, has in recent years led to the enactment of statutes in both countries to check the evil. The English Parliament led the way in these reforms by enacting the Corrupt Practices Prevention Act in 1854, which was aimed particularly at the practice of electoral bilbery. This was followed in 1868 by the Parliamentary Elections Act, and in 1883 by the Corrupt and Illegal Practices Pre-

vention Act Altogether these statutes constitute a most comprehensive and well-devised body of legislation, and they have proved themselves to be admirably adapted to the end in view They define with great particularity the acts which shall constitute the prohibited offenses, and prescribe the severe penalties of disfranchisement and the avoiding of the elections for their commission. The personation of voters is made a felony, and bribery and the other practices enumerated are declared to be misde-Many of the best provisions of these meanors statutes have been incorporated in the election laws of American States For the history and scope of these laws, see Electron, Electronal Reform The English law may be further studied in Rogers, Elections (17th ed., London, 1895), Mattinson and Macaskie, Law Relating to Corrupt and Illegal Practices (3d ed, London, 1892)

CORTEX. A city in Eric Co, Pa, 37 miles by all southeast of Eric, on the Eric and the Pennsylvania railroads (Map Pennsylvania, B 2). The State Fish Hatchery and the high-school buildings are prominent features Corry has steelworks, machine slops, flour and feed mills, brickworks, and manufactures of tram locomotives, stationary, gas, and steem engines, leather goods, corsets, furniture, radiators, shovels, wrenches, brushes, toys, etc. If has also extensive dairying interests. There are three mineral springs of value in the vicinity. Settled in 1880, Corry enjoyed a rapid growth, due to the existence of petroleum in the vicinity. The city adopted the commission form of government in December, 1913. Pop., 1890, 5677, 1900, 5369, 1910, 5981.

CORVEY ( from OIr corre, ravine, Swiss Kahre). A name applied to the recesses in a mountain slope beneath a sharp peak with serrate spurs, characteristic of the high Alps These are referred by E Richter to glacial erosion under specific conditions, although no glaciers occur in them at the present time See Cimoure

CORYSAC (native name), or Addive A small fox (Vulpes orrsac) of the deserts of Central Asia, its range extending through the open country from the Ural Mountains and Caspian Sea to Mongolia. It is pale, reddish yellow in hite, white on the ventral surface, and with the tip of the long bushy tail black. In the sixteenth century it was fashionable as a ladies pet in France It digs holes for itself or seizes upon marmot burrows, preys, chiefly at night, on young marmots, small rodents, insects, etc. and resembles the American kit fox (qv) The Russian traveler Pizewisky reports it as abundant in Tibet, where it is called kossa by the Mongols, and is both trapped and run down by dogs During the breeding season, in February, the high deserts resound with its owl-like cries, night and morning See Fox, and Plate of FOXES AND JACKALS

CORSAIR (Fr corsaire, from Prov corsair, Sp, Portug corsair, It corsairo, corsair, from corsa, Sp, Portug corso, tt. corsa, course, from Lat cursus, course, from currere, to run) A pirate or freebooter, or the vessel used by one The term was used with special reference to the marauding vessels of the Barbary Powers.

CORSAIR. One of the smallest and most brilliantly orange-red rockfish (Sebastichthys rosaceus) of the California coast See RookCORSAIR, THE A narrative poem by Byron (1814) The romantic adventures of the lofty-spirited who is its hero are sup-

posed to be continued in Lara

CORSE, JOHN MURRAY (1835-93) An American soldier, born in Pittsburgh, Pa In his eighteenth year he entered at West Point, which he left to take up the study of law He enlisted in the Union army at the outbreak of the Civil War, commanded a division at Memphis, and became bilgadier general in 1863. He distinguished himself in the Chattanooga campaign, was in command of a division in General Sherman's "March to the Sea," and was brevetted major general for his heroism at Altoona Pass While defending this place Sherman sent him a sun telegram saying, "Hold the foit, for I am coming," an exhortation taken by Ira D Sankey as the topic of a hymn He was afterward collector of revenue in Chicago and

postmaster of Boston.

COR/SET (F1, dim of corps, OF cors, body, from Lat corpus, body). An article appertaining to the costume of women, which was introduced into France about the time of the Revolution, when the French ladies adopted the Greek Previously they had been worn by Germans, by whom they were invented. Bandages resembling corsets were used in Rome during the early ages, but only as a support, until a slender warst was considered a mark of beauty, when they were made to compress the form Modern corsets, which vary with the dictates of fashion as regards shape, design, and material, are usually made of two thicknesses of white jean, silk, or other material, quilted together so as to form vertical cases, in which steels or whalebones are inserted, or they may be wholly, or in part, of some clastic or webbing material. Usually they are in two pieces, closed in front with steel or whalebone plates, which rest on the breastbone vertically, and laced at the back as tightly as the wearer may desire. With the more general participation of women in various athletic sports there have been many modifications in coiscts aimed to secure freedom of movement, while the change from the hourglass figure, at one time fashionable, to classical or Empire costumes led to important innovations. As these styles demanded straight lines in preference to curves, consets were modified accordingly, and at the same time a tendency developed to do away with these one-time essentials to diess and to emphasize the more natural figure Whatever the changes called for by designers of fashions, the corset maker was always ready with new contrivances or substitutes to secure the desired figure. The manufacture of corsets in the United States more than doubled in value in the decade 1899-1909, and in 1909 the United States Census of Manufactures reported 138 establishments (a decrease from 205 in 1890, but increase in capital and product), with a capital of \$18,033,000, devoted to the manufacture of corsets. The value of the product in 1909 was \$33,257,000 As showing the tendency towards concentration and consolidation in this industry, it may be said that while the number of establishments in 1909 was no greater than in 1899 (138 at each census) the amount of capital invested increased from \$7,290,000 in 1899 to \$18,033,000 in 1909 and the value of the output from \$14,451,000 to \$33,257,000.

COR'SICA (Gk. Kúpros, Kyrnos, Kopols, Korsts, Lat. Corsica, Fr. Corse). An island belonging to France (the fourth in size of the islands in the Mediterranean), situated between lat 41° 21' and 43° N and long 8° 32' and 9° 31' E. (Map France, S, L 7) It is separated by the Strait of Bonifacio from Sardinia, on the south, and occupies an area of nearly 3368 square miles In the northeast is a long, nairow penin-sula, pointing in the direction of Genoa and terminating in Cape Corso In its physical formation Corsica undoubtedly belongs more to Italy than to France Its surface is traversed by numerous mountain ranges of rugged appearance and covered with beautiful forests. principal chain runs from north to south, sending off numerous offshoots in every direction The highest summits of the island are Monte Cinto, 8881 feet, Monte Rotondo, 8612 feet, Monte Padio, 7851 feet, and Monte d'Oio, 7845 feet high The coasts are precipitous on the west, while on the east they are low and in some parts even swampy The chief geological formation is granite, occasionally interspersed with popphyry and serpentine There are a number of short and swift streams on the island, the principal of which are the Golo, Tavignano, and Taravo. The climate is generally healthful and the temperature moderate, the average for the summer being about 75° F The lower parts of the island are occasionally visited by malaria, but the mountain regions are very salubrious The vegetation of the island is rich, and the fine forests of chestnut, pine, and beech for which Coisica was famous in ancient times are still found on the mountain slopes The flora of the valleys does not differ materially from that of Italy. There is an abundance of clives, oranges, citions, vines, and other Mediterranean plants The inhabitants, numbering about 300,000, are not enterprising, and, because the island is somewhat apart from the lines of regular traffic and intercourse with other peoples is wanting, they have retained many of their primitive customs. The soil is very fertile, but agriculture is in

a low state, less than half the total area being cultivated There is scarcity of both labor and capital The chief products are wheat, barley, iye, corn, wine, fruits, and chestnuts, the latter being used extensively for food. The agricultural work is done in part by laborers who come over from Tuscany. The number of cattle and over from Tuscany. horses is small, but sheep and goats are numerous. The silkworm is cultivated There are also good fisheries of tunny and pilchard. Among the minerals mined are iron, lead, copper, and antimony, and there are quairies of granite, marble, and alabaster The chief imports are foodstuffs, building materials, and metal ware. The exports consist mostly of wine, olive oil, fiuits, and chestnuts. Coisica forms a depart-ment of France, and is divided into the five arrondissements of Ajaccio, Bastia, Calvi, Corte, and Sartène The population in 1901 was 295,-589, in 1906, 291,160; in 1911, 288,820, or 858 per square mile The Corsicans are of mixed origin, independent in spirit, passionate and revengeful. (See Vendetta.) They are simple and soler, but scorn work and pay little attention to the development of the natural resources of their island. The vernacular is a corrupt Italian The capital is Ajaccio, with a communal population of 19,227 in 1911; Bastia had 29,412 inhabitants. There are no other large towns, Corte had in 1911 5211 inhabitants, and Sartène 4746.

Corsica is supposed to have been originally in-

habited by Ligurians It was settled in succession by the Etiuscans, the Phænicians, and the Phoceans, and finally came into the pos-session of the Carthaginians in the fifth century Wrested by the Romans from the Carthaginians in the second half of the third century BC, the island remained for seven centuries under the sway of Rome, until, after repeated attacks by the Vandals, it finally fell into their hands in 469 After the conquest of the Vandals by Belisarius in 534, Corsica was occupied successively by the Byzantine Empire, the Goths, Franks, and the Saracens Towards the end of the eleventh century it came into the possession of the Pisans, by whom it was ceded in 1347 to the Genoese The rule of the latter was marked by continuous revolts on the island, and the ruling city found itself compelled on several occasions to ask assistance from Austria and France In 1736 a German adventurer, Baron Theodor von Neuhof, became King of Corsica, but soon was obliged to leave the island, and was never able to return. The uprisings under the leadership of Paoli during the second half of the eighteenth century were of the most serious nature In 1768 Genoa made Corsica over to France. Paoli made an attempt to resist the French rule, but the dispatch of French troops to the island compelled him to seek safety in England He returned in 1790, and in 1793 headed a successful rising, in which the British lent assistance to the patriots In the following year Corsica came under the protection of Great Britain, from which it obtained a constitutional form of government Two years later the British were forced by the French to evacuate the island, which has ever since remained in the possession of France Corsica is noted as the birthplace of Napoleon Consult Girolami-Contona, Géographie genérale de la Corse (Ajaccio, 1893), Vuillier, The Forgotten Isles (New York, 1896), Caird, The History of Corsica (London, 1899)

CORSICANA, kôr'sê-kă'na A city and the county seat of Navarro Co, Tex, 62 miles, by A city and rail, south-southeast of Dallas, on the Houston and Texas Central, the St Louis Southwestern, and the Trinity and Brazos Valley railroads (Map · Texas, D 3) It is the seat of the State Orphan Asylum and has an Odd Fellows' widows' and orphans' home, a Carnegie library, sanitariums, a fine courthouse, Federal and highschool buildings, a natatorium, and an Elks Corsicana is a progressive manufacturing centre, having among its industries large cotton mills, gins, and compresses, sheet-metal works, broom, harness, candy, overall, and sodawater factories, cottonseed-oil mills, brickyards, flour mills, a grain elevator, foundry and machine shops, planing mills, etc. It is also the seat of an extensive oil industry, there being in its vicinity a number of wells, oil machinery factories, and two large refineries The sewage system is owned by the city Pop, 1910, 9749.
COR/SICAN BROTHERS, The A romantic

drama adapted by Boucicault from a French

play. Les frères corses

CORSINI, kôr-sẽ'nė A celebrated Florentine family, which from the thirteenth century was prominent in the history of Italy The most famous was Andrea (1302-73), Bishop of Fiesole, who was canonized in 1629. He was for 40 years a monk in Florence and then was made Bishop of Fiesole, and later legate to Bologna That town was in the midst of a civil

war, but the eloquence of Corsini was successful in subduing it Austere in his life and ambitious only for his church, he was a type of the mediæval bishop ent XII in 1730 He restored the Corsini Palace in Rome, now containing the interesting Corsini

CORS'NED (AS corsnæd, from coren, pp of ccosan, Goth kiusan, OHG kiosan, Ger kiesen, to choose + snæd, bit, from snipan, Goth, snei-pan, OHG snidan, Ger schneiden, to cut) A form of ordeal in early English law, which consisted in administering to the accused a morsel of barley bread, about an ounce in weight, which had previously been endowed by execration with the magical power of exposing his guilt or innocence If the accused was innocent, the bread was readily swallowed, if guilty, it struck in his throat and killed him It was in this way (the chroniclers tell us) that Godwin, Earl of Kent, met his fate in the reign of Edward the Confessor when accused of the death of the King's brother Compare the similar ordeal of the "water of jealousy," which, according to the Mosaic law, was administered among the Jews to a woman charged with adultery (Num v) Consult Blackstone, Commentaries on the Laws

of England, bk iv, p 345 See Ordeal
COR/SO (It, course) A word used to express not only the racing of riderless horses, but also the slow driving in procession of handsome equipages through the principal streets of a town, such as almost always takes place in Italy on festive occasions This custom has given the name "Corso" to the principal streets in almost all the larger towns of Italy. best known of these is the Corso in Rome

COR/SON, HIRAM (1828-1911). An American scholar, born at Germantown, Pa He held positions in the Libiary of Congress and the Library of the Smithsonian Institution from 1849 to 1856, and taught in Girard College, Philadelphia (1865-66), and St. John's College, Annapolis (1866-70), and was professor of the English language and literature at Cornell Un-versity in 1870-1903 In 1906 he became a pensioner under the Carnege fund His publi-cations include: Handbook of Anglo-Saxon and Farly English (1871), Introduction to the Study of Browning (1886), Introduction to Shake-speare (1889); Primer of English Verse (1892), The Ams of Literary Study (1895), Selections from the Canterbury Tales (1896), The Voce and Spiritual Education (1896), Introduction to the Prose and Poetical Works of John Milton His Shakespearean textual criticism is (1899) of the highest value, and his interpretation of poets, especially of Browning, is luminous and sympathetic

CORSON, JULIET (1842-97) An American educator and author, born in Boston. She was secretary of the New York Free Training School for Women in 1872-73 and devoted herself to study and experiments on healthful and economical cookery and dietetics. In 1876 she established the New York School of Cookery She wrote several popular books, among them Fifteen-Cent Dunners for Workingmen's Fumilies (1877), Dietary for Schools (1878), piepared at the request of the United States Commissioner of Education, Cooking Manual (1878), Local American Cookery (1885), Living on Five

Hundred a Year (1886) CORS'SEN, WILHELM (1820-75). A noted German philologist, who devoted himself espe-

cially to the ancient Italic languages and dia-He was boin in Biemen, Jan 20, 1820, studied philology in Berlin (1840-44), and became professor of classical philology at Schul-pforta in 1846 On account of ill health he retiled in 1866 and dedicated the remaining years of his life to research at Berlin He died at Lichterfelde, near Beilin His most important work, Veber Aussprache, Volalismus und Betonung der lateinischen Sprache, was published in 2 vols in Leipzig (1858-59), icceiving the prize offered by the Royal Piussian Academy of Sciences for the best work on that subject A second edition appeared in 1868-70 It was followed and completed by Knitische Beitrage zur lateinische Formenlehre (1863) and Knitische Nachtrage (1866) Corssen afterward visited Italy and then set himself to prove that the Etruscans were an Italic people, allied closely to the Latins, in support of which theory he published a monumental work, Ueber die Sprache der Etrusher (2 vols, Leipzig, 1874-75) arguments met at once violent and universal opposition (see especially Wilhelm Deecke, Corssen und die Sprache der Etrusker, eine Kritik, Stuttgart, 1875) and have never found support

CÓRSTÓRPHINE, GEORGE STEUART (1808—). A Britals geologist, born in Edinburgh. He was educated at the universities of Edurburgh and Munich, in 1805 became professor of Edurburgh and Munich, in 1805 became professor of Edurburgh and Reper of the geological department of the South African Museum, in 1806 director of the Geological Survey of Cape Colony, and in 1902 consulting geologist of the Consolidated Gold Fields of South Africa, Ltd From 1908 to 1912 he was in private practice, after 1913 he served as principal of the South African School of Mines and Technology Besides his annual reports of the Geological Survey of South Africa (1806—1901), and papers in the Transactions of the Geological Society of South Africa (1905–44), he is coauthor with F H Hatch of The Geology of South Africa

CORT, kort, Cornelis (c 1533-78). An eminent Dutch engraver and etcher He was born in Hoorn, Holland, but removed to Antwerp, where he was first instructed by Hieronymus Cock, for whom he executed plates which were published with the signature of his master, as well as original landscapes. In 1566 he visited Venice, where, under the personal influence of Titian, whose best pictures he reproduced, he developed an admirable style In 1571 he went to Rome and established an influential school there. The art of engraving had previously been confined to small plates, and Cost was the first to use a larger size. He was the chosen engraver of the two Zucchari, Miziano, and the miniature painter (Tovio, besides reproducing works of Raphael, Michelangelo, and other Italnan and foreign painters in Rome His work furnished a model for an entire generation in Italy, and until the appearance of Goltzius he was considered the foremost engraver. Among his pupils were Philippe Thomassin and Agos-tino Carracci. Consult Longhi, Calcographia (Milan, 1830), and Bartsch, Anleitung zur Kupferstichpunde (Vienna, 1821)

CORT, Frans DE (1834-78). A Flemish lyrical poet born in Antwerp After being associated with the publication Grondisct, he was appointed editor of the Schelde (1858) It was secretary to the general anditro of the

military court at Brussels from 1861 until his death He was one of the most distinguished lyrical poets of Belgium, and his songs, although not conspicuous for fancy or imagination, are full of deep and genuine sentiment. His works comprise Lederen (1867-50), 2mg-Zang (1866), Liederen (1868) He translated lyrics of Burns and Jasmin and German verse, and after 1861 conducted the periodical De Tockomst He edited (1869) the posthumous poems of Dautzenberg (qv), his father-in-law

CORTE, kôit The capital of an arrondusement in the Department of Corse (Corsica, q v ), at the confluence of the Tavignano and Restonica, 52 miles notheast of Ajaccio by 1-al (Map France, S. M 6), picturesquely situated among the mountains and protected by a commanding cradel which has sustained many notable suggestored was the seat of Paolix Feform government. A university founded by that power bears his name, a communal college, an ancient bears his name, a communal college, and an old Franciscan monaster which served as the parlament house in 1765, and the house in which Paoli lived also remain There are monuments to Paoli, General Gasfori, and General Casanova, Duke of Padum Marble is quarried extensively in the neighborhood, lumber, wine, oil, and cheese are the staple products Pop, 1901, 5425, 1911, 5211

THE CONTINUATION OF THE ANALYSIS OF THE COURTEST AND A FARMOUS WOLK ON CEQUALITY OF THE SAIL CASTIGLION (19'), published in 1528 There are English translations by Thomas Hoby (1561) and by L. E. Opdycke (New York, 1903)

CORTELYOU, kôr'těl-you, George Bruce ) An American public official and He was boin in New York City, (1862capitalist graduated from the State Normal School of Westfield, Mass, in 1882 and in law from Georgetown University in 1895, and was engaged in teaching until 1889, when he entered public service as a post-office inspector. He be-came stenographer to President Cleveland in 1895, assistant secretary to President McKinley in 1898, and two years later secretary. He was reappointed by President Roosevelt in 1901, and in 1903-04 was the first Secretary of the Department of Commerce and Labor As chairman of the Republican National Committee he conducted the campaign of 1904. He was Postmaster-General of the United States in 1905— 07, and Secretary of the Treasury in 1907-09, and in the latter year became president of the Consolidated Gas Company

CORTE-REAL, of CORTERREAL, kor'(h-r'(al', Gaspar and Mrouer (c.1450-c.1501). Pot tuguese may gators. In 1500 Gaspar seems to have visited the North American coast at various points between Lahnado and the Bay of Fundy From his last voyage, beginn in 1501, he did not recture, although he sent back two of his vessels which did arrive safely. His brother Mignel in 1502 set out to find him and reached the northeast coast of America, but he too failed to return. In 1503 King Manuel of Portugal sent an expedition to learn their fate, but in vain. Consult Harrisse, Les Corte-Real of Lower voyagos on nouvean monde (Paris, 1883)

CORTES, ko. ths (Sp., Portug pl of corte, court) The name given in Spain and Portugal to the assembly of representatives of the inition As one district of Spain after another was recovered by the Christian princes from the Moors, there arose in each a corporation composed of the different 'estates" or orders of the population, limiting the power of the princes From the union of several of these territories were formed the three leading kingdoms of Castile, León, and Aragón, each having its Cortes, representing the clergy, the nobility, and the cities In Aragon the Cortes appointed a judge, known as the Justicia, who decided disputes between the King and his subjects and confined the royal power within constitutional limits Castle the rights of the burghers were less extensive than in Aragón, but in both states the King was dependent on the Coites After the union of Castile and León with Aragón the crown succeeded in greatly lessening the powers of the Cortes After 1713 at did not meet till 1789, on the accession of Charles IV In 1809 the Cortes, as composed in 1789, was assembled by the Junta, and framed a new constitution, called the "Constitution of 1812," which, however, was set aside at the Restoration Spain, Government

The history of the Portuguese Cortes is very similar to that of the Spanish In 1826 Dom Pedro promulgated a new constitution after the model of the French, calling the Cortes again into life, and abdicating at the same time in favor of his daughter, María da Gloria This constitution was set aside during the usurpa-tion of Dom Miguel, but was restored in 1842 The Constitution of the Republic, adopted Aug 21, 1911, provides for a Coites of two chambers, the lower house chosen by the people, and the upper by the municipalities The Coites elects the president, who serves four years, is not recligible, and cannot be present at the debates of the chambers The members of the cabinet have a right to the floor of both chambers Consult Muro y Martinez, Constituciones de España (Madrid, 1881), Desdevises du Dezert, L'Espagne de l'ancien régime (Paris, 1897-99) , Colmerro, Cortes de los antiguos remos de León y de Castilla (2 parts, Madud, 1883-84), Ste-phens, Portugal, in the "Stories of the Nations Series", Prescott, Ferdinand and Isabella

CORTÉS, kô1-tās', HERNÁN OF HERNANDO (1485-1547) Conqueror of Mexico He was born at Medellin, in Estremadura, Spain, and was sent to the University of Salamanca, but his superabundant animal spirits and unrestrained passions for the fair sex cut short his university career. The same cause made it impossible for him to remain at home, and so he decided to try his fortune in the New An accident, received in scaling a tumble-down wall while on his way to a final clandestine rendezvous, postponed his departure until the spring of 1504, when he sailed for Santo Domingo There he joined the forces engaged in suppressing a native revolt and quickly won promotion, so that in 1511 he was the chief executive officer with the expedition dispatched under Velasquez for the conquest of Cuba, becoming subsequently aleale of Santiago Mining and stock raising, although profitable, were not sufficiently to his taste, and he persuaded Velasquez to give him the com-mand of an expedition to the mainland, made known at that time by the discoveries of Gri-Jalva No expense was spared in equipping a float of seven vessels, carrying 300 men. Velasleet of seven vessels, carrying 300 men. quez, however, became suspicious lest Cortés should refuse to recognize his authority when once he was in a position to establish himself ındependently Leanning that he was to be superseded, Cortes gathered his forces and set sail, on Nov 17, 1518, before Velasquez could order him to resign the command Stopping for supplies at the settlements on the coast of Cuba, he proceeded to Cozumel Island, sailed along the Yucatan coast, and fought a bloody battle with the natives at Tabasco In the early spring of 1519 he landed at San Juan de Ulloa obtained numerous captives, one of whom was the famous Mariana, whom he made his mis-tress, and who, out of devotion to him, acted as the interpreter, guide, and counselor of the Spaniards, and frequently saved them from serious reverses Finding a better harbor a little north of San Juan, the Spaniards removed thither and established a town, naming it La Villa Rica de la Vera Ciuz An independent government was organized by vote of the settlers. who determined to renounce their allegiance to Velásquez and to acknowledge only the supreme control of the King in Spain In order to prevent those who opposed this movement from deserting him and carrying the news to Cuba, Cortés dispatched one vessel to Spain with messengers to represent his cause at the court, and

then sank the rest of his fleet

Starting on his march inland, Cortés entered the country of the Tlascalans, who fought him vigorously for a few days, but soon came to terms with the strangers and joined them against the Aztecs, by whom the Tlascalans had been subjugated not long before From this time until the conquest was achieved, the tribe continued the most important and trusty of all the native allies of the Spaniards Advancing into the country of the Cholulans, Cortés suc-Advancing ceeded, after a little fighting, in persuading the people to accept a reconciliation with their traditional enemies from Tlascala and to join them in his train for the march on Mexico Motecuhzoma, or Montezuma, the Aztec chieftain, pursued an irresolute policy and finally determined not to oppose the Spaniards directly by force of arms, but to await their arrival and learn more of their purposes On Nov 8, 1519, Cortés entered the city of Mexico and established him-self in one of its large communal dwellings, which had belonged to the family of Motecuhpredecessors The Spaniards zoma's allowed to roam through the city at their pleasure and found much gold and other treasures in the stolehouses Realizing that a party among the native leaders were talking of driving the strangers out of town, Coités induced Motecuhzoma to come to his house, where he was kept as a hostage Shortly after, in April, 1520, messengers brought word that an expedition sent from Cuba by Velasquez under the command of Narvaez, had landed at San Juan de Ulloa, with orders to airest Cortés and send him to Cuba for punishment Cortés promptly started for the coast with a small force He found the camp of his enemies unguaided, entered on a dark night, captured Naivaez, and the next day induced nearly all the soldiers to join his own standard Meanwhile, in Mexico, Alvarado, who had been left in command, had learned that the Aztecs intended to attack him at the close of a great religious ceremony which was then being held. To prevent this, Alvarado suddenly surrounded the leaders, who were all busy with the sacrifices in one of the large courtyards of the town, and killed most of them Cortés, as soon as all danger from Narvaez was past, hastened back to Mexico. He was allowed to enter the city penecably, with his followers, but was immediately surrounded and attacked As there was no possibility of maintaining his position in the city, for lack of food or water, and as all hope of persuading the natives to desist vanished when Moteeuhzoma died, an immediate retreat was decided on Selecting a dark, sainy night—the famous Noche Triste, on June 30—the Spaniards and their native allies started out of the city. The Mexicans pressed on behind them The Spaniards were hurried along the causeways of driven into the water, where they were seized by Mexicans in canoes and dragged off to the city for sacrifice. Some 40 Europeans were captured alive, the great object of their enemies. Luckily for their fellows, the prospective sacrifices attracted the larger part of their assailants back into the city. Cortés ietreated towards Thascala At Otumba he was confronted by an overwheiming force of his enemies. In despair the harassed Spaniards hurled themselves upon the Aztecs and ciushed them. They nevertheless confinicated their retreat to Thascala, where they recuperated during the summer.

The arrival of several vessels with men and war munitions enabled Cortés to reorganize his army, so that he was prepared to take the field again in October The outlying Aztee strongholds were captured one by one, and the various subject tribes, ever ready to rebel against their native conquerors, gradually recovered confidence in the white men Carpenters had been set to work at Tlascala in constructing a fleet of small vessels, which were hauled along a canal dug for the purpose into the Mexican lake, so that it became possible to attack the city by water as well as along the causeways which connected Mexico with the land By the end of April, 1521, with a force of over 900 Spaniards, and 87 horses, Cortes again approached the capital The city was attacked by columns along each of the three causeways from the shore, while the fleet of bigantines, with cannon, engaged the vast number of canoes on the lake For three months the Aztecs defended their homes stubbounly Street by street was taken by the Spaniards, who were obliged to tear down each house as soon as they had stormed it, to prevent the natives from returning to the attack At last, on August 13, the chief, Guatemozin, who had been the principal organizer of the defense, was captured while trying to escape in a canoc, and the war ended Cortés promptly set to work to repair the loss he had caused The lums of the city were used to fill in the marshy ground so as to afford a secure foundation for new edifices Colonists were brought from Spain, and in a very short time the city of Mexico became the principal European city in America Numerous expeditions were sent off in all directions, to Tampico, across Honduras to the Gulf coast, and to the Pacific, where Cortés established a shippard in which were built the vessels he used later in his explorations of the Pacific coast.

Meanwhile his enemies in Cuba and Spain were planning Cortés's destruction Officials were sent to Mexico to investigate his acts and supersede him, but he succeeded in persuading them to return without disturbing him. In 1528, however, when Estrada arrived with explicit orders to take over the government, Cortés yielded without opposition and took slip.

for Spain There he was welcomed with royal honors, was created Marquis of the Valley of Oaxaca, the fairest domain in the New World, and was reappointed captain general, although not restored to the civil governorship of Mexico He married the daughter of the Count of Aguilar and niece of the Duke of Bejar In 1530 Cortes returned to Mexico, where he amused himself for the next 10 years with schemes tor further conquests But the civil government being in other hands, he found himself constantly checked in his activity, his property de-tained from him, his rights interfered with, and his prestige rapidly waning. In 1536 he discovered Lower California and explored the Pacific coasts of Mexico, but no second treasurethe right to seek for the "Seven Cities" of Marcos de Niza, and in disgust Cortés went back to complain to the court. He was received with honor, but could secure no substantial assistance towards recovering his rights or his property Joining an expedition to Algiers, he was ship-wrecked, losing a large part of his fortune He then retired to a small estate near Seville, where he died, Dec 2, 1547 Prescott's Conquest of Mexico is, so far as Contés is conceined, little more than an admirer's abstract of the conqueror's official dispatches, which may be consulted in Folsom's translation (New York, 1843) The "Fifth Letter," describing Cortés's adventurous trip across Honduras in 1524, is in the "Hakluyt Society Scries" for 1868 Consult Ober, Hernando Cortée (New York, 1905), Antomo de Solis, Historia de la conquista de Mépico (Madiid, 1684, and a convenient edition in 5 small vols, Paris, 1827), and especially two recent works by F A MacNutt, Lotters of Cortes to Charles V, Translated and Educat, with a Biographical Introduction and Notes (2) vols, New York, 1908), and Fernando Cortés and the Conquest of Mexico 1485-1547, in "Heroes of the Nation Series" (ib, 1909)

CORTÉS, José Domingo (c1830-84). A Chilean author, born at Coquimbo He was successively journalist, member of the Chilean Legation in Belgium, and director general of libraries in Bolivia. He published antihologies, instories, and biographical works, such as Diocionario biográfico americano (1876), Historia de Bolivia, Los rovolucionarios de la independencia de Chile, and República de Mérico (1872).

CORTES, Sea of CORTES, Sea of CORTES (Lat, bark). That region of a stem or root which occurs between the contral vascular region (state) and the epidermis In those stems which increase in diameter each year the cortex becomes very much modified by the development of cork cells, being then usually called "hark" See Morrucology of Plants
CORTES See Nervous System and Brain.

CORTHELL', ELARS LAWDENCE (1840 – )
An American evil enginee, born at South
Abington (now Whitman), Mass. From 1801
to 1865 he served in the First Rhode Island
Light Artilley in the Civil War, returning to
graduate from Brown University in 1867 and
take up the practice of civil engineering. He
served on rathroad surveys and construction in
Missouri and Illinois; with James B. Eads was
resident engineer in constructing Mississippi
tities, and also cobperated with him in building a ship railroad over the Isthmus of Tehuantopee, Mexico, was chief engineer of the New

York, West Shore, and Buffalo Railroad, of the Merchants Bridge, St Louis, the Brazos River jetties, Texas, Tampico (Mexico) harbor works, and the port of Paia, and Rio Grande do Sul, Brazil From 1900 to 1902 he was consulting engineer of the National Public Works of the Argentine government. He is author of History of the Mississippi Jetties (1880), Report on Brussels Navigation Congress (1898), Maritime Commerce of the World Past, Present, and Future (1998), Some Poits of the World (1901), Argentine Past, Present, and Future (1908), Allowable Pressure on Deep Foundations (1907), Engineering and Commercial Conditions and Problems in Latin America (1911)

CORTINA, kôi-te'na, JUAN NEPOMUCENO 1830- ) A Mexican soldier and brigand, boin in La Higuera, State of Tamaulipas During the Mexican War he organized a band of cowboy guerrillas, later incorporated in the Mexican army He fought at Palo Alto, rose to the rank of captain, but at the conclusion of the war was refused a commission in the 1egular army Thereupon he turned smuggler Later he 10se to be a general in the liberalrevolutionist forces, but after his defeat by General Hinojosa was forced to escape to the United States From 1859 to 1863 he held sway on the frontier, devastating the country and making such official appointments as he saw fit He supported the cause of Maximilian in 1864, in 1867 again joined the Republicans, and in 1869 was appointed, by Juaiez, federal chief of Tamaulipas In 1876 he was arrested by General Canales, but instead of being executed, as General Diaz had directed, was incarcerated without trial in the military prison of Santiago Tlaltelolco

CORTINA'RIUS. See Fungi, Edible, and Plate

COR/TISSOZ, ROYAL An American art critic, born in New York City He became literary and art editor of the New York Tribune, lectured on art, edited an edition of Don Quiwote and The Autobiography of Benvenuto Cellins, and, besides contributions to magazines, is author of Augustus Saint-Gaudens (1907), John La Farge (1911), Art and Common Sense (1913) His wife, ELLEN MACKAY HUTCHINSON CORTISSOZ, associated with him in critical work, 18 author of Songs and Lyrics, and acted as assocate editor of The Library of American Literature (11 vols)

CORTILAND. A city and the county seat of Cortland Co, N Y, 37 miles by rail south of Syracuse, on the Thoughnioga River, and on the Lackawanna and the Lehigh Valley railroads (Map. New York, D 5) It is the seat of a State normal school and the Cortland County Hospital, and, as a manufacturing centre, produces extensively wire, wire cloth, carriages and wagons, carriage trimmings, drop forgings, corundum wheels, motor trucks, broad silk, flour, piano cases, wall paper, etc The government, piano cases, wall paper, etc The government, under a charter of 1900, is vested in a mayor, a municipal council, and administrative boards and officials appointed by the executive, the appointments, except the board of education, being subject to the consent of the council First settled in 1792, Cortland was included in the township of Homer until set off as Cortlandthe city Pop, 1900, 9014; 1910, 11,504

CORTONA, kôr-tô'na A city in the Prov-

Vol VI.-9

ince of Arezzo, central Italy, situated 2170 feet above the sea, 72 miles southeast of Florence and 4 miles north of Lake Trasimeno (ancient Trasimenus) (Map Italy, F 4) It has well-preserved cyclopean walls, built more than 3000 years ago, 8500 feet in circumference, the ruins of old Roman baths, a museum of Etruscan antiquities, including a remarkable candelabrum with 16 lights, assembled by the Etruscan Academy, founded in 1726, the cathedral of Santa Maria, containing paintings by Luca Signorelli (qv), who was born here in 1441, as was Pretro Berettini, known as Pietro da Cortona (qv) in 1596 The fifteenth-century church of San Domenico also contains excellent paintings The ancient Cortona, called "Kyrtonia" by Polybius, was the strongest of the 12 cities of the Etruscan League As a Roman colony it lost its importance, but in the eleventh century again prospered. It sided mostly with the Ghibellines, came into the possession of the Casale family in the fourteenth century, in 1409 was given by the last of the house to King Ladislaus of Naples, and by him in 1412 to Florence Pop. (commune), 1881, 26,353, 1901, 29,343, 1911, 29,659 Consult G Dennis, Cities and Cemeteres of Etrura (London, 1883), and A Della Cella, Cortona Antica (Cortona, 1900)

CORTONA, PIETRO DA, Properly PIETRO BERETTINI (1596-1669) An Italian painter and architect, born at Cortona He studied under Commodi and Ciarpi in Rome, where the greater part of his life was passed He was the most important painter of his day, and was employed by popes, cardinals, and princes Among the great decorative works intrusted to him were the frescoes of the ceiling in the hall of the Barberini Palace, Rome, decoration of the suite of rooms in the Pitti Palace, Florence, with paintings representing the seven virtues necessary for a sovereign (1640-47), and the frescoes in the church of Santa Maria in Vallicella was also superintendent of the mosaics for St Peter's, and himself designed those of the chapels of the right aisle. Among his oil paintings are "The Battle of Arbela" (Louvre), painted for Louis XIV, a "Nativity" (Prado), painted for the Spanish King, "Dainel in the Loon's Den' (Accademia, Venice). Cortons founded a new style in Rome and did for painting what Bernini did for sculpture, accentuating the personal individual tendency in opposition to the classical trend of his age. He had a remarkable power of heightening the illusion in his fresces, and the warm golden tones of his later works are admirable. As an architect, he designed the façade of Santa Maria in Via Lata, the portico of Santa Maria della Pace, and the church of Santa Martina, all in Rome Consult his Santa Martina, all in Kome Consult ins biographies by Fabbrini (Cortona, 1896), Gei-senheimer (Florence, 1909), Pollak, in Kunst-kronik, Neue Folge, xxiii (1912) CORUMBA, kō-rōōm/ba A town of Brazil, in the State of Matto Grosso, on the west bank

of the Paraguay River, about 325 miles southeast of Matto Grosso (Map Blazil, F 7) The naval arsenal of Brazil is on the east bank of the river. Pop, 10,000

CORUÑA, kô-roo'nya. A fortified seaport of Spain, capital of the province of the same name, in Galicia, situated on a small headland in the Atlantic, formed by two bays the Ria de la Coruña and the cove of El Orzán, 315 miles northwest of Madrid (Map Spain, A 1) It is built partly on the slope and partly at the foot

of a hill and is divided into the upper and lower towns, the former being the more ancient lower town, which was formerly an insignificant fishing village, is now more important and is well built, with broad and well paved streets The ancient section, which is partly surrounded by the old walls, contains the more prominent edifices, though there are comparatively few public buildings of note in Coruña The churches of Santiago and Santa María del Campo, of the twelfth century, the barracks, the Capitania-General, and the modern military hospital of San Carlos, are worthy of mention The provincial institute has a considerable library and valuable scientific collections, and the city contains also a meteorological observatory, and various educational institutions, including a marine school Other features of interest are the grave of Sir John Moore (qv), with a monument in the garden of San Carlos, and the so-called Torie de Hércules, of doubtful Phænician origin, having been built more probably in the time of Tiajan, which has served as a lighthouse for more than a century The harbor, protected by five forts, two of which, San Anton and San Diego, defend the entrance, is safe and Coruña is the centre of an excommodious tensive commerce, the exports comprising live stock, fruits, vegetables, wine, hams, saidines, leather, peat, etc, while the principal imports are sugar, hides, coal, oil, and manufactured There is also an important coastwise The city has a variety of manufactures, including cigars, linen goods, canvas, cordage, lumber, barrels, paper, etc, and many of the inhabitants are employed in the fisheries 1897, 40,500, 1900, 43,971; 1910, 45,650

The chronicled history of Coruña dates from the Roman occupation In the Middle Ages it was called Caronium. It was part of the eminate of Cordoba for some time, and suffered severely, with the rest of Galena, in the reconquest. The Portuguese captured the town in 1370. Here John of Gaunt landed in 1886, to uge the claims of his wife, Doña Constanza, to the Castilian crown, and in 1554 Philip II sauled from the port to marry Queen Mary of England. Coruña was the point of departure of the "Invincible Armada" in 1588, and in the following year it was taken by Drake and Norus and nearly destroyed. The haibor was the seene of English naval victories over the French in 1747 and 1805. Coruña is famous for the repulse, on Jan 10, 1809, of the French under Marshal Soult, by Sir John Moore, who succeeded in withstanding the French attempt to stop the English embarkation, but lost his life in the battle. The engagement took place on the heights of Elviña. In 1823 the city fell into the hands of the French in 1836 it was captured by the Carlists. The result of the Spannish-American War in 1898 was disastious to Coruña's trade with Cuba and Porto Reco.

CORUNYDUM (Neo-Lat, from Hind. Kurand, corundum), or AdamANTINE SPAE An analydrous aluminum peroxide that crystallizes in rhombohedral forms of the hexagonal system Owing to their extreme hardness (in which corundum ranks next to the diamond) and their high specific gravity (from 395 to 410), the colored varieties are much sought after as goms. According to their colors, they are called sapphile, which is blue, Oriental ruby, which is red; Oriental topaz, which is yellow; Oriental amethyst, demerald, which is green, and Oriental amethyst.

which is puiple. In addition to these there is the asternated on star suppline, which exhibits an opalescent star of six rays. The dark-colored varieties are called corundum, and granular corundum is known as emery. The colored varieties of colundum are found chiefly in Burma, China, Ceylon, and in the United States, where it occurs in the crystalline locks along the Appalachian Mountains, at Chester, Mass, in northern Georgia, and in Montana, where sapphires of gem grade have been found. Emery (q\forall i), which is used as an abiasive material, is found in Asia Minoi, at Chester, Mass, and in Canada. The imports into the United States are about \$100,000 annually, chiefly from Canada See Abrasive

CORUN'NA. A city and the county seat of Shnawassee Co, Mich, 30 miles (direct) nothenst of Lansing, on the Shnawassee River, and on the Ann Arbor and the Grand Trunk railoads (Map Michigan, E.5). The public libiary and McCuidy Park are among the features It has a trade in coal and manufactures flour, buffalo and astrachan cloths, vitrified brick, and frumture Pop. 1900, 1510. 1910. 1384

furniture Pop. 1900, 1510, 1910, 1334
CORVALTIAS A city and the county seat
of Benton Co. Ore. 96 miles south by west of
Portland, on the Southern Pacific, the Portland,
Eugene, and Eastern, the Oregon Electric, and
the Coivallis and Eastern railroads, and on the
Willamette River (Map Oregon, B 3) Corvallis is the seat of the State Agricultural
College and contains a fine courtlouse and city
hall and a large college armory. River sceamboat lines add to the transportation facilities
There is a considerable trade in grain, lumber,
flour, live stock, and wool Dairying, stock
raising and the raising of fruit and beries are
important occupations. The manufactures include lumber, flour, brick and tile, ice cream,
ciguas, etc. Pop. 1900, 1819, 1910, 4552

CORVÉE, kôr'và' (Fr. from ML corvata, demanded, from Lat corrogata, demanded, sc. opera, work, from com-, with + rogare, to demand) An obligation imposed under the Roman law and continued under feudal law, whereby the inhabitants of a district performed certain services, such as repairs of the highway and bridges, for the sovereign or the feudal lord. Under the feudal loids coivées were greatly increased and diversified, but were usually determined by the local customs Gradually the people succeeded in escaping from most of the corvées by substituting payments But in some countries some burdens were long continued, eg, French peasants were subject to some corvées until the French Revolution Under the name of prestation the coivée system was revived, and we made the subject of various legislative modifications in 1824 and 1871 In some arrondissements all able-bodied men may be called upon to give three days' work for the upkeep of the roads In England the Highways Act of 1837 did away with all statutory labor on the roads, but in Scotland the practice persisted until 1883, when it was abolished by law The system was enforced by the Dual Control in Egypt, where, in 1882, 234,000 follahoen were called out for 100 days to clean the rrigating canals; but the obligation was gradually abolished until, in 1887, through the efforts of the British, the corvée for this purpose was wholly done away with, and the labor performed by contract. Other corvées were abolished by 1891, except the forced labor to guard against floods.

125 CORY

For the feudal corvees, consult Luchaire, Manuel des institutions françaises (Paris, 1902)

CORVEI, kôr'vi (ML Corbeia Nova, New

Corbeia, as it was first occupied by monks from Corbie) A Benedictine abbey of Germany, on the Weser, near Hoxter, the oldest and most famous abbey in Saxony It was founded by Louis the Pious in the beginning of the ninth century, being a colony from the monastery of the same name in Picardy It received rich endowments and was the centre of great agricultural improvement and prosperity during the earlier part of the Middle Ages, besides being the seat of a famous school In 1793 it was made a bishopric by Pius VI Its territory then embraced about 22 square miles, with 10,000 inhabitants In 1802 it was secularized and annexed to Nassau, from which it was transferred, in 1807, to Westphalia, and in 1815 to Prussia The church of the abbey is built in Gothic style, magnificently adorned in the interior, and contains a multitude of monuments of successive dynasties. The library and archives of the cloister, which contained most valuable records of the early ages of German history, have all been destroyed, the Chronicon Corbecease, an alleged record of this abbey from its foundation to the end of the twelfth century, being a forgery. Certain brief Annales Corberenses from 648 to 1148 are, however, printed in the Monumenta Germania Historica Consult Wigand, Geschichte der Abter Korvey (Hoxter, 1819)

CÓRVETTE, kor-vet/ (Fr, from Sp coneta, coneta, to-coreta, conveta, from Lat corbita, slow slip of burden, from corbis, basket) In the days of saling men-of-war, a corvette was a sip-rigged vessel (ie, having three masts, all square rigged), can ying all her broadside guns on one covered deck The upper deck, above the guns, was flush (ie, was continuous from stem to stein, without poop or topgallant forceastle). Corvettes occasionally had a bow or stern chaser on the unper deck

CORVIDE (Neo-Lat nom pl, from corvus, crow) A family of passenne birds which in-cludes the ravens, crows, magpies, jays, etc. See these words, and Plate of JAYS, MAGPIES, ETC.

CORVI'NUS, MATTHIAS See MATTHIAS CORVINUS

CORVIN-WIERSBITSKI, kôr-vēn'-vērs-bīt'skė, Otro von (1812-86). A German author, born at Gumbinnen He took part in the revo lutionary uprising in Baden in 1848 and 1849, and became chief of the general staff of the Republican forces at Rastatt He was condemned to death, but the sentence was commuted to six years' solitary confinement In 1855 he went to London, whence in 1861 he proceeded to the United States to act as the war correspondent of the Augsburg Allgemeine Zeitung During the Franco-German War he was the correspondent of the Vienna Neue Freie Presse, and his experiences are admirably described in his well-known book, In France with the Germans (1872) In his earlier years Corvin devised "Corviniello," a species of metal work inlaid with mother-of-pearl, stones, or other materials His numerous historical and other writings in-Historische Denkmale des christlichen Fanatismus (1845), the second edition of which appeared under the title Pfaffenspiegel (1869), and was further supplemented by Die Geissler (3d ed., 1892-93) Consult his Erinnerungen aus meinem Leben (4th ed, Rudolstadt, 1890-92)

COR/VO (Sp, crow). The most northerly and the smallest of the Azores (qv) (Map Portugal, A 4)

CORTVUS, MARCUS VALERUIS (0 370-270 B C). A general of the early Roman Republic Ho was twice dictator and six times consul, and occupied the curule char 21 times He defeated the Gaulis, the Volse, the Sammites, the Etruscans, and the Marsi He owed his name, tradition said, to the corous, raven, which helped him to defeat a gigantic Gaul
CORWUIN, Edward Tarjore (1834-).

An American writer, and historian of the Reformed Dutch church He was born in New York City, July 12, 1834, graduated at the present College of the City of New York in 1853, and at the Theological Seminary in New Brunswick, N J, in 1856 He has held various pastorates, but his reputation rests upon his literary work, which has made him the recognized historian of his denomination. His publications include Manual of the Reformed Protestant Dutch Church in North America (1859; 4th ed 1902), Millstone Centennial (1866), A History of the Reformed Church, Dutch (1895); Ecclesiastical Records of New York (6 vols. Albany, 1901-05) This is a translation and elaborate annotation of the letters which passed between the Classis of Amsterdam and the churches in the New Netherlands and Province of New York, and so are an important historical source It is published by the New York State Library He contributed to the first edition of the New International Encyclopædia

CORWIN, THOMAS (1794-1865) An American lawyer and statesman, born in Bourbon Co, Ky He studied and placticed law in Ohio, where his eloquence soon won him prominence. He was a member of the State Legislature from 1822 to 1823 and in 1829, and of Congress from 1831 to 1840, when he was chosen Governor of Ohio From 1845 to 1850 he was a member of the United States Senate, and in the latter year he became Secretary of the Treasury in President Fillmore's cabinet He was again in Congress (1859-61) and was Minister to Mexico from 1861 to 1864 As an orator he won his greatest distinction, his speeches both on the stump and in debate being examples of remarkable eloquence His arraignment of the administration for the war with Mexico in the Senate, Feb 11, 1847, was a notable effort, which made him many enemies and damaged his political career Consult Russell, Thomas Corum (Cincinnati, 1882), and J Morrow, Life and Speeches of Thomas Corwin (Cincinnati, 1896)

CORY, CHARLES BARNEY (1857—). An American ornithologist, born in Boston. He became professor and honorary curator of zoology in the Field Columbian Museum in Chicago His publications include Birds of the Bahama Islands (1880), The Beautiful and Curious Birds of the World (1880), Southern Rambles Florida (1881), Montesumo's Castle (1899), The Birds of Illinois and Wisconsin (1909), Mammals of Illinois and Wisconsin (1912), Description of Twenty-eight New Speces and Subspeces of Neotropical Birds (1913)

CORY, WILLIAM JOHNSON (1823-92) An English poet, son of Charles Johnson, of Torrington, Devonshire, his mother was a grandniec of Sir Joshua Reynolds He was educated at Eton, and at King's College, Cambridge, was

graduated BA in 1845, and in the same year became fellow of his college He was at once appointed assistant master of Eton, where he In 1872, havwon great distinction as a tutor ing inherited an estate at Halsdon, he letired from Eton and changed his name to Coly His subsequent home was Hampstead, where he died, June 11, 1892 Cory is mainly known for a volume of verse entitled Ionica (1858, republished with additional poems in 1891), containing "Mimnermus in Church" and other poems of great tenderness and beauty The volume was reissued, with additions, in 1891 He is also author of an agreeable Guide to Modern English History from 1815 to 1835 (1880-82), of Lucretilis, a treatise on writing Latin verse (1871), and of Iophon (1873), on Greek Iambics After his death appeared his Letters and Journals (Oxford, 1897)

CORYAT, kôr'yat, or CORYATE, THOMAS (1577-1617) An English traveler and author, born at Odcombe and educated at Oxford He made an extensive tour of Europe, traveling mostly on foot, and published his experiences in a volume entitled Coryat's Crudities (1611; new ed, 1905) It was the first manual of continental travel and was illustrated with engravings Paits of this work, consisting of nock verse commending the author, were published separately under the title Odcombian Banquet (1811) Cotyat made other voyages through Greece, Asia Minor, north Africa, and

India, where he died

CORYBANTES, kor'i-ban'tez (Gk Κορύβαντες, Korybantes) Mythical beings, attendant upon the Phrygian Cybele (qv), as the Curetes (qv) belong to the Cretan cult of Zeus and Rhea Unlike the Curctes, with whom they were sometimes confused, the Corybantes were not believed to dance in armor, but rather to perform wild and orgastic dances which frequently ended in ecstasy The name does not properly denote priests, or human beings at all, since the Corybantes represent rather gods of procreative sig-nificance, but, as the pilests of Cybele imitated these dances, the name is sometimes extended to them. Consult Frazer, Adonis, Attis, Osiris (London, 1907), Part IV of his Golden Bough

CORYCIA, kò-rish'i-à (Lat., from Gk Κωρυ-κla, Κοτγλια) The mother of Lycoris, by Apollo She was a nymph, whose name is preserved in that of the Corycian Cave on Mount Parnassus, and in the appellation Corycides applied to the nymphs of the cave and to the muses, who were worshiped on Parnassus See

CASTALIA.

CORYD'ALIS. See FUMARIACEÆ. CORYDALIS (Neo-Lat, from Gk. κορυδαλλίς, korydallıs, κορυδός, korydos, crested lark, from κόρυς, korys, helmet) or Dobson A genus of large, net-verned insects (true Neuroptera), repdescribing the family Stalididæ, and peculiar to America, where its larva, used for bait under the names "crawlei," "dobson," "hell devil," and many others, is the largest of our aquatic inmany others, is the ingress of our aguacut access the single species (Corydal's connuta), often called "hell-grammite," is brownish green n color, about 2 inches in length, and expands its four nearly equal wings fully 6 inches. "In the female the jaws are very large, flat, and toothed at the extremity, but in the male they are remarkably long and slender, not toothed, and the sharp tips crossing each other, their only use is evidently for seizing the soft, somewhat yielding body of the female during the act of pairing, hence during its short life the male, at least, takes no food" The female lays her eggs in midsummer, in white chalky masses almost an inch wide, on tree leaves, rocks, timbers, etc, overhanging water, into which the young drop as soon as hatched These sink to the bottom and grow rapidly into large, slate-gray, tough, predatory larve, which hide under stones, etc, in the rapid streams where they most abound, clinging firmly to some support with their anal hooks, while they seize in their jaws such living creatures as come within their reach They remain in the water 2 years and 11 months, then creep out upon land, where they wander about at night for a few days, then pupate in some retreat, and speedily emerge as adults The larvæ (dobsons) are regarded as the most satisfactory bart known for still fishing, and are captured with nets, after overturning stones, etc, and frightening them out into the open water Foi the many interesting peculiarities of the structure and economy of this and other species of the Sialidida (called "adder flies" in England), consult Howard, The Insect Book (New York, 1901). Packard, Standard Natural (New York, 1901), Packard, Standard Natural History, vol in (Boston, 1884), Miall, The Natural History of Aquatic Insects (London, 1895); Kellogg, American Insects (New York, 1908), Davis, "Stalidida," in Aquatic Insects in New York State (Albany, 1903)

CORYDON A town and the county seat of Hallison Co, Ind, 25 miles west by south of Louisville, Ky, on Indian Creek and on the Louisville, New Albany, and Covidon Railtoad

Louisville, New Albany, and Corydon Railroad (Map Indiana, C 4) It is known as a summer resort, one of its attractions being a sulphur well Corydon was the capital of the Territory of Indiana from 1813 to 1816, and of the State of Indiana from 1816 to 1825, when the seat of government was removed to Indianapolis The old capitol is still standing The Constitutional Convention of 1816 met here In 1863 the town was the scene of a sharp skirmish between a small force of State militia and a superior force of Confederate raiders under John Morgan Pop,

1900, 1610, 1910, 1669

CORYDON. A town and the county seat of Wayne Co., Iowa, 81 miles (by rail) south by east of Des Moines, on the Keokuk and Western and the Chicago, Rock Island, and Pacific railroads (Map Iowa, D 4) Conydon is essentially an agricultural town and exports a large amount of timothy seed. The electric-light plant, sewer, and water works are under municipal ownership and control Pop, 1900, 1477, 1910, 1703
CORYDON. 1. A shepherd in the Idyls of

Theocritus, and in the second and the seventh Eclogue of Vergil, and hence a name conventionally used in literature to designate a country swain, as in Spenser's Facine Queene and Colin Clout 2. A shoemaker in Scott's Count Robert of Paris 3. A musical countryman in Walton's Compleat Angles, who fraternizes with Piscator.

COR/YMB (from Lat. corymbus, from Gk. κόρυμβοs, Lorymbos, cluster, from κόρυς, korus, helmet) A flat-topped flower cluster, in which the pedicels arise at different levels upon an clongated axis and the outermost flowers bloom first. See Inflorescence

CORYM'BUS (Lat., cluster). That mode of dressing the hair which prevailed among the Greek women and which may be seen in examples of the antique, particularly in the statues representing Venus This arrangement of the hair was also adopted by the Romans Tt. consisted in gathering it upward upon the may be seen in its simplest form in the statue of the Venus de' Medici, in the Uffizi Gallery, Florence

CORYNACTICS See SEA ANEMONE

COR/YPHA See FAN PALM, GEBANG PALM CORYPHENE (Lat coryphana, from Gk. κορύφαινα, Loryphama, a sort of fish, from κορυφή, koruphē, summit), Dorado or Dolphin of a genus of fishes (Coryphana) of the family Coryphænidæ, to which the name "dolphin. properly belonging to the Cetacea, has been popularly transferred The coryphenes are allied to the opahs, and are remarkable for the beauty and metallic brilliancy of their colors, which delight the spectator as the graceful fish are seen gliding with extreme rapidity near the surface of the water, gleaming in the light, and the changes the colors undergo while the fish is dying have acquired a poetic celeb-11ty They have an elongated compressed body covered with small scales, the head rising in a sharp crest, the mouth large. They are They are large fishes, attaining a length of 6 feet, and are inhabitants of the high seas of warm climates, where they chase the flying fishes and other surface prey with great speed and vora-The common, almost cosmopolitan coryphene (Conyphæna hippurus) occurs on the coast of the United States as far north as Cape Cod "They are often caught by sailors at sea and are considered most excellent food. It is an almost universal custom before eating them to test the flesh by putting a piece of silver into the vessel in which they have been cooked, it being a common belief that if the flesh is poisonous the silver will turn dark" (Goode) See Plate of Horse Mackerel

CORYPH'ODON (Neo-Lat, from Gk. κορυφή, koryphō, summit + δδούs, odous, tooth). A fossil amblyped mammal of the Lower Eocene bcds (Wasatch) of western America, related to Tinoccras and the Uintatheria A complete skeleton of Coryphodon radians has been found, and is mounted in the American Museum of Natural History in New York City It shows an animal between 5 and 6 feet in length, with large skull, formidable teeth, short neck, rather long body, and short, strong, bowed legs with spicading toes The brain cavity is iemarkably The skeleton indicates a heavy, clumsy animal that lived in the bordering marshes of the Wasatch lakes, feeding on succulent water Coryphodon remains have also been found in the Eccene beds of Europe Consult Osborn, "A Complete Skeleton of Coryphodon Radians," Bulletin of the American Museum of Natural History, vol x (New York, 1898), and Knipe, Evolution in the Past (London, 1912). Sec TERTIARY SYSTEM, TINOCERAS, THERIUM

CORY'ZA. An inflammation of the nasal and ocular mucous membrane, with discharge of thin Preceded by a chilly feeling and a slight 118e of temperature, it constitutes the invasion of measles, whooping cough, la grippe, and certain fevers, and is constant during hay fever (q v). Constipation or uric-acid diathesis is often the underlying cause for its appearance, the exciting cause is nearly always bacterial infection Relief in the simple forms follows the use of alkaline laxatives, nasal spraying with mild anti-septic solutions, and the correction of any

diathesis such as rheumatism. If neglected, the mucous membrane affords an inviting field for

the germs of grippe, pneumonna, etc

COS, or KOS (GK Kos, Kos, It Stancho,

Turk Istanhor) One of the Dorran Sporades, off the southwest coast of Asia Minor, now belonging to Turkey Cos is about 23 miles long, and about 74 in circumference On the southern side of the island a range of hills, called Prion, extends along the coast, the western half of the island is also mountainous, but the eastern portion north of the jagged ridge of Mount Prion is a fertile plain, producing the grapes and the sultana raisins which furnish the chief modern exports The population is estimated at about 10,000 In ancient times the island was famous for its perfumes, wines, and silk (probably produced from an inferior variety of worm), from which were woven the transparent Coan garments (Coa vestis) worn by the courtesans of Greece and Rome. There are many mineral springs on the island, which early became an important seat of the worship of Asclepius (qv) The precinct of Asclepius, on Mount Prion, was excavated in 1900-04, it had a continuous history from the sixth century Bc to 554 AD Cos was the birthplace of the great physician Hippocrates (qv) and of Apelles (qv) The chief town, Cos, is situated on the northeast coast, on the site of the ancient city In the centre of the main street is a gigantic plane tree, said to have stood there before the Christian era To the northwest is an old fortress of the Knights of St John The harbor is small and so filled with mud as to be available only for small boats The inhabitants are employed chiefly in agriculture Cos is mentioned in the Iliad among the allies of the Greeks, and the island seems to have been early colonized Later it was the seat of a Dorian colony, apparently from Epidaurus (qv.), and became a part of the Dorian Hexapolis It was a member of the Athenian League, and in the fourth century BC enjoyed a prosperity which in-creased under Alexander and his successors It was the birthplace of Ptolemy II Philadelphus, and the home of Philetas, the bucolic poet, who founded on the island a school of which Theocritus (qv) was the most distinguished member. From the Latin conquest of Constantinople (1204 AD) till its capture by the Turks in 1523, Cos shared the vicissitudes of Rhodes and the neighboring islands. In 1912, in the course of the Turco-Italian War  $(q \vee 1)$ , it was served by an Italian fleet, but Italy, by the Treaty of Lausanne (Oct 15, 1912), engaged to restore to Turkey the  $E_{\rm gean}$  Islands on conditional conditions. tion that a general amnesty should be granted to the inhabitants and that local autonomy and public liberty should be guaranteed The contemporaneous outbreak of the Balkan War (qv) aroused a vigorous agitation among the Greek islanders of Cos for union with the Greek Kingdom It was agreed by the Treaty of London (May 30, 1913) that the final disposition of all the Ægean Islands should be left to the Powers, in the meanwhile Italian occupation of Cos continued Consult Rayet, Mémoire sur Vile de Cos (1876), Paton and Hicks, Inscrip tions of Cos (Oxford, 1891), Herzog, Koische Forschungen (Leipzig, 1899), Archaologische

Hosenwagen (Leipzig, 1899), Architolysche Anzeiger (1895) COSA, ko'sa, JUAN DE LA (c 1460-c.1512). A Spanish navigator and cartographer, born in Santoña (Santander) He accompanied Columbus on his first and second voyages, and after returning to Santoña tor a brief period, settled in the Puerto de Santa María (Province of Cadız), where he became famous as a cartographer He was the principal pilot of the expeditions sent out under Oleda (1499) and Rodingo Bastidas (1500) to explore the coast of Venezuela After two other successful vovages (1504-07 and 1507-08) he was appointed by Juana heieditary alquooil mayor of Uiuba Isahella, in 1503, had appointed him to this position, but had not made the title hereditary Late in 1509 he fitted out three vessels with which he set sail for Santo Domingo to meet Ojeda, who had been appointed general of Nueva Andalucia In Santo Domingo he served as arbiter between Ojeda and Nicuesa in a dispute over the boundaries of their respective territories and jurisdiction In 1510 Cosa had to defend himself from Portuguese accusations that he had made discoveries and explorations beyond the line set for the Spaniards Later Cosa accompanied Ojeda to South America, where the entire party, with the exception of Ojeda and one other, was massacred by Indians while trying to land in Cartagena Bay, Cosa losing his life in deliberate defense of Ojeda In 1500 Cosa made a large map of the world, probably the first to be prepared after 1492 and the first, therefore, to include the New World. For this reason it is of the greatest value to cartographers and historians, and many reproductions of the part relating to America have been made. It was accidentally discovered by Humboldt in the library of Baion Walckenaer in Paris in 1832, and since 1856, when it was acquired by the Spanish government, has been in the Naval Museum in Madrid On several occasions parts of it have been reproduced, but M Jomard's is the only reproduction of the whole map, on the original scale and with the original colors

COSCIN'OMANCY (from Gk κόσκινον, koskinon, sieve + partela, manteia, divination) species of divination, practiced from the earliest times by means of a sieve and a pan of shears or forceps Tylor (Primitive Culture, 4th ed, vol 1, p 128) says "The sieve was held hanging by a thread, or by the points of a pair of shears stuck into its iim, and it would tuin, or swing, or fall, at the mention of a thief's name, and give similar signs for other purposes." The order of the Bible and key is a survival of the old custom. The liftieth Psalm is read, and when the verse beginning "When thou sawest a thief" is reached, the apparatus is expected to turn towards the culprit See Superstition.

## COSE/CANT. See TRIGONOMETRY

COSEGÜINA, kö/så-gwö/na, or COSIGÜINA, kö'sê-gwē'na A volcano in the extreme north-west corner of Nicaragua, Central America (Map Central America, D 4). It is situated on a small peninsula which partly separates the Gulf of Fonseca from the Pacific, it has an altitude of over 3000 feet. Its latest cruption, on Jan. 20, 1835, is famous as the most violent in history. The sky was darkened by the ashes during three days for a distance of 100 miles from the crater, and ashes fell as far away as Jamaica and Bogota, Colombia. The explosion was said to have been heard in the city of Mexico, 900 miles away.

CO'SEL, or Kosel. The capital of a district of Silesia, Prussia, on the river Oder, at the confluence of the Klodnitz, 25 miles southeast of Oppeln (Map. Prussia, H 3). It is a garrison

town, has a castle, and was formerly surrounded by walls, the site of which has been converted into boulevards A fine monument commemorates the unsuccessful siege by the French in 1807. The town manufactures celluloid, lumber, flour, malt. beer, bricks, and refined petroleum. It was the capital of a former duchy in the fourteenth century Pop, 1905, 7085, 1910, 7832

CÓSELEY, köz'li A manufacturing town in Staffordshire, England, a suburb of Wolverhampton (Map England, D 4), with which its industries and public works are identified non, coal, and cement mines, manufactures of Hon goods and stoves Pop, 1901, 22,219, 1911, 22.834

COSENTIA See Cosenza

COSENZ, kō'sānz, Enrico (1820-98) Italian soldier, born at Gaeta He enter He entered the military service of Naples in 1840, participated in the campaign in Upper Italy (1848), and afterward was prominent in the defense of Venice against the Austrians In 1859 he became a colonel in the 'Hunters of the Alps." Garibaldi's corps, and in 1860 took part in the expedition to Sicily Upon Garibaldi's assumption of the dictatorship of Naples, he was appointed Minister of War He commanded a division in the attack on Rome in 1870, and from 1881 until his retirement in 1893 was chief of the general staff of the Italian army He also held civil office as a deputy from 1860, and senator from 1872

COSENZA, ko-zent'sa (Lat Cosentia) capital of the Piovince of Cosenza (Calabria Citeriore) at the confluence of the Crati and Busento rivers, in south Italy, situated 120 miles southwest of Taranto, and only a short distance from the Mediterranean (Map Italy, L 8). It is commanded by a castle, whose walls, 9 feet thick, were shattered in the earth-quakes of 1783, 1854, and 1870 The older and lower part of the town is infected with malaria in summer The cathedral, of the thirteenth century, which has been restored, contains the tombs of Louis III of Anjou, and Isabella, consort of Philip III of France, who died here in 1435 In the attractive public gardens, near the prefecture and the new theatre, are a figure of Liberty by Giuseppe Pacchioni, elected in 1879 to the brothers Bandiera and others who took part in the Calabrian rebellion of 1844, and busts of Gambaldi, Cavoui, and Mazzini There are a seminary, a royal college, a technical school, two academies of science and fine arts, and a chamber of commerce. Cozenza markets silk, oil, wine, manna, hemp, grain, and honey, and manufactures faience, iron and steel ware Alaric, King of the Visigoths, died here in 410 while on his way to Sicily after the spoliation of Rome. Tradition has it that he and his treasures were builed just below the town in the Busento (ancient Buxentius), where the Crati joins it-a spot now marked by the Ponto Alerico. The city is subject to earthquakes, having suffered many severe shocks Pop. (commune), 1881, 16,253, 1901, 21,545; 1911, 23,805. COSETTE, kazat The adopted daughter of Jean Valjean in Hugo's Les Misérables

COSHOCTON, ko-shok'ton A city and the county seat of Coshocton Co., Ohio, 69 miles east-northeast of Columbus, on the Pennsylvanus, the Pittsburgh, Cincinnati, Chicago, and St Louis, and the Wheeling and Lake Brie railroads, on the Ohio Canal, and on the Muskingum River (Map: Ohio, G 5). It con-

tains a city hospital, Carnegie library, park and fair grounds, and a fine courthouse Coshocton is in the centre of a coal, gas, and oil region, and has several novelty advertising establishments, machine shops, pipe works, automobile, carriage, furniture, and glass factories, potteries, paper and flour mills, etc Settled in 1811, the city was incorporated in 1833 water works are owned and operated by the numericality Here, after a long struggle, Colonel Boquet concluded a treaty with the Delaware Indians in 1765 Pop, 1900, 6473, 1910,

COSIMO, kô'zĕ-mô, Piero di See Piero di

COSIMO DE' MEDICI, da mā'dē-chē

COSIN, kŭz'n, JOHN (1594-1672) An Enghish, pielate He was born at Norwich and was educated at Cambridge After holding rectorates at Elwick, Brancepeth, and elsewhere, he assumed charge of St Peter's College, Cambridge, in 1635 Three years afterward he was made vice chancellor of the university and in 1640 was appointed Dean of Peterborough He was chaplain to Charles I and subsequently joined the royal family in Paris, where for nearly 20 years he conducted religious services in the household of Queen Henrietta In 1660 he was appointed Bishop of Durham Although by no means inclined towards Puritanism, he was an inveterate antagonist of Roman Catholicism, and during his long residence in France was regarded as the champion of the Protestant cause in that country Many of the finest prayers in the English church were written by him, while his other numerous writings are imbued with the force and brilliancy of his interesting personality He was celebrated for the remarkable frankness with which he defended his views, even under the most unfavorable conditions, and by his splendid administrative ability in the church His works include Collection of Private Devotions, picpaied at the request of King Charles I and first published in 1627, Scholastical History of the Canon of Holy Scripture (1857), Historia Transubstantiations Papelis (1875), Notes on the Book of Common Prayers (1710) A collected edition of his works was published (5 vols) in 1843-55, and his Correspondence (2 vols) in 1868-70 CO'SINE. See TRIGONOMETRY.

COS'MAS (Lat, from Gk Koσμas, Kosmas), surnamed Indicopleustes (1 e, Indian navigator) A merchant of Alexandria, in which city he was probably born, who, after having traveled much in eastern Asia, including India and Cevlon, returned to Egypt and ended his days in monastic retirement about the middle of the While a monk he wrote a Chrissixth century tian Topography in 12 vols, in the Greek language, containing much information about many countries and particularly about India An attempt to reconcile everything to his notions of the meaning of the Bible led him into many errors, but though deficient, and even absurd scientifically, as a record of travel and geographical information, the eleventh book, which gives a description of the animals of India and of the island of Ceylon, takes high rank His other works, which seem to have included a

treatise of the motion of the stars, and commentaries on the Palms and Canticles, have perished The Topography (which, among other things, gives the flist account of the Monumentum Adulitanum, see ADULE) was edited by Montfauçon in the Nova Collectio Patrum Grecorum, vol. 11 (Paris, 1707), reprinted by Migne, Patrol Graca, IvxxvIII, translated by Charton in his Voyageurs (Paris, 1854), and in English by McCrindle (London, 1897) An edition was edited by Winstedt (Cambridge, 1910).

COSMAS (Lat, from Gk. Κοσμάς, Κοσμας) and DA'MIA'NUS (Lat, from Gk Δαμιανός) Two Arabian brothers of the third century, Christian martyrs under Diocletian. They placticed medicine without fee (whence they came to be known as "The Silverless") at Ægea in Cilicia, and, having refused to sacrifice on pagan altars, were beheaded in 303 Their day in the calendar of the Roman church is September 27 They are honored as the patron saints of physicians and apothecaries A short-lived order of knights spiritual, named after them, was in-stituted during the Crusades. A round temple on the north side of the Roman Forum, built by the Emperor Maxentius to his son Romulus, was converted into a chuich in their honor in 526, Its mosaics are among the most valuable in Rome

COSMAS OF PRAGUE (c 1039-1125) Czech historian, dean of the cathedral at Prague. His works, particularly his "Chronica Boe-morum," printed in the second volume of the Fontes Revum Bohemicarum (Prague, 1874)

constitute a very complete and accurate record of the history of the times COSMATI, kbs-ma'th. The popular name of a group of mediæval Roman architects and decorative marble workers, from Cosmas, the name of two important members The group manie of two important members. The group was composed of two tamilies one descending from a certain Tebaldo, who was father of Lorenzo, grandfather of Giacomo, and great-grandfather of Cosmas I, and flourished about 1150-1250, the other founded by Pieter Mellini, father of Cosmas II, the most prominent of whose sons were Giovanni and Deodato, active from about 1250 to 1350 It dispersed with the departure of the popes for Avignon and the fall of Rome as an artistic centre The specialty of this school was the use of rich mosaic inlay in geometric patterns in architecture and church interiors and furniture-a style often called Cosmati work But it was not confined to this family, being a style common to all the other family groups of artists of mediæval Rome and its neighborhood, such as the families of Paulus and Vassallectus The beautiful closters of St John Lateran, St Paul Without the Walls, and Santa Sabina in Rome are the most familiar of then large works The choir seats at San Lorenzo, the tabernacles at Santa Cecilia and St. Paul's, the pulpits at the Aracceli, the tombs at the Minerva and Santa Maria Maggiore, the paschal candlestick at Santa Cecilia, the pavements of these and many other Roman churches, show the versatility and universal use of this style But most of the finest works are scattered throughout the province, at Civita Castellana, Subiaco, Corneto, Alatri, Anagni, Alba, Ferentino, Terracina, and other cities The architectural as well as the decorative work was probably designed and executed by these artists. That the style was Roman is shown by the in-

scription of 1229 in the charming cloister of Sassovivo in Umbria, where the artist calls it Roman work However, there were two other contemporary Italian schools which produced similar work that of Campania, with centres at Saleino, Sessa, and Gaeta, and that of Sicily, in the churches of Paleimo, Monicale, Cefala, and others

Boito, Architettura Cosmatesca Frothingham, "Notes on Roman Consult (Milan), Artists of the Middle Ages," in early volumes of American Journal of Archwology, G Clausse, "Les Cosmati," in Revue de l'art chrétien (1897), Les marbiers iomains (Paris, 1897), Tommasseti, Bolletino della Commissione Architetturale Comunale (Rome, 1906), Filippini, La Scultura nel trecento in Roma (Turin, 1908)

COSMETICS (Gk κοσμέω, kosmeō, I adoin)
The term is used to indicate (1) all the mixtures and preparations employed for the purpose of beautifying and improving the appearance of the han or skin, (2) the art which serves to adorn, beautify, and improve a person's looks

and appearance

The preparations used are liquids, ointments, creams, and powders Liquids are used chiefly for the hair in order to produce a more luxurious growth, or to impart to it a strong gloss, or to effect a change in its color, as by means of hair dyes and hair bleaches The liquids used usually contain alcohol and oil in dilution, some containing also medicinal substances, such as quinine and canthandes, intended to act as a quinine and cantinaides, intended to act as a stimulant to hair growth. These preparations are all applied to the hair and scalp, followed by bisk rubbing or massage. It is the massage cliefty, if not wholly, that brings about the de-sired result, since the friction improves the circulation of the scalp and thus by nourishing the hair roots causes a more healthful condition and lapid growth of the han The cleanliness unparted to the scalp by the liquid preparation used and the rubbing likewise enhances hair growth. The ordinary hair tonic is not injunious, but han dyes and hair bleaches fre-quently contain poisonous ingledients and are apt to be injunious both to the hair and to the general health.

For the face and hands various massage creams, vanishing creams, ointments, and powders are prepared. Some of the creams have carmine ied incorporated into them to act as a rouge and to give a pink color to the skin of the face. The massage creams are made of casem, glycerine, fat, and water with some perfume added thereto. There are other preparations made of starch or chalk, and still others, like the pearl white, contain a white bismuth powder which is deposited as a fine white flour upon the skin. All these preparations for the skin are more or less harmful, because they clog up the skin's pores, thus interfering with its proper physiological functions and with its nutrition

The cosmetic art includes a variety of procedures and manipulations by means of the hand and by the assistance of certain electrical appliances and vibrators Mameuring and artistic hair dressing properly belong to the cosmetic art. Facial massage and the removal of wrinkles manually and by the vibrator are likewise cosmetic procedures Cosmetic surgery is that branch of the surgical art practiced expressly for the purpose of improving a person's looks and not to cure disease. The procedures are

various, ranging from the removal of superfluous hairs by means of the electric needle to the removal of nævi, or bithmaiks and moles The correction of harelip and certain nasal deformities, as the hammer nose, are procedures See PERFUMERY, ROUGE of cosmetic surgery

COS'MIC DUST See Dust

COSMOGYONY (Gk κοσμογονία, kosmogoma, from κόσμος, kosmos, oider, world, universe + γονή, gonē, birth, origin). A name used by astronomers to designate theories concerning the origin and development of the solar system, stellar systems, or the universe in general Many 1 emai kable facts connected with our solar system tend to show that its present condition cannot be the result of a purely accidental action of natural forces Thus, the orbits of all the important planets are very nearly circular and are situated nearly in the same plane, the directions of the planets' motions in their orbits are the same for all, all the planets, with the probable exception of Uranus and Neptune, rotate in the same direction on their own axes, and that direction is the same as the direction of their orbital revolutions, etc Even the planetary satellites share in these peculiarities of the solar system, the planes of then orbital revolutions about the primary planets are always very near the corresponding planes of the planets' own axial rotations, and the directions of the satellites' revolutions also coincide with the directions of the planets' axial rotations

The Nebular Hypothesis Kantand Laplace have given us the well-known "Nebular Hypothesis," later developed by Sir W Herschel, to account for the state of affairs existing in the solar system According to this hypothesis, the material composing the system was originally a mass of intensely hot nebulous or gaseous matter that tended to assume a rotating globular form under the action of gravitational forces Gradually the mass contracted, and successive rotating rings of matter were from time to time, as it were, left behind. These rings, in turn, broke up, and the matter of each formed a planetary system in which again rings and satellites could form just as in the parent nebular mass

Darwin's Hypothesis In 1885 Sir George Howard Darwin showed mathematically that the present condition of our earth and moon (the revolution of the moon and its axial rotation being synchronous) might have been brought about by the action of the tidal friction working continuously through successive ages of cosmic time. Indeed, it is quite reasonable to suppose that, when earth and moon were nearer together, and as yet in a more or less plastic condition, very gigantic tides must have been set up—tides involving the earth's semisolid matter, as well as the oceans of water and air. Darwin's researches have brought out the fact that such tides must produce important modifications in any system of celestial bodies

The Meteoric Hypothesis Sir Norman Lockyer's so-called Meteoritic Hypothesis assumes that space was originally occupied by swarms of meteors (q.v.), and that collisions between these swarms gave rise to condensa-tions from which the stars have been gradually built up by accretion.

The Planetesimal Hypothesis. Modern research has shown that the nebular hypothesis is unable to explain all the phenomena presented by planetary systems, and, in order to overcome the difficulties which arise, Professors Chamberlin and Moulton, of the University of Chicago, have recently put forward a theory which the former calls the "Plantesmal Hypothesis." It may be regarded as a combination of the nebular and meteorite hypotheses. Led to the conclusion by the large number of spiral nebula which have been brought to light by modern telescopes, the propounders of this theory suppose the solar system to have developed from such a nebula This they imagine to have had its origin at a time when another sun passed near our own This nebulous mass was composed of a great number of small masses, but throughout it there were primitive nuclei of considerable dimensions around which have gathered accretions of the scattered material, thus giving rise to the planets.

See Nebulæ, Solar System, Sun, etc. Ancient Cosmogonies. Scarcely any people, either ancient of modern, has been without some theory concerning the creation of the world The cosmogonies of chief interest in connection with our own views are those of Babylonia, India, Iran, Greece, and ancient Germany The Babylonian system resembles in many respects the cosmogony of the Bible There was darkness and water, with strange monsters Into this chaos the god Bel entered, and clove the cosmic sea, and parted the darkness. Animals took the place of the former monsters, and man himself was created, as well as the sun and moon and five planets In some of the latest hymns of the Rigveda (q.v.) water was the source of all, whence came fire and wind-the breath of divinity Or, again, the world arose from the sacrifice of Man (Skt purusha), whose head became the sky, his feet the earth, his eye the sun, his breath the wind, while from his mouth, arms, thighs, and feet the four castes sprang. These ideas, developed more fully in the pseudoepical Sanskrit Purānas (qv), exhibit clearly the pantheistic trend of Hindu thought The rôle of Kāma or Love in Indian cosmogony bears some resemblance to that of the Greek Eros. Iranian cosmogony, as we find it in the Avesta and the writings in Pahlavi (qv), corresponds to the dualistic character of the Zoroastrian Ormazd, the god of everlasting light, created the good in opposition to Ahriman, the devil, who dwells in eternal darkness In the course of a period of 3000 years Ormazd created the heaven, water, earth, plants, animals, and man. In the following 3000 years Ahriman produced evils to combat these creations of Ormazd. but, despite some temporary success, he was

finally forced to yield to the powers of good Greek cosmogony is more varied. The Homeric poems regard Ocean as the source of the world, while the Hesiodic account ascribes the first beginnings to Chaos Thales followed first beginnings to Chaos Thales followed the first theory, and Anaximander the second, which has its parallel also in India Anaximenes considered air to be the source of all, while Herachitus postulated fire as the primal element, and supposed a constant flux of all things, where only the divine law (Zeus) was immutable. The notion of Eros or Love as a cosmic force was introduced into Greek philosophy by Parmendes and Empedocles, for which Anaxagoras substituted Mind (Gk. 1967). Of special interest in this connection is the atomic theory of Democritus, according to whose view the world is permeated by a soul which is composed of atoms in continual motion, and which partakes of the nature of fire Later Greek philosophy

did hardly anything towards the development of cosmogonic ideas

For Germanic beliefs on this subject, the most comprehensive source is the Voluspa, an Icelandic poem of the twelfth century of our

Bibliography. For the cosmogonic ideas of the Egyptians consult the studies of Naville The cosmological views of the American Indian and Eskimo tribes, of the African races, and of the peoples of Farther Asia and the islands of the Eastern seas, may be gathered from the writings of Brinton, Grey, Tylor, and others. The Hindu theories will be found in Hopkins, Religions of India (Boston, 1895), and the Persian in Jackson, "Iranische Religion," in Geiger und Kuhn, Grundriss der iransichen Philologie (Strassburg, 1900) Consult also Lukas, Gumbbegriffe in der Kosmogome der alten Volker (Leipzig, 1893), Jensen, Kosmologie der Babylonier (Strassburg, 1890), Meyer, Eddische Kosmogonie (Freiburg, 1891), Faye, Sur l'origine du monde : théories cosmogomques des anciens et des modernes (2d ed, Paris, 1885), Plunket, Ancient Calendars and Constellations (London, 1903), Chamberlin, "Funstellations (London, 1905), Unamberlin, run-damental Problems in Geology, 'in Year Book No. 3 of the Carnegue Institution, Clerke, Modern Cosmogomes (London, 1905), La-grange, Etudes sur les religions sémitques (Paris, 1905), Moulton, "On the Evolution of the Solar System," in Astrophysical Journal for October, 1905, Hale, Study of Stellar Evolution (Chicago, 1908), Lowell, The Evolution of Worlds (New York, 1910).

COSMOP'OLIS (from Gk κόσμος, Losmos, order, world, universe  $+\pi\delta ns$ , polse, city) A French novel by Paul Bourget (1892) The characters come to Paris from all quarters of the earth, forming an international society. The theme of the action is the persistence of ethical differences even where a complete cosmopolitamism has apparently been reached

COSMOP'OLITIE (Gk κοσμοπολίτης, cosmopolities, citzen of the world, from κόσμος, kosmopolities, citzen, from πόλες, polis, city) A plant which grows spontaneously in every climate Not to be confused with hydroger.

fused with ubiquist (q v).

COSMORAMA, körmö-rä'må (from Gk κόσμος, kosmos, order, world, universe + όραμα, horama, sight, from όρᾶη, horan, to see) An arangement of lenses and mirror for viewing pictures, so that they appear as natural as possible The name was applied to exhibitions where representations of landscapes, buildings, and other features of places in different parts of the world could be seen. By properly arranging the lenses, mirrors, and illumination, the pictures were produced not only enlarged, but with the effect of perspective. Cosmoramas were first introduced in France at the beginning of the nineteenth century

COS'MOS (Neo-Lat, from Gk kóspos, kosmos, cosmos, order, world, universe). A genus of annual and perennial herbs of the family Compositæ The 20 or so species comprised in this genus are natives of tropical America, mostly Mexico A few annual species are cultivated in flower gardens and have within recent years come into increased prominence and popularity, especially in the United States (For illustration, see Plate of Cranderry, ETO) The plants branch freely and are sometimes 10 feet high, leaves pinnately cut, flowers mostly rose, crimson,

puiple, yellow, oi white, generally solitary on a long pedunicle. A sandy soil not too rich is preferred. The seeds are sown indoors, and the plants when large enough are set in the garden, after danger of frost is past. Cosmos hymmatics and Cosmos sulphuseus are the species most commonly grown. The former grows 7 to 10 feet high, blooms in the late fall, and has many different forms. A dwarf variety about 4½ feet high blooms in July. Cosmos sulphuseus grows 2½ to 4 feet high, with sulphur on independent of the consequence of the consequence of the core southern States in late spring and continues to bloom without cessation until killed by fall frosts. The black cosmos (Cosmos diversifolius) is a tender annual, growing only 2 to 16 inches high.

COSMOS A great scientific work in four volumes, by Alexander von Humboldt, which appeared at intervals from 1845 to 1858. It is a physical description of the universe, setting forth physical laws in logical order, though modern science shows it faulty in some of its

NOSQUIN, koʻskin', EMMANUEI (1841—) A French witte on folklote He was boin at Vitry-le-François, Marne In his Contes populares de Lorraune (1887) he follows Benfevin an attempt to show that the folklore of Europe has been derived from India He also wrote on ecclesiastical subjects, clinelly for the paper Le Français, and translated into French the works of Joseph Fesslet (qv) on papal infallibility (1873) and the Vatican Council (1877)

COSS. See ALGEBRA.

COS'SA, FRANCESCO (c.1435-c 77) An Italian painter of the Renaissance He was a pupil of Tura of Feriara and was also influenced by Piero della Francesca, worked at Feilara and Bologna, and is considered, with Ercole Roberts, to have been the founder of the Bolognese school. He and his contemporary, Cosimo Tura, are the most important representatives of Ferrarese art In the Palazzo Schifanoja at Feirara there is a curious fresco by him, "The Glorification of March, April, and May," the other months having been done by lesser artists. In this composition there are a number of portraits of his contemporaries, remarkable for then fidelity to nature and for the valuable studies of costume Indignant at the slight compensation he received from Duke Borso d'Este, he left Ferrara and settled at Bologna Among his finest works are a Madonna in the Pinacoteca, Bologna, a Madonna in the Johnston collection, Philadelphia (attributed to Tura), and "Autumn" in the Berlin Museum. A distinguishing characteristic of his art is his command of movement and of line. Consult Berenson, North Italian Painters of the Renaissance (New York, 1907)

"OOSSA\_LTURY (1831-96) An Italian economist. He was born in Milan, studied at the universities of Pavia, Vienna, and Leipzag, and in 1858 was appointed professor of political economy in Pavia. His most important work is the Prima elements do economia politica (8th ed., 1889), which has been translated into Inglish and several other languages. Among his other publications may be mentioned Soienza della finance (1875, Eng. trans, 1888, under title Taxaction, its Principles and Methods), Guida allo studio dell' economia politica (1876, Guida allo studio dell' economia politica (1876).

Eng trans, 1880), and Saggi di economia politica (1878)

COSSA, Prerso (1830-81). An Italian 10-mantic dramatist, born in Rome He fought in the campaign of 1849, going thereafter into the campaign of 1849, going thereafter into the campaign of 1849, going thereafter into the following the second of 1876), followed by Plaulo e il suo secolo (1876), Messalma (1876). Cleopatra, and other plays of classic subject matter. In his best work Cossa frees the classic drama from Alfierian initiation and the aridity of the classic tradition, attaining great excellence of historical coloning, reducing his characters from abstractions to concrete vital human beings, combining beauty of lyric movement with delicate humor, sound psychology, and realistic truth Consult Mazzon, L'Ottocento (Milan), Franchetti, in Nuova Antologia (1881). Works (Tuim, 1887)

COS'SACK ASPARAGUS See TYPHA

COSSACK POSTS The name of an observation group of four men sent out from the support of an outpost The cossack post is now included in the general term outguards, which vary in size from four men to a platoon sult Field Service Regulations, U S. A ( S. A (1913). Each post consists of four men-three reliefs of one sentinel each and a non-commissioned officer as commander, or, failing such, an old and experienced soldier They are a substitute for the usual line of pickets and sentinels are sufficient in number to cover the front of the support and to connect with the outguards of adjoining supports The interval between posts and their distances from the support depends upon the situation and teriain sentinels are seldom posted more than 30 to 40 yards in front of the Cossack posts and are kept under constant observation by the other memhour, and the posts every three hours. The advantages claimed for the Cossack system are that it is more economical in point of men required than is the usual method and is besides less fatiguing and consequently more effective, and that, above all else, it enables the sentries to be more resolute in the per-formance of their duties, because, backed up by the nearness of their post, they are freed

non any timidity of loneliness. See Outroost COSSACKS (Russ. kozaků, kazaků, from Turk. kazak, robbet, the same word in Tatar designating a light-armed warrior). A name borne by a people living under a peculiar military organization, who for several centuries have constituted an important element in the population of southern Russia. Their principal homes are the steppes of the Don and of Ciscaucasia and a region at the southern end of the Ural Mountains, on the borders of European Russia and Siberia. They are a mixed race, of Russian, Polish, Tatar, and other elements, with the Russian predominating. In fact, they are distinguished from the other Russians by their unsettled mode of life rather than by any difference of race or fundamental character Cossacks make then appearance in history about the close of the Middle Ages as a frontier people, on the border of Slavdom (Russia and Poland) on the one hand and the Tatai regions to the southeast on the other A free, wild people, accustomed to live in the saddle and in constant waifare, they acquired by inheritance the qualities of courage, endurance, self-reliance, and good horsemanship which gave them high 133

rank among the irregular cavalry of the world. Long unaccustomed to the restraints of civilized government, they distinguished themselves by their predatory habits The Don Cossacks, who at the present time constitute the principal body of the Cossacks, became powerful about the close of the sixteenth century. The town of Tcherkask became the seat of then government. At the head of their democratic organization was the Ataman (Hetman) In 1773 the Don Cossacks joined the pretender Pugatcheff against Catharine II, for which they were deprived of all of their liberties and their democratic institutions Yermak Timofeyeff, a Don Cossack, belonging to a lawless band, the Good Companions of the Don, entered the service of the Stroganoffs, a wealthy family living in the Ural region and holding special trading privi-leges, crossed the Urals with a few hundled followers in 1581, and in a few years conquered and brought into a rude kind of subjection all of western Siberia. From this time the history of the Cossacks is closely connected with that of the Russian progress eastward through Siberia. With wonderful persistence and endurance, and a spirit of enterprise that would have been impossible in the stolid Russian village peasant, they explored and subdued this vast addition to Russia's territory The Malorussian (Little Russian) Cossacks, or Cossacks of the Ukraine (Boider Land), were organized in the second half of the sixteenth century by Stephen Bathory, King of Poland, into a defensive bulwark on the southeastern frontiers of the realm In the middle of the seventeenth century, harassed by Polish oppression, they revolted under the lead of their Ataman, Chmielnicki (qv), and placed themselves under the protection of Russia Under the lead of Mazeppa they joined Charles XII against Peter the Great, whose victory at Poltava sealed their Their liberties were abolished, and they treated with great harshness. The Zapowere treated with great harshness. The Zaporogian Cossacks (Russ Zaporog, beyond the rapids), on the Dneiper, were one of the most notable of the tribes down to the middle of the seventeenth century, when they submitted to Russia. Their predatory incursions were not confined to the land, but included naval expeditions against the Turkish towns of Asia Minor Among their peculiar tribal institutions was

The Cossacks are regaided by the Russian government as a military division of the population. They are organized in 11 voiskos, or corps (Don, Kuban, Freek, Astrakhan, Orenburg, Ural, Siberia, Semiryetchensk, Transbaikalia, Amur, Usuri) Their military training begins in boyhood, compulsory service in the stantsa, or Cossack post, begins at 18, field service begins at 20, 12 years being spent in active service and five years in the reserve. This service and five years in the reserve. This service with arms and hoises, and on furlough with arms and hoises, and on furlough with arms but without horses. Each voisko equips and elothes its soldiers and receives an allowance of land from the crown. The Cossacks wear a distinctive uniform of dark green Part of them, in addition to other arms, still carry a long lance. The Kuban voisko enrolls six battalions of Cossack infantry, and there are also 15 batteries (44 on a war footing) of Cossack field artillery. The title of Ataman, or chief of the Cossacks; now vested in the Imperial family. The Cossacks probably num-

the celibacy imposed upon the ruling class

ber nearly 3,000,000, and it is estimated that over 300,000 could take the field within a comparatively short space of time. The Cossack regiments are armed with a short magazine rifie of 0.299 inch calibre, sighted to 3000 paces. Every cossack up to any age can be called out in time of emergency to assist in the national defense. Consult Erckert, Dev Ursprung der Kosaken (Berlin, 1882), and Tettau, Die Kosaken (eth. 1892). A realiste picture of Cossack life may be found in Gogol's celebrated novel Twas Builba.

COSSACKS, THE A novel by Count Tolstoy (1852) It was translated into English in 1878

COSSON, ko'son', Ernest (1819-89) A
French botanist, born in Paris. He carried on
extensive botanical studies in Algeria and explored the flora in the suburbs of Paiis His
published works include the following Flore
descriptive et analytique des environs de Paris,
jointly with Saint-Pierre (1845); Synopsis
analytique de la flore des environs de Paris,
(1845), Atlas de la flore des environs de Paris,
(1852), Compendum Flora Atlantica, ou
Flore des états barbaresques Algérie, Tunnsie,
Mano (1881-87), Conspectus Flora Atlantica
(1881), Illustrationes Flora Atlantica (188392)

COSSUTIUS, kös-sh'sh'va. A Roman alchitect noted for his selection by King Antiochus Epiphanes (175-164 sc) to rebuild the great temple of the Olympian Zeus at Athens in the Corinthain style He did not hive to complete the temple, which was finished by Hadrian in the early second century a D

COST. See COTISE.

COSTA, ko'sta, Alfonso Augusto de (1871) A Portuguese statesman, born in Ceia, Guarda, Portugal He studied at Coimbra, recerving his doctor's degree in 1895, and in the following year became professor of law Known as an eloquent speaker, he affiliated himself with the an aroutent speaker, in animated filment wint one Republican party and was elected by a great majority deputy to the Cortes, in spite of the machinations of government agents (Nov 26, 1899) The ministry annulled his election on a futile pretext, but in the new elections, on Feb. 18, 1900, he was again triumphantly elected. In the Cortes he was received as a recog-nized enemy of the monarchical régime, and he soon gave more than ample proof of his enmity by introducing, amid great protest, a resolu-tion in the Cortes in which he proposed the abolition of the monaichy After the fall of the ministry he failed to be reelected, but thiew himself enthusiastically into the preparations for the revolution which resulted in 1910 in Under the new establishing the Republic Under the new régime he became Minister of Justice, and in January, 1913, Minister of Finance and Premier. The exiled Royalists in July, 1913, made an attempt on his life, but he escaped with slight injuries, another plot to kill him in September, 1913, was also frustrated Dr Costa, more than any other one man, typifies the spirit of the new Republic of Portugal His publications include A Egreje e a questão social, O serviço de peritos no proceso criminal legislação portugueza, critica e reforma, Direito civil (1896), Economia politica (1896-98), Organização judiciaria (1897-1901)

COSTA, kö'sta, CLAUDIO MANUEL DA (1729– 790) A Brazilian poet, statesman, and jurisconsult He was born at Mariamo (Province of Minas Geraes) He studied law at the University of Coimbra, and on his return to Brazil in 1751 devoted himself to his profession and to political economy From 1780 to 1788 he was second Secretary of State His works, which are numerous, are highly valued by the Portuguese, who consider them classics. The best of them is Villarica, composed about 1773, but not published until 1841

COSTA, ISAAC DA See Da Costa, Isaac

COSTA, LORENZO (1460-1535) An Italian painter of the Renaissance He was a pupil of Cosimo Tura in his birthplace, Feriara, and was influenced at first by Ercole Roberti and Francesco Cossa Of his supposed early paintings only the St Sebastian (Dresden Museum) is authentic. In 1483 he went to Bologna, where he remained almost constantly until the fall of his pations, the Bentivoglio family, in 1506, and there he began his connection with Fiancia. The artists had a joint school and worked as copainters Costa first influenced Francia, and was in turn influenced by him His landscape backgrounds are among the best of his day He was a master of linear com-position, and in his best pictures the color is clear and refulgent, the figures dignified, and the whole effect pleasing Among his best "A Mapaintings in Bolognese churches are donna with Members of the Bentivoglio Family" (1488) in San Giacomo Maggiore, a characteristic example, admirable in its fresh, simple, sincere treatment and masterly drawing, "The Triumph of Life and Death," in the same church, a Madonna (1497), in San Giovanni in Monti, a "Santa Conversatione," in San Petronio, and fiescoes in the Misericordia and After leaving Bologna he was Santa Cecilia appointed court painter in Mantua, where his chief work was the decoration of Palazzo San Sebastiano. Other works include "Isabella d'Este Crowned by the Muse" (Louvre) and the "Dead Christ" (1504, Berlin Museum) Costa played an important part in the history of the schools of Bologna and Ferrara The young Correggio, who accompanied him to Man-

tua, was his principal pupil.

Consult Morelli, Italian Painters: Critical Studies of their Works, translated by Constance Joseph Fronkes (London, 1892-93); Berenson, North Italian Painters of the Renaissance (New York, 1907), Gardner, The Painters of Forms a (London, 1911)

COSTA, SIR MICHAEL, really MICHELE (1808-84). An Italian composer and conductor, born in Naples. He was taught by his father and Zingarelli (qv). When the latter's psalm was to be performed at the Birmingham Festival (1828), he sent Costa, then only 18 years old, to conduct it. Owing to a misunderstanding, Costa had, instead, to sing the tenor part, but acquitted himself of the task brilliantly, and his reception induced him to settle in England He became conductor of Italian opera in 1830 He became conductor of Italian opera in 1830 and in 1847 assumed the same post in the Covent Garden Opera In addition he was ap-pointed conductor of the Philharmonic Society (1846), Sacred Harmonic Society (1848), Birmingham Festivals (1849), and Handel Festivals (1857) His principal work, the oratorio File, was successfully produced at the Birming-ham Festival of 1855 and Naaman in 1864. In 1869 he was knighted by Queen Victoria and also received the royal order of Frederick from the King of Württemberg. Costa wrote several

ballets and operas, of which the most successful were Don Carlos and Malek Adel. He died at

Brighton, England COSTA, PAOLO (1771-1836) An Italian author, born in Ravenna, educated at Padua, and a teacher successively at Treviso, Bologna, and Corfu He published a commentary on Dante, a revision of the Dictionary of the Crusca, and translations of the Batrachomyomachia and of

translations of the Batrachomyomachta and of Schiller's Don Carlos Works (Florence, 1839– 40), biography by Moidam (Forli, 1840) COSTA CABRAL, Kôtsta ka-brāl', Antonto Bernardo da, Count de Thoman (1803–89) A Portuguese statesman He became judge of the Supreme Court in Oporto and in Lasbon, and in 1835 was elected to the Chamber of Deputies, where at first he was one of the leaders of the Radicals, but soon joined the Conservative party He was appointed Governor of Lisbon in 1838 and Minister of Justice in 1839. For the purpose of setting aside the constitution of 1820 with its restrictions of the loyal power, he fomented, in 1842, an insurrection in Oporto, assumed control of the army, established a censorship of the public schools, suppressed the universities, and so oppressed the people with taxes that he was driven from power in Once more appointed Prime Minister, in 1849, he again played the dictator, to the detriment especially of the state finances, but was compelled to resign The Queen refused to accompense to resign the queen recused to accept his resignation, and a revolution was started against him under the leadership of Saldanha, which overthrew his administration in April, 1851 He fied to England, but returned the next year, and from 1859 to 1861 was Ambassador to Brazil In 1862 he became a member of the Council of State and president of the Superior Administrative Court

COSTANOAN. A linguistic family of Indians, formerly occupying territory north of San Francisco Bay In 1910 there were but 17 passing under the name "Santa Cruz"

COSTA RICA, kô'stà rẽ'kà (Sp., rich coast). The most southern of the Central American States, bounded by Nicaragua on the north, the Caribbean Sea on the east, Panisma on the southwest (Map Central America, E 5). Its area is estimated at 18,700 square miles. Lake Nicara-

gua forms part of the northern boundary.

Topography. The interior of the country is taken up partly by the Talamanea Range of mountains (a continuation of the Cordillera of Chiriqui), which runs from the southeast to the northwest as far as lat 10° N The Talamanca is of volcanic origin and reaches in its highest peaks an altitude of over 12,700 feet North of the Cartago highland commences the second mountain range, which extends in the same (northwesterly) direction to the northern boundary of the Republic There are several volcances in this range. Of them, however, but two—the Iraza (11,500 feet) and Turrialba (11,350 feet)—show any signs of activity Since 1841, when the town of Cartago was almost completely destroyed, no serious eruption has occurred Earthquakes are of frequent occurrence. The last serious shock occurred in 1910, when the Peace Palace and other buildings at Cartago were destroyed, and 1000 lives were lost. The Atlantic coast, which, according to the adjustment of the southern boundary in 1900, reaches only to a point a little north of the mouth of the river Teliri or Sixola, is generally low, and, with the exception of Port Lumón, without any inlet. The Pacific coast, on the contiary, has a more elevated surface and forms the two spacious gulfs of Nicoya and Dulce, which are protected by two mountainous pennisulas. There are a number of smaller inlets in the northern part. The rivers of Costa Rica are short and, although abundant in water, unmavigable. Most of them flow into the Atlantic or the Pacific, while some join the San Juan, which forms the eastern half of the notthern boundary.

Geology. The interior highland region is composed of Paleozoic and Mesozoic strata, in places broken through by ancient eruptives and overlain by more recent lava flows Many districts are known to be mineralized, the deposits of gold are especially important and have attracted the attention of foreign capitalists, who are now engaged in developing this branch of the mining industry. The east coast of

Costa Rica is an alluvial plain

Climate. In regard to its climate Costa Rica may be divided into three zones. The torrid zone, below 3000 feet, comprising the coast lands, has an average temperature ranging from 72° to 82° F. The temperate zone, lying between 3000 and 7500 feet, has the most salubrious climate and a mean temperature langing from 57° to 68° F. Above 7500 feet the temperature is much lower, and frosts are frequent, but snows rare. On the table-lands of San José, lying at an elevation of 3000 to 4000 feet, the climate is very agreeable, the temperature having a range of only about 5°, the mean for the year being 67° F. The average yearly rainfall is about 100 inches, but occasionally it reaches 130 inches. The day season lasts from December to May, while the months of December, January, and February are the coldest of the year Owing to the proximity of the two occans, winds blow almost continually and occasion considerable discomfort during the dry season On the whole, the climate of Costa Rica is healthful and fevers occur only in regions below an elevation of 150 feet

Flora The vegetation of Costa Rica is characteristically tropical in its nature. In the forests are found mahogany, brazilwood, cedar, evergreen oak, and ebony. Coffee and banana are the principal cultivated plants

Fauna. Animal life is abundant and varied. The tapir and other South American animals are found. Bird life is represented by about 700 species, including parrots, toucans, humning birds, and members of the gallinaceous family. There are over 130 species of reptiles and batrachians. The most important life in the surrounding waters are the pearl and mother-of-pearl oysters.

Agriculture Costa Rica is essentially an agricultural country and is chiefly dependent on the cultivation of coffee and bananas Notwitistanding the sparse population of the country and the lack of transportation facilities, agricultural is in a flourishing condition, as evidenced by the constantly increasing exports of agricultural products. This is due partly to the ferthity of the soil and favorable climatic conditions, and partly to the fact that more than two-thirds of the inhabitants belong to a class of peasant proprietors. The state domain is soil or leased on advantageous terms in lots of not over 500 hectares. The presence of so large a proportion of working landowners makes

not only for the development of agriculture but for the political stability of the country Coffee cultivation was retarded during the first decade of the century by the prevailing low prices 1894 the export amounted to 23,129,000 pounds, it increased to over 43,000,000 in 1898, decreased to about 24,000,000 in 1904, advanced to about 35,000,000 pounds in 1905, and in 1911 was 27,150,000 pounds. This latter figure rep resents the approximate annual export from 1909 to 1912 Banana growing has developed rapidly, chiefly under American management, over threefourths of the export goes to the United States In 1881 about 3500 bunches were exported, by 1890 the exports had increased to 1,034,765 bunches, while in 1905 they amounted to 7,283,-000, in 1910 to 9,097,285, and in 1912 to 10, 647,702 bunches Besides coffee and bananas, there are raised sugar, cacao, rice, corn, and beans, but none of them is exported to any extent Stock raising, though relatively unimpor-tant, is developing. The forests are exploited on a steadily increasing scale

Mining and Manufactures. The precious metals, particularly gold, are mined to some extent, principally with the aid of American capital. Their export, which was valued at about \$283,000 in 1915, mereased to over \$1,184,000 in 1911 and then declined to about \$764,000 in 1912 of manufacturing establishments Costa Ruca has very few, the largest being the national liquor factory and the national

foundry at San José

Transportation and Communication The transcontinental railway connects the Caribbean port Limón with the Pacific port Puntarenas, by way of San José There are branches to the north and the south of the main line, and these it is planned to extend to various parts of the country and ultimately to connect with railways in Nicaragua and Panama The railways aggregate over 430 miles There are over 130 telegraph offices, with upward of 1520 miles of wire.

Commerce. The chief ports are Limon untarenas In 1912 there entered at the Puntarenas former 538 vessels, of 1,120,606 tons, and at the latter 87 vessels, of 178,904 tons Imports increased from \$6,175,637 in 1909 to \$10,187,-686 in 1912, and exports from \$8,264,174 to \$10,071,144 Of the imports in 1912, the value of \$5,865,908 represented the United States, \$1,503,944 Germany, and \$1,391,003 the United Kingdom The coffee export in 1912 was valued at about \$4,950,000, about five-sixths of it going to the United Kingdom, the banana export, about \$3,503,000, over three-fourths to the United States Other exports are gold bars, woods, hides, rubber, and cacao About 46 per cent of the imports are drawn from the United States, and about 55 per cent of the exports are to that country Costa Rica is economically one of the more promising Latin-American countries. Its favorable climate and soil and its comparative freedom from political disturbances have attracted foreign capital.

Government. In its form of government Costa Rica is a republic It is governed under a constitution adopted in 1871, but this did not come into force until 1882, and it has been repeatedly modified. The executive power is vested in the president, elected indirectly for four years, he is ineligible for the next succeeding term. He is assisted by a cabinet of four members. The congress consists of a

single chambes of 43 representatives elected indirectly for four years. For administrative purposes the republic is divided into seven provinces, administered by governors appointed by the president Justice is administered by a supreme court, two courts of appeals, a court of cassation, and also provincial courts. Capital punishment is prohibited. The constitution provides for compulsory military service in time of wai. On a peace footing the standing army has a maximum strength of 1000 men and the milita about 5000. See ARMIES AND NAVIES. For national colors see Colored Plate of Flaces.

Finance. The standard of value is gold, the monetary unit, the colon, par value 48536 cents. The budget for 1914 showed estimated revenue of 9,200,000 colones and estimated expenditure of 9,013,635 colones. The estimated recepts from customs were 5,500,000 and from luquor excess 2,200,000 colones. Public debt. as converted at the end of 1911 foreign, £1,617,200, internal, \$6,553,950. The metric system is legally established in the country, but Span-

ish weights and measures are generally used Banks. There are 5 banks in Costa Rica, with a combined capital of 6,365,000 colones At the end of 1911 notes in circulation amounted to 4,007,405 colones Foreign gold

is legal, but not foreign silver.

Fopulation. Although there are many mixed bloods in Costa Ruca, the percentage of Spanish blood is greater than in the other Central American republies. The majority of the inhabitants claim descent from the Spanish colonists, chiefly Galicians, who arrived in the sixteenth century and subsequently. Through the industry and peaceful disposition of the people, Costa Ruca presents a favorable contrast to the rest of Central and much of South America. The population in 1904 was reported at 331,340. The enumeration of Dec 31, 1911, showed 388,-266 inhabitants, but it was not complicts, several districts being omitted. The largest town is the capital, San José (31,688). In 1910 and 1911 immigrants numbered 11,233 and 5537, emigrants, 7236 and 8170, briths, 15,847 and 16,839, deaths, 9723 and 9483

Elementary instruction is free and compulsory, but the majority of the inhabitants are still illherate. In 1911 about 30,000 pupils were enrolled in the elementary schools. There are several institutions for secondary and professional education. The Roman Catholic church is recognized and supported by the state, but other religions are tolerated

History Costa Rica was first visited, and probably named, by Columbus in 1502 and set-tled permanently about 1530 It formed a part of the audiencia and captaincy-general of Guatemala till 1821 With other Central American States, Costa Rica was a part of Mexico till 1823, when the proclamation of a Mexican republic caused them to withdraw from a connection which had always been distasteful and which in effect had been merely nominal federal republic of the seceding states was first tried. It lasted until 1839, but its authority does not seem to have extended over the Costa Ricans, who busied themselves with commerce and took little interest in public matters Affairs remained in an unsettled condition, however, and Costa Rica's exact status was not definitely determined until 1848, when she successfully declared herself an independent republic In 1856 Costa Rica was involved in war against the filibuster William Walker (qv). The country has been freer from revolution than its neighbors The present constitution dates from 1871 In 1897 Costa Rica became a member of the short-lived Greater Republic of Central America, established in 1895 by Honduras, Nicaragua, and Salvador for the purpose of common defense and the harmonious adjustment of foreign relations Since then nothing more serious than boundary disputes has disturbed the government of Costa Rica. The most important of these, with Colombia, was adjusted in 1900, in favor of Costa Rica, by the award of President Loubet of France But as Loubet in making that award had been guilty of extralimitation, the award was rejected, and after many attempts to reach a settlement (made somewhat more compli-cated by the fact that Panama had become independent and had to be dealt with instead of Colombia), the whole matter was again submitted to arbitration, with the Chief Justice of the United States Supreme Court as arbitrator, by a protocol signed at Washington March 17, 1910 Besides the general works on Central America, of which Squier, States of Central America (New York, 1858), is the best, and Bancroft, Central America, vol in (San Francisco, 1890), is the most copious, consult the English translation of Calvo, Republic of Costa Rica (Chicago, 1890) This is a popular and patriotic work, authorized by the Costa Rican Government, and gives the version of political and commercial events most acceptable to the men in power in 1890

Consult Barrantes, Geografía de Costa Rea (Barcelona, 1892), Villafranca, Costa Reca, the Gem of American Republics The Land, its Resources and its People (New York, 1895). Biolley, Gosta Reca and her fixing C Washington, 1889). Schroder, Costa Rica State Immigration (San José, 1894), Revista de Oosta Rica, en el Sujo XIX (th., 1902), Barrantes, Elementos de Historia de Gosta Rica (th, 1892). For detailed bibliography, consult D J Malnquer, República de Costa Rica (Madrid, 1890). Maps are published by the Bureau of American Regration (Washington, 1903), and the Royal Geographical Society (London, 1897), the latter being physical.

GOSTE, East, Jean Victor (1807–73) A French naturalist, noted for researches in embryology and for efforts towards the cultivation of fishes in his country. In 1841 he became professor of embryogeny at the Collège de France. Mainly through his influence 600,000 sulmon and trout were placed in the Rilone. In 1862 he was appointed inspector general of the river and coast fisheries. He published Cours d'embryogène comparée (1887), Instructions pratiques sur la piscutture (1887), Ovologio du Kanguroo (1838); Histoire générale et particultire du développement des corps orquisés (1847–59), Voyage d'émploration sur le littonal de la France et de l'Italia (1885).

COSTEANING (kos-ten'ng) DITCH (from costeon, from Corn cothes, dropped + stean, try, Wolsh, ystacm, Gael, staon, Manx stammy, Lat stammum, tn) A ditch dug through the surface soil to bed rock, at right angles to the strike of the formation, for the purpose of prospecting for or locating the outcrop of the continuation of a mineral deposit, the presence of which is suspected. In the United States,

this method is known as trenching. In the Cobalt District of Ontario many miles of such trenches were dug in prospecting for silver veins in the ore-bearing formation. The same method was adopted in the Porcupine District of Ontario in the search for gold veins. It is the usual method followed in preliminary prospecting when the presence of mineral is suspected or known from surface float, and the

overlying soil is not too deep

COSTEL'LO, LOUISA STUART (1799-1870) An English author and miniature painter For a time she occupied herself entirely with painting miniatures and copying illuminated manuscripts, but having attracted the attention of Scott and Moore, she adopted literature as her profession and produced many works which attained popularity Some of them are Songs of tames popularity some of the man and some as Stronger (1825). The Mand of the Cypress Isle and Other Poems (1815), Specimens of the Early Poetry of France (1835), The Rose Garden of Persia (1845), with illuminations by herself and her brother Dudley, and a number of semihistorical novels, of which the most prominent is Memoirs of Mary, the Young

Duchess of Burquidy (1853)
COSTEE, körter, Louens Janszoon. A native of Haarlem, Holland, reputed inventor of printing (about 1440) He is said to have printed sentences from beech-bark blocks, to have discovered a suitable ink, and to have substituted types of lead and later of pewter for beech wood. As he is alleged to have endeavoied to counterfeit manuscript, he is supposed to have worked in secret, but to have taken apprentices, one of whom, Johann Gansfleisch, a member of the Gutenberg family, is said in 1441 after Coster's death to have stolen types and matrices and fled to Mainz, where he might have revealed the secret to Gutenberg Coster's claim, vigorously maintained (q.v) by many Dutch scholars, was disproved by Van der Linde (1870), who showed that Coster was a tallow chandler and tavern keepen, that he was confused with Lourens Janszoon, a wine merchant and town officer, and that the claim for him as inventor was first made by Geirit Thomaszoon in 1550 Consult Morley, English Writers, vol vi (London, 1890), also Wysz,

Zentralblatt für Bibliothekswesen (1888) COSTER, SAMUEL See KOSTER, SAMUEL

COS'TIGAN, CAPTAIN A retired shabby-genteel Irish officer in Thackeray's Pendennis COSTIGAN, JOHN (1835- ) A Canadian statesman. He was born at St Nicholas. Quebec Province, and was educated at St Anne's College He became a judge of the Inferior Common Pleas Court, was in 1861-66 a Conservative member of the New Brunswick Legislature, and after confederation in 1867 was elected to the Dominion House of Commons, of which he remained a member until 1896. During the earlier part of his pailiamentary career he took a prominent part in amending the school law of New Brunswick, which contained a provision obnoxious to Roman Catholics In 1882-92 he was Minister of Inland Revenue, from 1892 to 1894 was Secretary of State, and in 1894-96 was Minister of Marine and Fisheries In 1882 he procured the adoption by the House of Commons of a notable series of resolutions praying the British government to concede home rule to Ireland The resolutions were politely disregarded in London In 1896 he was a delegate to the National Convention, Dublin, in the interest of

Irish home rule. In the same year he left the Conservative party and became a supporter of the Laurier administration In 1907 he was appointed to the Dominion Senate

COST'MARY (from cost, Lat costum, an Oriental aromatic plant, from Gk κόστος, kostos, spice root + mary, Fr marine, Lat marinus, pertaining to the sea, from mare, sea, but confused by popular etymology with Mary) The rayless form of Chrysanthemum balsamita, a perennial plant of the family Compositee, a native of western Asia, long cultivated in gardens for the agreeable fragrance of the leaves The root leaves are ovate, of a grayish color, on long footstalks, the stem is 2 to 3 feet high, it has small heads of deep yellow flowers in loose corymbs

COSTS (from cost, OF coster, couster, Fr. coûter, ML costare, to cost, from Lat constare, to cost, stand together, from com-, together + stare, Gk lorávai, histanai, Skt. stha, to stand). In a litigated case, the sum of money which the successful party is allowed to recover from his opponent, as a partial compensation for the expenses of the litigation. In actions at common law costs are the creation of statute, but in equity and admiralty suits they are fixed by the court, except where this power has been taken away or modified by legislation. Even in common-law actions discretion is often vested in the court to grant an allowance to the prevailing party in addition to the ordinary costs, and in some jurisdictions paupers and seamen may be relieved from costs altogether

Costs are either (a) interlocutory, ie, such as are awarded upon motions or similar proceedings during the pendency of the action, or (b) final, ie, such as follow upon the determination of the action. Upon the decision of a motion, or upon a judgment on appeal reversing the judgment appealed from and awarding a new trial, costs are often ordered to abide the event. In such a case, if the final judgment is in favor of the party who succeeded on the motion or appeal, he gets his costs of those proceedings, otherwise he loses them

The taxation of costs is the official adjustment,

on notice, of the various items to which the successful party is entitled For details relating to costs, consult the authorities referred to under PRACTICE

COS'TUME (Fr costume, from It costume, from ML costuma, from Lat consuctudinem.

custom or habit).

Costume is dress (qv.) regarded from the point of view of style, the distinctive garments worn at different periods by different human groups, and including not only gowns, shirts, drawers, coats, vests, trousers, petticoats, skirts, hoop skirts, waists, corsets, stockings, hats, boots, shoes, collars, belts, fans, garters, gloves, but also jewelry, modes of dressing the hair and beard, military and naval uni-forms, ecclesiastical vestments, university robes, armor and coats of arms. See HERALDRY, AR-MOR, COSTUME, ECCLESIASTICAL, HAIR DRESS-ING, BEARD, UNIFORMS, MILITARY AND NAVAL. JEWELRY, DRESS, FASHION, CROWN, CORONET, UMBRELLA, PARASOL, SHOES, CORSET, CRINO-LINE, TATOOING, ETC.

Once it was the generally accepted opinion that the primary object of clothing is to conceal nakedness and satisfy innate feelings of modesty. This view was perhaps based to some extent on the third chapter of Genesis, where,

after Adam and Eve ate of the fruit, "the eyes of them both were opened, and they knew they were naked, and they sewed fig leaves together and made themselves aprons and hid themand made themserves aprons and methods selves from the presence of the Lord God amongst the trees in the gaiden" During the past few years, however, anthropologists have accumulated and arranged facts about primitive pooles which, in the works of Westermarck, "applies which were the work of the works of pear to prove that the feeling of shame, far from being the cause of man's covering his body, is, on the contiary, the result of it, and that the covering owes its origin, at least in a great many cases, to the desire of men and women to make themselves mutually attractive

Certainly, when we turn from primitive to modern civilized humans, it is obvious that the primary object of costume, which is merely clothing that has style, is to increase the attractiveness of the individual or class of individuals and to enhance the curiosity and desire of the sexes for each other by exaggerating the difference between them and the mystery of it. unierence between them and the mystery of it. Structurally as well as decoratively the difference between "pants and peticoats," "trousers and skirts," is fundamental—so thoroughly fundamental that when women "wear the trousers" we are said to have "peticoat govern ment "

Climatically, clothing may be divided into two classes (with apologies to Dr Stratz)—one tropical, based on skirts, the other arctic, based on trousers—both developed from the gudle or waist cloth. In the arctic regions both men and women wear trousers, in the tropics both wear skirts, while in between, the men adhere to the arctic costume, the women to the tropical one, apparently because most of the women lead an inactive and house-sheltered life, while the men are active out-of-doors It is noteworthy that when women work as laborers they are apt to don trousers, eg, in the Belgian mines of the Swiss fields The ancient Greeks and Romans were much impressed by the fact that the barbarians to the north wore trousers Cicero speaks of the Tiansalpine tribes as the "panted people" (nationes bracata), while Pliny's term for what was afterward called Gallia Narbonensis, is Gallia bracata (Breeches Gaul) However, it will not do to push the geographical division too far, for trousers were the national costume not only of the peoples to the north of the Greeks and Romans—Gauls, Belgians, Franks, Britons, Germans, Scythians—but also of those to the east— Medes, Persians, and Parthians, as well as Armenians and Phrygians
To judge from the artistic remains of ancient

Egypt and Assyria, the use of rich stuffs was the primary thought of those Egyptians who sought to be splended in appearance Beauty of material and of pattern at least held an even place in their minds with jewelly Thus, from the earliest era known to us by the painted monuments down to a period later than the Macedonian conquest, the little-changing adornment of the Egyptian official or court lady was something very magnificent indeed, in the way of broad necklaces made up apparently of ring within ring of carved gens, mounted in gold with exquisite handling and taste, and covering the shoulders and the junction of the throat with the breast, as completely as the steel gorget of the sixteenth century The full significance of these collars is not entirely certain

It may be that in some cases the jewelry was sewn upon a collar-shaped piece of stuff, which has fallen away from those jewels which are found in the ancient tombs Armlets woin on the upper arm and also on the wrist, like the modern bracelet, are as common as the neck-laces, and there are evidences of a jewelled girdle as 11ch and as broad as the combination of necklaces, although this, being worn, as the necklaces are, directly upon the skin, is only in part seen, being often covered by the folds of the skiit, which is sometimes secured to the belt and falls below it. The stuffs themselves are found of still greater splendor in the representations of upholstered furniture, but this appears to be in part because a larger surface could be presented there than in the garment worn by man or woman The patterns are so similar to the earlier painted designs of the tomb interiors that there becomes evident a close connection in the mind of the Egyptian designer between one surface and another, the beautifying of which was to be intrusted to color There are, however, stuffs of the eighteenth dynasty, and perhaps earlier, usually of linen, which have been found in a more or less fragmentary condition in the tombs, and many of these are of the most exquisite beauty, equaling in the perfect intelligence of the design adapted to textile fabrics the finest work of the Byzantines or Persians 2000 years later In the warm climate of Egypt the clothes even of persons of rank were very slight and rather for ceremonial purposes than for utility In the Assyrian monuments, on the other hand, there is a marked tendency towards covering the whole person with what seem to be heavy drapetics, whereas in the Egyptian bas-reliefs the lines of the body are often made visible through the opening which represents the outer garments, suggesting either a partly transparent material or at least a material so little adjusted to the person and so slight that the body itself was never forgotten The monuments of the Assyrian tombs, on the contrary, show wrappings apparently opaque and stiff It is evident, however, that embroidery was much used, for parts of the garments, as of a king, are sculptured in low relief upon relief, and in a way which resembles closely the representation of the embroideries upon priestly robes in the sculpture of the Italian Remaissance As for jewelry, it was as rich and splen-did in Assyria as in Egypt, though the forms differ.

Among the peoples of western Asia even partial nudity was considered dishonorable, or at least the badge of inferiority Accordingly, the heavy garments shown in the works of art of Mesopotamia are easy of explanation, for where only slaves are wholly or partially naked, the tendency is strong towards the association of high rank with complete clothing. But then another tendency appears, that of making the garments of plainer stuff when the body is covered by them from shoulders to ankles, and using the richer stuffs, as above explained, for borders and the like. The Egyptian, with body, arms, and feet bare, might make his kilt of the most splendid piece of weaving obtainable, but the Assyrian, using yards of material for his garment, would naturally employ a simpler stuff not to avoid expense, but because people of such refined taste as those of Mesopotamia would shun the use of large surfaces, of uniform patterns, or the contrast, side by side, of differing patterns, of about equal size and brilliancy

This tendency is not maintained, however, in that other ancient civilization in a sense equal in antiquity as in importance to the civilization of western Asia. The Chinese, from the oldest times of which we have any knowledge, have been among the greatest artists in textile fabrics, as in other industrial arts, and history does not tell us of the time when the population, whether of true Chinese origin or of conquering Tatar dynasties and their followers, have not been more and more clothed in proportion to their rank and station Porters may go barelegged and barearmed, and, in warm weather, with the body naked above the belt, but as one ascends in the orders of rank, the clothing becomes more and more complete. This tendency is not, however, accompanied by any objection to bril-liant and rich stuffs The more abundant the means of the wearer, the richer his costumethat seems to have been the rule from all time, and this is partly explained by the beauty of the floral and foliated designs Embroidery, too, is used to heighten and complete the splendid weaves, and at least from the tenth century of our era until the present day, the most magnificent stuffs in texture and in color are those used by the ladies and gentlemen of the court On the other hand, personal jewelry, that which is worn apart from the garments, is not very rich nor very costly, though it may be effective Strings of pearls are known, and many stones that we in the West ignorantly despise because they are mexpensive, are made much of by the Chinese, who will use a rough turquoise, a piece of veined or spotted agate, or even a beautiful piece of glass accidentally rich in its veining and cut deliberately from the vessel to which it belonged—setting them in bronze or silver gilt, and making a very decorative clasp, or buckle, or pommel of a sword hilt Chinese costume should be most carefully studied, because it has been maintained in its traditional character even to our own time The blue cotton blouse of the workingman, and the garment of delicate blue and gold silk, woven in very elaborate patterns expressly for this garment, with gold or gilt buttons spherical in shape and working in loops, are mainly the same garments as those of a century ago.

The people of India are even more divided among themselves in details of costume than are the people of Europe. The general character of the different races, north and south, leads towards a great distinction between classes of the population. The simple piece of stuff, 4 feet wide by thrice as long, worn by the women, is most gracefully draped about the shoulders and breast, in very recent times it is often a picce made in Europe of three large handkerchiefs, with their several borders complete This is worn over a petticoat, arms and legs are bare, and the feet, except for occasional use of sandals, but the dark skin is barred and spotted with many and large jewels Necklaces, broad armlets and wristlets, rings for toes and fingers, earrings, and nose rings, are all made of silver wire for the poorer women, who often put their whole savings into these adornments The necessity of providing for a very warm summer climate, and in the south for a wholly tropical year, has caused the making of muslins of a fineness and perfection of weave never approached in Europe, though these native manu-Vol. VI -10

factures have been destroyed by the competition of British cottons A few of the native princes alone encourage the making of these exquisite weaves Besides these there are figured cottons of such perfect make and so beauured cottons of such perfect make and so local-tiful in design that they are worn even by princes, as if of equal importance with silk The gold-flowered and silver-flowered textiles of silk and cotton, or even of fine cotton alone, are famous in Europe, under the name "kinkab" or "kincob" The costume of India in general is mainly an affair of beautiful stuffs, very little shaped to the body and usually worn loosely, and of jewels in great abundance Among the people of the tropical islands, the

Malays, and the black and brown inhabitants of Polynesia, the art of weaving has never reached sufficient perfection to allow the stuffs to be sought for their own sake Very beautiful pat-terns are printed upon cotton by the women of the larger islands, wood blocks being used for the purpose in a way almost exactly like that employed in the printing of cretonnes and wall papers among the Western nations, but these stuffs, however attractive to our eyes, however superior in design, are yet inexpensive—they could be produced by any one who has a little skill in the use of the hands, and are therefore not a part of ceremonial or decorative costume. A few very beautiful weaves exist, as in the Solomon Islands, and especially in New Zealand, but still they are not of rare material, nor is the elaboration of the design very great. The skill in the working of metals, which is great among the Indians of the continent, is much smaller among the islanders, and so it happens that personal jewelry also is but little sought for by the chiefs The result of all this is seen in the simple and tasteful use of natural productions, brilliant flowers, and richly colored fruits and seeds, which, strung as necklaces or worn as pendants, have especial significance and are attached cach in its way to the traditional ceremonies of these curiously civilized peoples

If now we turn to the race which of all peoples has had the most influence over modern intellectual life, we shall find that the Greeks of antiquity limited their desires in the way of textile fabrics to very simple patterns, as of stars or round spots diapered over the surface of a stuff, with somewhat more elaborate patterns of zigzags and frets in the borders Their costume, including their jewelry, was, in fact, marked throughout by extreme simplicity, which increases as our studies bring us to a later time The statues discovered on the Acropolis at Athens since 1883 are certainly of the century before the Persian invasion of 480 BC. They show a number of garments, certainly as many as three, worn one over the other by the priestesses represented in the statue, and each of these garments is made of a different stuff, all the stuffs, or all but the craped undershirt (the chiton of later dress), covered with elaborate patterns in several colors There is nowhere a more interesting study of brilliant coloring in costume than were these statues when first discovered, and fortunately the finest of them have been reproduced in water-color painting, and these water colors often multiplied in chromolithography, and published by the archaeological societies It is clear that, immediately after the Persian War, during the period of the Athenian hegemony in Greece, beginning with 477 BC, the use of these striped and spotted

stuffs becomes much less common, at least in the mainland of Greece, and the use of plain materials, white, boildered with stripes, or of one rather subdued color perhaps striped at the edge, becomes the rule Those admirable bronze statues which were discovered in the famous villa at Herculaneum and now stand in the Museum of Naples (the Room of the Greater Bronzes) show perfectly well-better than any bas-reliefs, however elaborately detailed-the true Greek sense of what was beauty in costume The long chiton, which, left ungirdled, would sweep the floor, is belted up so far as to allow a foot or more of its length to hang over the girdle outside of the skirt or lower part, forming a sort of pocket, known as the kolpos Outside of this is seen hanging what looks like a cape, and which generally reaches just the line of the girdle or may fall a little below it. This, however, is not a cape nor a separate garment at all it is the reverse or turning over of the chiton at the top Of the chiton there were several forms The earliest was not sewn at all, and therefore left the right side, thigh and leg, exposed on the slightest movement A later form was a sewn-up cylinder, a long shirt in the modern sense The stately maidens of the ieliefs and the vase paintings often wear one of these two forms of chiton, and nothing else To such a dress, even on occasions of great ceremony, there is nothing to be added, except perhaps a more splended brooch on the shoulder, a broader and more brightly colored border to the chiton, perhaps an armlet, perhaps richer and more glittering earlings Splendor in the more modern sense was hardly desired, and beauty was shown in the perfect taste with which these simple appliances were disposed Other garments, however, are seen in the sculptures and vase paintings the himation and a variety of it, the chlamys, were square or oblong pieces of woolen cloth, draped about the left shoulder and covering the body more or less as it might be adjusted, it was held sometimes by brooches Statues show a garment arranged nearly as the Scotch pland is, at times folded long and narrow, falling over one shoulder and passing around the waist, and this is thought to be a long and narrow himation It is impossible to distinguish these garments from the epiblemata The essential fact is that the Greeks, both women and men, wore a long shirt and a loose, square shawl over it, and nothing else on body or limbs

The Etruscans were quite as simply clothed as the Greeks. The late Etruscan work passes by insensible gradations into that Italian work of the centuries during which the Roman Republic and the early Empire controlled the whole pennisula, and introduced insensibly its own strongly Hellenne tendences into the arts of the subject countries. The effect of this on the art of northern Italy was altogether fortunate, except in so far as the lover of strongly accordinated national peculiarities found reason to regret their partial disappearance. The terraction sarcophage, with high reliefs and with what are almost statues awought upon the covers; the bronze statues and groups, the jewelry of the fourth century no, and the following epoch, are almost Greek in their claum, while preserving a ceitain attractive local cloir. It is probably because of this constantly increasing influence of the Greena artistic sense upon all the nations of Italy that the Roman dress from the earliest times known to us remains

Greek in its simplicity, although very different in form There were different ways of wearing the toga, some of which were connected with Thus, when a statue or ceremonial occasions a bas-relief shows a Roman draped in a large and elaborately folded toga, one fold of which is brought over the head, he is assumed by modern students to be a person who is per-forming a sacrifice The toga, as ordinarily worn, showed the tunion in front, from the throat nearly to the waist, but the long end could be thrown over the right shoulder so as to cover the tunica entirely, and in this way the toga would cover the whole person, from the neck to the ankles Here, as among the Greeks, good taste dictated the utmost simplicity of effect, except in the mere arrangement and careful disposition of the folds There was no other garment of the men while in the city which in any way concerned their appearance, as the only leg covenings known were bandages or wrappers, not unlike those worn to-day by the peasantly in some parts of Europe. On the other hand, the toga prætewta, which was worn by certain officials and even by some priests, had a "purple," ie, a dark crimson border, and the trabea seems to have been a soit of cloak with still more elaborate stripes, including perhaps one made entirely of red cloth, which generals were allowed to wear on the day of their tilumph It is probable, however, that in this last usage the military cloak of red was worn during the triumphal piocession, that being the one occasion when the soldiers of the Republic were allowed to appear within the walls with their arms and military trappings. The women were dressed as simply as the men, wearing over the tunica merely a garment called the stola, which replaces for them the toga of the men, and when the woman of rank went abroad, usually in a litter, a shawl-like garment called the palla might also be added. That which makes the peculiar stateliness of the diess seen in female statues of the early Empire is the contrast of the folds of the long tunica, reaching the floor, nearly covering the feet, and forming a strongly marked base, as it were, for the whole figure, while the more loosely folded stola above it seems to reinforce the lines of the undergarment A veil of more or less thin and floating material covered the head and could be brought around to the front to hide the face at pleasure. It must be constantly kept in mind that the idea of beauty in diess was simply uniform whiteness and many skillfully contrived folds, the white-ness was kept up by the use for woolen garments of the most elaborate system of cleansing applied by the fullones, or cleansers, and, for the folds of the drapery, highly trained experts—body servants who knew their business—were employed It is evident that these peculiarities of dress had much influence upon the art of sculpture.

In all the above discussion of costume one thing is very noticeable—the absence of anything like tailoring, except, perhaps, among the Chinese. The clothes of the Greeks and the Romans, like those of the people of the Pacific islands, always approximated to the ideal of an uncut, unsewed, unattered piece of textule fabric; square or oblong, as in the himation, chlamys, sagum, or paludamentum; semicircular or semioval in shape, or approximately so, as in the toga, or simply sewn down one side so as to make a tubulual garment of one piece of stuff, as in the

later chiton, and in the tunica A curious reproduction of this characteristic of ancient costume exists among the wilder Arabs, the Bedouins of the desert, and the horsemen of the up-They wear a shirt, indeed, and this is of thicker stuff and covers the body more completely than what we know by that name, but apart from this their covering is almost wholly a matter of unaltered or scarcely altered pieces of woolen Perhaps two breadths of the narrower stuff are sewn together to make the harch or, as in the north of Africa, a square of striped woolen stuff is caught up in the middle of one side so as to form a sort of hood, as in the burnous, or, as in the aba or abayeh, the square of stuff may have its two outer edges folded over towards the middle, so that the two edges meet or nearly meet, and then two openings are made in the two outer folds where the stuff is actually creased, which serve as aimholes, so that the square blanket resembles an overcoat But in all this there is absolutely no fitting of the piece of stuff to the body. It is a heavy woolen blanket, which is adapted more or less to the shoulders so as not to slip off, but is not otherwise altered in any way, and might cover a man or a woman, and a person of any stature What is curious about this costume is the enormously heavy woolen dress worn in the desert and under the semitropical sun It is evident that nothing but a heavy material is expected to keep off the heat of the sun or the burning wind of the desert, and therefore a man who wears only the long shirt, and has the legs and feet, arms and neck, absolutely naked, will pile two or three of these heavy woolen things upon his shoulders and head The result of this arrangement is that the only decoration sought for is in the beauty of two or three colors arranged in stripes of different widths, and broken more or less by the carrying of threads of different colors across the stripes, like the countercharging of heraldry A much greater development of design by stripes alone is in the cotton dharries of India The aba may indeed be further adorned by very simple embroidery in woolen thread The first appearance of any tendency to fit

The first appearance of any tendency to fit the gaments to the person among nations more western than the Chinese is probably in the leg coverings of the Persians and Syrians, as represented in Giecian and Greco-Roman art, and yet these garments are of extreme simplicity and there is no appearance of tailoring in any modern sense in connection with them. They are merely loose trousers, gathered at the ankles, or sleeved tunics, and their use seems to have come from the mountain regions of Asia Minor and the shores of the Caspian Sea. The barbarians of Europe, Gauli, Scandinavians, and Germans, made up suits of clothes in a not dissimlar way, but it does not seem that their exampla affected the Greco-Roman world very much

The beginning of change is to be looked for in the Byzantine Imperial epoch. From a time as early as the seventh century an there is a constant increase in the number of garments worn, and in the elaboration of their shape and their combination, while at the same time the costiness and splendor of the stuffs are in no way diminished, and the custom begins which was destined to have so much effect on the costume of later times in Europe, the sewing of jewels, mounted in slender rings, or chatons, of gold or silver gilt, to the material Sometimes smaller fragments of glittering material of no value were

used in this way, as in a later time pieces of mirror were used throughout the lands influenced by Persian decorative ideas. In the Byzantine Empire the dress of the officials shows a certain disposition to follow early Roman traditions, but only in the general shape of outer garments and to a certain extent in their names. The general aspect of a member of the Imperial family, or an officer of the court, as it is seen in the mosaics of Ravenna, or in the illuminated manuscripts of the time, is altogether different from that of higher antiquity. The robes reached to the feet, they were closely sewed up and not very loose or flowing, not greatly tending towards elaboration of folds or to what we commonly call "drapery", and over them are worn dalmatics, maniples, and stoles, not merely by the clergy, but by the laity as well, and showing plainly where the peculiar clerical dress took its origin. See Costume, Ecclesiastical.

The Eastern influence was still strong, and all costume which was at all splendid was a matter of long and ample robes, made of stuffs of almost incredible richness, and more or less richly decorated by embroidery Western dress was at this early time very different from any-thing in common use in the Byzantine Empire, except in so far as that the poorer people, and those engaged in out-of-door work, would naturally dress in almost the same careless fashion East and West For one thing, it was more nearly classical Roman in character If the costume of the eleventh and twelfth centuries, in the lands which are now France and Germany and England, be studied in the sculptures of Romanesque and Gothic buildings, or in the rare illuminations of manuscripts of that time, it will be seen that a certain antique or early Roman character obtains in the garments worn by persons presented as kings and princes, which had already been lost in the Eastern Empire The robed figures of the porch of Chartres, or the doorways of Le Mans, do not seem to record much that was splended in the way of stuffs or Their robes are still simply falling in loose folds, girded at the waist and differing from the garments of antiquity mainly in this, that the arms are always covered by sleeves Men and women alike wore a gown, that garment which in the French archæological vocabulary is called the robe This garment, which is treated under Dress, served for people of every rank and of both sexes, but its fashion changed very much, and in like manner the resulting appearance of the clothed figure in the sculptures changed greatly between the twelfth and the fourteenth centuries In the fourteenth century it grew more and more into that stately but most inconvenient garment, well known to us from the paintings in manuscripts of the time of Richard II of England and his immediate successor, and Charles VI of France This gar-ment swept the floor It was girded around the waist with the military belt, or some modification of it, it had sleeves, which also reached the floor, and were of fullness equal to that of the skirts, covering the hands also when the arms hung down The collar covered the neck completely in a solid cylinder, and rose on the sides nearly to the ears How this rich and grandiose dress could be used at all in summer, and how it could be girded and shortened in any way, in time of necessity, does not appear, nor is it known whether the men wore complete leg coverings of some kind beneath this long and completely closed skirt The diess of elegant women of the same epoch was less elaborately conceived the same habit of long sleeves prevailed, but the upper part of the sleeve was pieced with a slit through which the forearm could be extended The result of this was that the robe, as a garment for women, hardly changed during the next two centuries, whereas the use of it for men went out very soon, and while there are still representations of gentlemen of the first half of the fifteenth century dressed in robes reaching the ground, those robes are far more convenient than before, they are evidently capable of being tucked up, and the man is dressed beneath his skirt, which can either be ermoved or shortened up to nothing when the occasion of ceremony is passed Finally, as early as the second decade of the fifteenth century, it disappears from the dress of men, and that time on the short-skinted garment, called rochet, or corset, became the dress of business, while the name cotte was then and thereafter given to a very tight-fitting garment, laced or buttoned close to the body and having a skirt reaching only to mid thigh This lastnamed garment existed under the name of cotte d'armes as long as the complete suit of armor was woin by gentlemen, and in this case it was embroidered with the armonal bearings of the wearer The French terms were commonly used in England as well, as Chaucer lets us know, and in modern study we can hardly find English equivalents Under all these garments were woin the long, close-fitting stockings, serving as the only covering from the waist to the toes, except as the skirt covered the upper part of the thigh These changes involved the complete establishment of tailoring as the main thing in elegant costume From the middle of the fifteenth century on, the dress of nobles and countriers, and of men who affected elegance, was a matter of cutting out and shaping, fitting in goies and gussets, and, in fact, adapting garments closely to the body in the first place, and then covering them with elaborate adornment This might be applied in the way of passementerre, or by modifying the whole surface of the stuff by what we now call quilting and the like A piece of blocade used for a doublet or the body of a gown would be gathered up into puffs and projecting rounded surfaces, the lines of sewing between those projections being themselves decorated and even including the setting of a pearl or of a jewel of some other kind set in a gold chaton at the junction of these two lines of stitching. The stockings were the only part of the dress that was not elaborately decorated; and these stockings were half concealed in the sixteenth century by the enormous hauts de chausses, which, in 1530 and the following years, are sometimes in two or three rings of puffs like rounded ridges, passing horizontally around the thigh, and which, in the closing years of Elizabeth's reign and the corresponding times in France, the reigns of Henry III and Henry IV, are closer in their fit and resemble not distantly the knee breeches of the eighteenth century They are, however, made of costly stuff, and claborately adorned almost in the style of the body garment. Still again, in the time of James I of England, the hauts de chausses were stuffed (bombasted), or held with springs in a single rounded projection, as if the man had been thrust feet foremost through a lather flat, oblate spheroid. This projected so much all around the hips that the sword had to be hung in a houzontal position and great pains taken to prevent its being entirely dislodged by the monstrous gainment.

At no time during the Middle Ages and the

epoch of the Renaissance was the tailoring and mantuamaking more 11ch and fantastic during the French religious wars and the suc-ceeding reign of Henry IV Painted portraits, prints from famous engravings, carved rivories, medallions, and painted enamels of the time, exist in some quantity, and they agree in telling the most extraordinary tale of splendid extravagance in the dress of both sexes Embroidery was loaded upon bodice and doublet, or was dispensed with only when a very rich brocade was employed, and lace, or its earlier forms of cut work and drawn work, and needle embroidery in pierced patterns like filigree, were used with freedom The circular ruff, projecting like a dish on which the head seems to lie, appears, but is not yet so popular as the broad and flat laced collar, sometimes lying on the shoulders, sometimes standing stiffly out houzontally, or for women in steep, upward slope behind the head and neck. The fashion of bombasted thigh coverings for the men is identified in artistic history with the reign of Henry IV of France, but it did not last very long, being replaced by the loose, short trousers of about 1025 and after No costume in the modern sense is perhaps more graceful and spirited at once than the diess of the gentlemen of the time of Louis XIII, which, with its short trousers, the stocking below covering the calf of the leg, which was concealed by the boots commonly worn out of doors, the doublet, reaching a little below the waist, and worn loose, generally unbuttoned in front and showing the shirt in its full folds, the short cloak, worn on the left shoulder, except when it was gathered around the body, the flat hat, with very broad brim, and soft falling feather, and the broad, loose collar, is a complete and graceful translation into form of those ideas which the modern world has conceived—ideas absolutely contrary to those of antiquity plicity and grace have given place to picturesque combination of small details, and here is the new theory, perfectly put mit practice. The reign of Louis XIV had but little influence on this dress of men, except to stiffen it and make it rigid and hard, but the dress of women improved, on the whole, in tastefulness throughout the seventeenth century, and as late as 1670 was introduced that admirable costume which we identify with Madame de Sévigné—a skirt not very full, over which was worn a short upper skirt, open in front, a bodice fitting snugly, but not involving very tight lacing, a stomacher, but not excessive in its length, sleeves reaching the elbow, and accompanied by lace ruffles, which partly shroud the lower arm; the bodice cut low, but not to excess, and a cape worn over the neck and shoulders on occasion of going out-ofdoors The same thing, in simpler stuffs and in graver colors, was worn by the wives of the wealthier bourgeois, and this is the dress which we identify with the women of Holland and the English Puritans. It is preserved for us in a great number of paintings, and in the prints from Hollar's engravings; and it has impressed itself upon modern designers as the most complete type of womanly costume which we know;

but that is because the richer dress of the time is impossible to realize nowadays—it seems non-human, as if of fairyland The eighteenth-century dress in England, which was at times popular and acceptable in decorative design, is a modification of it, not for the better. The fop of 1750 is less beautifully dressed than the muguet of 1650, and the ladies of 1775, with their enormous hoops, far less charming in appearance than Madame de Sévigné 100 years earlier.

The French Revolution in 1789 brought in a number of strange vagaries in dress - red and white striped warstcoats, stockings striped blue and white in horizontal rings, white cravats wound round and sound the neck until they reached the point of the chin, while at the same time the women wore the lightest and thinnest costume possible, in fancied imitation of the Romans Cocked hats of exaggerated shape for the men alternated with steeple-crowned hats with curly biims, while the female costume was finished by the most elaborate pile of cuils and crimps, crowned by an enormous cap, either simply of muslin and lace, or with these combined with a sort of hat half concealed with feathers, flowers, and ruffles of lace The momentary prohibition of elegances of this sort under the Revolution led to a change in the dress of both sexes, which was not to be temporary, except in details. Thus the dress which we call that of the "Empire," the famous "pink nightgown," girded immediately below breasts and hanging thence to the ankles, but so close that a woman could hardly walk and was utterly unable to step across a gutter, was worn with low shoes and with an unprotected neck, while the cold of winter was met by a pelisse, generally worn open in front and affording merely shelter for the shoulders and back, however richly it might be furred. The men fell immediately into the simple and not im-The men pressive dress of a time when the civilian was of his aspirations found some excuse to wear a military or official uniform The civilian dress was then merely a waistcoat, over which was woin a long-skirted coat, and the pantalon, or tight-fitting breeches reaching to the ankle instead of the knee The large and loose white cravat still continued From these dresses all our modern fashions have followed. See FASILION

Bibliography. Valuable for bibliography are: Katalog der Freiherlich von Lypperheideschen Kostumbelhothele zu Berlin (2 vols. Bielefeld, 1897), and Reading and Reference List on Costume (Brooklyn Public Library, 1999). General works are Racinet, Le costume historique (6 vols. Paris, 1888), with 500 plates, of which 300 are colored, and with extensive bibliography. COSTUME, AGNERIC See DEGREE COSTUME, ECCLESIASTICAL The dress worn by ministers of religion acting in their official capacity, in distinction from the dress of ordinary life in different lands and periods While practically all such officials do wear such distinctive dress, even though in certain cases it is very simple, it is necessary, in view of many and often bitter controversies on the subject of the relation between such costume and religious doctrine, to emphasize the fact that costume belongs to the discipline, not the doctrine, or religious, more especially Christian, bodies. The competence of any such body acting in its corporate and legislative capacity to prescribe a uniform dress for purposes of edification, indication of functions, or liturgical propriety, is undoubted, and is analogous to the requirement of distinctive uniform, e.g., in the army or the law courts. An association of such dress with

official powers or as essentially doctrinal in itself is erroneous, though often popularly assumed. The Christian era has witnessed the development of ecclesiastical costume in so marked a way as to make the subject one of importance more than archeological.

History of Development. Under the Jewish dispensation the costumes of the officiating priests and Levites, like everything else pertaining to the divine worship, was minutely pre-scribed and rigidly observed. The purpose seems to have been, as with other parts of the Jewish system, to distinguish the Jews as a people from all other nations, and their religion from all other religions as one of special revelation and positive injunctions rather than natural religion accompanied by a system of human origin. attempt to trace the vestments used in the Christian Church to the Jewish vestments has been made at different times. The theory breaks down historically and when applied carefully in detail. Certain features which are found in common are accidental, not fundamental. Underlying the prescribed Jewish system of vestments, however, is the principle that the divine sanction is given to the use of such costume for such purposes as are mentioned above. This principle, rather than any special application of it, is characteristic of both the Jewish and Christian development of

In all probability the Christian clergy at first used no distinctive dress, and so long as the garb of daily life continued unaltered in the higher ranks of society, a celebrating or officiating bishop, priest, or deacon differed only possibly in a few slight variations from a well-dressed layman. This very absence of distinctive costume, however, was really an indication that the Christian clergy differed from the Jewish orders and from the non-Christian sacerdos or other minister. From this early stage two principles entered into the development of a more or less characteristic dress for the clergy—the principle of fixity as opposed to changing fashions in lay costume, and the principle of putting on the best apparel when employed in the service and worship of God. The former resulted in the style and articles of vestments becoming permanent and subject to authoritative prescription; the latter introduced the element of refinement, beauty, and dignity in the dress of the clergy. The recognition of Christianity by the Roman Empire under Constantine gave an impetus to external splendor in all parts of Christian worship. Canonical legislation prescribed as a rule many things which had been heretofore hallowed by custom and religious association and also put a check upon the discretion or caprice of individuals. The growth of such regulation was slow and local rather than general from the third to the eighth century. In the revival of interest in the details of the Christian religion which characterized the age of Charlemagne in the eighth and ninth centuries is to be found explicitly the teaching that the vestments of the Christian clergy are a matter of great importance, and also in this period there is found the custom of giving a mystical interpretation to these vestments in relation to the services and functions where they were worn. The process in development was practically the same throughout the Church. The gradual tendency of the East and the West to diverge in matters political and social also worked out in the externals of re-ligion, and the breaking off of intercommunion

between the Eastern and Western parts of the Church, which reached a crisis in 1054, emphasized this tendency. Although the principles are the same throughout the Church, it is convenient to consider the specific developments of vestments under different heads.

Vestments in the Western Church. In the West the use of ecclesiastical vestments developed with considerable uniformity so far as the employment of certain articles of dress for certain liturgical offices was concerned, but with latitude so far as specific shape, material, and rigidity of use were concerned. There grew up a variety of uses, largely coterminous with national or diocesan subdivisions, e.g., Gallican, Italian, Sarum (Salisbury), Milanese. Not until the sixteenth century and the Reformation movement do we find divergences relating to the authoritative employment of certain vestments. Since the sixteenth century the Roman Catholic discipline on the subject of vestments has tended strongly towards absolute uniformity, while the Anglican discipline has tended more towards specifying what is legal and what is allowable. In general, the same vestments are legal in all parts of the Western church-Roman, Anglican, American, and Canadian. Hence they may be described as belonging to all and not confined to any one section. Specific variations will be mentioned. The laws governing the use of costume are set forth for the Roman communion in the rubricæ generales of the missal and are in form historical and descriptive, not imperative (e.g., celebrans semper utitur, etc.), while the Council of Trent merely mentions vestes as part of the Apostolic traditions of the Church. can communion sets forth the use of vestments in canons and in rubrics of the Book of Common Prayer and in statements of general adherence to the customs of the Western church.

Vestments, Sacrificial. The chasuble is the principal vestment regarded as strictly sacerdotal

Church. From its shape and fullness it was found an inconvenient garment to wear in ministrations at the altar, and it was gradually modified by cutting it away so as to leave the arms

CHASUBLE, OLDER FORM.

free until, from the older form, or the Gothic chasuble, it assumed after the seventeenth century in the West very commonly the extreme modern, or fiddle-back style, as seen in the accompanying illustrations. The older shape has been retained in the Spanish and Anglican uses and is to some extent being revived elsewhere. Traces of the use of the chasuble as a distinctively ecclesiastical vestment are found as early as the first half of the sixth century, and the Fourth Council of Toledo (633) expressly mentions it as such. Its use seems to have been confined at first to priests; and even at the present time, in Advent, Lent, and other penitential seasons, the chasuble is worn at solemn mass in the Roman communion by the deacon and subdeacon, but laid aside when they sing the Epistle and Gospel. Chasubles are sometimes worn in the Roman rite by canons and other dignitaries simply present at a pontifical mass. In most Western countries a large cross, either in the Latin or in the Y form, is embroidered on the back, while on the front is either a cross or a long, straight piece of embroidery. The stole is a narrow strip of the same material as the chasuble, with more or less elaborate embroidery. The usual decoration consists of a cross where it will be in the middle at the back of the neck and a cross on each end as it hangs down. It is considered a symbol of priestly jurisdiction, in which sense the Pope may wear it constantly, even when not officiating; and this is also the use of priests in the Roman and other communions when present at certain offices without officiating. It is worn, as a rule, in the ministration of all the sacraments. At the altar the priest wears it crossed over the breast and the deacon over the left shoulder; at other times, and also by a bishop, it is worn hanging straight down. The earliest traces of its use in the West as a sacerdotal vestment are found in Spain, where the Council of Braga (563) speaks of the orarium as worn by deacons, and the Fourth Council of Toledo mentions it as a vestment of bishops, priests, and deacons. The name "stole" (Gk. στολή, stolē) may indicate that a Western piece of apparel, adopted into Eastern use, came back to the West later and passed into ecclesiastical use. The earlier use of the term "stole" in Greek ecclesiastical writers is not consistent with the article later called by the same name. It seems to have been at first a linen handkerchief longer and narrower than our modern handkerchief. The maniple is like a short stole and is worn hanging from the left wrist by the celebrant, deacon, and subdeacon at the altar. Its origin seems to have been in the napkin with which the consul gave the signal for the start in a chariot race. The alb (Latin, albus, white) is a close-fitting garment with sleves, of plain white linen, reaching to the feet, though the lower part may be made of lace. It sometimes has pieces of embroidery, called "apparels," sewn on it in four places. Originally it was probably nothing more than the ordinary tunic of Greek and Roman costume. It is confined around the waist by a linen girdle. The amice is a piece of fine linen, oblong in shape, which the priest rests for a moment on his head and then spreads on his shoulders, tying it by strings in front. It originally covered the head, and to this day, in the rites of certain monastic orders which have preserved some traditional peculiarities, the priest wears it in that position until he reaches the altar to begin the service. These vestments are put on in the following order: amice, alb, girdle, maniple, stole, chasuble. The special vestments of the deacon and subdeacon are the dalmatic and tunicle, respectively, which differ very slightly, both being close-fitting vestments of the same material as the chasuble, reaching to the knees and having sleeves.

The color of all vestments seems to have been white at the first. The introduction of colors was very gradual and not without opposition. To Innocent III (1198-1216) is traced the setting forth of the simple sequence of colors which has largely prevailed in the West. The cus-tomary modern use prescribes white for the feasts of our Lord, for feasts of the Biessed Virgin, and for other virgins who were not martyrs, and for confessors; red (the color of fire and of blood) for the Feast of Whitsunday and of all martyrs except the Holy Innocents; violet, the color of mourning and of penitence for the season of Advent, from Septuagesima to Easter, the Ember days, except in Whitsuntide, and the Rogation days; green, the color of hope, for ferial or ordinary days. White is also used at confirmations, ordinations, consecration of churches, baptisms, and weddings. *Black* is worn on Good Friday and in services for the dead. Vestments of cloth of gold or very rich and costly material are considered festal and allowed to be used in place of white, red, or green. This sequence was adopted generally on the Continent and in England in the important churches of Canterbury, York, London, and Exeter, while the diocese of Salisbury developed a use of its own confining the colors almost exclusively to white and red.

Vestments, Episcopal. The vestments officially worn by a bishop in the exercise of his functions are numerous. In part they indicate his position as including all the powers of the Christian ministry, in part they are peculiar to his episcopal office. The full vestments of a bishop when at the altar include (over a purple or black cassock) the amice, alb, girdle, stole, maniple, tunicle, dalmatic, chasuble, and mitre, while the pastoral staff is carried in the hand. At this and at other times the bishop wears a ring and pectoral cross. Sandals and gloves are included in the Roman use. The gremial veil is an embroidered cloth which is spread over his kness when he sits during the service. In other functions, such as confirmation, he wears cope

and mitre with a stole for the administration of the sacraments In ministrations of certain functions of less solemn kind he may wear simply the rochet The mitre is the ornament worn in solemn services by bishops and abbots of certain monasteries which carry with them a quasi episcopal jurisdiction. The mitre may be described as a tall, tongue-shaped cap, terminating in a twofold point, which is supposed to symbolize the cloven tongues in the which form The the Holy Ghost came upon the Apostles pastoral staff, or crozier, in the case of bishops resembles a shepherd's crook, and is given at their consecration as a symbol of the authority with which they are to rule their flocks. An archbishop's pastoral staff does not differ from a bishop's, but he sometimes has carried in front of him a staff surmounted by a cross or crucifix -that of a patriarch having two cross bars. The pallium is a circular band of white woolen stuff surrounding the neck, with a pendent strip before and behind It is generally richly embroidered and marked with several crosses. There is much controversy among historical and archeological scholars as to the origin and significance of the pallium. The two main theories are that it represents a vestment used in the Imperial court and sent at first to certain ecclesiastics as a mark of Imperial favor, whence it passed into similar use by certain bishops of patriarchal rank to confer upon archbishops in the patriarchate, or that it is a symbol of jurisdiction and is worn by the Pope to indicate universal jurisdiction, and conferred by him upon archbishops who acknowledge his supremacy is worn by such only within their own territorial jurisdiction, at high mass on solemn days. The sandals were not originally confined to bishops; the earliest authors who mention them allude to a special shape worn by deacons and subdeacons. The pectoral cross is a small gold cross adorned with jewels which is worn by bishops and mitred abbots as a mark of their office The episcopal ring, worn on the middle finger of the right hand and generally set with a large amethyst, is supposed to symbolize that the bishop is wedded to his diocese Among less formal vestments the rochet alluded to above is a close-fitting vestment of linen, somewhat like a shorter alb or surplice with tight sleeves. It is confined to bishops and abbots, also sometimes worn as a special privilege in the Roman use by canons The mozetta is a short cape covering the shoulders, a part of the state dress of the bishop when not officiating, and is worn with the rochet. The mantelletta is a sleeveless garment of silk or woolen stuff reaching to the knees, worn according to Roman use by cardinals, bishops, and other prelates It is used to cover the rochet, so that bishops wear it when out of their own dioceses, the uncovered rochet being a symbol of jurisdiction. A bishop when wearing a pectoral cross does not cross the stole when preparing to celebrate

Vestments, general. The most important vestment to be mentioned under this head is the cope, a wide cloak of silk or other costly material reaching nearly to the feet and fastened in front by a clasp called the morse, and having a semicircular hood at the back. While it is worn by the officiating priest in benediction and other solemn rites, it is not distinctly a sacerdotal vestment, and is worn by centors at solemn vespers and by other laymen. The humeral vest is an oblong scarf of the same ma

terial as the chasuble, worn by the subdeacon at high mass when he holds the paten from the offertory to the Paternoster, and by the priest when giving benediction or carrying the blessed sacrament in procession. It is worn over the shoulders, the paten, pyx, or monstrance being wrapped in it. The Levites (Num iv) were allowed to bear the sacred vessels only when wrapped in coverings, and although those in holy orders (and they alone) are allowed to touch the euchanistic vessels with the bare hands, the use of the veil is probably an expression of the feeling of reverence inculcated by the Jewish rule The surplice (called also cotta at first in Italy, now generally) is a garment of linen worn by all clerics and assistants in choir and by priests in the administration of the sacraments As late as the twelfth century it was supposed to reach to the ankles, but in modern times it has been very much curtailed, and since the seventeenth century commonly ornamented with lace Under all the other vestments is worn the cassock, a close-fitting garment reaching to the feet, which is the distinctive dress of clerics, in church and out The color varies, being black for a simple priest, purple for a bishop, and red for a cardinal, the Pope alone wears a white cassock The berretta (or biretta), which is also a part of the priest's street or house dress, must be mentioned under official costume, as the rubrics prescribe it for the sacred ministers going to the altar and for ecclesiastics in choir It is a square cap with three ridges extending outward from the centre of the top-four in the case of doctors of divinity "At Rome," says Benedict XIV, "and in most churches the berretta was unknown as late as the ninth century. Its ecclesiastical use began when priests gave up the ancient custom of covering their heads with the amice till the actual beginning of the mass" The succhetto is a small, round skullcap, of color suited to the wearer's rank, which, if worn in church, is removed only at the most solemn parts of the services.

Eastern Vestments. The influence which between the eighth and twelfth centuries in the West bore so strongly upon the development of ecclesiastical costume, that of the numerous liturgical writers, was almost wholly lacking in the East, where between the Patriarch Germanus of Constantinople in the eighth century and Simeon, Archbishop of Thessalonica, in the fifteenth, scarcely one of importance is to be named. The natural conservatism of the Oriental mind has also militated against change in the ecclesiastical usages The Western maniple, amice, and cope are unknown in the Greek and Russian churches, in place of the first named, somewhat similar bands (epimanikia) are worn around both arms by bishops, priests, and dea-cons, those of the bishop being richly ornamented The lector and readers wear an ample white or reddish vestment, called *phelomon*, but differing from the priestly chasuble in reaching only to the waist. The subdeacon wears the sticharion, a sort of dalmatic, narrower and shorter than that of the deacon, who wears in addition the orarron, or stole, hanging before and behind over the left shoulder. The sticharion has undoubtedly developed from the alb, but more closely resembles the dalmatic both in shape and material The priest wears the sticharion, the epitrachelion (a long narrow stole something like an archiepiscopal pallium in the West), the zone, or girdle, and the phelonion, or

chasuble, which in Russia is much abbreviated in front, but hangs down to the ankles behind. The episcopal vestments are in the main similar to those of the priests, but more richly decorated; the bishop's phelonion is adorned with many small crosses. Instead of this vestment the Greek metropolitans, and in Russia all bishops since the time of Peter the Great, wear the sakkos, a tight-fitting garment supposed to symbolize the seamless robe of Christ. The episcopal gloves, sandals, and ring are not in use. The head covering resembles a crown more than the Western mitre.

Anglican Usage. The Anglican communion, as a part of the Western church, has the same history in regard to vestments, subject to the same constitutional right to regulate vestments as a part of discipline. In the Reformation movement of the sixteenth century in England, which differs in essential features from the contemporaneous movement in Germany and France, an element of confusion was introduced by the influence of Lutheran and Calvinistic reformers. The continental reformers had assumed that vestments might be identified with doctrine and hence had reacted from Western custom. disciplinarian Puritanism in the reign of Elizabeth concentrated itself against externals in liturgy and worship. Two parties accordingly sprang up—one holding to the general use of the Western church, the other desiring to abandon absolutely that use. The tendency of Queen Elizabeth in aiding the action of the Church was in favor of the Western system. The vagueness and indefinite character of legislation in the reign of Edward VI and the resulting doubt led to the setting forth of the so-called "Ornaments Rubric," which authorizes the "ornaments of the Church and of the ministers thereof as used by the authority of Parliament in the second year of King Edward VI." The contest, however, for the principle of distinctive dress for the clergy was at first, in the latter part of the sixteenth and the seventeenth centuries, fought out on the minimum of the surplice, and again, in the middle of the nineteenth cenand again, in the Surplice Riots, principally in London. The principle of vestments being thus established, the character of such vestments was not pressed. The limited use of most of the Western vestments, and the more rapid restoration of the elaborate eucharistic and other vestments in connection with the Oxford movement of the nineteenth century, have illustrated the position in general of the Anglican communion as a national church and belonging to the Western Catholic church as distinguished from such sections as pay obedience to the Bishop of Rome. A simpler use, however, sprang up during these troubled centuries which has remained to a large extent. This use provides, for the general dress of the clergy, the surplice. With it are worn at certain offices the stole, while dignitaries—e.g., chaplains to bishops, canons in cathedrals, and members of university colleges of clergy-wear for choir offices the broad black scarf, and over it the hood indicating the academic degree of the wearer. The cope has in English cathedrals become an altar vestment, and is also worn by bishops at great state functions, such as the coronation of the sovereign. The more usual dress for a bishop of the Anglican communion in ordinary ministrations consists of a rochet with black or scarlet chimere, a de-velopment of the street dress or convocation robes of earlier times in England, analogous to the original development of ordinary costume into ecclesiastical use. At present both the Western and local Anglican uses are followed, as one finds in other countries to some extent, e.g., in Spain, where the Spanish use prevails, but the Italian use is also found.

Protestant Usage. The universal tendency of the Reformers was naturally to dissociate themselves from the older Church by abandoning to a greater or less extent the ceremonies and vestments used by it. The Lutherans, however, showed a more conservative spirit than the others. Luther himself considered the matter one of indifference; and his followers for a long time retained most of the old vestments, even the chasuble being worn in Sweden and Denmark, where the Lutheran bishops also wear copes and pectoral crosses. But the Calvinists and other more extreme Reformers on the Continent abolished the older vestments completely and adopted the black Geneva gown, or robe de Calvin. This, which is nothing more than the ordinary dress of a scholar in the sixteenth century, with the white bands at the neck, has become a distinctive costume of Protestant ministers for officiating. In recent years there has been a notable tendency, especially among the Scottish Presbyterians, towards the restoration or adaptation of ancient customs, and surpliced choirs have been introduced among other "ritualistic" usages. The semimilitary costume of the Salvation Army officers may be referred to as in some degree illustrating the same tendency.

Monastic Costume. The principle of uni-

Monastic Costume. The principle of uniformity of dress to mark those who lived a common life was adopted even among the early monks of the Egyptian deserts. The character of the Eastern religious costumes was usually, as far as can be determined from the vague descriptions of early writers, such as to express a spirit of pentitence and differentiate their wearers from the gayly dressed worldlings. The early Western founders, St. Benedict and even St. Francis, prescribed the general char

FATHER ADAM SCHALL, B. J., IN MANDARIN COSTUME.

acter, but not the exact shape and color, of the garments to be worn by their followers. Custom gradually, in a community life, crystallized into rule. But since the thirteenth century the

founders of orders have usually laid down the exact details of the habit to be worn, as a sort of regimental uniform The notable exceptions are St Ignatius, St Philip Neri, and St Vincent de Paul, whose followers have never worn anything but the ordinary dress of secular priests The wearing of the habit at all times is most strictly enjoined upon members of religious orders, except when it is sometimes dispensed with in non-Catholic countries, the early Jesuits in China, in pursuance of their policy of adapting themselves to the customs of the country, wore the native costume (See illustration of Father Adam Schall in the dress of a mandarin ) Normally, however, the habit is always worn, taking the place for preaching (and in some places for administering the sacrament of penance) of the surplice and stole For specific details of the costume of the various orders, see the articles under their titles

COS'WAY, RICHARD (1742-1821) The most celebrated English miniature painter He was born at Okeford near Bampton (Devonshire) and studied under Thomas Hudson, at several London drawing schools, and at the Royal Academy He was the greatest miniature painter of his age and raised this art, which had fallen into disrepute, into universal favor In 1785 he was appointed principal painter to the Prince of Wales and numbered the members of the fashionable world of London and Paris among his sitters He amassed a large fortune and acquired a valuable collection of pictures and curios, but with his success he developed many eccentricities, which caused him to be often caricatured. He was the first to bring out the beauties of the avory background in miniature painting, his color is brilliant, his brushwork of extraordinary delicacy and skill, and he ex-pressed with consummate skill the rather artificial grace and charm which characterized the age. He made use occasionally of paichment and enamel as backgrounds. The largest collections of his miniatures are in Windsor Castle and in the J Pierpont Morgan collection. Among the most celebrated are Lady Beechy (sold in Paris, 1912, for 18,000 francs), Mrs. Fitzherbert (Wallace collection, London), "The Prince of Wales as St George" (Guinthorpe Prince of Wales as St George" (Glimthorpe Castle), the artist's wife and daughter An-gelica, Madame du Barry (Morgan collection), Lady Diana Sinclair, and the heads of the

so-called "Aneaster Box," owned by the Earl of Ancaster His oil pottraits and religious pictures are greatly inferior to his miniatures. In 1781 Cosway married Maria Hadfield, a well-known painter and etche Consult his biography by G C Williamson (London, 1905)

GOT, lct, Pierre Auguste (1837–83) A French painter He was boin at Bedaiieux (Haiault) and studied under Cogniet, Cabanel, and Bouguereau He painted at first historical subjects in the academic style of his masters, later also portiaits, and acquired great reputation, especially by his female heads Among his most noteworthy works are "Spring Time" (Biooklyn Museum), "Day of the Dead at the Campo Santo of Pisa", "Donnisa", "The Storm" (Metropolitan Museum, New York); "Prometheus", "Mirreille" (Museum, Montpeller)

COTA DE MAGUAQUE, ko'ta da ma-gwa'ka, Rodato (died e 1498) A Spanish poet of the fifteenth century, born at Toledo His reputation rests upon the dainty, with Dulloqo entre et Amor y un caballero viego, which appeared first in the Cancionero general in 1511. The authorship of this poem has been much disputed, but it seems quite safe to attribute it to Cota He was less certainly the author of Las Coplas de Mingo Revulgo (c 1472), and the attribution to him of the first act of the comedy Celestina (first known edition, Buigos, 1499, but certainly not the first action) has been made on wholly unacceptable grounds. He also produced some sature poems Consult Foulché-Delbosc's ed of the "Epithalame builesque," in Revue Hispanique, vol 1, pp 69-72 (Paris, 1894), and remarks by Bonilla y San Martín in his Anales de la hieratura española, pp 164-167 (Madrid, 1904)

COTAN'GENT. See TRIGONOMETRY

COTÉ, kötā', AURELE SUZOR (1870-A Canadian painter He was born at Aithabaska, P Q., and was educated at the Commercial Academy there After some experience as a church decorator, he went to Paris in 1891 and studied under Bonnat and Lefebvre He exhibited at the Salon in 1894, where his pictures "Pastourelle" and "Retour des Champs" were much admired, the former being admitted to the reward list In 1898 his picture "The Death of Archimedes" won the grand prize. He was appointed an officer of the Academy by the French government in 1901, and in 1908 he was commissioned by the Dominion government to execute panel decorations and illustrations for the Parliament buildings, Ottawa Among his best-known works are a portrait of Sir Wilfrid Laurier, for the Dominion Parliament buildings, "The Lauding of Champlain at Quebec", and "The Discovery of Canada by Jacques Cartier"

CÔTE-D'ÓR, kôt'do!' (Fr. golden hill) A department in the east of France (nv.), formerly pair of the Province of Burgundy (Map France, N, K. 5). Area, 3393 square miles, pop. 1896, 368,168, 1901, 381,626, 1911, 350,044. The surface is in general elevated and is traversed by the Côte-d'Or ('golden hill'), which gives its name to the department and is so called on account of the excellence of the wines produced on its slopes. A great pair of the department is covered with forests, there are mines of iron, coal marble, and gypsum; stone is quarried, the valleys and plains are fertile, producing where, oats, barley, potatoes, and there is good pasture land, but the

peasants are not skilled in agriculture Manufactures include iron, steel, machinery, bricks, leather goods, oil, and beer Côte-d'or is watered by the Seine, which rises in the northwest, and by several of its affluents, by the Saône, by the Anioux, a tributary of the Loire,

and the Armancon Capital, Dijon

COTELIER, kot'lya', or COTELE/RIUS, JEAN BAPTISTE (1627-86) A French Hellenist He was born in Nîmes, studied theology and philosophy in Paris, and in 1654 became counselor of the Archibishop of Embrum He was appointed assistant libratian in the Royal Library in 1667, and in 1676 he became professor of Greek at the Collège de France His principal publication, and one which made him widely famous, was his edition of the Sanctorum Patinm qui Temporibus Apostolicis Florucium Opera Græce et Latine (Paris, 1672)

COTENTIN, ANNE HILARION DE See Tour-

VILLE, COUNT DE

COTES, köts, Roger (1682-1716) An English mathematician and physicist. He was born at Burbage, in Leicestershire, was graduated at Trinity College, Cambridge, became a fellow in 1705, and in 1706, on the recommendation of Newton, Whiston, and Bentley, was made Plumian professor of astronomy Cotes was editor of the second edition of Newton's Principia (1713). Various mathematical papers of his own, bearing on logarithms, trigonometry, and geometry, were published posthumously under the title Harmonia Mensurarum (Cambridge, 1722) The only independent publication of his own, during his lifetime, was his essay entitled This treated of methods of con-Logometriastructing the Briggs logarithms (qv) and applied the theory laid down to the quadrature of the hyperbola and other problems Several theorems are known by his name, eg, to determine the haimonic mean between the segments of a secant to a curve of the nth order reckoned from a fixed point (see CURVE. CIRCLE), and also the well-known theorem of trigonometry If A is any point on the radius OB of circle O, and if the circumference is divided into O, and it is the circumsteness and into 2n of equal parts  $BP_1$ ,  $P_1P_2$ ,  $P_2P_3$  and into 2n equal parts  $BQ_1$ ,  $Q_1P_3$ ,  $P_1Q_2$ , the product  $AP_1$ ,  $AP_2$ ,  $AP_3$  (n factors) =  $\pm$  ( $OA^{\#}$  —  $OB^n$ ), and  $AQ_1$   $AQ_2$   $AQ_3$ . (n factors)  $= 0A^n + 0B^n$ 

Cotes was held in the highest esteem by the scholars and scientific men of his time. Newton remarked of him. "If Cotes had lived, we might

have known something"

COTES, SARA JEANNETTE DUNCAN (1861—

An English novelist She was born at Brantford, Ontario, Canada, and was educated at the Collegate School there She found her way to the novel through letters and sketches contributed to newspapers and periodicals and made a brilliant success in A Social Departure, the observations of a tour round the world in 1889—90 with Mrs Lihan Rood In 1891 Miss Duncan married Everard C Cotes, a press correspondent of Simla, India Among her novels are An American Gul in London (1891), A Daughter of To-Day (1894), Vernon's Aunt (1894), The Simple Adventures of a Memsath (1893), The Story of Sonny Salub (1894), His Honour and a Lady (1896), A Voyage of Consolation (1898), The Poth of a Star (1899), The Other Side of the Latch, the diary of an invalid in Simla (1901), Those Deleghtful Americans (1902), The Poth of in the Deset

(1903), The Imperialist (1904), Burnt Offering (1910), The Consort (1912)

GÔTES-DU-NORD, kot'-du-nor' A department in northwest France (q), formerly a part of Buttany, bounded on the north by the English Channel (Map France, N. C. 4) Auea, 2787 square miles Pop, 1896, 616,074, 1901, 609,349, 1911, 605,523. The Armorch hills, called also the Montagne Norre, and the Mene Mountains cross the department from east to west, giving a rude and broken aspect to the coasts. The chief invers, which are short but navigable, are the Rance, Gouet, Trieux, and Arguenon The cultivation of flax and hemp, with the pasturing of cattle, and iron, coal, and lead mining, supply employment in the mountainous districts, while in the sheltered valleys and on the coast levels grain, potatoes, flax, with pears and apples and other fruits, are produced. It builds ships, makes linen and paper, and is a noted horse market Along the seacoast are many large fisheries, and sardines are cannel. Capital, Sant Brieuc.

COTGRAVE, RANDLE (\*e-1634). An English lexicographer, born in Cheshire and educated at St John's College, Cambridge. It was while secretary to Wilham Cecil, Lord Burghley, that he compiled his French-English dictionary (1611, 1632, 1650, 1660, and 1673). The work contains many absurd errors, but is

still much used by philologists

COTHEN, or Kothen, ke'ten An ancient town of the German Duchy of Anhalt, situated on the Ziethe, about 22 miles north of Halle (Map Germany, D 3) It is surrounded by high and ancient walls Among its notable public buildings are the Jakobskirche, a Lutheran church of the Gothic order, the church of St James, with some fine old stained glass and a handsome organ, and the former palace of the dukes of Anhalt-Cothen, now used as a museum and containing a library of about 20,000 volumes. Cothen boasts a technical institute, a school of gardening, and a school of forestry The chief industry is the manufacture of beet sugar, there are also iron foundries, machine works, boiler shops, and malting works, it also manufactures cigars, vehicles, and leather Pop., 1890, 18,215, 1900, 22,100, 1905, 22,978 Cothen was an old Slavic settlement, and received municipal privileges in the twelfth century. In 1547 it joined the Schmalkaldic League and was taken by Charles V Until 1853 it was the was taken by Charles V Until 1853 it was the capital of the Principality of Anhalt-Cothen. A monument has been erected to Sebastian Bach, who was music director here 1717-23

COTHUR/NUS. See BUSKIN

COTI'DAL LINES. A system of lines on a globe or chart which show the movement of the ocean tidal waves. The lines join the places where high water occurs at the same moment

COTTLION, kb-til'yon, Fr. pron ko'tè'yon' A dance of French origin and performed to quadrille music. It was a fashionable dance at the court of Charles X, where it had been adapted from a peasant dance At first for one, then for two performers, it soon became a ronde dance, in which form it was introduced into England. There are hundreds of possible figures in the modern dance, and the accessories are most elaborate. The cotillon is begun by a small number of couples, who occupy the floor while the rest of the guests sit about the ball-room. These couples select others from among

those seated, and after going through a figure all take seats and are replaced by other couples until the whole company has danced that particular figure Another method is for each set of couples to dance a different figure For some account of the dance and descriptions of many of the figures, consult Grove, Dancing, "The Badminton Library" (London and Boston,

COTIN, kô'tān', CHARLES (1604-82) A French poetaster, born in Paris He was royal councilor and almoner to the King under Louis XIV, and in 1655 was admitted to the Academie Française. His knowledge of Oriental and classic languages was extensive, and he was a member of the literary circle of the Hôtel Rambouillet He was an abbé and a successful preacher His verse, of which the *Poésies chrétiennes* (1657) are the most creditable, is of no importance He is famous as the object of Boileau's ridicule (Satires, 3, 8, 9) and the original of Trissotin in Molière's Femmes savantes

COTINGA, kô-tên'ga, or CHATTERER (native South American) A bird of the family Cotingide, allied to the waxwings and manakins. Cotingas are numerous, both in species and individuals, inhabit tropical America exclusively, feeding on insects and fruit, and are remarkable for the splendor of the nuptial plumage worn by the males in many cases, or for eccentricities of ornament The bell bird and umbrella bird, elsewhere described, are cotingas exemplifying such peculiarities, and the cocks-of-the-rock are included by some systemists. They have been specially studied by Dr Leonard Stejneger, who refers to the group as follows in the Standard Natural History, vol iv (Boston, 1885) "The greater number of the species of cotinga are plain-colored, gray, rufous, or greenish . . though even among these rather modest forms there are some which are more or less highly adorned Among these is the rose-breasted fly-catcher, or Xantus's Becard (Platypsans aglane albiventris), with a beautiful crimson rosy patch on the breast, which just enters our fauna across the southern frontier Nevertheless, the cotingas are, generally considered, especially bright-colored and currously adorned birds . . . From Central America we have the exquisite Carpodectes, white all over, with a delicate tinge of bluish gray washed over the upper surface, from Guiana to Brazil are found the deep purplish-carmine Xipholæna, with white remiges, and the great wing coverts singularly lengthened, nairow and stiffened, like a woodpecker's tail feathers, the glorious cotinga, shining azure blue, with purple throat, from the same countries, the greenish, fork-tailed Phibalura from Brazil, and the small, pipralike Iodopleura, curious on account of the rare lilac color of the sides of the body hidden under the wings." Of all these the females are plainly colored, mostly gray, and are therefore incon-spicuous when making their nests or broodingan important precaution against the extinction of the lace, and the gaudy hues of the males are molted to a great extent during the off season, when their dress is much plainer than in the season of courtship None of these birds are notable as singers, though several utter loud and singular cries. See Plate of Cottnoxa COTISE, köt'is, or COST (Fr côte, side) In heraldry (qv), one of the diminutives of

the bend

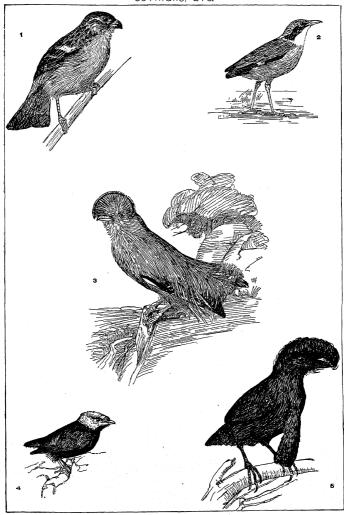

COT'MAN, JOHN SELL (1782-1842).

English landscape painter and etcher He was born at Norwich, the son of wealthy parents, and in 1798 was sent to London There he joined the group of water-color painters led by Gutin and Turner, but without adopting their naturalistic tendencies. Cotman is now more appreciated than when he was alive and is considered the most gifted artist, after Crome, of the Norwich school In versatility he is equaled only by Tuiner, his diaftsmanship is excellent, and his color is of unusual breadth and often very beautiful The British Museum possesses nearly 300 of his water colors and drawings, including "Greta Bridge" and the drawings, including Greek Bridge and the famous India-ink drawing, "Freaking the Clod" Among his much rarer oil paintings are "When-ries on Brevdon" (National Gallery), 'Fishing Boats off Yarmouth" (Norwich Museum), the "Waterfall," a fantastic landscape in classical style, an "English Village" and "Worcester Cathedral" in the Metropolitan Museum, New York. He is widely known through his architectural etchings such as his Etchings of Architectural and Picturesque Remains (1838) and Architectural Antiquities of Normandy (1822) His sons Miles Edmund and Joseph John were able landscape painters, and his nephew Frederick George Cotman was an able painter in water color Consult Binyon, John Crome and

water color Consult Binyon, John Grome ona John Sell Cotman (London, 1906)

COTO'NEAS'TER (Neo-Lat, from Neo-Lat cotonea, quince, Lat cotonea, wallwort) A genus of plants of the family Rosacea, allied to the apple and quince The species are shrubs or small trees, some of them evergreen, with simple, undivided leaves, more or less woolly beneath, small flowers in lateral cymes, and small fruit not agreeable to the palate, but the bright color of which, and its remaining on the tree in winter, make them very ornamental These plants, while common in Europe, seem little known in the United States Most of the species are natives of mountainous parts of Asia, they are sufficiently hardy for the climate of Great Britain, where they are among the most common ornamental shrubs

COTOPAXI, kō'tô-pāk'sê, Sp pron kō'tôpa'ne The loftiest active volcano in the world It is in Ecuador, in the eastern chain of the Andes, about 40 miles nearly south of Quito, and about 50 miles south of the equator, in long 78° 42' W (Map Ecuador, B 4). La Condamine estimated the height at 18,860 feet, Reiss, the first to ascend it (in 1872), found it to be 19,500 feet, and Whymper (in 1880), 19,-613 feet The valley at its foot, however, is itself over 9000 feet above the sea. The upper part of Cotopaxi, a perfect cone for a distance of 4400 feet, is entirely covered with snow, with the exception of the immediate margin of the crater, which is a bare parapet of rock snow line on the northern exposure is 15,600 feet, and on the southern exposure 15,200 feet, above sea level Reiss, whose measurements are largely accordant with the more recent ones of Whymper, estimated that the crater, which is elliptical, has a depth of 1500 feet and a maximum diameter of about 2600 feet. Below the snow line is a well-marked barren belt covered with lichens and shrubs, below which again is forest Smoke issues from the summit: sounds as of explosions are occasionally heard, and, also, a fiery glow is often visible by night. Lava rarely flows even during eruptions, but flame, smoke, and immense volumes of ashes are

- 1- BAND-TAILED PLANT CUTTER (Phytotoma rara).
  2. INDIAN PITTA (Pitta brachyma).
  3. AMAZONIAN COCK-OF-THE-ROCK (Rupicola rupicola).
- GOLDEN-CAPPED MANAKIN (Pipra auricapilla).
   ECUADORIAN UMBRELLA-BIRD (Cephalopterus penduliger).

then ejected, and when the heat melts large masses of the snow lying on the sides, destructive floods are occasioned in the valleys beneath. The first eruption recorded was in 1532, and tradition makes a secondary cone, "the Luca's head" on the slope of Cotopaxi, the peak of the volcano blown off at this time. Others followed in 1698 and 1743, since which date numerous eruptions have occurred. One of the most violent was that of 1768, during which ashes, thrown high into the air, were transported by the winds and thickly strewn over an area of about 250 miles in diameter. The more recent volent enuptions were in 1877 and 1903

COTRONE, kô-trô'na An episcopal city (since the sixth century) on the Gulf of Taranto, southern Italy, 146 miles, by the winding railway, south of Taranto (Map Italy, M 8) railway, south of Taranto (Map Italy, M 8) It has a castle of the time of Charles V. a cathedral, and an excellent, though small, harbor Of the temple of Hera on Cape Colonne, sometimes called Cape Nau, 7 miles to the southeast, which was the most magnificent structure of the kind in Magna Græcia, only one solitary Doric column remains The worship of Hera has been replaced by that of the Madonna del Capo, to whose church, near the temple, the young girls of Cotrone go in barefoot procession every Saturday. The town markets oranges and other semitropical fruit, oil, licorice, wine, olives, grain, and turpentine Cotrone is the olives, grain, and turpentine modern name for the ancient Crotona, founded by the Achæans about 710 BC. About 530 BC. Pythagoras, after being banished by Polycrates of Samos, established his brotherhood here and acquired such influence in the oligarchical council that the people rebelled, and expelled the Pythagoreans and established a democracy Crotona suffered severely during the Pyrrhic wars (see Pyrrhus) and in the later years of the Second Punic War was Hannibal's headquarters for three successive winters It did not appear again in history until the wars of Narses and Belisarius (q.v) against the Goths. In the days of Herodotus, and long after, the medical school of Crotona was the most famous in the Greek world This city has given many famous champions to the Olympian games of the Greeks, among them Milo Pop (commune), 18 9649, 1901, 9610, 1911, 10,162 See CROTONA COTS'WOLD See SHEEP (commune), 1881,

COTSWOLD, or COTESWOLD HILLS (village meadow), from cot, but + woold, meadow). A range of hills, running through the middle of Gloucestershire, England, from Chipping Camden in the northeast to near Bath in the southwest, and forming the inner ridge of the English coastal plain (Map England, D 5). They are 54 miles long, in some parts 8 miles broad, and cover 312 square miles, with an average height of 500 to 600 feet. The highest points are Cleave Hill (1184 feet) and Broadway Hill (1086 feet). The surface is generally bare, but (1086 feet). The surface is generally bare, but corn, turnips, and samfoin, a perennial herb cultivated as a forage plant for sheep, are grown, and coarse-wooled sheep are raised less for the wool than for their value in crosses with less hardy breeds. Consult Evans, Highvays and Byvays in Oxford and the Cotswolds (New York 1905).

teags and Diverse. (New York, 1905).

COTTA The name of a family of German publishers, whose establishment was founded in Tubingen in 1659. It included the eminent theologian, JOHANNES FRIEDRICH COTTA (1701—70), and his grandnephew, JOHANN FRIEDRICH,

FREHERR COTTA VON COTTENDORF (1764-1832), the most emment publisher in German history Educated for the law, he entered the book business at Tubingen in 1787 and in 1795 began to publish Schiller's Hoven, the Politische Innalen, and an architectural annual in 1798 he issued Die Allgemeine Zeitting (qv), the Damenalmanach, and other such publications. The Litteraturblatt and the Kunstblatt followed Cotta was publisher for nearly all the distinguished literary men of the classical epoch. In 1810 he moved his printing house to Stuttgart, in 1824 at Augsburg he introduced the first steam printing press into Bavaria. In politics Cotta was a moderate but steadfast Laberal He was a practical social reformer, abolishing serfdom on his estates, building model farms, and making them in effect neighborhood experiment stations. The house of Cotta is still among the greatest publishing firms in Germany, since 1899 a stock company in Stuttgart.

COTTA, BERNHABD VON (1808-79) A Ger-

COTTA, Bernhard von (1808-79) A German geologist, born at Zielbach, near Eisenach After studying at the School of Mines at Freiberg and at the University of Hedelberg, he was associated with Naumann in the publication of a geological map of Saxony (12 sections, 1833-42), and from 1841 to 1874 was professor of geology at Freiberg His publications, many of which have been translated into English, include Geognosische Wanderungen (1836-38), Anleitung zum Studium der Geognosis um Geologie (3d ed, 1849), Deutschlands Boden (1854), Die Geologie der Gegenwart (5th ed, 1878). In the latter work he proved himself an evolutionist and an adherent of Darwin's theory of the origin of species He was one of the first geologists to accept this theory and apply it to organic remains in sedimentary rocks His treatise on ore deposits contributed greatly to the development of that branch of geology COTTA, GAIDS AUBLIUGS (6124-73 BC).

COTTA, GAIDS AURELIUS (c 124-73 B C). A Roman, distinguished as statesman and orator He was an intimate friend of M. Livius Driving the was an intimate friend of M. Livius Driving the tribuneship of the people. (See Drusus, 2, Social War) In 91 he sought unsuccessfully the tribuneship of the people. Soon afterward, by the terms of the Lex Varia, a law aimed at all who had supported the Italians against Rome, he was accused, and went into voluntary exile. He returned in 82 As consul in 75, he championed the popular cause by carrying a law freeing the tribunes of the people from legislation by which Sulla had disqualified them from holding higher magistraces. He died suddenly, in 74, from the breaking out of an old wound. Cicero praises him highly as an orator and makes him a participant in the dialogue of his De Oratore (2d ed, Oxford, 1888).

COTTA, Heinrich (1763-1844) A German forester of distinction, born near Wasungen He studied at Jena, in 1801 became a master forester and a member of the Eisenach College of Forestry, and from 1795 to 1811 conducted at Zillbach a school of sylviculture, founded by himself In 1811 he was summoned to Saxony as counselor of forestry, and thither removed his school, which in 1816 received the title of "Royal Academy of Forestry" He wrote a number of volumes, including Systematische Anlesting zur Tacation der Waldungen (1804), Anweisung zum Waldbau (1817,

9th ed., 1865), Die Verbindung des Feldbaues mit dem Waldbau (1819-22), Hilfstofeln für Forstuurte und Forstaxatoren (1821, 2d ed, 1841), Grundriss der Forstuurthschaft (1832, 6th ed., 1872)

COTTABUS (Gk. κότταβος, cottabus) game said to have originated in ancient Sicily, widely popular in Greece at dinner parties, in the fifth and fourth centuries BC, especially at Athens. The purpose of the game was to throw wine at a mark, so that the wine should make a clear noise as it struck In its simplest form a number of saucers were set floating in a crater or mixing bowl filled with water, guests in turn, without using from their places, flung wine at the saucers, seeking to sink them, the player who sank most saucers was the winner Other more intricate forms of the game, in spite of many descriptions in Greek writers, most of which, however, were written when the game was no longer played, and the discovery, near Perugia, of two sets of apparatus used in playing the game, are not clearly understood. The game was much used as a love augury, the player, as he threw, named his beloved or thought of her and augured success or failure in his suit from the nature of his throw. Consult Becq de Fouquières, Les jeux des anciens (1873), Helbig, Mittheilungen des Kaiserlich Deutschen Archaologischen Instituts, Romische Abtheilung (1886), Sartori, Das Kottabos-Spiel der atten Griechen (1893), Higgins, "Recent Discoveries of the Apparatus Used in Playing the Game of Kottabos," in Archæologia (1888).

COTTAGE (OF cotage, ML cotaguum, from AS cot, Icel kot, hut). Formerly a term used in Great Britain for a small dwelling house of a poor family, especially in the country, detached from other buildings It had no second story (though sometimes garret rooms) and was built usually of stone or brick and thus distinguished from wooden cabins or huts, though wood was not excluded Recently the term has been extended to mean country houses of moderate extent, especially summer residences for wellto-do families, and finally it is often but improperly applied, in the United States, to the most sumptuous summer residences at places like Newport and Bar Harbor

COT'TAR'S SATURDAY NIGHT, THE. A poem by Robert Burns, published with a volume

of other verse in 1786

COTTBUS, or KOTTBUS, kot/bus A town of the Prussian Province of Brandenburg, situated on the Spree, about 70 miles southeast of Berlin It has been noted since mediæval days for the manufacture of cloth, and to this has been added linen, wool, yarn, jute, carpets, to-bacco, machinery, and beer (Map Germany, F 3) A government tuberculosis sanitarium is just outside the town Pop., 1890, 34,910, 1900, 39,327, 1905, 46,269 Cottbus was founded in the tenth century by Henry I In 1445 it was sold to the Elector of Brandenburg It belonged to Saxony from 1807 till 1813, when it passed to

COTTE, kot, ROBERT DE (1656-1735) French architect He was born in Paris and was a pupil and brother-in-law of J H Mansard As assistant to, and later as superintendent for, his master, he collaborated in the erection of the chapel of Versailles, the dome of the Invalides, and the Hôtel de la . Vrillière (now the Bank of France) He appears to have designed the colonnade of the Trianon, and left designs for the portal of Saint-Roch and for many buildings outside of his own country. De Cotte was made director of the Academy for Architecture in 1699, and first architect to the King (1708), after the death of Mansard

COTTENHAM, köt/en-am, Earl of Pepys, Charles Christopher

COT'TER, JOSEPH B (1844-1909). American Roman Catholic bishop, born in Liverpool He came to America in his youth and was educated at St John's University After holding a pastorate at Winona, Minn, for 18 years, he was in 1889 consecrated first bishop of that diocese He was active in the temperance movement and thrice president of the Total Abstinence Union of America

COTTEREAU, köt'rô', JEAN See CHOUANS COTTET, ko'ft/, CHARLES (1893—) a French landscape and genie painter and etcher. He was born in Puy (Haute Loure) and studied under Maillaid at the Académie Julian and under Roll He at first joined the Impression-ists and later helped to found the Société Na-tionale des Beaux-Arts He is known chieffy as a painter of Breton subjects A cycle of 10 COTTET, ko'tâ', CHARLES (1863landscapes, entitled "The Country of the Sea" (1905), several of which are now in the Luxemboung, attracted wide attention He also painted many Venetian and Spanish subjects. In his early impressionistic work his color is light and delicate, later it grew darker and heavier, and an element of pathos was introduced. His paintings include "The Port of Camaret," and others, in the Luxembourg Museum, "Going to Church in Brittany" (Vienna), "A Moonlight Night" (Philadelphia), "Breton Women in Mourning" (Cincinnati) COT'TIDÆ (Neo-Lat nom pl, from Neo-

Lat. cottus, Gk. κόττος, kottos, a sort of river fish, probably the bullhead) A family of small, ugly-looking, spiny-rayed fishes, having a large depressed head, usually armed with spines or tubercles, and a tapering body, which may be naked or irregularly aimed with scales or bony plates. There are about 60 genera and 250 species The typical genus is Cottus Nearly all are small. They inhabit the rocky shores and pools of the northern regions, some of the spe-cies descending to great depths. Many inhabit fresh waters, occupying the clear, cool streams of northern regions The family includes the sculpins, miller's-thumb, grubby, father-lasher, etc Very few are used as food See Sculpins

COTTIERS, köt'ti-erz. A term originally indicating tenants who rented cots or cottages, or at the most a plot of land too small to be designated a farm, but later the term had a more general application to peasant farmers whose rent was determined not by custom, but by competition The most notable case of this system of land tenure was in Ireland, where the capitalist farmer was scarcely represented in the population The same class in the western parts of Scotland are called "crofters" Among both the lack of capital and the competition for both the tack or capital and the competation for land, including rack rant, has provoked much misery it has been partially allevated in Ire-land by the gradual diminution of the popula-tion, and still more by the acts of Parlament known as the "Land Laws" See IMSH LAND

COTTIN, ko'tan', Sophie Risteau (1770-1807) A French novelist, born at Tonneins, and generally known to a now past generation as the author of Elisabeth ou les exilés de Sibérie, which

won the praise of imitation from Xavier de Maistre in La jeune Sibérienne (1825) Its translation in English by G R Lockwood (New York, 1869) is still popular among old-fashioned English readers In France her vogue was not lasting Her Mathilde (1805), a tale of an intense love between a Christian Crusader and a Saracen, may be considered as the precursor of the Romanticist novels of the Châteaubriand school, especially by reason of its very creditable local color She died in Paris, Aug 25, 1807, too early to fulfill the promises of an interesting and sympathetic genius Consult Sainte-Beuve, Causeries du Lundi, vol xi, and Julia Kavanaugh, French Women of Letters (Leipzig,

COT'TLE, JOSEPH (1770-1853) An English publisher, born probably in Gloucestershire opened a bookshop in Bristol and was institumental in publishing some of the first poems of Southey, Coleridge, and Wordsworth mained in business from 1791 to 1799 After his retirement he produced several volumes of poetry, such as \*Maloern Hills (1798), John the Baptist (1801), Messah (1815), which awoke the satin of Byron His Early Recol-lections, Onselfy Relating to Samuel Taylor Coleridge (1837), with a second edition under the title Reminiscences of Coleridge and Southey (1847), contains interesting information on the early lives of Coleridge and Southey, but is disfigured by many details that show Cottle

himself in an unpleasant light

COTTON (Fr., Sp. coton, from Ar qutun, utn. cotton, from qatana, to inhabit) An imqutn, cotton, from qatana, to inhabit) An important vegetable fibre, distinguished from all other fibres by the peculiar twist it possesses, which makes it exceedingly valuable for spin-ning It is cultivated in those parts of the globe between the two thirty-fifth parallels of latitude (a region which contains the largest portion of the land surface of the globe) although its most profitable cultivation is between the twenteth and thirty-fith parallels north of the equator Within this belt lie the cotton dis-tricts of the United States, northern Mexico, Egypt, northern Africa, and Asia, except the extreme southern parts of India and the Malay Peninsula South of the equator cotton is grown in Biazil, nearly all of which country is said to be favorably adapted to its cultivation, in Argentina, in Australia, though not to any great extent, in Africa, where efforts to extend its production are being made, and in the islands of the Pacific Cotton is grown under wider range of climatic conditions, over a greater area, and by a greater variety and number of people, and is useful for a larger number of purposes, than any other fibre Its cheapness and the extent of its production preclude the demand ever exceeding the supply except locally and temporarily Although cotton is grown mainly for the fibre surrounding its seeds, its by-products, the seeds as a source of oil and cake, and also the fibre of the stalks, are of great importance. The cottonseed products of the United States in 1912 were valued at \$132,230,000 See Cottonseed and its Prod-UCTS, and Colored Plate of FIBRE PLANTS in article HEMP

Botanical and Commercial Classifications. The cotton of commerce is the product of a few species of Gossypium, a genus of the family Malvacea, to which also belong the hollyhock, mallow, hibiscus, etc, as may be readily seen

by a comparison of their flowers (For illustration, see Plate with article HEMP) There are numerous species of Gossypium, only three or four of which are economically important They are small trees, shrubs, or herbaceous plants, and in their duration are perennials, brennials, or annuals. The leaves of the cultivated species are three to seven, or even nine, lobed, and are more or less sprinkled with small black or pellucid dots The flowers vary in color, are white or light yellow, with purple spots at base, and are usually borne singly in the axils of the leaves except in the "cluster" type, where a number occur together At their bases the flowers are surrounded by three or more green heart-shaped bracts, which constitute the "squares" The fruit, known as the boll, is a three to five celled capsule, containing the numerous seeds, more or less covered with lint, which is white or tawny. All of the species are of tropical origin, yet their most successful cultivation is in temperate climates where there is a period of six months free from frosts and where there is an abundant and welldistributed rainfall throughout the growing sea son

The botanical origin of plants that have long been in cultivation is always a source of perplexity, and the exact species to which the different varieties of cotton belong has been the sub-ject of much controversy By almost common consent it is now agreed that most of the cot-ton of commerce is the product of three or four species and their phyrids. These species are Gossypium arboicum and Gossypium peruvianum, arborescent species grown only in the tropics, Gossypium barbadense, the source of the celebrated Sea Island and Egyptian cottons, and Gossypium herbaceum, the species from which most of the crop of India is grown American upland cotton is believed to have originated from Gossypium hirsutum There is perhaps no other plant that responds so quickly to changes in environment and improved cultivation, and to this are doubtless due the many

varieties and species

The Sea Island and Egyptian cottons, Gossypium barbadense, with their beautiful, long, and silky staple, are among the most valuable of the races or species of cotton The flower is of a rich cream color, and its seeds are black, small, and easily separable from the lint This species attains the highest perfection along the coast legion of South Carolina, Georgia, and Florida, with well-known varieties grown under irrigation in Egypt from American seed The fibre of Sea Island cotton averages about 1¾ inches in length, with 1½ to 2½ as the extremes. It is adapted to the finest thread and lace work, and other products for which the short staple is not suited. The Egyptian varieties are usually a little shorter in staple and are of a tawny color. These are often used and are of a tawny color. These are often used for the natural-colored balbriggan underwear, hosiery, etc, where a smooth finish and silky lustre are desired. The cultivation of Sea Instere are desired. The cutavarion of Sea Island cotton is highly developed, and the United States crop of 1912 was 73,777 bales of 382 pounds each. The value of the Sea Island cotton crop is about 51/2 million dollars annually The Department of Agriculture has in recent years imported a quantity of seed of the Egyptian cotton and by a series of experiments dem-onstrated the feasibility of its production The quantity of Egyptian cotton imported in 1913 154

was approximately 100 million pounds, valued at about \$20,000,000 Most of this comes direct from Egypt, but a small part from England

The upland cotton of the United States is mostly derived from Gossypium hisutum In this country the varieties of this species have white flowers, which turn red the second day after opening The fibre of this series is shorter, but the plant can be cultivated over a much greater extent of territory than the others The seed of the upland varieties is usually of a greenish color and has a closely adherent gray fuzz in addition to the longer lint, making the process of ginning more difficult. There are doubtless many hybrids between these series, There are as may be seen in the character of some upland cottons In 1896 descriptions were published in the United States Department of Agriculture, Office of Experiment Stations, Bulletin 33, of more than 130 varieties of cotton in cultivation in the United States at that time, together with about an equal number of so-called varieties which were only old ones renamed. Most of these varieties were upland cottons, and they varied widely in their production and character of lint Gossypium arboreum is a small tree rather common about the temples of India and China, and also grows wild in Abyssinia and Senegal, but it is said never to be cultivated as a regular crop The trees are rather short-lived, and they yield a fine, silky fibre an inch or more in length This is called Nurma or Deo cotton and is little used except by the priestly class It is probable that its value has been overrated. It will not mature in the United States. The origin of the cottons supposed to be derived from Gossypium peruvianum is somewhat in doubt. They are South American, as their name would indicate, and their smooth black seeds adhere in a reinform mass, hence the name "kidney cotton," which is usually applied to them. Their fibre is strong, rather coarse and woolly, 1½ inches or less in length, and from its great resemblance to wool is frequently used in combination with that staple About 41/2 million pounds, valued at nearly \$1,000,000, are annually imported into the United States, and it is claimed that most of it is used by woolen manufacturers to mix in making underwear, hosiery, etc, much of the material being sold as all-woolen goods.

In commercial usage, to fibres under 0.98 mch, or 25 millmeters, in length there has been given the name "short staple" "medium" means from 0.98 to 1.17 inches (25 to 30 millmeters), and "long" 1.18 to 1.57 inches (30 to 40 millmeters), extra," including those which are 1.58 inches (40 millimeters) or more. The extra and the long in the United States seem to come from Sea Island cotton or some of its hybrids, the short and medium from Gossypuum hivsutum

The commercial classification of cotton in New York is as follows The "full grades" are fair, middling fair, good middling, middling, low middling, good ordinary, and ordinary. Half grades are designated by the prefix "frirct." quarter grades by prefixes "barely," meaning the point above half grade and the next full grade above, and "fully," meaning the mean point between the half grade and the next full grade below Liverpool high grades are lower, and low grades higher, than New York Acting under authorization from Congress, the United States Department of Agriculture established

nine grades of cotton based on middling cotton. They are middling fair, strict middling, good middling, strict good middling, middling, strict low middling, low middling, strict good ordinary, and good ordinary. Standard sets of these grades have been prepared, and they have been officially adopted by the leading cotton exchanges of this

Cultivation The plant requires for its best development a peculiar soil and climate While the method of cultivation is about the same in the various countries where it is grown, that in the United States is the most perfect though the plant is not really an annual, and in the tropics it can be grown as a perennial, yet it is treated as an annual in its cultivation in most countries The land is prepared in winter or early spring, the time of beginning varying with the locality After thorough plowing, and after all frost has gone, the ground is bedded into rows from 3 to 4 feet wide, according to situation and the quality of the soil, the seed is sown along the centre of these beds, either in a straight furrow made with a small plow or opener, or in holes 12 to 18 inches apart Flat culture is also used Where artificial fertilizers or cottonseed meal is drilled in, this method of preparation is indispensable. The usual date to begin preparing land is from January 15 in southern Texas to March 5 in South Carolina Sowing usually commences March 10 to April 15 and continues to May 15, and late aroung frosts may delay it longer. The but late spring frosts may delay it longer The young shoots, which appear in from 10 to 15 days, are weeded and thinned when they have attained a height of 2 to 6 inches, say, when the third or first true leaf appears The aver-age date of bloom is June 5 As a general rule, cotton is a dry-weather plant, heavy rainfall interfering with both the culture and the stand, although an extremely dry spring interferes with the growth. For plowing it is best to have just enough rain to make the soil moist and spongy. When young, the crop flourishes best with warm steamy weather, with an occasional shower until blooming An excess of stones showed and wood, severe drought stunts the plant, matures it too early, and causes a small light-stapled crop Early frost causes the plant to turn brown, cold nights cause many of the plants to die. Lands in hilly or upland districts require more moisture than those lying in the plains and river bottoms. Overflowing often causes injury on bottom and flat prairie lands, but replanting or recuperation often redeems the most hopeless cases Where, however, overflowing causes "sanding," the land is rendered utterly useless for cotton culture that year The experiment stations in the Southern States have aided in introducing improved methods of cultivating, fertilizing, and handling the crop Rotation of crops and green manuring have been shown to be of great advantage From the date of bloom, warm, dry weather is needful, until picking time, which usually commences from July 10 in southern Texas up to September 10 in Tennessee, and continues until frost puts a stop to further growth During the harvest all available hands are called into full employment. The cotton is gathered into baskets or bags hung from the shoulders of the pickers, and as the crop is secured it is either sent directly to the gin or dried, and then the fibre separated from the seeds Recent investigations have

shown the quality of the fibre is improved by storing cotton for a time before ginning For long-staple or Sea Island cotton in South Carolina the usual date to begin preparing land is February 1, planting begins April 1 and ends May 1, picking is from August 25 to December 10

The occurrence of the cotton-boll weevil over much of the cotton area has caused some modification in the growing of the crop Clean cultivation, earlier planting, wider spacing, and the use of early maturing varieties are recommended for infested regions
Insect Enemies of the Cotton Plant.

COTTON INSECTS

Cotton Diseases There are a number of wellcharacterized diseases of the cotton plant, some of which are due to disturbances in the nutrition of the plant, others are caused by fungus attacks, while still others are attributed to the presence of minute worms, called "nematodes," in the roots Attention to the requirements of the plants will correct the first class of diseases For the fungus troubles but little in the way of prevention is known Among the most important diseases due to physiological causes are those known as the "mosaic disease," or "yellow leaf blight," and the shedding of bolls In the first, small areas of the leaves become yellow, giving to the leaf a peculiar checkered appearance Later these areas turn brown and dry up, leaving the leaf in a more or less ragged condition At this stage the disease is usually referred to as the "black rust" Heavy applications of kainite or similar ferti-lizer are said to correct this evil. The shedding of the bolls, or their drying up while still attached to the plant, is often a serious trouble Extreme dip or wet weather causes this disease by interfering with the proper supply of moisture and nutriment furnished the plant through its roots. Among the diseases due to parasitic fung: a few of the most serious and widely distributed may be mentioned Damping off, sore shin, or seedling rot is caused by Pythium de-baryanum and a number of other fungi They attack the young plants at or near the surface of the ground, producing ulcer-like spots, and later rot the plant off The sunken, ulcer-like spots can be readily seen on the affected stems. Another common disease is anthracnose (qv), due to Glomerella, or Colletotrichum, gossypu. It is a widely distributed fungus that attacks the bolls, stems, and leaves, and is probably the most destructive of cotton diseases the bolls small reddish spots appear which later become black The centre then becomes gray or pink, and the spots enlarge in a concentric manner with well-marked zones of color The boll is killed outright or has its development checked so that the lint is worthless Upon the stems the fungus is somewhat similar in its behavior, although the spots are not quite so definitely marked. Upon the leaves the disease is not very well characterized Cotton anthracnose is carried with the seed, and it may be prevented by the use of good seed and rotation of crops. A root rot is very destructive in some places. Its behavior is so marked as to need no description. It is due to a rather widely distributed fungus that has been called Ozomum auricomum It attacks a number of plants in addition to cotton Rotation of crops is about the only method of relief known. A leaf blight (Sphærella gossypma) and a mil-

Vol. VI.-11

dew (Ramularia areola) are common diseases in the cotton field, but they seldom occasion much injury

Another of the serious fungus diseases to which the cotton plant is subject is the wilt disease It makes its appearance usually in May, when the plants are 6 or 8 inches high. The plants are dwarfed, have an unhealthy appearance, the leaves turn yellow between the veins, and their margins dry up. Sometimes plants wilt and die at once, while at other times the progress of the disease is slower and the plant may partly recover A plant attacked by this disease will show a brownish stained color in the wood when cut across The cause of the trouble is a fungus, Fusarium vasinfectum, and the same or a closely related form occurs on the okra and watermelon varieties and individual plants seem less liable to this disease, which attacks the plants through the soil, and it is thought the means for overcoming this trouble lies in resistant plants This disease, as well as some others, is very much complicated by the presence in the roots of the cotton of nematodes (Heterodera radioscola), minute worms that enter the roots of cotton and a number of other plants, causing a large number of galls to be formed. The plant is injured by the nourishment being taken from other parts of the plant to make the galls. This weakens the plant so that it is more hable to fungus attack. When nematodes occur in abundance in the field, no entirely efficient means of eradication is known as yet

Production and Distribution The oldestknown cotton-producing country is India, where for 30 centuries the plant has been grown and its fibie manufactured. For 400 years before the Christian era cotton was well known in what was then the civilized world, the writings of the Greeks and Egyptians plainly in-dicating the knowledge of the value of this fibre Columbus found it in the Western world, although not so extensively cultivated as in the East, but during the past 50 years its culture here has distanced in quantity and in quality the produce of the Old World Down to 1800 the cotton consumers of Europe depended upon the Indies and the Levant for their raw material, but by 1860, so far had the inventive genius, the superior farming, and the greater energy of the planters of our Southern States pushed the production of the fibre, that they furnished the greater part of the cotton used by Great Britain and the continent of Europe From 1858 to 1860 America furnished 79 per cent of the cotton imported into Great Britain. During our Civil War this dropped to 31/2 per cent, rising to 58 per cent in 1871, and amounting to 80 per cent in 1900 and 628 per cent in 1912 During the Civil War, when the price of cotton was abnormally high, attempts were made to grow cotton in many countries The industry flourished there for a while, but it has ceased to be profitable in Europe, Australia, Russia in her Asiatic possessions has developed cotton growing greatly in recent years, so that the imports into the Empire years, so that the imports into the basis decade have fallen off 50 per cent in the past decade Great Britain, Germany, and France are making especial efforts to develop cotton growing in Africa, and in 1912 nearly 60,000 bales were

produced in their colonies, mostly in Africa
Cotton Production of the World. This is difficult to state except approximately, as a large COTTON

proportion and amount consumed is produced in of a million in 1864, against 41/2 millions in uncivilized or in semicivilized countries, where no accurate record is kept, and in many countries and districts absolutely no data are available-as in China, where soil and climate are favorable and the clothing of the population is largely of cotton, yet the extent of its cultivation is a close secret, and in some parts of India, where the production can be estimated only by the amount in sight and the known or assumed requirements for dress. The amount produced in the vast unknown continent of Africa is even more of a mystery, although native cottons form there a large proportion of the dress

The world's production of cotton has increased more rapidly in recent years than that of any other of the chief materials of clothing, wool, silk, or flax, and the growth in world consumption has been far greater than that of population The total cotton production of the world in 1850 was approximately 3 million bales, in 1900, 12½ million, and in the cotton year 1911–12, 25 million, the production of 1912 being practically double that of 1900 and fully eight times that of 1850 As the world population increased but about 50 per cent from 1850 to 1912, while cotton production increased 700 per cent and that of wool about 200 per cent, it is apparent that the popularity of cotton as an article of clothing has greatly increased

Cotton in the United States The first authentic record of cotton cultivation in the United States was at Jamestown, Va, in 1607 The first exportation was in 1747, when eight bags were sent to England, the first shipment of any importance being 2000 pounds in 1770 In 1791, 189,316 pounds were exported, Whitney's invention of the saw gin in 1793 raised this amount to 17,789,803 pounds by 1800 The production reached 1,920,000,000 pounds in 1860, 3,178,000,000 in 1880, 5,133,000,000 in 1900, 6,840,000,000 in 1904, and 7,157,000,000 ın 1912 Cheapening the processes of cultivation and cleaning, and increase of acreage, have so lowered the cost of the fibre that while the average price in Liverpool was is 6d (sav.

1861 In 1867 there was a decline from the high prices consequent upon the Civil War to 7%d. (14% cents), but in a few months it reached to 6%4d in Liverpool, and from 10% cents to 12% cents in New York From 1891 to 1901 prices were low, falling to an annual average of 594 cents per pound in New York in 1898, advancing to 1118 cents per pound in 1911 and an annual average of 1511 cents per pound in 1910—the highest record since 1875. In 1912 the average price of middling cotton in New York was 1152 cents and in 1914 about 124 cents

The acreage and yield of cotton, including linters, for the season of 1912, as reported by the United States Bureau of the Census, were as follows

STATE	Acres	Running Bales
Alabama Arkanasa Florada Georgia Louisiana Massaspip North Cauchina North Carolina South Carolina Tennesse Toxias All Others	3,730,000 1,991,000 224,000 5,335,000 929,000 2,889,000 1,545,000 2,665,000 2,695,000 783,000 11,338,000 159,000	1,367,136 805,021 60,248 1,888,963 392,720 1,049,604 935,080 1,057,125 1,259,672 289,731 4,888,023 96,850 14,090,863

The accompanying Table No 1, taken from Bulletin No 116, United States Census Bureau, Buttettn No 116, United States Census Bureau, gives the cotton cop in the United States by States, according to censuses of 1870, 1880, 1890, 1900, and 1910 for the crops of the preceding year. The bale measurement of 1910 was 502 6 pounds, in 1890 it was 477 pounds, in 1880 it was 433 pounds; in 1870 it was 440 pounds. The early settlers north of the Ohio River planted cotton for domestic uses between 1749 and 1780. The census for 1800 care for 1749 and 1780 The census for 1860 gave for Illinois 1482 bales, or 659,490 pounds, of cotton

36 cents) per pound in 1793, it was 5 %d (say, 1142 cents) in 1851, averaging 7d (14 cents) for the five years ending 1861 During the period of the Civil War in the United States the prices were very high owing to the small production, the quantity produced being less than half a million bales in 1863 and but about one-fourth

Among the States classed as "all others" are Missouri, Virginia, California, Kansas, Arizona, all of which are producing cotton in commercial amounts, and a number of other States where its cultivation as a crop has been abandoned Stimulated by the high prices following the Civil War, the cultivation of cotton was con-

ducted to a limited extent in California, Illinois, Indiana, Nevada, Utah, and West Virginia With the coming of low prices cotton culture gradually disappeared from those sections not peculiarly adapted to it, and censuses after 1870 credited none to Illinois, Indiana, Nevada, Utah, or West Virginia Natural selection continues to eliminate the industry from sections less favored by climatic conditions. To illustrate Kentucky is credited by the censuses of 1880 and 1890 with 1367 and 873 bales respectively, but the census of 1900 finds in this State only 84 commercial bales The loss in those States lying along the northern border of the cotton belt is more than offset by the increase found in the territory west and southwest of the Mississippi River According to the eleventh census 2,872,524 bales, or 38 per cent of the entire American crop of 1889, was grown in that region, while in the census of 1900, in the same territory, the production reached 4,250,940 bales, or 45 per cent of the whole crop In 1912 the States of Arkansas, Louisiana, Oklahoma, and Texas, all west of the Mississippi River, produced 7,169,604 bales, or 52 3 per cent of the entire crop

The exports of cotton from the United States averaged less than 2 billion pounds per annum in the decade ending with 1880, and between 2 and 3 billions per year up to 1895. During the next decade the exports averaged over 3 billion pounds per annum, and from 1907 to 1914 averaged over 4 billion pounds per annum, the quantity exported in the fiscal year 1911 being 5,535,-125,000 pounds, the high record up to that date, and in 1913 was 4,562,926,000 pounds. The high record in value of exports was in 1911, being \$585,318,869, that of 1913 being \$547,357,-195 The exports to the principal countries in 1913 were to Great Britain, \$224,783,457, Germany, \$144,175,157; France, \$64,137,024, \$30,169,663, and Japan, \$25,022,050 ports of cotton for 1913 were valued at \$22,-987,318, of which \$18,753,197 was imported direct from Egypt, and between one and two million Hold Egypt, and between one and two Minton dollars' worth of Egyptian cotton from England For the same fiscal year the exports of cotton goods were valued at \$53,743,977, and the imports at \$66,065,857, of which \$35,776,301 was laces, embroideries, and other articles of this character

The amount of cotton consumed by all the mills in the would for the year ending Aug 31, 1913, was approximately 21,000,000 bales. At the same date there were 30,500,563 active spindles in the United States, 11,971,092 of which were in the cotton-producing States and 18,619,461 in all other States The consumption of domestic cotton in the United States for the above period was 5,786,061 bales. About one-third of the cotton grown in the United States is consumed in domestic manufactures, and about two-thirds is exported, chiefly to Europe.

Manufacture. The process of transforming cotton from its raw condition into the thread or cloth that is such an essential of daily life is one which involves many different operations. It must first be cleaned to remove sand, dust, and other foreign substances. It then contains about two-thirds of its weight in seeds, which must be removed.

Cotton General —Before Eh Whitney's invention of the cotton gin, the removal of the seeds by hand was so difficult a task that very little cotton was raised. It would take one person

two years to turn out an average bale of cotton, 3 to 15 of which are produced by one machine in one day Before the Civil War the gins were run chiefly by mule power, which, when operated in connection with slave labor, was cheaper than steam Whitney's cotton gin, known as the saw gin, may be briefly described as a series of circular saws with fine teeth, revolving with an arc of their circumference projecting through a guide into a receptacle for seed cotton. These saws tear the lint from the seed and carry it through the guide. It is removed from the saws by a brush and carried to a condenser Great care must be exercised not to injure the cotton (1) by having the saws too close to the bars of the grate, so as to rub, (2) by having them revolve too fast, or (3) by having the teeth too sharp. The roller gin is growing in favor among cotton producers, especially for the long-staple or Sea Island cotton, and in the United States and Egypt all long-staple cotton is ginned in this way It removes the seed with only one-fifth the rapidity of the saw gin, but it does not injure the fibre. In a primitive form it has been used in Egypt and India for many centuries It consists of two rollers, revolving in opposite directions, between which the cotton is passed and the smooth, hard seeds thrown off Both the saw gin and roller gin have been much modified and their effectiveness increased by successive improvements.

In 1012 there were 28,358 ginneries in the United States, 25,279 of which were reported as active by the Census Bureau. The average outfurn was 535 bales, a somewhat lower average than that of 1911, but a decided increase over the average for the preceding five years. The number of idle ginneries was 3070, or 203 more than in 1911. While the erop of 1912 was somewhat less than that of 1911, yet it would seem from the steady increase in the number of idle gins that the process of ginning is being gradually concentrated in the larger establishments.

In Bulletin No 58, on Cotton Ginning, Twelfth United States Census, Damel C Roper divides cotton ginneries into three general classes. Those conducted exclusively for the plublic, those conducted exclusively for the plublic and plaintation. The Bulletin states that "the rapidity with which the private or plantation ginneries have been supplanted by public and more modern equipments is noteworthy. Through inquiries of the census of 1880, covering the power and machinery of cotton-ginning establishments, it was ascertained that a large percentage of the crop of 1879 was handled by ginneries of a private character. The motive power of these ginning and baling plants consisted of horses or mules, and each had a daily capacity of from three to five bales. The general introduction of steam power brought economic methods that have crowded out primitive horse ginneries to such an extent that they are now curiosities."

Baling—The cotton having been separated from the seed, the next step is to pack it in bales for shipment Different methods of baling prevail among the cotton-producing countries. The American product, as put up in the old-fashioned tortoise-back bales, has the reputation of being the worst-baled cotton in the world East Indian cotton is shipped in cubical

158

bales, weighing about 400 pounds, covered with thick Indian hemp and held together with strong iron bands. The Egyptian bale weighs about 700 pounds, is a little thicker and not so long as the American, and has 11, instead of 7 or 8, bands around it Brazilian cotton comes in very light bales, weighing only 200 pounds, which are tied with trailing vines In the cotton States of America the cotton which is not consumed by the Southern mills is shipped to the exporting city by rail, steamboat, or wagon It is there graded by the exporter, who fastens a tag to each bale and also to a sample taken from it. It is from these labeled samples that the foreign manufacturer makes his purchases. The bales are then subjected to enormous pressure, usually by the transportation company, to reduce the size of the export bale, a standard bale weighing 500 pounds. During its progress from the farm to the factory a bale of cotton is given a series of brands, by the farmer and the ginnery, as well as the exporter, so that fraud can easily be traced One of the objections to the American baling methods, however, is that the covering becomes so torn that the marks on it cannot be deciphered

The manner in which American cotton is generally baled and pressed for transportation to the markets and mills is not only needlessly expensive and wasteful, but fails to protect the cotton from damage and theft The bales are cotton from damage and theft covered with jute cloth, made of thread so coarse and loosely woven that, while it adds unnecessarily to the weight of the bale, it does not protect the cotton. The bales are held together by steel bands, which still further increase the weight. The weight of the bagging and ties on a bale weighing 500 pounds is about 23 pounds Besides the increased freight rates due to this besides the indicased regard race bulky method of baling, the necessity of a second pressing, and the bad condition in which the cotton reaches the factory, a more grave defect is its excessive inflammability, resulting in high insurance charges So great is this risk that on some passenger steamers cotton is not carried, on account of the danger of fire An illustration of this danger was afforded by the terrible fire which occurred on the docks of the North German Lloyd Steamship Company at Hoboken, N J, on June 30, 1900 The fire started in some unknown manner in a lot of cotton bales and spread with such rapidity that efforts to check it were unavailing. The loss of property caused by this cotton fire has been estimated variously at from \$4,000,000 to The loss of \$6,000,000, and the loss of life was about 200 persons

Some years ago a cylindrical bale was devised that is made directly from the gin. This seemed to meet with favor for a time, but the census reports show a diminishing number of round bales, only 99,916 such bales being reported for the crop of 1913 The American Cotton Company makes a bale 4 feet long and 2 feet in diameter, weighing over 35 pounds per cubic foot. cotton is pressed gradually, so as not to injure cotton is pressed gradually, so as not to injure the fibre, and is in the form of a continuous lap or roll. Since the air is pressed out of the cotton, it has no tendency to expand, and the covering is only sufficient to keep the cotton clean The heavy bagging and ties are entirely dispensed with The cotton is compressed as fast as ginned and is shipped direct from the ginhouse to the warehouse or mill. The cylindrical bale of the Planters' Compress Company is 36 inches long, 18 inches in diameter, and weighs 250 pounds. This bale is held together wires passing from end to end through a small opening in the centre It is covered with cotton duck, and the weight of the cloth and wire is about three pounds per bale satisfactory tests have been made with each of these types of bales, showing that they are both fire and water proof The other objections to the old-fashioned methods of baling are also met by the cylindrical bales described son for the failure of the round bale to be more

widely adopted is not evident

Spinning—When the cotton bales are re-ceived at the factory, the cotton from the different bales is first mixed in order that the yarn produced may be of uniform quality is next submitted to a process of opening and pricking that loosens the fibres which became closely packed together when the bale was pressed Then follow the processes of carding, drawing, slubbing, roving, spinning, and dou-bling, by which the cotton fibre is reduced by successive stages from a web or sheet into cotton yarn. The process of carding is de-scribed under that title. Its object, besides cleaning the cotton of any foreign substances still adhering, is to reduce the lap into a thin fleece and then contract it into a ribbon or sliver. The sliver, after being doubled so that inequalities in the single slivers are counterbalanced, is put through a diawing machine, consisting of successive pairs of rollers, each of which revolves more rapidly than the preceding one, and which reduces the sliver to a finer and finer thread By slubbing and roving, the process of attenuation is continued, the thread in each case taking the name of the machine through which it has just passed The thread is also twisted, and when it leaves the roving machine it is strong enough to be wound on a bobbin Spinning is the concluding process, and in this the thread is given the requisite firmness and twist Doubling is the combining of two or more threads into a single coid Every step in the manufacture of cotton yarn has for its object (1) the removal of finer and finer impurities, (2) the attenuation and strengthening of the thread, (3) correcting the mistakes of the preceding process The whole process is described in more detail in the article Spinning

The thread may be subjected to the additional processes of gassing and polishing. The object of gassing is to singe off all the loose fibres and so produce a very smooth yarn This is accomplished by passing the thread through a very fine jet of gas, as it is wound from one bobbin to another The yarn is polished by applying a sizing made of starch, beeswax, or other ma-terials This not only gives the yarn a gloss, but increases its strength and weight The process of weaving cotton into cloth does not differ materially from that of silk and wool and is treated in the article Weaving

The bulk of the world's cotton is shipped into foreign countries and often across the ocean twice-once to the factories to be transformed into yarn and cloth, and again, perhaps, back to the very region where it was first raised, in the form of cotton goods The best example of this fact is offered by the United States, which raises nearly three-fourths of the world's cotton, yet in 1911 exported less cotton goods, measured by values, than the Republic of Switzerland, which laises not a pound of cotton and has not even a seaport. Of course the United States is an enormous consumer of cotton, onethird of its large crop being consumed by its own mills, and this fact must be remembered in considering the extent of her export trade. Obviously the amount of cotton goods imported,

TABLE II

VALUE OF THE WORLD'S EXPORTS OF COTTON
GOODS BY COUNTRIES

(From Bureau of Census Bulletins, 106, 110, 113, and 115)

COUNTRY	1909	1910	1911
Austria-Hungary Belgium France Germany Great Britain Italy Netherlands Russia Switzerland United States British India Japan	\$13,257,962 54,004,530 64,619,295 95,524,870 558,269,108 25,646,333 16,116,466 10,689,328 52,967,250 31,878,566 37,428,252 29,260,177	\$63,768,744 103,466,692 515,222,235 26,369,009 13,155,995 33,398,672 40,216,450 38,446,485	\$18,153,373 62,367,303 67,789,127 114,108,624 595,584,160 42,003,541 52,206,307 40,851,918 48,478,362 34,049,000

and the amount produced and consumed at home, are also important factors

Table II gives the value of the world's export tade in cotton, by countries, for 1909, 1910, and 1911. The table is compiled from Bureau of Census Bulletins. Of more value, however, as showing the actual extent of the cotton

It is inferesting to note that this enormous midustry is concentrated about Lancashue, in a district whose area is about 50 per cent greater than that of the State of Rhode Island In the United States the most marked development is the relative importance of Southern factories, situated in the very locality where cotton is produced. Since 1890 the number of spindles has greatly increased and now more than one-third of the whole number in the country are in the cotton-producing States. The number in the Southern States grew from 4,368,000 in 1900 to 11,568,000 in 1912. Other industrial conditions besides the mearness to the cotton cop produced this growth, chief of which has been the general industrial awakening experienced by the South Capital, however, in this section, has shown greater progress than labor, so that the latter is still cheap, a working day is long, and there are comparatively few labor laws restricting the age, sex, and other conditions of labor.

In 1000, according to the census report, there were in the United States 1324 establishments engaged in the manufacture of cotton goods. The materials used cost \$371,009,000 and the manufactured products were valued at \$625, 392,000. There were 387,771 persons engaged in these undustries and the wages paid in 1990 were \$132,859,000 against \$60,025,000 in 1889, having thus doubled in 20 years.

During the closing years of the nineteenth

TABLE III
NUMBER OF SPINDLES IN COTTON MILLS

SEASON OF	Great Britain	Continental Europe	Northern United States	Southern United States	Total United States	India
1889-90	43,750,000	25,460,000	12,800,000	1,605,000	14,405,000	3,274,000
1899-1900	45,500,000	33,000,000	14,400,000	4,700,000	19,100,000	4,945,000
1909-10	53,729,000	40,190,000	17,770,000	10,490,000	28,226,000	6,053,000
1912-13	55,576,000	43,400,000	18,700,000	11,700,000	30,500,000	6,400,000

industry, including both home and foreign consumption, and its geographical tendencies as well, are the Tables III and IV, showing the number of cotton mills and spindles, the amount consumed, and the value of the output. By studying these tables certain facts and tendencies in the cotton trade are apparent Great Britain is and for many years has been at the head of the cotton-goods trade, both in the amount exported and in the actual amount produced.

century the manufacture of cotton was much advanced in China and Japan In China cotton has been made into cloth since 1260, and for four centuries it usurped the place of silk Steam power was introduced into Chinese cotton factories in 1865-67 and into Japan in 1889. Great difficulty has been experienced in both China and Japan in getting laborers. There is no factory legislation in either country limiting the hours of labor, and in China children ing the hours of labor, and in China children

TABLE IV
COTTON CONSUMPTION OF THE WORLD, IN 500-POUND BALES

YEAR	Great Britain	Continent of Europe	United States	India	All Others	Total World
1880-00 1890-1000 1900-1 1901-2 1902-3 1903-4 1904-5 1905-7 1907-8 1908-9 1900-10 1910-11	3,227,000 3,334,000 3,299,000 3,253,000 3,185,000 3,017,000 3,774,000 3,892,000 3,792,000 3,775,000 3,775,000 3,776,000 4,160,000	3,432,000 4,576,000 4,576,000 5,148,000 5,148,000 5,148,000 5,252,000 5,460,000 5,720,000 5,460,000 5,460,000 5,460,000 5,460,000 5,720,000	2,185,000 3,856,000 3,727,000 4,037,000 4,015,000 3,908,000 4,726,000 4,950,000 4,950,000 4,912,000 4,912,000 4,533,000 4,485,000 5,211,000	791,000 980,000 1,080,000 1,384,000 1,364,000 1,368,000 1,474,000 1,552,000 1,551,000 1,653,000 1,517,000 1,600,000	789,000 784,000 905,000 766,000 899,000 1,097,000 1,145,000 1,159,000 1,159,000 1,304,000 1,788,000	9,635,000 13,535,000 13,416,000 14,415,000 14,415,000 14,310,000 15,612,000 16,435,000 16,281,000 17,164,000 15,989,000 16,615,000 18,479,000

begin to work at a very early age. The working day is 11 or more hours long, and the factories run seven days in the week Labor is also very cheap, as estimated by the amount of money paid for a day's work, which averages from 10 to 15 cents, but the standard of intelligence and faithfulness among operatives is so low that, measured by the amount and quality of the product, the real cost of labor is high In Japan it is particularly hard to keep steady employees The girls are used to the freedom and out-of-door life of the country and will not stay long at their situations, so that mill operators are constantly hampered with green operators are constitutly hampered with green hands In Japan the wearing of cotton and other fabrics is still largely a household in-dustry In 1896, according to the French Con-sul at Yokohama, 660,408 dwellings or establishments contained 949,123 looms, at which 1,043,866 persons were engaged in weaving The varn used in this household art is largely factory spun, thus increasing rather than diminishing the demand for cotton factories

The preceding Table IV, compiled from various sources, shows the cotton consumption of the world for a number of years In China most of the cotton cloth made is produced by hand labor, in part from yarns made by the Chinese mills, and in part from yarns imported from India and The cotton mills of China up to 1905 Japan produced only yarn, but since that time have

begun the manufacture of cloth.

Japan had 200,000 spindles in operation in 1889, 1,358,125 spindles in 1899, and 2,192,000 in 1912 Japan consumed 99,375 bales of cotton in 1890, 644,818 bales in 1898, and 1,190,000 bales in 1912 China had 570,000 spindles in operation in 1899 and 831,000 in 1912 It is estimated that on July 1, 1900, the world's working spindles numbered 105,000,000, and

140,996,000 in 1912

COTTON

COT'TON, CHARLES (1630-87) An English translator and poet He was a friend of Izaak Walton, to whom he addressed several poems, and to the fifth edition (1676) of whose Com-pleat Angler he contributed as the "second part" an essay on fly fishing. His works, nearly all in verse, include a translation of Cornelle's Horace (1671), the Life of the Duke d'Esper-non (1670), The Fair One of Tunis, published anonymously (1674), The Scarronides, or Virgil Travestie (1664), a coarse burlesque of the Enerd that ran through 15 editions, The Voyage to Ireland in Burlesque (1670), The Wonders of the Peak (1681) Cotton was a famous angler and was horticulturist enough to write an excellent Planters' Manual (1675) Some of his poems have been much admired for their sweetness and directness of style, and volume of his Lyrical Poems was edited by J R Tutin in 1903 Wordsworth and Lamb particularly praised his "Ode to Winter" His best work, the English version of Montaigne's Essays (1685 and frequently since), places him among the greatest of translators

COTTON, CHARLES STANHOPE (1843-1909) An American naval officer, born in Milwaukee, Wis, and educated at the Naval Academy. In 1861 he entered active service and participated in several of the principal naval engagements of the Civil War He was on the frigate St Laurence when that vessel captured the Petrel (July 28, 1861) and took part in the fight between the Merrimac and the Monitor (March, 1862) Soon after the close of the war he was appointed lieutenant commander. During the Spanish-American War he was in command of the auxiliary cruiser Harvard, and after the war he became commandant of the navy yard at Norfolk, Va He was made a rear admiral in 1900 and was placed in command of the European squadron in 1903

COTTON, GEORGE EDWARD LYNCH (1813-66). An English divine and educator He was born

at Chester and was educated at Trinity College, Cambridge From 1837 to 1852 he taught at Rugby, being the "young master" mentioned in Tom Brown's School Days He was for six years principal of Marlborough College and in 1858 was made Bishop of Calcutta He founded many schools and effected great improvement in the education of the poorer classes of the Anglo-Indian population He was di the Ganges Consult the Memoir He was drowned in (London. 1871) by his wife

COTTON, JOHN (1585-1652). An eminent Puritan divine, known as "The Patriarch of New England" He was boin in Derby, England, and was educated at Trinity College and Emmanuel College, Cambridge, at the latter of which he was successively a fellow, head lecturer, dean, and catechist Inclining towards Puritanism, he left Cambridge about 1612, and for the next 21 years, with one short intermission, he had charge of the church of St Botolph's, at Boston, in Lincolnshire, where he had an extraordinary influence over his congregation, gained a wide reputation for learning and godliness, and trained many young men for the ministry. When Archbishop Laud befor the ministry. When Archbishop Laud became Primate of England (in 1633), Cotton was summoned to appear before the Court of High Commission, but escaped the pursuivants sent to apprehend him and, after lying in con-cealment for some time in London, embarked for Boston, New England (which had been named in compliment to him), where he landed in September, 1633 Almost immediately thereafter he was chosen as teacher of the First Church in Boston, of which the Rev John Wilson was then pastor, and he continued to act in this capacity until his death. Here, as in England, he had a wide reputation for learning and piety and soon came to wield a powerful influence over affairs both ecclesiastical and secular in New England and especially in Massa-a contemporary historian, whatever he "de-livered in the pulpit was soon put into an order of court. or set up as a practice in the Church," and the enthusiastic Cotton Mather, speaking of his learning, says that he was "a most universal scholar, and a living system of the liberal arts, and a walking li-brary" "He was," says Tyler, "the unmitred pope of a pope-hating commonwealth" He took an active part in the Antinomian controversy, first supporting and afterward opposing Anne Hutchinson (qv), and conducted an ex-tended controversy with Roger Williams, whose expulsion from Massachusetts he approved He was a voluminous writer and published as many as 50 volumes, the most important of which are: Set Forms of Prayer (1642), The Keys to the Kingdom of Heaven and the Power Thereof (1664), The Bloody Tenent Washed and Made White in the Blood of the Lamb (1647), written in answer to a letter from Roger Williams, A Brief Exposition upon Ecclesiastes, A Brief Exposition upon Canticles; A Treatise of the Covenant of Grace as It Is Dispensed to the Elect nant of Grace as It is Dispensed to the busiced; A Treatise Concerning Predestination, and the famous catechism, entitled Spiritual Milk for Babes, Drawn Out of the Breasts of Both Testaments, Chiefly for the Spiritual Nourishment of Boston Babes in Either England (1646) A part of the controversy between him and Roger Williams may be found in the Publications of Narragansett Club, vols. 1 and

(New York, 1878)
COTTON, NATHANIEL (1705-88). An English physician and poet, the friend of Young, author of Night Thoughts, and of the poet Cowper, whom he cared for in 1763-65 in his samitarium, or, as he rather grandiloquently styled tt, "Collegum Insanorum," at St Albans, Hert-fordshire, where he treated mental diseases with success. His Visions in Verse (1751) is his best-known volume, and among his shorter poems, "The Fireside" and "To a Child Five Years Old" are still found in anthologies Consult Select Poems of Dr Cotton with a Life of the Author, in the series "The Works of the British Poets" (Philadelphia, 1819-23).

COTTON, SIR ROBERT BRUCE (1571-1631). A distinguished English antiquarian, founder of the Cottonian Library, now in the British Museum After his education at Westminster School under the famous Camden, and at Cambridge, where he took a BA degree in his sixteenth year, he began those archæological pursuits which made his name famous, and which proved of immense value to historians As the dissolution of the monasteries, about half a century before, had dispersed many valuable collections of manuscripts among private persons, Cotton sought out and purchased these documents wherever practicable On account of his ability and knowledge he was frequently consulted by ministers of state on difficult constitutional points and international questions. In 1600, at the request of Queen Elizabeth, who desired antiquarian authority on the matter, he wrote A Brief Abstract of the Question of Precedency Between England and Spain King James, who knighted him in 1603 and gave him a baronetcy in 1611, employed him to vindicate the conduct of his mother, Mary, Queen of Scots, and also to examine whether the Roman Catholics, on account of whom some alarm was then felt, should be imprisoned or put to death. Cotton advocated tolerance His intimacy with the Earl of Somerset led him to be suspected of complicity in the death of Sir Thomas Overbury, and in consequence he was imprisoned for about eight months In 1629 a tract entitled A Project How a Prince May Make Himself an Absolute Tyrant was obtained from his library, the tendency of which Charles I and the Star Chamber considered dangerous to the liberty of the state His library was accordingly declared un-fit for public inspection, and he himself was denied all use of it Depression at this edict caused his death, less than two years afterward His son, Sir Thomas (1594-1662), regained John (1621–1701), and great-grandson, Sir John (1679–1731), added to it considerably The latter bequeathed it in public trust to the nation in 1700 In 1730 the library was lodged with the royal collection in Ashburnham House, Westminster The following year a fire occurred in which 114 out of 958 manuscript volumes were reported as "lost, burned, or entirely destroyed; and 98 damaged so as to be defective." Fortunately a great number of these injured volumes were skillfully restored, so that the library now consists of nearly 900 volumes, of which, says Mr Edwards in his Memoirs of Libraries, nearly 200 are state papers of the highest value. They include a vast series relating to the diplomatic intercourse between England and almost every state of Europe, extending from the reign of Edward III to that of James I A large proportion of these documents consist of the original letters of sovereigns and or statesmen Even those papers which are not original have a high degree of authority as coeval transcripts" The Cottoman Library was transferred to the British Museum (qv) in 1757 In addition to the manuscripts, the collection includes many valuable coins and antiquities Among Cotton's works may be mentioned, in addition to those referred to above Povver of the Peeres and Comons of Parliament in point of Judicature (1640), Cottoni Postuma-Choice Preces of that Renowned Antiquary (1672), Divers Short Preces Emposed to Publick Light by J Howell (1679), "Speech before the Privy Council touching the Alteration of Coyn," in Shaw, Select Tracts and Documents (1896). Consult also Calendars of State Papers (London, 1591-1631), Parliamentary Journals (1b), Planta, Catalogue of the Manuscripts in the Cottonian Library (1b, 1802), Smith, Catalogue Cottonum Library (1b, 1802), Smith, Contagoue (Oxford, 1696), containing a memorr, Kippis, "Robert Bruce Cotton" in Biog Brit (London, 1797), D'Ewes, Autohography (2 vols, ib, 1845), Nichols, Progresses of James I (4 vols, b, 1828), id, Leucestershive (ib, 1795-1811), Gardiner, History of England (b), 1883-84) COTTON BIRD A small South African tit-

COTTON BIRD A small South African titmouse (Agritalus capresses), called keppok vogel (i.e., 'cotton bird') by the Cape Colony Dutch on account of its wonderful nest, made of cottony materials, which closely resemble the nest of its congener, the penduline titmouse of Europe, illustrated on the Plate of PENSIE NESTS OF BIRDS with the article NIDIFICATION (See also TITMOUSE) This nest, first figured by Le Valllant (Oseaus d'Afrique, Paris, 1806), whose pictine has been wiedly copied, is usually wrongly assigned to an entirely different bird Consult Shelley, Birds of Africa (London, 1900)
COTTON FAMINE The name given to an

industrial crisis in the manufacturing towns of northern England, occasioned by the almost complete disappearance of cotton imports from the United States during the last three years of the Civil War As a result of the blockade of the Southern ports by the Federal government, the importation of cotton from the United States into Great Britain sank from more than 1,000,-000,000 pounds in 1860 to 816,000,000 pounds in 1861, 13,000,000 pounds in 1862, and 6,000,000 pounds in 1863, and as the imports from the United States constituted more than threefourths of the total supply, the blow to the cotton industry in Lancashire was a stunning one The suffering fell most heavily on the mill operatives, who, as a body, were brought to the verge of starvation by the partial or complete suspension of production. In November 1862, it was estimated that more than 350,000 persons in Lancashire were subsisting on parochial relief or private charity. It is a notable fact that, in spite of their great privations, the factory population of Lancashire was in thorough sympathy with the Northern cause, which they regarded as a crusade against slavery. Consult Arnold, History of the Cotton Famine (London, 1865) COTTON GIN A machine for separating

COTTON GIN A machine for separating the cotton fibre from the seed, invented by Eli Whitney of Massachusetts and patented March 14, 1794 Previously the work had been done by hand, a slow and tedious process Two types of gin are now in use—the saw gin of the Whitney type, which does very rapid work, and is generally used, and the roller gin, which is much slower, but is less likely to injure the fibre and is therefore preferred for the long staple Sea Island and Egyptian cottons See Cotton, Manufacture

GOTTOM GRASS (from its cottony spike), Prophorum A genus of plants of the family Cyperaces, having the fruit accompanied with long, silky hairs which sping from the base of the ovary. The species, which are about a dozen, are natives chiefly of the colder regions of the Nothern Hemisphere. Several are found in America, and their white, cottony fruit-bearing spikes are well known in our swamps and bogs. The cottony substance is used for stuffing pillows, etc., and it is claimed that cloth may be made from it. The fibre lacks the twist of the setons of a Himalayan species, Briophorum canabinum, called bhabhur, yield a very strong fibre and cannot he spin as readily. The stems of are much employed for making cordage, being simply twisted into cables, of which rope bridges are usually made, but they are not durable and require much repairing every year Cotton grass is said to be valuable for sheep pasture.

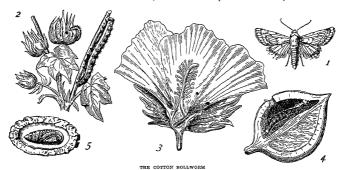

COTTON INSECTS. One of the most important insects injurious to the American cotton culture is the cotton worm, the larva of a noctuid moth (Aletia wylina), which sometimes de-foliates whole districts. It is believed to be foliates whole districts South American, and first became strikingly harmful in the Southern States in 1804 It is now known all over the Union, but its Northern food plant is unknown A government commission reported in 1879 that the average loss to the cotton-growing States due to its lavages was then from \$15,000,000 to \$20,000,000 annually. The moth is 11/2 inches in spread of wings, the fore wings and body reddish brown, with delicate zigzag markings, and the hinder wings pale gray-brown It flies at night and deposits eggs singly or sparsely on the underside of the leaves of the cotton plant, where they hatch in midsummer in about 50 to 60 hours. The caterpillars begin at once to devour the leaves, and so many are they, sometimes, that whole fields have been defoliated in three days, when the caterpillars swarm elsewhere in search of more food. In midsummer the caterpillars remain about 13 days, then fold a leaf about themselves and spin a cocoon in which they pupate In two to four days after issuing from the chrysalis the female moth begins to lay-her average product being 400 eggs in the season The natural food is the juice exuding from the glands on the leaf's midrib and at the base of blooms and bolls, but it will feed on any kind of fruit as it ripens. Until the worms are numerous enough to riddle the leaves badly, the moths continue to lay near their birthplace, then they migrate to considerable distances—seldom, however, until after the third generation of worms, say July 1, in southern Texas Migrations are most common in the fall months, the moths flying at night and on cloudy days In the Southern States only the moths hibeinate (the worms never, nor anywhere), hibernation being more frequent in the Southwestern than in the Atlantic States. The moths hibernate under balk, in logs and timbers, etc, and mild winters are more severe on them than cold ones, which keep them torpid

In some districts there are as many as seven generations in a season. The average time from the egg of one generation to that of the next is

The caterpillars visit earliest low alluvial lands where the plants are luxurious and thrifty Mosture is favoiable to their development, hot, dry weather unfavorable. The damages to the crop may reach 25 per cent in the Southern districts, but in the Northern theworms may do

similar insects, viz, Prodenia littoralis and Ea-

The cotton stainer, or red bug (Dysderous sative elius), is a small suctorial bug, "which drains the sap from the bolls by its puncture, causing them to become diminutive or aboutive, but the principal injury it does is by voiding an excrementations liquid which stains the cotton fibre yellow or leddish and very much depiceates its value in the market, the stains being indelible" It is also troublesome to orange growers in cotton-growing districts See Insect Life, vol 1 (Washington, 1888), illustrated Several plant bugs, such as the capsid (Psallus delicatus), known in Texas as the cotton flea, and certain small beetles, are also injurious to cotton for a description of the weell, see Weevil

1 Adult moth (*Heliothis armigera*) 2 Destructive larva (the "bollworm" or "bud worm"), with a small boll pierced by a young eaterpillar 3 Vertical section of a newly expanded cotton flower, showing a young bollworm at work 4 Section of a large green boll, which contains a caterpillar that has devoured the contents of the cell 5 A pupe within its earthen case

more good than harm, by removing superabundant leaves, thus facilitating the ripening of the bolls

For further and extensive information and preventive measures, consult Comstock, "Report on Cotton Insects," in United States Department of Agriculture (Washington, 1879), Illustrated, Riley, United States Intomological Commission, 4th Report (ib, 1885), Bulletin No 18, No (b. 1898)

Commission, 4th Report (ib., 1885), Bulletin No 12, Ns (ib. 1898) to 15, Ns (ib. 1898). The bud worm is scarcely second in its evil effects (See Borlworm) It is hatched from eggs deposited singly on all parts of the plant, taking only three to five days to hatch in summer. The worm is much like the cotton caterpillar, but larger Its principal food is the flowers and bolls The chrysalis is found a few inches underground. The chrysalis state lasts 7 to 10 days in misummer, double that in cooler weather. The moth is in appearance and habits much like the Atetta, but seldom appears before July or August Hibernation is in the chrysalis state only and underground. Breeding continues until cold weather, but the first three generations of each year generally feed in the cornfields, the first lot seen on cotton being the fourth brood

Other injurious moths infesting cotton and eating the foliage include the yellow bear (Spilosoma visginica), the io (Saturnia io), the basket worm, or bagworm (qv), and several others. Cotton culture in Egypt is afflicted by two very

The natural enemies of the cotton worm and of the bollworm are domestic fowls, birds, spiders, beetles, wasps, ants, parasites, etc. As preventive measures, the free use of poisons is good for both, and fall plowing, which upturns the chrysalids of the bollworm, exposes these to the attacks of fowls and the fatal influences of cold.

Consult "Mexican Cotton Boll Weevil," Senate Document No 305 (Washington, 1912), "Control of the Boll Weevil," Farmers Bulletin No 500 (th. 1912), "The Boll Weevil Problem," Farmers Bulletin No 512 (th. 1912); "The Cotton Boll," United States Department of Agraculture, Bureau Entomology, Bulletin No 50 (th. 1905)

COTTON MOUSE A field mouse (Peromyscus gossyptums), dark brown, with grayish feet, prevalent in the southern United States and injurious to cotton plants. Its habits are similar to those of the common white-footed mouse of the North See Mouse

COT'TONMOUTH' (so named from the white, cotton-like streak about its mouth) Properly, the moccasin snake (qv), but also a name in the southern United States of the copperhead

COTTONSEED AND ITS PRODUCTS Cottonseed Oil—Cotton, which is described in the article bearing that title, when it is picked consists of the seeds and the lint or fibre adhering to and covering the seeds. The seeds constitute about two-thirds of this product. The

census of 1910 estimated the production of seed at 5,324,634 tons, valued at \$121,076,984 constitutes a very valuable part of the product and is used for manufacturing cottonseed oil, for feeding animals, and for fertilizer cottonseed, after the removal of the "linters" and hulls, yields, upon piessuie, a large amount of yellow oil, with a bland, nutlike taste Even before the invention of the cotton gin in 1794, the utilization of cottonseed was attempted, and in 1770 samples of the oil were exhibited by the Moravians in Bethlehem, Pa Previous to that time the seed had been allowed to rot on the ground by many of the planters, while others more intelligent had utilized it as food for cattle, sheep, and horses Others dug furrow trenches and buried it in the rows on which the next crop of cotton would be planted. Some fed it raw to their stock, while others boiled or roasted it to make it possibly more palatable In 1820 a patent was granted for a process for extracting the oil, but the construction of the mills was so slow that at the end of 50 years only 26 cotton-oil mills had been erected Towards the close of the nineteenth century the value of the cottonseed began to be more generally appreciated In 1909 there were in the United States 817 cotton-oil mills, which crushed a total of 3,798,549 tons of cottonseed, yielding 157,145,689 gallons of crude oil, 1,661,734 tons of cottonseed meal, and 1,258,612 tons of hulls The product of these mills had a combined value of \$147,867,894 against total of \$58,727,000 in 1899

In addition to the oil extracted from the cottonseed, it yields the following by-products Linters, or short bits of lint that adhere to the seed in the ordinary process of gimning, and are stripped by a specially constructed gim. These short fibres are used for the manufacture of batting and wadding Hulls, the outer easings of the seed, used extensively for cattle food, whose properties are discussed below Cottonseed med, the residue left after the oil is expressed from the means. This is extensively used as a cattle food and as a fertilizer Sludge, which settles at the bottom of the oil tanks and is used in the making of soap, steam, etc.

The process of manufacture is briefly as follows The seed is shoveled from the cars into conveyors, which are spiral screens revolving in troughs with perforated bottoms through which any loose soil, sand, and stones are shaken This process of cleaning is continued in a separator, where by means of different-sized screens all dirt and impurities are removed. A strong magnet is also used to draw out bits of nails and other iron The seed being sifted and cleansed, it is now passed through the linter, a specially constructed gin for removing these short fibres. The list is ginned twice, the second process removing the shorter fibres, so that two brands or qualities are thus obtained The next process is to crack the hulls in a machine between revolving blades and bars, and then the meats and hulls are separated, the latter being sold either loose or in 100-pound bales The meats are now ready to be passed through heavy calender rolls to crush the oil cells. There are two piocesses of making cottonseed oil It may be expressed directly from the cold meats, this process making a high-grade oil, or the meats may first be heated in cookers. These cookers are steamheated metal pans, covered with nonheat-conducting material and holding 700 pounds. The

seeds are cooked from one-quarter to threequarters of an hour, according to their condition as determined by the judgment of the operator, too little or too much cooking giving a smaller yield of oil The cooked meats are dropped into a camel's-hair sheet, spread out on a steel plate Wiapped in this sheet the meats are subjected to pressure, which is gradually increased till it reaches 3500 pounds per square inch Under this pressure a dark, murky oil flows out in streams and is received in reservoirs beneath the presses, whence it is pumped into settling tanks The cakes are now taken from their wrappings of camel's-hair, cooled, and dried They are then cracked and ground into meal, which is shipped directly in sacks of pressed again into cakes After the crude oil has settled, it is drawn off and refined by treating it to a 10 or 15 per cent solution of caustic soda and then allowed again to settle As it settles, the mucilaginous, albuminous coloring matters and other impurities sink to the bottom, leaving a clear yellow oil, which may be still further filtered and purified if desired The white oil of commerce is produced by shaking up the oil with a 2 or 3 per cent mixture of fuller's earth and then allowing it to settle

The commercial cottonseed oils are classified as crude, summer yellow, summer white, winter yellow, and winter white The winter oils are made by cooling the summer oils to the freezing point, when the palmitin crystallizes and the oil is pressed out of the remaining solidified material Cottonseed oil consists chiefly of palmatin and olein, the winter oils being almost entirely olein. It stands midway between the drying and nondrying oils, its drying properties being inferior to those of linseed oil Oils) It solidines at from 32° to 38° F, is almost odorless, and has a slight nutry taste Its uses are constantly increasing. It is employed extensively in cooking and, prior to the passage of pure-food laws, was also used as an adulterant of lard, olive oil, and other staples Large quantities are used in making oleomargarine (qv) It is used in pharmacy, in making soap and paint, as a lubricator and an illuminant. Consult Brooks, Cotton and its Uses (New York, 1898)

Feeding and Fertilizing Value —Brief mention has already been made of the use of cottonseed products for feeding cattle and for ferthlizer Whole cottonseed has been shown by a large number of analyses to range in composition as follows

PERCENTAGE COMPOSITION OF WHOLE COTTONSEED

	Water	Ash	Protein	Fibre	Nitro- gen-free extract	Fat
Maximum	17 51	8 00	29 70	32 40	36 70	29 34
Minimum	8 00	2 89	13 62	17 60	7 58	10 40
Average	9 92	4 74	19 38	22 57	23 94	19 45

This material was used in the past to considerable extent as a feeding stuff for cattle, hogs, and sheep, and was fed either raw, cooked, or roasted, but, with the advent of oil mills, its use for this purpose is much less in the vicinity of these, because the seed is disposed of to better advantage to the millers or can be exchanged for cottonseed meal. There are also the further reasons that the lint on the seed and the dust it collects are likely to be mjurious, while at the

same time it is not easy to mix the seed itself thoroughly with other coarse feeds It is a very rich feeding stuff, and animals must be accustomed to it gradually The whole seed is sometimes used for fertilizer, and then it is partially

Cottonseed meal is the ground residue left in the manufacture of oil from the seed It is sometimes called cottonseed cake and belongs to the class of feeding stuffs known as oil cakes Cottonseed cake is of two kinds-undecorticated, or that from the whole seed, and decorticated, or made from the kernels after the hulls have been removed Undecorticated cake was formerly largely used, but most of the mills now remove the hulls before expressing the oil Cottonseed meal is bright yellow in color, with a sweet, nutty flavor. It deteriorates and becomes discolored with age The following summary of over 400 analyses shows its range in composition, which is due to differences in the composition of the seed and the completeness with which the hulls are separated and the oil expressed

PERCENTAGE COMPOSITION OF COTTONSEED MEAL (DECORTICATED)

	Water	Ash	Protein	Fibre	Nitro- gen-free extract	Fat
Maximum	18 52	10 60	52 88	15 15	38 68	20 66
Minimum	5 29	1 72	23 27	1 88	9 13	2 18
Average	8 52	7 02	43 26	5 44	22 31	13 45

This material is one of the richest feeding stuffs in use, considerably exceeding in protein and fat such materials as linseed meal, but, in spite of this, it is quite well digested when fed in moderation On an average, 88 8 per cent of the protein, 57 per cent of the fibre, 77 6 per cent of the nitrogen-free extract, and 88 6 per cent of the fat has been found to be digested by ruminants. It is fed extensively in the United States to cows, cattle, sheep, and nearly all kinds of farm stock Pigs do not seem, for kinds of farm stock some reason, to be able to eat the meal for any considerable length of time without danger of injurious effects An apparent antidote for cot-Withers in iron salts Young animals, like calves, have also often been injured by cottonseed meal, and its use with them is attended with danger All experience goes to show that the fresh meal can be fed to other kinds of animals without danger and in large quantities after they become accustomed to it Six, 8, and even 10 pounds of cottonseed meal per head is often fed to steers for short periods with good results, using no other kind of grain except the hulls It is undoubtedly best to mix some material like coin meal with it. For cows about two pounds a day seem to be a safe limit for continued are often fed it tends to give a firmer, harder butter, which will stand shipment better, but large rations injure the quality Larger quantities can be fed with safety in winter than in The meal was formerly adulterated with finely ground hulls, but the foodstuff laws now require the composition to be stated

Cottonseed meal is rich in fertilizing materials, as shown by the following average of over 200 analyses water, 78, ash, 7, nitrogen, 68, phosphoric acid, 29, and potash, 18 per cent It is chiefly used as a source of nitrogen, and finds quite extensive use for that purpose through the southern portion of the United States. It has given excellent results with sugar cane, cotton, and corn, and has been successfully substituted for barnyaid manure in the culture of tobacco But its use as a fertilizer is of course wasteful, as the food constituents are not utilized in that case A more national practice in many cases is to feed the meal and apply the resulting manure to the soil, since from 80 to 90 per cent of the fertilizing materials would be recovered in the manure, and additional benefit would be secured in the production of meat, milk, etc

Cottonseed hulls, which are removed at the mills by means of crushers, screens, and shakers, also possess some feeding value and are much used with the meal They constitute nearly onehalf of the weight of the ginned seed. They contain about 11 per cent of water, 4 of protein, 46 of fibre, 33 of nitrogen-free extract, and 2 per cent of fat Their digestibility is low, less than 40 per cent of the total dry matter being assimilated They are hard and dry, usually covered with a fuzzy lint, and very bulky They are used principally as a cheap substitute for hay and for the purpose of giving bulk to the ration Large numbers of cattle are fattened in the Southern States of the United States on cottonseed meal and hulls exclusively, in proportions varying from two to six pounds of hulls to one pound of meal The practice is claimed to be economical and profitable Cottonseed hulls were formerly burned at the oil mills as fuel, the resulting cotton-hull ashes being rich in potash and much used as a fertilizer (See ASHES) Consult Roper, "Cottonseed Products," in Twelfth United States Census, vol 1x, part 111 (Washington, 1902), Thirteenth Census, vol viii (Washington, 1913), Tompkins, Cotton and Cotton Oil (Charlotte, N. C., 1901), Tamborn, Cottonseed Products (New York, 1905) COTTON STATE. Alabama See States,

COTYLETOON (Gk κοτυληδών, kotylkédon, cup-shaped hollow socket, from κοτύλη, kotylkédon, hollow cup) The first leaf or leaves of an embryo In seed plants the cotyledons are usually formed within the seed, and in most cases they escape during germination, but are usually very different in appearance from the later leaves. See Seed

COTTIOSAU'RIA (Neo-Lat nom pl, from Gk sorthy, Lotyle, hollow cup + asipos, sauros, lozard). The order which includes the most ancient reptiles, fossil in rocks of the Carboniferous and Permian ages The Cotvlosauria are generally agreed to be the ancestors of all later reptilian types and are most nearly allied to the tuitles among living reptiles, though they are much more primitine and show no evidences of a carapace. The cotylosaurians are thus characterized by Cope "Quadrate bone united with adjacent elements by sutine, temporal regions with roof of a few symmetrical segments. No distinct postorbital bars, vertebre amplicacious, ilium narrow, vertical, feet ambulatory."—Report United States National Museum, 1898 (Washington, 1900). Consult Case, "A Review of the Cotylosauria of Notth America," Can angue Institution Publication (Washington, 1911)

COTYS, or COTYTTO (Lat, from Gk Kotys, Kotys, Kotys, Kotystal, the Cotytta, was held at night and was notorous for its debaucheries. Her worship was adopted by some of the Greek states

COTYTTIA. See COTYS

COUCAL, koo'kal (probably an African word, although according to Cuvier it was coined in 1796 by Le Vaillant in his Oiseaux d'Afrique, from Fr couc-ou, cuckoo + al-ouette, sparrow) A kind of cuckoo, many species of which are widely distributed throughout Africa and southeastern Asia to Australia, constituting the subfamily Centropodine, especially characterized by having the hind toe terminated by a straight, spinelike claw, whence they have been called "lark-heeled" They are large, ground-keeping birds, generally red and black, more or less glossed, and sometimes banded with brown, and are known generally as "ground cuckoos" A species of the Philippines has a rounded crest and black, horny appendages to the feathers of the head and throat Some other Asiatic species mimic pheasants in appearance and gait and are called "pheasant cuckoos" The best-known one, the very common Indian "crow pheasant" (Contropus sinensis), is nearly 2 feet long, black, with the mantle and wings chestnut, and utters a curious howling cry, followed by a series of lattling exclamations. All these birds make their own nests, sometimes elaborate roofed structures own theory bushes, and lay white eggs inclusted like those of an They are closely allied to the American road lunner See Cuckoo

COUCH, DARIUS NASH (1822-97) An American soldier He was born at South East, N Y, graduated at West Point in 1846, served in the Mexican War (1846-47), and was brevetted first lieutenant in 1847 for services at Buena Vista In 1849-50 he served against the Seminoles and in 1853 made an important exploring expedition into northern Mexico In 1855 he resigned from the army to become a merchant in New York, but in June, 1861, reentered the service as a colonel of volunteers, and in August became brigadier general He served in 1861-62 with the Army of the Potomac, rendering valuable services at Fair Oaks, Williamsburg, and Malvern Hill, was promoted to be major general in July, 1862, commanded the Second Army Corps at Fredericksburg and Chancellorsville, was in command of the Department of Susquehanna in 1863 and 1864, and was at the head of a divi-sion at the battle of Nashville He resigned in 1865, and in the same year was an unsuccessful candidate on the Democratic ticket for the governorship of Massachusetts. He was subsequently collector of the port of Boston in 1867– 67, was quartermaster-general of Connecticut in 1877–78, and was adjutant general of that State in 1883–84

COUCHANT, kou'chant (Fr, pres part of couche, to he down) In healdry, a beast lying down, with his head up, is couchant If the head is down, he is dormant See Heraldry

Is down, he is dormant. See Heraldry COUCH GRASS (corrupted from guston grass, quick grass, so called from its rapid growth), Agropyron repens. Also called wheat grass, dog grass, quickens, and squich or quitch A grass chiefly known as a troublesome weed It is common in most parts of Europe and North America. See Agroupting.

America See Agropyron
COUCY, kōō'sê', The Châtelain de A
French troubadour, whose name was Guy—although he has sometimes been identified with Renaud, Guy's successor, as Chatelain of Coucy Guy became Châtelain of Coucy in 1186, took part in the Third Crusade (1189-91), and was killed by the Saracens about 1203 His work consists of about 16 songs, in the troubadour style, but with more sincerity and originality than the usual chansons courtoises of the time They were published by Fath as Die Lieder des Castellan von Coucy (Heidelberg, 1883) The legend connected with his name is found in the literature of many countries, though it is most likely of Breton origin About the end of the thirteenth century there appeared a story, or roman, in verse by Jakemon Sakesep, of whom nothing is known, and whose name is taken from an acrostic given in his work, Roman d'aven-ture. He tells of the loves of the Châtelain de Coucy and the Dame de Fayel Falling ill on his way from the Holy Land, the Châtelain ordered that after his death his heart be taken to his lady. But her husband intercepted the messenger, took the sacred souvenir, and forced his wife to eat it Thereupon the Dame starved herself to death The story was published with a modern version by Crapelet (Paris, 1829), and an English romance on the same subject is printed in vol iii of Ritson's English Metrical Romances (1885) See Cabestaing, Guillaume de

GOUCY-LE-CHĀTEAU, koʊ'sê'lo-sha'to'. A small village and cantonal scat in the Department of Aisne, France, N, J 3) It is celepartment of Aisne, France, N, J 3) It is celeparted for the remains of its medieval castle of the thirteenth century, standing on an acclivity, accessible on one side alone, and one of the most formidable fortresses of its period. The castle covers an area of 10,000 square yards and is surrounded by lofty walls and a moat. Four towers flank the donjon, which is 210 feet ligh, 100 feet in diameter, and has walls 34 feet thick Fop, 1901, 683, 1911, 657 Built by Enguerrand III, a pietender to the throne of France, it was puichased in 1896 by Louis of Orléans and in 1498 became crown property It was dismantled by Mazarin's order in 1652.

COUDER, koo\*dår.' Louis Charles Auguste.
(1790-1873) A French historical, religious, and decorative painter. He was born in Paris and studed at the Beaux-Arts under David and Regnault He first attracted favorable attention in the Salon of 1817 with "The Levite of Ephraim" (Luxembourg), which was followed by several historical and religious pictures His frescoes in the Rotunda of the Louire (1820)

were severely criticized, but he was more successful with his decorations of several Parisian churches and with his series of large historical compositions in the gallery at Versailles, beginning with the 'Battle of Lawfeld' and including the Siege of Yorktown'' Gouder was one of the most important representatives of the Classical school in France He was a member of the conseil supérieur of the Ecole des Beaux-Arts and wrote some critical works on ait Consult Jules Breton, Nos peintres du siecle (Paris, nd)

GOUDERSPORT, kou'dērz-pōrt A borough and the county seat of Potter Co, Pa, 110 miles (direct) east by south of Erie, on the Allegaheny River, and on the Condersport and Port Allegany Railroad (Map Pennsylvania, F 2) It contains a public hibrary and a hospital The borough has flour mills, a foundry, a tannery, and manufactures of furniture, rubber goods, mangle rollers, condensed milk, bairel headings, etc. Pop. 1890 1530, 1900, 2917, 1910, 2105.

COUDES, or COUDIÉRES. See ELBOW PIECES

GOUES, kouz, ELLIOTT (1842-99). An American naturalist, particularly known for his researches in ornithology He was born at Portsmouth, N H, graduated at Columbian (now George Washington) University in 1861, from the medical department of that institution in 1863, became an assistant surgeon in the United States army, and made extensive studies of the flora and fatuma in the vicinity of the various posts at which he chanced to be stationed. In 1873-76 he was attached as surgeon and naturalist to the United States Northern Boundary commission, and from 1876 to 1880 as secretary and naturalist to the United States Geological and Geographical Survey of the Territories, di-

rected by Dr F V Hayden He resigned his commission in 1881, and thenceforth was occupied wholly with scientific pursuits From 1877. to 1887 he was professor of anatomy at the National Medical College at Washington, D C He was elected to the National Academy of Sciences in 1877, was a founder of the American Ornithologists' Union, and an editor of the Auk, the journal of that society About 1880 he became interested in spiritualism, theosophy, and allied matters, and for a time was affiliated with the Theosophical Society He was known as a student of comparative anatomy and general biology, and for seven years was connected with the Century Dictionary as editor and contributor in the departments of general zoology, biology, and comparative anatomy But while his field of activity was wide, he was prominent chiefly as a writer on ornithology and in particular on that of North American birds. His Key to North American Birds (1872, rewritten 1884, again, 1901, 5th ed, 1903) has perhaps had a greater influence on American ornithology than any other work With this should be named his Field Ornithology (1874), Birds of the Northuest (1874), Fur-Bearing Animals (1877); Birds of the Colorado Valley (1878), an incompurus of the Cotorado Vatley (1878), an incomplete Bibliography of Ornathology (1878-80), New England Bird-Life (1881, with W A Stearns), Dictionary and Check-List of North American Birds (1882), Biogen (1882, 4th ed. 1884), The Damon of Davium (1884) He also week a wave to the contraction from the contraction of th made investigations regarding the early exploration of the trans-Mississippi region, and edited (1893) the Journals of Lewis and Clark As a contributor to the technical advance of ornithology in America he ranked as not greatly inferior to Spencer Baird (qv), and as a popular ex-positor of the subject probably had no equal

COUGAR, koo'ger (Fr. couguar, Sp cuguardo, from native South American cuguaçuara, cuguaçuarana) One of the names of the American panther (Felix concolor), described in this work under Puma (qv). Although widely in use, the name should be abandoned because it perpetuates an error of identification explained its origin in his Regne animal (Griffith's version, The Animal Kingdom, vol 11, London, 1827) as follows, speaking of the pums. "It is called by the Mexicans Minths, in Pert, Pums, in Brazil, Cuguaquarana (the word Cougoua is contracted by Buffon from this latter barbarous appellation), and in Paraguay Gua-zuara . The name Cougoua, by which it is most commonly known in Europe, particularly in France, appears, probably, to have been borrowed from that proper to another animal; but puma is its native name" Elsewhere it appears that the "other animal" was the eyra (qv). A drawing of this cat brought to Europe by John Maurice, Count of Nassau, when Governor of Dutch Guiana in the seventeenth century, was labeled "çuguaçuarana" and "çuguaçguarana" This was copied by Marcgrave and Piso and applied by Buffon, in the contracted form above noted, probably under the belief that the eyra (which is concolorous) was the same animal as the puma

COUGHYING (AS. cohhetan, Dutch kugchen, to cough, MHG kichen, kichen, Gel keuchen, keeken, to gasp, imitative of the sound) Considered physiologically, coughing consists, first, in a long inspiration which fills the lungs to a greater extent than usual, second, in a closure of the glotths, or narrow opening in the organ of

voice (see LARYNX), at the commencement of the act of expiration, and third, in a sudden forcing open of the glottis by the violence of the expiratory movement In this way a blast of air is driven upward from the lungs through the mouth, which carries with it anything that may be present and cause mritation in the air passages Coughing may occur from irritation in the back of the throat, in the larynx, trachea, or bronchial tubes, and may be excited by irritant gases, or by articles of food or drink-such as even a drop of water or a crumb of bread-making their way into the air passages instead of into the esophagus, or by excessive or morbid secretion from the walls of the air tubes, or even by the entrance of cold air, when the lining membrane of the air passages is abnormally irritable, or by the tickling due to an elongated Reflex cough is often set up by irritation of the external car canal, as by the presence Cough is reflex and involuntary of cerumen generally, and is due to irritation of the terminal fibres of the pneumogastric nerves, which are distributed to the mucous membrane of the res-piratory tract The object of coughing in the animal organism is unquestionably to guard against the danger of the entrance of mechanical and chemical irritants into the air passages, and accordingly the mucous membrane, especially of their upper part, is endowed with a most exquisite sensibility, which, when aroused by mechanical irritation or by disease, provokes incessant coughing until the cause of the irritation is removed Cough is a common symptom of all diseases of the organs of respiration, as well as of inflammatory affections of the throat, tonsils, The treatment of cough depends upon and nose the cause. See PNEUMONIA, BRONCHITIS, PLEU-RISY. TUBERCULOSIS

COULMIERS, kool'mya' A village in the Department of Loiret, Fiance, 13 miles north-west of Oileans Population, 1901, 368, 1911, 404. On Nov. 9, 1870, the German and French forces, under Von der Tann and Aurelle de Paladines respectively, met here in a seven hours' battle, the former suffering a loss of 1166 and being compelled to retreat to Artenay, the French losing 1500 and taking prisoners 1000 Consult Lehautsick and wounded Germans cour, Coulmiers et Orléans (Paris, 1893)

COULOMB, koo'lon' (named after the physicist Coulomb) The practical unit of quantities of electricity In the United States the legal unit is the international coulomb, "which is the quantity of electricity transferred by a current of one international ampele in one second" Therefore, if in the ordinary form of silver voltameter, m grams of silver are deposited, m = 0.001118 is the number of coulombs which have passed, assuming that an ampere deposits 0 001118 gram of silver per second See Am-PERE ELECTRICAL UNITS

COULOMB, CHARLES AUGUSTIN (1736-1806). A French physicist, celebrated for his researches particularly in electricity and magnetism He was born at Augoulême in 1736 and in early life became an officer of engineers In 1777 he gained a prize by an essay on the construction of magnetic needles (Sur les aiguilles aimantées) In 1779 his Théorie des machines simples gained the prize offered by the Academy, and in 1781 he was a third time successful in an essay on the friction and resistance of cordage, etc., used in machines. In the same year he was elected a member of the Academy, and his services were employed on all the most difficult problems in mechanics He is known as the inventor of the torsion balance (qv), by which the attraction of electricity and magnetism can be measured, while his memory has been perpetuated by the use of his name for the unit of electric quantity Having offended certain influential persons by reporting unfavorably on a project for a navigable canal in Bretagne, Coulomb was for some time imprisoned, but received from the states of Brittany a present of a handsome watch, as a reward of his firm opposition to an expensive and unprofitable scheme He lived in retirement during the Revolution, but took part in the investigations attending the introduction of the metric system of weights and measures by the new government, being a member of the com-mission of 12 appointed under the provisions of

the Law of April 7, 1795 COULOMMIERS, koo'lo'mya'. The capital of an airondissement and a gailison town in the Department of Seine-et-Marne, France, on the Grand-Moiin, 38 miles east of Paris (Map France, N, J 4). Its parish church of St Denis dates from the thirteenth century, and it has remains of a castle built in 1613 There is a monument to the heroic Beaurépaire, who killed himself in 1792 rather than surrender the town of Verdun It boasts a college, library, and museum of antiquities Printing is the chief industry It has woolen mills, tanneries, flour and sugar mills, and manufactories of starch and cheese. Market gardening is largely carried on Jean de Boullonge or Le Valentin, the artist, was a native of Coulommiers Pop, 1901, 6505. 1911, 7224

COULTER, köl'ter, John Lee (1881-An American statistician, boin at Mallory, Minn He was educated at the universities of North Dakota, Wisconsin, and Minnesota, and at Iowa State College. Between 1907 and 1909 he was an instructor at Iowa State College, the University of Wisconsin, and the University of Minnesota, where he also served for two years as assistant professor of rural economics From 1910 to 1912 he was expert special agent of the United States Census Bureau, and during the same period he also lectured at George Washington University He is author of Economic History of the Red River Valley of the North (1910), Co-operation among Farmers (1911), The Problem of Rural Credit, or Farm Finance in the United States (1913)

COULTER, köl'ter, John Merle (1851). An American botanist and educator, brother of Stanley Coulter, born at Ningpo, China He received his education at Hanover College, Ind, and subsequently studied at Harvard After serving for two years (1872-73) as botanist to the United States Geological Survey in the Rocky Mountains, he was made professor of natural science at Hanover College, where he

remained for five years He was appointed piofessor of biology at Wabash College in 1879, from 1891 to 1893 he was president of Indiana State University, and from 1893 to 1896 he presided over Lake Forest University In 1896 he became head of the department of botany in the University of Chicago His works include: Manual of Rocky Mountain Botany (1885, 1ev ed , 1909), Manual of Texan Botany (1892-93), Plant Relations (1899, 3d ed rev, 1910), Plant Structures (1899, 2d ed, 1904), Morphology of Spermatophytes (1901) and Morphology of Angiosperms (1903), with Charles J. Chamberlam, Plant Studies (1902, rev ed, 1905), A Text-Book of Botany (1906), Elementary Agriculture (1909), Morphology of Gymnosperms (1910), A Text-Book of Botany for Colleges and Universities (2 vols, 1910-11), Elementary Studies in Botany (1913), Plant Breeding (1914). In 1875 he founded the Botanical Gazette and thereafter continued to be its editor He had charge of the department of botany in the first (1903) and second (1914) editions of the New International Encyclopædia

COULTER, STANLEY (1853-American biologist, brother of John M Coulter, born at Ningpo, China He was educated at Hanover College In 1887 he was appointed professor of biology and director of the biological laboratory at Purdue University and in 1907 dean of the School of Science. In 1902 he became a member of the State Board of Forestry His publications include more than 125 pamphlet's on nature study, scientific researches, sketches, and also Flora of Indiana (1899), and A Key to the Genera of the Native Forest Trees and Shrubs of Indiana (1907)

ANDROS See KUMUNDUROS

COUN'CIL (OF. concile, cuncilie, Lat concilum, from com, together + calare, Gk καλείν, kalein, to call). In Church usage, an assembly of ecclesiastical dignitaries held for the purpose of regulating the doctrine or discipline of the Church As early as the second century Church councils were convened in which only one or two provinces took part, the bishops and presbyters binding themselves to carry out the decisions ar-These asrived at in their own communities semblies were commonly held in the chief town or metropolis of the province, and the bishops of such capitals-who, after the third century, bore the title of metropolitan-were wont to preside over the meetings and to consider questions of doctrine and discipline which had arisen within the territory Over these metropolitan councils were established, at a later period, the provincial synods, exercising authority over several united provinces, and, finally, the national councils. After the fourth century, when the Christian religion was established in the Roman Empire, we read of ecumenical, 1e, universal councils, so called because all the bishops of Christendom were invited or summoned by the Emperor. In some early synods we find bishops, presbyters, and others taking part in the deliberations, but after the opening of the fourth century only the bishops were convened According to the doctrine of the Roman Catholic church, the Pope alone, or, by way of exception, in some cases the College of Cardinals, had the power of convening ecumenical councils, which, in the Catholic view, represent the universal Church under the guidance of the Holy Ghost.

Questions were determined by the majority of votes, and the Pope or his proxy presided and confirmed the resolutions carried in the council In matters of faith the Holy Scriptures and the traditions of the Church were the guide, while in lighter matters human reason and expediency were consulted In the former, ecumenical councils are held to be infallible, but in other matters of discipline, etc, the latest council decides questions The question of the Pope's subordination to the decrees of the ecumenical councils was long and waimly debated during the Middle Ages, but is not asserted by any Roman Catholic theologian to-day

Twenty ecumenical councils are recognized by the Roman Catholic church 1 The first Council of Nicæa, held 325 AD, in the height of the Arian controversy to define the doctrine of the Godhead of Christ, and to settle the proper time of keeping Easter (q v ) against the Quartodecimans 2 The first Council of Constantinople (381) completed the Nicene symbol by the defini-tion of the Godhead of the Holy Ghost 3 The Council of Ephesus (431) defined the unity of person in God the Son, against Nestorius, and guarded the definition by applying the term θεοτόκοs, theotokos, to His mother 4 The Council of Chalcedon (451), against the opposite heresy of Eutyches, asserted the twofold nature of Christ 5 The second Council of Constantinople (553) condemned some survivals of Nestorianism 6 The third Council of Constantinople (680-681) condemned the Monothelites 7 The second Council of Nicea (787) was directed against the iconoclasts and defined the respect to be paid to images 8 The fourth Council of Constantinople (869-870) was called to secure the peace of the Eastern and Western churches, by the deposition of Photius, who had unjustly intruded into the see of Constantinople The following councils, all held in the West, were subsequent to the schism between the Eastern and Western churches, and are consequently not recognized as ecumenical by Easterns or by Anglicans Over the next seven councils, four held in Rome and three in southern France, the popes presided in person, without Imperial co-operation they were held now, not so much to condemn heresy as to deal with other pressing needs of the Church, such as the encroachments of the Imperial power and reform in ecclesias-9 The first Lateran Council tical discipline (1123) was called to settle the dispute between the spiritual and temporal powers on the ques-tion of investiture 10 The second Lateran Council (1139) condemned the errors of Arnold of Brescia and others 11. The third Lateran Council (1179) condemned the Albigenses and Waldenses and passed a number of reforming decrees 12 The fourth Lateran Council (1215), the most important ecclesiastical gathering of the Middle Ages, formulated a more detailed confession of faith in opposition to the Albigenses and other innovators, and passed 70 reforming decrees 13 The first Council of Lyons (1245) threatened the Emperor Frederick II with excommunication and deposition and called on Christendom to take up aims against the Mohammedans 14 The second Council of Lyons (1274) strove for the reunion of the Greek and Latin churches and regulated papal elections 15 The Council of Vienne (1311-12) suppressed the Knights Templars and condemned various sects of the time, such as the Fraticelli and Beghards 16 The Council of Constance (1414-18) was called to restore the unity of the Church by the recognition of a legitimate pope and condemned the doctrine of Wichif and Huss 17 The Council of Basel, convoked in 1431 and later removed to Ferrara and Florence, discussed ecclesiastical reformation and made a determined attempt, in consultation with Greek deputies who came to Florence, to bring about a union with the East 18 The fifth Lateran Council (1512-17) annulled the Pragmatic Sanction and confirmed the bull Unam Sanctam, besides occupying itself with ecclesiastical discipline 19 The Council of Trent (1545-63, with some intersuptions), called to meet the problems presented by the Reformation, was very rich in consequences both for the confirmation of doctrine and the establishment of discipline 20 The Vatican Council (1870) decreed the infallibility of the Pope For further details of important councils, see NICÆA, BASEL, CONSTANCE, TRENT, CHAL-CEDON, CONSTANTINOPLE, EPHESUS, LATERAN, LYONS. VATICAN

Among Congregationalists and Baptists the term "council" is applied to an assembly of ministers and delegates from neighboring churches, called by a local church, as occasion arises, to act or assist in ordaining a minister, or give advice on matters referred to it, beyond which its power does not extend They have also a national council, composed of delegates from all parts of the denomination and meeting for conference concerning its work The Pan-Presbyterian Alliance, as the association of the re-formed churches holding the Presbyterian system is called, holds a council every four years for conference on matters of general interest to the allied churches So the Evangelical Alliance, a loose, undenominational body, holds councils, and the Methodists throughout the world held

one in 1901

In England, the convocations of the Church of England are practically councils, while the dis-senting bodies are represented in the Free Church Council, meeting annually

The great history of the councils of all kinds from the Apostolic age to the Council of Trent is by C J Hefele, assisted in the latter part by A Knofler and Cardinal Hergenrother (9 vols, Freiburg, 1855-90), there is an English transla-tion by Clark and Oxenham of the first two volumes, and up to the eighteenth book of the original (4 vols, Edinburgh, 1871 et seq) Consult Consult also the great collection of canons and other acts of the councils, by G D Mansi (31 vols, Florence and Venice, 1759-98) A study of the first seven ecumenical councils from a doctrinal standpoint is presented by W P du Bose (New York, 1897), and their Canons and Dogmatic Decrees, annotated with much additional matter, all in English, by H R Percival (1b, 1900) See SYNOD

COUNCIL, PRIVY See PRIVY COUNCIL COUNCIL BLUFFS A city and the county

seat of Pottawattamie Co, Iowa, 5 miles east of Omaha, Neb, near the Missouri River, and on the Union Pacific, the Chicago and North-western, the Chicago, Burlington, and Quincy, the Chicago, Rock Island, and Pacific, the Illinois Central, the Chicago, Milwaukee, and St Paul, the Chicago Great Western, and the Wabash railroads (Map · Iowa, B 3) The city is well laid out, with brick-paved streets, and lies to a great extent on a plain underlying high bluffs Electric lines connect Council Bluffs with Lake Manawa, a beautiful summer resort 3

miles south of the city, and with Fairmount and other paiks Council Bluffs is the seat of the Iowa School for the Deaf, and has a fine publiclibrary building Railroad and wagon bridges over the Missouri, and electric lines, afford communication with Omaha, with which city there 18 extensive traffic. The exceptional railroad facilities of Council Bluff's make it an important manufacturing and transportation point one of the great agricultural-implement trade centres of the world and also has a large trade in fruit and produce There are eight large grain elevators The city government, under a general State incorporation law, revised in 1897, is vested in a mayor, elected for two years and a city council, composed of representatives from the six wards of the city and two members at large The water works are owned and operated by the municipality In 1804, on the site of Council Bluff's, Lewis and Clark held a council with the Indians-hence the name Here, in 1846, the Mormons established a settlement, called "Kanesville," which, however, they soon abandoned for Salt Lake City The city was chartered in 1850 Pop, 1900, 25,802, 1910, 29,292

COUNCIL GROVE A city and the county seat of Morris Co, Kans, 24 miles northwest of Emporia, on the Missouri, Kansas, and Texas, and the Missouri Pacific railroads, and on the Neosho River (Map Kansas, F 3) It is in a fertile agricultural and stock-raising region, and has important dairying interests. The is situated on the old Santa Fe trail The city contains a public library Council Grove was settled in 1847 and is one of the oldest towns in the State It adopted the commission form of government in 1911 Pop, 1900, 2265, 1910, 2545 COUNCILMAN, WILLIAM THOMAS (1854-

An American pathologist, born at Pikesville, Md He was educated at St John's College (Annapolis, Md ) and at the universities of Maryland, Vienna, and Leipzig. From 1886 to 1891 he was associate and associate professor of pathology at Johns Hopkins University In 1892 he became Shattuck professor of pathological anatomy at Haivard University 1904 he was president of the Association of American Physicians His publications include A Study of the Bacteriology and Pathology of Two Hundred and Twenty Fatal Cases of Diphthere (1901), Pathology (1902), Pathology A Manual for Teachers and Students (1912), Disease and its Causes (1913)

COUNCIL OF BLOOD See ALVA
COUNCIL OF FIVE HUNDRED. See DIRECTORY.

RECTORY COUNCIL OF TEN (Consiglio de diece)
The supreme body in the Venetian government from the beginning of the fourteenth century till the overthrow of the republic in 1797 The creation of the Council of Ten was but the final step in the process by which the oligarchie party succeeded in obtaining sole control of the government, beginning with the so-called "Closing of the Grand Council" in 1297 Its immediate cause was a popular uprising in 1310 headed by the noble families of Trepolo and Querini. After the suppression of the revolt the Council of Ten was constituted as a secret body for the purpose of discovering and punishing all the participants in the conspiracy Created at first for a few days, its existence was prolonged from time to time until, in 1335, it was made permanent In times of great emergency the council was augmented by a grunta of 20 or more of the noblest citizens, so that until 1595 it was officially known as the Consiglio di dieci e anunta The powers exercised by the council were unlimited and touched upon every affair of public and private life Its decisions, from which there was no appeal, were arrived at in secret, and its sentences were often carried out in the same manner It employed assassins and used poison to remove dangerous individuals In spite, however, of its arbitrary acts and the relentlessness with which it visited punishment upon those who offended it, the Council of Ten insured internal tranquillity and the administration of justice and preserved the state against the ambition of powerful nobles In 1539 the discovery of treasonable behavior on the part of certain of the Ten led to the creation of the Inquisitors di stato, or Council of Thiee, to whom the council delegated its police functions and the trial of offenders From 1527, possibly earlier, the council exercised a censorship over the piess. The archives of the council, extending from 1315 to the end of the republic, are of great importance, as they deal with political, ecclesiastical, and criminal subjects "There we find such papers as still survive in connection with the cases of the Carraiesi, of Carmagnola, of Foscarı, of Caterina Coinaro, and of Fosca-Consult Brown, Studies in Venetian History (2 vols, London, 1907).

COUNCIL OF THE INDIES, THE A governing council formed in 1511 by King Ferdinand for the regulation of Spanish colonial affairs

COUNCIL OF WAR A conference of officers in war time, whom the commander voluntarily calls together to discuss matters of moment It is an unwritten but generally understood rule that the commandant of a garrison will accept, or at least solicit, the opinion of a council of war before surrendering to an enemy COUNCILS, COUNTY See COUNTY COUNCILS

COUNCILS, COUNTY See COUNTY COUNCILS
COUN'SEL (OF consel, cunsel, consel, from
Lat consiluum, consultation, from consulere, to
consult) A term applied to attorneys and counselois who become associated together in the conduct of a cause at any stage of the proceedings,
or who jointly act as jegal advisers in any matter, whether litigated or not It is less frequently used in speaking of a single lawyer
acting in any of the above capacities. The term
"of counsel" is employed to designate a lawyer
who assists the attorney of record in the management, trial, and conduct of a case. See AdvoCATE, ATTORNEY, LAWYER

COUNSEL, Book of Good See Hittoplanes COUNSELOR. In law, a person admitted to practice law in any capacity, and who is by reason of that fact an officer of the court of the term was formerly used to distinguish those lawyers who were licensed to appear in court, corresponding to the barrister in England and the advocate in Scotland The distinction has, however, been abolished in most, if not all, of the United States, and the term "counselor" is now used synonymously with "attorney" See

ATTORNEY, LAWYER
COUNT (OF conte, comte, Fr comte, from
Lat comes, companions, from com-, together +
vre, 6k tévat, venat, Skt v, to go) In classical
writers down to the end of the fourth century
the meanings attached to the word comes were

writers down to the end of the fourth century the meanings attached to the word comes were comparatively few and simple At first the word signified merely an "attendant," and differed Vol. VI.—12

from socius chiefly in expressing a less intimate and equal relation to the persons accompanied A little later, in Holace's time, it was applied to those young men of family whom it had become customary to send out as pupils under the eye of a governor of a province or the com-mander of an army Very soon the fashion of having attendants at home was introduced The Emperor had many comites in this sense, and to these, as he gradually became the centre of power, he transferred the various offices of his household and of the state The example of the emperors of the West was followed by the emperors of the East Most of the titles at present applied to court officials are translations of the names applied to similar offices in the By-zantine Empire The comes sacrarum largi-tionum was grand almoner and practically chancellor of the exchequer, the comes curve was the grand master of ceremonies, the comes equorum, the grand equerry The comes marcarum, or count of the marches, was the original of the

later marquis

In France the count of the palace (comes palatu) was the highest dignitary in the state after the mayor of the palace, and in the eleventh century had already acquired a rank apart from that of the other counts He pre-sided in the court of the sovereign in his absence and possessed sovereign jurisdiction. The habit of instituting counts palatine was adopted by Spain and England The counts of Charties, Champagne, Blois, and Toulouse arrogated to themselves the authority to appoint palatine counts, and the ancient houses of Charties and of Blois continued to claim in perpetuity the title of count palatine as that of their eldest sons Counts of this sovereign class owed their origin to the feebleness of the later Carolingian kings, under whom they contrived gradually to convert the provinces and towns which they had governed as royal officers into principalities hereditary in their families It was then that the counts came to be known by the names of their The title was never used in England, though its Latin equivalent has always been the common translation for "earl," and the wife of an earl from a very early period has been styled "countess" For the history of the office in Germany, where it was of great importance, see GRAF Consult Rambaud, L'Empure grec au Xe siècle (Paris, 1870), Luchaire, Histoire des in-stitutions monarchiques de la France sous les premiers Capétiens (ib, 1883), Maury, "La noblesse et les titres nobiliaires en France," in Revue des Deux Mondes (December, 1882); Pfaff, Geschichte des Pfalzgrafenamtes (Halle, 1847), Luchaire, Essar sur l'origine de la noblesse en France au moyen âge (Paris, 1902)

COUNTERCHANGED A term in heraldry (qv) When several metals and colors are interchanged, one being set against another, they

are said to be counterchanged

OUNTERCLAIM. In the law of pleading, an affirmative cause of action asserted by the defendant against the plaintiff and introduced in connection with his answer or defense proper. The counterclaim is a modern statutory device for enabling a person who is sued on a claim against him to procure an adjudication, at the same time, of a legal claim which he has against the party suing him. Its purpose is to consolidate the causes of action which two parties may have against one another, reducing the amount and cost of hitgation and compelling the adjudi-

cation, so tar as possible, of all open controversus between them No such practice existed at common law, but every claum, no matter how closely related to another and opposing claum, constituted a separate cause or action and had to be separately prosecuted As early as the year 1729, however, an act of the British Parliament introduced the principle of the set-off (qv), whereby, in case of mutual indebtedness growing out of the same transaction, the defendant was enabled to set off his claim against that of the plaintiff and have it allowed on the judgment. It was not until the Judicature Acts in 1875, however, that the defendant acquired the right of setting up a counterclaim, constituting a distinct cause of actions.

Both the set-off and the counterclaim exist in the United States, the former generally, but the latter only in the so-called "code States," which have adopted the reformed piocedule. These differ among themselves, however, as to the nature of the actions which can be pleaded by way of counterclaim—some following the modern English practice, under which any cause of action, however divergent from that alleged in the complaint, may be set up, and others, like New York, limiting the right of counterclaim to a matter arising out of the same transaction as that on which the action is based, or, in an action on contract (New York Code of Civil Procedure, § 501) See Plea, Pleading, Recoupagent, and consult the authorites referred to under Pleading.

COUN'TERFEITING (from counterfest, from OF, Fr contrefait, counterfeit, from ML contrafacere, to imitate, from Lat contra, against The criminal offense of - facere, to make) falsely and fraudulently making an article in the semblance of another with the intent to induce the acceptance and use of such spurious article for the genuine one The term "counterfert" is used most frequently of imitations of coined money or of the paper currency of the government or of a bank, but is applied also to other cases of fraudulent imitation, as spurious trade-marks or dies The most important British statute on this topic is the Coinage Offense Act, 1861 (24 and 25 Vict, c 99) In this country the subject is dealt with in the Revised Statutes of the United States (\$\$ 5413 et seq ), especially so far as it relates to Federal coinage and securities and the money or securities of foreign nations, and other forms of counterfeiting are made punishable by State legislation. See Coinage; Forgery

COUNTERIRRITANTS Medical agents applied to the skin so as to redden (lubefacients), to vesicate (blisters or vesicants), or to produce pustules, purulent issues, or even sloughs of skin and of the subcutaneous textures (pustulants) Counterrritants act by reflex influence upon cential nerve centies which control the blood supply to diseased internal organs or deep-seated structures. The milder counterirritants are mustard, turpentine applied on hot cloths, and tincture of The stronger are blisters of canthacansieum nides or of ammonia, croton oil or tartai emetic in ointment, and the actual cautery or hot iron. Setons, moxæ, and caustics are rarely, if ever, employed None of the stronger counterprintants should be used without medical advice, great mischief being done by their improper Counterpritants relieve internal pain and tend to promote the absorption of effusions They should be applied at a distance from the site of

the inflammation Counterpritants are much used for strains and diseases of the joints in horses, but should never be applied, as they too often are, in recent cases, or while the part is did not or inflamed Preparations of cantharides (qv) and ointment of mercuric biniodide (red nodide of mercury) are the most convenient. For cows, use hot fomentations, followed by the smart infriction of mustard paste, for dogs, soap liniment, strengthened, if required, by ammonia or turpentine. See Moxa

COUNTERMINE See MINES AND MINING, MILITARY

COUN'TERPAS'SANT (Fr contre-passant, passing opposite, from contre, Lat contra, against + passer, ML passare, to pace, from Lat passus, step, from pandere, to stietch) In heraldry (qv), a term denoting two beasts bound in opposite directions passing each other.

OUNTERPOINT In music, the setting of one or more pairs against a given melody, so that all the voices are of equal importance and independence. The name was first used in the fourteenth century. It suggested itself from the fact that one note (pinetus) was set against another, punctus conti a punctum. A counterpoint may be written in various ways against a given melody, as one, two, four, or even more notes against one of the cantus. The counterpoint most useful in practical composition is one where the different parts are variously constructed, as in the following (Handel)

When two voices are used the counterpoint is called two-part, when three, three-part, etc When the counterpoint hes uniformly above or below the cantus, it is single If the parts be constructed in regard to one another so that they can be changed or transposed over or under each other, without alteration in the movement, or injury to the harmony, it is then called double counterpoint, eg

The intervals most frequently used for transposition in double counterpoint are the octave, decima, and duodecima The following admits of different transpositions

When three voices are constructed so that they can be exchanged one against the other, the counterpoint is triple, when four, quadruple The first indications of counterpoint we find in the thirteenth century in the works of Adam de The development of the art of contrapuntal writing was then very rapid, and in the school of the Netherlands (in the fifteenth and sixteenth centuries) the acme of technical skill was reached But counterpoint was then less a genuine musical art than an exhibition of astounding technical tricks. The great Italian schools (see Palestrina) returned to a simpler and artistic style As a genuine art counterpoint culminated in the form of the fugue (qv). The latest and best treatises on counterpoint are those of Dehn, Richter, Marx, Lobe, Prout, Jadassohn, and Riemann

COUN'TERPOISE CARRIAGE. NANCE

COUN'TERPO'TENT A fur used in heraldry (qv) COUN'TERPROOF'.

An impression which is obtained from a freshly printed proof of an engraving, by laying it, before the ink is dry, upon plain paper and passing it through the press By this means the ink is transferred from the wet proof to the plain paper, and a reversed impression is obtained, which is often of use in enabling the engraver to judge of the success of his work See Engraving

COUN'TER-REFORMA'TION. The term used to describe the period of Catholic revival between about 1560 and 1648 The Catholic church undertook (1) to reform abuses, (2) to counteract the Protestant movement in those lands where it threatened to succeed, and (3) to uproot it where it had entirely or very considerably succeeded Long before the Protestant revolt took place there had been a demand upon the part of faithful sons of the Church for a reform in "head and members," from the Pope down to the humblest Christian Efforts had accomplished something, as in the Council of Basel (1431), but not enough to stay the tide of At last the Council of Trent was assembled, which, lasting with interluptions from 1545 to 1563, solemnly reaffirmed and defined Catholic doctrine and enacted disciplinary measures to rectify widespread and prevalent abuses Of the agents most active in raising the tone of

the Church, animating its pulpit and its schools, and inspiring self-sacrifice and ardent piety, the chief have been the Jesuits-so much so, indeed, that the counter-reformation is frequently spoken of as their work The other measures spoken of have naturally incurred more censure. The check or extirpation of Protestantism has been accomplished necessarily with violence. though it must be said that the intolerance of the Roman Catholic ruler or prelate was matched, when opportunity served, by that of Protestants in similar positions In Bavaria the nobility which had tavored Protestantism were expelled in 1564 At Treves the Elector, James of Eltz, in 1572, forbade Protestants his court In other ecclesiastical states of the Empire, as Bamberg and Salzburg, the rulers drove out the evangelical clergy and gave the laity the alternative of conformity to the Catholic church or exile Austria attempted to uproot religious liberty in Hungary, but was forced to restore it In Bohemia Protestantism was extirpated during the Thirty Years' War As far as the German Empire was concerned, the arbitrary exercise of power to repress Protestantism ended with the Peace of Westphalia in 1648 In such countries as Spain and Italy Protestantism never had more than a feeble existence and so was rather easily suppressed by the Inquisition In France there was never more than a possibility of Protestantism gaining an ascendancy, but in the sixteenth and seventeenth centuries it had many influential adherents Civil wars, the result of political intrigue, and the acceptance from personal ambition of Romanism by Henry IV, ruined whatever prospects the Protestants had, and with the revocation of the Edict of Nantes in 1685, all semblance of state favor to Protestantism was removed and the faith outlawed In the Netherlands persecution and war wrested the southern provinces from Protestant domination, but it remained in the northern Scandinavia was not seriously shaken in her acceptance of Protestantism In England, after tireless, ingenious, and heroic attempts of seminary priests, upon whose head a price was fixed, to effect a return to Catholicism, with the secret cooperation of many nobles and other prominent men, the scheme had to be abandoned, mainly because the invasion of England by the Spanish Armada in 1588 welded the nation into a whole against foreign political or religious dominion This was also the period of greatest heroism and success in Catholic missions

Consult Ranke, History of the Popes (Eng trans, London, 1867), A Ward, History of the Counter-Reformation (New York, 1889), A R Pennington, History of the Counter-Reformation

(London, 1900)
COUN'TERSCARP The side of the ditch of a fortification opposite to the parapet slopes of the scarp, which is the side of the ditch next to the parapet, and of the counterscarp will depend on the nature of the soil, and the action on it of frost and rain The scarp, or outside slope of the parapet, is less steep than the counterscarp, because it has to sustain the weight of the parapet See FORTIFICATION

COUN'TERSIGN. A watchword or sign disclosed only to persons authorized to pass a line of sentinels. The countersign may be changed at any moment, or any number of times, but is usually altered each 24 hours. It is given primarily to commanders of guards, and outposts and their sentries, to reconnoitring and visiting patrols, and to the field and regimental officers of the day All others desiring to pass through the lines must first be supplied with the countersign, which is thus a guard against spies, stiangers, and surplise

COUNTERSUBJECT A musical term See FUGUE

COUN'TERTEN'OR The highest adult male voice, most commonly the male alto (qv) A fur used in heialdry

COUN'TESS'S POWDER See CINCHONA

COUN'TIES COR'PORATE In England cities and towns which possessed the privilege of being governed by their own sheriff and magistrates independently of the county in which they are situated

COUNT'ING-OUT' RHYMES See NUBSERY

RHYMES

COUNT ROB'ERT OF PARIS A late novel of Sir Walter Scott (1833), the scene of which is laid at Constantinople in the eleventh century COUNTRY-DANCE An old English dance of rustic origin, in lively movement, usually in 2-4 time (occasionally 6-8) It was performed by several pairs dancing against one another Originally the music was performed on a bag-pipe or fiddle or a pipe and tabor When introduced into refined society, the music became more refined and was written for orchestral instruments. The oldest collection of countrydances was published in 1651 under the title, "The English Dancing Master" In the eight-eenth century it was introduced into France, where it was first known as Anglaise From the fact that the couples danced against one another it also was called contreduce From France it soon spread to Germany, where it became exceedingly popular, and was known under its French name The etymology regarding contredance as a corruption of country-dance, or vice versa, is wiong

COUNTRY LASSES, or THE CUSTOM OF THE MANOR The title of a play by Charles Johnson (1715), based on Fletcher and Massinger's Custom of the Country and Middleton's A Mad World, My Mosters

COUNTRY PARTY, THE The anti-Royalist party in England in Charles II's time, which opposed the court party It finally developed into the "Whig" party

COUNTRY WIFE, THE A comedy by

Wycherley (1673), drawn largely from Molière's L'Ecole des maris and L'Ecole des femmes COUN'TY (OF counte, contee, Fr comté, It,

contado, from Lat comitatus, county, escort, from comes, count, companion) Either (a) one of the civil divisions of a country, for judicial and political purposes; or (b) a local subdivision of a state created by the sovereign power of its own will, or (c) a "local organization which, for the purpose of civil administration, is invested with the functions of a corporate existence" The Saxon term was "shire," a name still preserved in England In the United States counties are divided into a number of townships or towns Cities and incorporated towns and villages are, generally speaking, subdivisions of counties and townships, but in some instances a city may be geographically coterminous with a county, as is the case with St Louis and Philadelphia, while "the city of New York" includes within its municipal limits five distinct counties In Louisiana the similar division is called a "parish" For purposes of local government, each county has at least one court and one prison and usually an almshouse The smaller divisions are townships, or precincts, according to the system of local government, each of which by popular suffrage chooses supervisors or commissioners, who form an administrative board to conduct the financial and other county affairs Counties are the creatures of the legislative will They are vested with certain corporate powers in order to enable them to perform the duties required of them as part of the machinery of the state; and, masmuch as all their powers are derived from the legislature, the latter may enlarge, modify, or diminish them at any time Counties are generally invested with the following corporate powers to sue and be sued by a corporate name, to have a county seat, a counthouse, and prison, to acquire and hold title to real estate, to levy taxes and to make such contracts as may be necessary for their corporate existence For an historical sketch of the English county, consult Pollock and Maitland, History of English Law (2d ed, Boston, 1899) See Shire, Municipal LAW, and consult authorities there referred to

COUNTY COUNCILS Until 1888 the county government of England was conducted in the quarter sessions, held by justices of the peace As these magistrates were appointed by the crown to attend to all administration and the minor judicial business of the county, there was practically no local self-government. To remedy this, the first Local Government Act was passed in 1888 by a Conservative ministry It established representative county councils elected every three years by all ratepayers, male and female, of the shire, besides other nonresident property holders, under certain conditions Practically the same qualifications are necessary for membership in the council, except that women are not eligible The elected councilors choose additional members called "aldermen," one-third of the council in number, and also a mayor, who may or may not be of their number The council controls all the administrative functions of the county, such as the management of the roads. msane asylums, county jails, and the issue of liquor licenses, it shares the police control with the justices of the peace

Mr. Henry Fowler's second Local Government Act, passed by the Liberals in 1894, perfected the flist by transforming the ancient vestries of a population of 300 and over into parish councils, for the management of local business Smaller parishes, if they so desire, may, with the consent of the county council, have the same privilege The system closely resembles the American township organization In Scotland and Ireland counties have since been organized along similar lines, except that there are no coopted aldermen in the former country

Previous to 1885 all London lying without the ancient city had no local government except the church vestries It was brought under the operation of the Act of 1888 and given a county government In 1899 the administrative functions of the vestries not ecclesiastical were turned over by the county council to subordinate boroughs having mayors, aldermen, and councilors of their own The old city, though represented in the county council, retains most of its antiquated constitution The personnel of the London County Council is very high, and the amount of work it has accomplished is remarkable It has successfully provided public baths

and libraries, parks and playgrounds, better dwellings for the poor, besides grving large sums for technical education Consult Macmorran and Dill, The Local Government Act of 1894 (London, 1896)

COUNTY COURT. In English and American law, a judicial tribunal of considerable dignity and importance, whose jurisdiction is coextensive with the limits of a county (q v). The county courts are among the most ancient institutions in England, dating back to the popular tribunals of the Anglo-Saxon period We find provisions regulating their procedure as far back as the laws of Edward the Elder (901-925) and of Canute (1014-35). Under the system of local self-government which was characteristic of that period, the county courts (shire gemots) were the chief ordinary tribunals of the English people, their judicial authority being superseded by that of the Witenagemot, or Great Council of the Kingdom, only for particular purposes and on rare occasions

It will be remembered that in England the county, or shire, is not merely a political sub-division of the state for administrative purposes, as it is in most cases in the United States, and as are the departments into which the territory of France is divided, but it is a separate and distinct political division, in many cases antedating, in organization and in its functions, the state itself As the supreme judicial tribunal, therefore, of such an ancient political organization, the county court was not only the fountain of justice for the people of England, high and low, but a court of great dignity and authority as well It was presided over by the sheriff (shire reeve), who was the high judicial officer of the county, and, like the court baron and other popular tribunals, was composed of the freeholders of the county who should be summoned by the sheriff for that purpose Its origmal jurisdiction extended to all civil and crim-inal matters, and it was the common court of appeal from all the minor courts of the county. Under the Saxon regume there was no regular tribunal of appeal from the judgments of the county court, but after the Conquest the superior authority of the new national tribunal, the Curra Regis, or King's Court, drew to it appeals from the county courts The rapid growth in power and importance of the King's courts, especially of the so-called common-law courts—the King's Bench, Common Pleas, and Exchequertended to reduce the authority of the more antended to reduce the authority of the more an-cient tribunals, and their jurisdiction was im-panied by successive acts of Parliament They still exist, however, with a limited though con-See County Courts Act, siderable authority 1888 (51 and 52 Vict, c 43)

County courts in the United States exercise both evil and emmnal jurisdation, and in some of the States the functions of probate, or surrogates, courts as well. They are held by a county ludge, usually at the county seat or principal town of the county. The county judge is usually elected by popular vote for a specified term. See COURT See also CURIA REGIS, SURRIFF Consult Encyclopedia of the Laws of England (London, 1897), and Raikes, Admirally Jurisdation and Practice in County Courts (1b, 1896).

COUP, koo (Br., stroke) A word often used on a figurative sense Coup d'état, 'stroke of state,' means an arbitrary encroachment suddenly effected by the governing authorities upon the constitution of the state, altering or setting

aside the prerogatives of other parts of the body politic. The coup d'état which is usually understood by this term is that effected by Louis Napoleon in making himself practically dictator (Dec 2, 1851). Coup de main, a stroke of the hand, is applied, in the language of war, to a sudden and successful attack. Coup de foudre, a 'thunderbolt,' applied figuratively to any astonishing occurrence Coup d'cui, a 'stroke (or glance) of the eye,' is applied in speaking of persons who have the faculty of comprehending all the relations of a complicated matter at one survey, or, in art, it expresses the general effect of a picture or group at first sight. Coup de théâtre mans properly a trick of the stage to produce a shock by surprise, and is hence applied to any analogous dramatic effect

The word is also used in Canada to designate a war custom of the Plains Indians. Among many of these tribes the first warrior to touch an enemy or his body was credited with a "coup," or deed of honor The social rank of an individual was largely dependent upon the number of coups to his credit. Thus Red Cloud (q v) claimed 80 coups—an unusual number, since 4 coups were generally considered sufficient to give distinction Consult Grinnell, "The Coup," in American Anthropologist (1911)

COUPÉ, korpà' (Fr. Interally, section, cut, from couper, to cut) A four-wheeled, one-horse, closed carriage, holding two persons, with separate seat for the driver (See Carriage, Moron VEHICLE) The name is also given to a compartment of a railway carriage in continental Europe

COUPED, koopt (hybrid Eng, pp of Frouper, to cut) In heraldry, a term used to describe the head or any limb of an animal, or a part of a plant, represented as cut off smoothly from the trunk. It is distinguished from enused—1e, fouchly torn off A distinction is made also between couped and couped close, the latter signifying that the head or limb is cut off close, leaving no part of the neck or trunk attached to it. When crosses, bars, and bends are cut so as not to touch the sides of the escutcheon, they are also said to be couped.

COUPER, kov/per, Millam (1853—)
An American sculptor. He was born in Norfolk, Va, and studied at the Cooper Institute, New York, and the Royal Academy at Munich in 1876 he removed to Florence and entered the studio of Thomas Ball In 1897 he returned to America and established himself in New York His art is modern Italian in manner, but its beauty and techinque are somewhat marred by overelaborate detail and neglect of powerful lines and planes His management of drapery is especially good Among his works are "Mother's Love," "The Falconer," "Beauty's Wreath for Valor's Brow," the maible statue of "Moses" on the Appellate Courthouse, New York City, "Te Deum Laudamus," and several peculiarly sympathetic and exquisitely executed angles for funeral monuments His portraits include the heroic bronze bust of Prof Thomas Eggleston, Columbia University, New York, and that of President McKinley He won the competition for the monument to Colomel Hawkins, at Pittsburgh, Pa. Consult Lorado Taft, History of American Soulpture (New York, 1903)
COUPERIN, koop-rins' The name of a

COUPERIN, koo'p'-rhn' The name of a family of famous French musicians.—The first members who became famous were three brothers, Lours (1630-65), François (1631-

98), and CHARLES (1638-69) The latter's son, also called François (1668-1733), was the greatest of all the Couperins, and is generally spoken of as François le Grand He studied under J Thomelin In 1693 he was appointed court cembalist and teacher of the princes, and in 1698 he succeeded his uncle François as organist of Saint-Gervais, in Paris As a composer Couperin occupies an important position in the history of piano music His works for the harpsichord were not only the first of their kind, but also developed a new style of music, characteristic of the instrument, whereas his predecessors had cultivated the organ style. His compositions are not very profound, are overloaded with embellishments, but exerted a decided influence upon the style of his younger contemporaries, Handel and Bach

COUPLE (OF cuple, cople, Fr couple, Sp cópula, from Lat copula, bond, from co-, together + apere, Gk äπτειν, haptern, to join) A couple is the name given in statics to a pair of equal parallel forces acting in opposite directions and at different points of a body It is shown in the article MECHANICS (qv) that, when two parallel forces act in opposite directions on a body, they may be replaced by one equal to their difference, acting parallel to them and in the same plane with them, the point of application of this resultant being beyond the points where they are applied. This point recedes farther from the points of application of the original forces the nearer they approach equality, getting to an infinite distance when they become equal and when their resultant accordingly is zero this limiting case the forces constitute a couple They have no tendency to translate the body, their action goes wholly to make it rotate about an axis passing through its centre of inertia and perpendicular to the plane in which the couple acts Such being the case, a couple cannot be replaced or counteracted by any single force, for such a force would produce translation, it can only be replaced or balanced by other cou-The length of the straight line which meets the lines of action of the forces at right angles is called the "arm" of the couple, and the product of the arm and either force is called the "strength" or the "moment" of the couple It serience that a couple can be replaced by one of equal strength Consult Routh, Treatise on Analytical Statios (Cambridge, Eng., 1892), Minchin, Status (New York, 1892), Johnson, Theoretical Mechanics (ib., 1901), Ziwett and Field, Introduction to Analytical Mechanics (ib., 1912) See MECHANICS

COUPLET (Fr., dim of couple, pair, from Lat copula, bond) Any two lines which hyme together. They usually contain the expression of a complete idea. The poethe wits of the age of Queen Anne excelled in this kind of aphoristic versification. Pope, it has been said, reasons in couplets. For example

"'Tis with our judgments as our watches, none Go just alike, yet each believes his own"

COUPON, 150°/90n (Fi coupon, from couper, to cut, from coup, It colpp, Lat colpp, from Gk köhades, kolaphas, blow with the fist, from xohár-rew, kolapten, to strike) An undertaking on the part of an obligor on a money bond or other interest or dividend bearing obligation to pay a definite amount of accrued interest or dividends to the holder thereof at a specified date It is usually so attached to the bond, debentue,

or other principal instrument that it can conveniently be cut off (whence the name) and presented for payment Each interest or dividend coupon constitutes in law a separate claim or demand and may be separately enforced Corporate bonds and similar securities usually issued in this form, and so, sometimes, are shares of preferred stock, in which case the coupons represent the guaranteed dividend payments. Of course the coupon does not, in any of these forms, confer any additional legal rights on the holder of the security against the person bound thereby nor increase the liability of the latter A general agreement to pay interest or dividends at such a late would be equally valid and efficacious The advantage of the coupon hes in the convenience to the holder of furnishing him with a separate undertaking for each interest or dividend payment for piesentment and collection, and in the fact that corporate coupons are usually of a negotiable or quasi-negotiable character, facilitating their trans-fer from hand to hand See NEGOTIABLE See NEGOTIABLE INSTRUMENTS

COURANT, koo-rant' (F1, pres part of course, to run) In heraldry, a term used for running

COURANTE. An old French dance, originated about the middle of the sixteenth century. The oldest specimens are rather rapid, in 3-2 time, beginning on the beat. Later, the dance became confused with other dance forms of similar character, especially the 3-2 time (three beats) was frequently confused with 6-4 time (two beats). At the beginning of the eighteenth century it became one of the movements of the Suite (q v.), where it usually follows the Allemande (q v.), and is contrasted with it. At the same time the tempo became slower and, instead of proceeding mainly in notes of even value, dotted notes became the usual movement. The Italian form (corrente) always preserved the rapid tempo and even movement.

COURAYER, koo'ra'yâ', Pierre François c (1681-1776) A French Catholic theologian LE (1681-1776) He is chiefly known for the part which he took in the discussion, which so interested Leibnitz and others at the time, on the possibility of the reunion of Christendom, and especially of uniting the Church of England with the Roman Catholic communion at the Reformation In 1723 he published anonymously a Dissertation sur la validité des ordinations des Anglais (Eng. trans, London, 1725, new ed, Oxford, 1844), in which he endeavored to prove that there had been no break in the line of ordination from the Apostles to the English clergy This was naturally received with enthusiasm in England, and Oxford conferred the degree of DD on him, but it subjected him to so much criticism and unpopularity in Fiance that he presently fled to England, where he remained until his death In 1736 he published a French translation of Sarpi's History of the Council of Trent, and in 1767 a translation of Sleidan's History of the Reformation

GOURBET, koorbat, Amfore Amarone Prospens (1827-85) A French admiral, born at Abbeville He was educated at the Ecole Polytechnique and entered the navy in 1849 In 1850 he was made rear admiral and, after being Governor of New Caledonia, in 1883 commanded the French fleet in the campaign of Tongking After the violation of the Treaty of Tientsin by the Chinese, Courbet, in a naval engagement (1884),

destroyed the entire Chinese flect without losing a vessel In 1855 he started to return to France, but his strength had given out and he died at sea. Consult the biographies by Julien (1888) and De la Faye (1891), Loir, *L'Discade de* l'annial Combet (Nancy, 1880), Cahu, Combet en Extense-Orient (Paris, 1896)

COURBET, GUSTAVE (1819-77). A French landscape, figure, and portrait painter, founder of the modern Realist school He was born at Ornans (Franche-Comté) on June 10, 1819, of wealthy peasant parents His first instruction in art was acquired at his home under Flageoulet, a pupil of David In his twentieth year he went to Paris, where he worked in different studios, but he was in the main self-taught. He speedily found recognition, and soon became the chief leader of the Realists, in opposition to both Classicists and Romanticists Courbet was of a very independent character, and had so little regard for the opinions of the judges of the Salon that he returned for six successive years a picture rejected in 1841. When in the Exposition of 1855 his pictures were re-fused, he held a separate exposition, which attracted wide attention In 1870 he returned the cross of the Legion of Honor to Napoleon with a protest He was Radical and Socialist in politics, and under the Commune he was made director of the fine arts As such he saved the collections of Thiers and of the Luxembourg from the infuriated populace, but he sacrificed the Vendôme Column in order to appease the crowd For this act he was implisoned after the downfall of the Commune, and all of his paintings were sold at public auction. In order to avoid the payment of further damages he went into voluntary exile, and died broken-hearted near Vevey, in Switzerland, Dec 31, 1877 He was a strong but rather coarse character, blustering but good-natured-a healthy animal without the least spirituality.

His paintings poitray nature exactly as it is, without the least addition of sentiment or idealism, for he conceived realism to be possible only through the absolute negation of idealism. As he confined himself to the reproduction of nature, there could be no refined composition or real action in his work, for these depend on the painter himself. His figures were no more than models in the positions painted, his landscapes mere patches of forest or country taken at random. In figure painting he was partial to the coarse types preferred by the Flemish school, and he always painted them life-size. His coloring was excellent, and in his figure subjects, which are chiefly brushworks, it was pure, strong, and mellow. In his landscapes he used the palette kinfe very feely, obtaining brilliant and sparkling effects of color. His chief defect is his lack of strength in drawing.

The volume of Courbet's work was enormous, and his activity extends over a variety of subjects. Among the best of his figure paintings are the "Man with a Leather Belt" (Louvre), the "Stone Breakers" (Dresden), representing two workmen bleaking stones, as one can see them in the street, the "Demoiselles des bords de la Seme" (Petit Palais), two typical grisettes reclining in ungraceful attitudes on the grass, yet a picture of great beauty of color. The most ambitious of all is his "Burnal at Ornans" (1850, Louvre), a village funeral. This picture is composed of 39 life-size figures, admirably balanced. On the one hand are the perfunctory

mourners, such as the priest, beadles, pallbearers, gravediggers, on the other, the real mourners The Louvre also possesses two of his land-scapes—the "Combat of the Stags" and the Retreat of the Deer"—a marine painting, "The Wave," the portrait of Champileury, and other of his works In the Petit Palais are "The Father of the Artist," 'Prudhon and his Childien," and several others In the Metropolitan Museum, New York, are "The Woman with a Pairot," a marine, and a landscape Courbet is also represented in the chief provincial museums in France and in the galleries of Beilin, Frankfort, Cologne, Munich, Vienna, Amsterdam, The Hague, Copenhagen, and Chicago, and in many private collections, including the Widener and Johnson collections, Philadelphia, and the Allston Club, Boston

Bibliography Monographs on the art and life of Courbet have been written by Estignard (Paris, 1874), Dideville (ib, 1878), Silvestre in Les artistes français (ib, 1878), Isham in Van Dyke's Modern French Masters (New York, 1896), Meier-Giaefe, Conot and Courbet (Leipt, 1896), Carrer (Paris, 1906), Robin (Paris, 1909), Benedite (ib, 1911), and Lazir Bela (ib, 1911) to Consult also Muther, History of Modern Painting, vol in (London, 1896, 1907). COURBEVOIE, kggr'b'-wa' (Fr, crooked way) A town in the Department of Seine, France, on the left bank of the Seine, opposite Neully, 5 miles northwest of Paris Courbe-voie has well-built houses and large barracks erected by Louis XV for the Swiss Guards. In 1883 a honze group, the Monument de la défense de Paus, by E Barrias, was elected here Its principal manufactures are white lead, brandy, carriage bodies, and drugs Pop, 1896, 20,105, 1901, 28,765, (commune) 25,330, 1911, 38,138
COURCEL, kggr'sêl', Baron Alphonse Cho-

COURCELL, ROOT'Self, BARON ALPHONES CHO-DRON DE (1835— ) A French diplomathst He was educated in France and Germany, and entered political and diplomatic life in 1859 From 1881 to 1886 he was Ambassador to Germany In 1884-85 he was joint reporter with Baron Lambermont of the Berlin Conference Courcel was an arbitrator appointed by the French President on the Bering Sea Arbitration Commission in 1892, and was elected president of that body by his associates He became Senator in 1892, and was made Ambassador to Great Britain in 1894, but resigned in 1898 With Lain and others he edited for the Société de l'Histoire de France the Mémoires of Ruchelieu (2 vols. 1907-09)

GOURCELLE, kōōr/sēl. Daniel de Rémy, Sieur de French Governor of Canada from 1665 to 1672 He succeeded Mézy and preceded Frontence In 1666, in the depth of winter, he led a force of 300 men by way of Lakes Champlain and George to the country of the Mohawks, who had persisted in attacks upon the colony. He retuined, having accomplished nothing, and having lost a large number of his troops through the severity of the weather. Not long after, with Tracy, the heutenant general, and an army of 1300, he undertook a second expedition, which resulted in the complete destruction of the five Mohawk forts The English were considerably alarmed at this invasion of territory claimed for the British crown, and there ensued a coirespondence between Tracy

778

and Governor Nicolls of New York Courcelle projected the post at Kingston (Katarakoui), afterward established by Frontenac

COURCELLE-SENEUIL, kooi'sel' se-ne'\'.

JEAN GUSTAVE (1813-92) A French political conomist, born at Seneul (Dordogne) He occupied the chair of political economy at the University of Santiago de Chile from 1853 to 1863 and became a member of the French Academy of Moral and Political Sciences in 1882 Among his principal publications are the following Traité théorique et pratique des operations de banque (1853, 6th ed., 1876) Manuel des affaires (4th ed., 1883), Traité d'économie politique (1858, 3d ed, 1890), and Liberté et so-cialisme (1868), in which, as in several others of his writings, he defends the principle of ındıvıdualısm Principles of J S Mill and some of the writings of W G Sumner

COURCILLON, PHILIPPE DE See DANGEAU COURDE DE MONTAIGLON, A. DE

MONTAIGION, A DE COURDE DE

COUREURS DE BOIS, koo'rêr' de bwa (Fr, Canadian bushiangers of the wood runners) seventeenth century who forsook their families and homes and took to the woods to engage in the beaver trade The movement became so general that whole communities were virtually deprived of their male support, and much destideprived of their male support, and much destr-tution ensured Stringent measures to restrain the movement were taken by the French King, but without much result. The rangers, declared outlaws, built palisade forts at Detroit, on Lake Superior, and at various points in the West and Northwest

COURIER, koo'ri-er (OF, Fr courrier, runner, from courtr, Lat currere, to run) bearer of dispatches or letters, usually sent on public business Such messengers were extensively used up to comparatively recent yearsindeed, until the establishment of the postal and telegraph systems Organized courier service existed among the Medes, Assyrians, and Egyptians from very early times, and relays of runners were employed by the ancient Greeks until the system of mounted couriers was introduced by the Persians Among the Romans the change from nunners to mounted men took place in the time of Augustus During the Middle Ages, besides the staff of couriers in the service of sovereigns, the English and French nobility employed professional runners, called in France laquats and in England "running footmen" They were an elaborate costume, and carried a long cane topped with a large, hollow silver apple containing provisions for the journey Towards the middle of the fifteenth century formal permission was given to the government couriers of Germany and Spain to carry unofficial letters

In modern times correspondence between diplomatic representatives and their home government is sometimes conducted by means of special couriers, who, unless they happen to fall into the hands of a hostile power in time of war, are considered inviolable messengers. The office of King's messenger in the English diplomatic service used to be an honorable and coveted position, but is now practically obsolete The word "courier" also signifies a hired attendant who accompanies travelers abroad, and whose special duty consists in making arrangements for the journey, attending to passports, settling hotel bills, and the like An important qualification for a courier in the latter capacity is the ability to speak several foreign languages

COURIER DE MÉRÉ, koo'rya' de ma'1a', PAUL LOUIS (1772-1825) A French Liberal politician and classical scholar He was born in Paus Jan 4, 1772 entered the army in 1792, and served without distinction until 1809, pursuing his studies as he found opportunity, and publishing unimportant critical articles and translations He from his youth cherished a bitter aversion to the nobility and a passionate love of Greek literature On resigning from the aimy he went to Florence and discovered there a com-plete manuscript of the Greek pastoral Daphnis and Chloe (see Longus), which he edited (1810) and translated into exquisite French At the Restoration (1815) he became active as a political pamphleteer, writing letters for Le Censeur, comparable to Les promneiales of Pascal or the satures of Junius Fined and imprisoned for his Simple Discours (1821) ridiculing a plan to endow the royal family, he published a report of his trial that had a sensational success throughout France His last political satire, Le pamphlet des pamphlets (1824), is among the bitterest and best, witty, classical in form and scholarly allusion, epigrammatic in its common sense A few months after, he was assassinated (April 10, 1825), by whom the government could or would never discover His rare style has saved his writings from oblivion Through communication with the classics he acquired a poetic grace, a vividness of description, and a Socratic irony which transformed vituperation into litera-Courier's Œuvies complètes were pubhished in 4 vols, with an essay on his life by Armand Carrel (Pans, 1830, new ed, 1890) Consult Gaschet, La jounesse de Paul-Louis Courser, étude sur sa vie et ses œuvres de 1772 à 1812 (ib, 1911), and the same author's Les pastorales de Longus, édition critique, suivie d'une étude sur l'essai de style weilh de Courier (1b., 1911); Schwab, Vie politique de P-L Courier (Meioure de France, 1909), Sainte-Beuve, Causeires du Lundi, vol. vi (1857-72).

COURLAN, koordan (Fr. probably from native South American) The French book name for a limpkin (Aramidæ), called also "crying bird" and "mad widow" (viuda loca) by

Spanish Americans See Limpkin

COURLAND, koor'land, or KURLAND (trans of Lett Kursemme, from Kur, Finnish tribe inhabiting the region in mediaval times + semme, land, OCh Slav zemlya, OPruss same, land, Gk xaual, chama, on the ground, Lat. humus, soil) One of the "Baltic provinces", a government of European Russia, bounded by the Gulf of Riga and the Government of Livonia on the north, Vitebsk on the east, Kovno on the south, and the Baltic Sea on the west (Map Russia, B 3) Aiea, 10,435 square miles The surface is undulating, broken only by isolated hills, while the coasts are very low There are a number of lakes, and a large portion of the area is covered with forests The climate is damp, with very cold winters. The chief occupations are agriculture, cattle raising, and fishing There are also a number of breweries, distilleries, and textile mills, but the manufacturing industries are very little developed commerce, on the other hand, is considerable. The seaport of Libau is the commercial centre. Courland had a population, Jan 1, 1911, of 749,100 Letts form the bulk of the population, a few owning farms, but the majority working as agricultural laborers Large estates are scientifically conducted under German management, and produce cereals, flax, potatoes, etc majority of the population are Lutherans Capital, Mitau

Courland came under the rule of the Teutonic Order in the thirteenth century In the second half of the sixteenth century it became an hereditary duchy under the sovereignty of Poland After a long internal struggle between the Russian and the Polish parties the duchy came under Russian influence with the appointment of Biion as Duke of Courland in 1737 It was annexed to Russia in 1795 In 1905 it was the scene of a violent revolutionary uprising

COURLAND, DUKE OF See BIRON, ERNST

COURNOT, kooi'no', Antoine Augustin 1801-77) A French mathematician, philoso-(1801-77)pher, and economist His work in philosophy was important, anticipating in some particulars the doctrines of Bergson relating to the adjustment of rational processes to manimate physical nature and their consequent inadequacy for the analysis of vital phenomena But his fame rests chiefly upon his application of mathe-But his fame matical methods to the investigation of problems of economic theory The chief results of Cournot's studies were the simplification of the theory of the equilibrium of demand and supply, the discovery of the theory of monopoly price now generally accepted in its essentials by economists, and a theory of the incidence of excise and customs taxes levied under conditions of monopoly and of competition which, as further elaborated by Marshall, Bastable, and Seligman, is generally accepted in public finance Perhaps the most important service of Cournot to economic and social science was his demonstration of the applicability of the mathematical theory of probabilities to the problems of statistics His most important works are Recherches sur les principes mathématiques de la théorie des richesses (1838), Exposition de la théorie des chances et des probabilités (1843), Traité de l'enchamement des idées fondamentales dans les sciences et dans l'histoire (1861), Principes de la théorie des richesses (1863, revised under the title Revue sommaire des doctrines économiques 1877), Considérations sur la marche des idées et des événements dans les temps modernes (1872)

COURSE OF TIME, THE A religious epic

in blank verse by Robert Pollok (1827)
COURS'ER (Fr. courser, from OF, Fr.
course, Lat cursus, course, from currere, to
run) The French name of 8 or 10 species of plovers of various genera inhabiting desert re-gions of Africa and Asia The best known is the cream-colored courser (Cursorius gallicus), common on and plains from the western Sahara to northern India All are sand-colored above, swift-footed, and wary, and conceal themselves by simply squatting and remaining motionless and so practically invisible, their food consists of insects, mainly locusts The name "blackbacked courser" is frequently given to the crocodile bird (q v )

COURS'ING (from course, OF, Fr course). The pursuit of a hare by greyhounds, who follow it by sight and not by scent, is one of the most ancient of field sports Arrian (150 AD) made its history the subject of much research. There are two kinds of coursing-"open," which may be described as the haphazard pursuit of any hare that can be discovered, without regard to any set rules or regulations, and "close" coursing, in which the course is determined by fixed boundaries, or otherwise fenced in In the latter case the hares, which have been previously secured, are released, and after sufficient law (time or distance) has been allowed them, the dogs are slipped, and the pulsuit begins Both these kinds of coursing are practiced under similar jules in Great Britain and America The oldest coursing club in England was that established at Swaffham in Noifolk in 1776, and of existing organizations the most important is the Altear Club, established in 1825. In America the sport has been in existence since the middle of the nineteenth century, but open meetings, in which competitors from regular or-ganizations take part, are of comparatively recent date The supervising and controlling body of the sport is "The American Coursing Board, and the principal meets, or meetings, are in the two Dakotas, Kansas, Nebiaska, Iowa, and Minnesota The open coursing of the coyote (prairie wolf) is frequently practiced (especially by stockmen and cowboys) in this country and is an exciting and somewhat dangerous sport, often involving a long chase on horseback over a rough country

In England the sport is conducted under the laws and rules of the National Coursing Club, and the principal meet is that held every February over the Altcar Course near Liverpool, for the Waterloo cup, a prize instituted in 1836 It was originally an 8-dog course, increased the next year to 16, the year after to 32, at which it stood until 1857, when it became a 64-dog The best dogs stake, and as such it remains of the world compete In competitions the judge follows the dogs throughout the course, noting every movement from the moment they are slipped until the "kill," or conclusion of the course—his decision being based on the following general rules I For speed, according to the degree of superiority shown, 1, 2, or 3 II. For the go-by—the starting of a greyhound a clear length behind its opponent, passing it in a straight run and obtaining a clear length ahead -2 points or, if gained on the outer circle, 3 points III The turn-a sharp turn of not less than a right angle in the hare's course when pressed by a dog, 1 point IV The wrench a change of less than a right angle in a hare's course when pressed, one-half point V kill, 2 points, or in a descending scale in proportion to the ment displayed, which may be of no value VI The trip—an unsuccessful effort which threw the hare off its legs, or the getting so close as to snatch it and lose hold, I point Consult The Encyclopædia of Sports and Games, ed by the Earl of Suffolk (London, 1911)

COURT (Fr cour, It courte, from Lat cohors ndlosure, from oo, together + \*hors, connected with Lat hortus, garden, Gk xépres, ohortos, hay, Oir gort, sedge, Goth gards, court, OHG. garto, Ger. Garten, AS geard, Eng yard; Courts, in the legal sens—i.e., authorities empowered to try and punish persons charged with offenses against the public or state, and to settle disputes regarding the nights and duties of individuals—have existed among all peoples that have emerged from savagery There is no single root from which early judicial authority springs; nor is there, even among the Aryan peoples,

any single typical form of primitive court The right of the community to punish offenses against the community—a right which expresses itself originally in lynch law—may beget a popular jurisdiction in criminal cases, and the interest of the community in preventing feuds may make the popular assembly competent to decide civil cases The belief that flagrant breaches of the social order are offenses against the gods may vest criminal jurisdiction in the priests, and the duty of the priests to see that vows and promises under oath are performed may be expanded into a fairly broad civil junis-diction. The attribution to the king of disciplinary powers over the popular army, and the concentration in his hands of the power of preserving internal peace, may create an extensive royal jurisdiction over crimes and also over torts, and the king's civil jurisdiction may be widened by ascribing to him a patriarchal authority analogous to that exercised by the heads of houses and of clans Private disputes may be referred, voluntarily at first, to the decision of king or priest or assembly, and when such references have become customary the duty of decision may be transformed into judicial authority Traces of all these ideas and influences are discernible in the early judicial systems of the Aryan peoples

Roman Courts. Among the ancient Romans criminal jurisdiction was exercised by the King or by officials appointed by the King From the decisions of such officials appeal to the popular assembly was sometimes granted In the Republican period such an appeal (provocatio) lay against all sentences condemning a citizen to death, or scourging, or exile, and also against fines beyond a certain amount, and this appeal became the real trial The forms observed were substantially the same as in legislation A proposal to condemn the accused to a certain punishment was submitted to the people, debated before them in informal assembly (contro), and accepted or rejected by them in formal assembly (See COMITIA ) During the last (comitia) (See COMITIA) During the last century of the Republic criminal courts of a different type, the quæstiones, gradually absorbed the jurisdiction previously exercised by the assembly The quæstio was a body of select jurors sitting under the presidency of a special magistrate, usually a prætor The jurors were drawn from a small panel, which included only the most distinguished and wealthy citizens

Civil jurisdiction, also, is said to have been exercised by the Roman kings. It is probable, however, that the King did not decide the controversies submitted to him, but, like the prætor in later times, heard the pleadings only and then sent the parties to a nidem, or referee, nominated (or at least accepted) by the parties themselves It also seems probable that, in the royal period, the referees were usually priests (pontifices) In the Republican period there were elected boards of judices (decemviri, centumviri), to which cases were sent by the prætor, but reference to a single judex, regularly a senator, seems to have been customary in actions on tort or on contract, and was admissible, during the last century of the Republic, in all

The fundamental principle which controlled the administration of civil and criminal justice, and the composition of the courts, in the Repubhean period, was the separation of jurisdiction (1988) and judgment (1994) Pleas were made and the case was formulated before a magistrate, but the decision was rendered by a private citizen or by a body of private citizens In the Imperial period this system (ordo judiciorum) was gradually supplanted by the cognitio extraordinaria, in which an Imperial official conducted the trial and rendered the decision Under this system the administration of justice was taken out of the hands of the people and became a part of the general administration created and controlled by the Emperor As in the general administration, so in the administration of justice, there were courts of lower and higher instance, and appeals could be taken from the former to the latter

Teutonic and Mediæval Courts The primitive Teutonic court was a folkmoot, or popular court, in which the decision was proposed by the presiding dignitary (king or prince or hundredman), or by a law speaker appointed by the presiding dignitary, and was approved or disapproved by the assembled freemen In the later Frankish (Carolingian) Empire, special judgment finders (scabin, Schoffen, échevins) gradually took the place of the body of freemen These judges or assessors were at first appointed by the count, but, after the dissolution of the Empire, their office, like most offices, be-

came hereditary

The early Teutonic courts were those of the hundred, of the county, and of the tribe In the Frankish Empire the court of the tribe was replaced by the royal court, held by the count palatine, and in the Carolingian period circuit courts were held by Imperial missi Even in the Carolingian period the courts of the hundred and of the county were being supplanted by manorial courts, held by the bailiffs of the seigneurs, and after the dissolution of the Empire the popular free courts disappeared in many parts of Europe During the Middle Ages ap-peared special feudal courts and independent city courts Nearly all the mediæval courts were courts at once of first and last instance, there was no system of appeals, the King's court was usually nothing but a feudal court for the great vassals In all of these courts, from the King's court down to the manorial court, the decision was usually rendered (or at least approved) by a limited number of judges or assessors, who were regularly the pares of the defendant—1 e, persons of the same class and rank Throughout the Middle Ages there were also special ecclesiastical courts (see Canon Law), with jurisdiction not only over church matters, but over the persons of the clergy and over many matters to-day regarded as civil In these courts the judicial organization and procedure of the late Roman Empire were perpetuated From the ordinary (bishop's) courts appeals ran to Rome, and the Pope could appoint legates to hold special courts

Modern European Courts When the administration of justice was reorganized by the absolute monarchy, the new royal courts were modeled on the ecclesiastical courts of the Middle Ages Professional or "learned" judges replaced the mediaval lay judges, the judge or bench of judges rendered decision both upon the law and the facts, appeals ran from the courts of lower instance to those of higher, and finally to the King's court The modern European courts are still, essentially, courts of this Roman-Imperial-ecclesiastical type, except that the court of last instance has usually cassational jurisdiction 181 COTTRA

only, not reformatory jurisdiction The only important modification which has been introduced is jury trial in criminal cases Lav assessors have been retained or reintroduced, in some countries, in the police courts and in the commercial courts. These latter courts, with special jurisdiction over merchants and commercial cases, are survivals of the independent city courts of the Middle Ages The number of judges in a European court is usually proportional to the amount of business with which the court has to deal In the larger courts the judicial force is divided into sections (sometimes teimed "senates"), and the judicial business is distributed according to its charactercriminal cases going to one section, commercial cases to another, etc. When a doubtful question of general importance comes before such a section, a session of the entire court may be called In all the leading European states the independence of the judge is safeguarded by life tenure and fixed salary, and in the German Empile by the rule that a transfer, even when it is technically a promotion, cannot be made without the consent of the judge concerned

English and American Courts Originally of wider signification, the term "court" has come to represent a permanent organization or tribunal for the public administration of justice, composed of one or more judges, who, when engaged in the transaction of business, are attended ordinarily by attorneys and counselors, who represent the litigants, by clerks, who keep records of what is done, and by marshals, sheriffs, constables, or like officers, who enforce judicial mandates and preserve order

In primitive communities courts legislative and executive as well as judicial functions The scyresgemot, county court, or sheriff's turn of Anglo-Saxon England was not simply a judicial tribunal presided over by a bishop and sheriff, but was an assemblage of freemen for the discussion and transaction of local affairs generally The Aula Regis, or Great Council of the Kingdom, in early English history performed legislative as well as judicial duties, and so did the stated assemblages of the ruling class in some of the English colonies in this country In Massachusetts the present names of the legislative and the judicial bodies-the General Court and the Supreme Judicial Court respectivelybear testimony to the fact that the primitive court of the colony performed both legislative and judicial functions

I English courts may be classified in various ways One basis of classification is their relative authority, and this divides them into superior and inferior courts (a) The latter class includes those tribunals over which courts of the former class may exercise a supervisory jurisdiction by writs of mandamus (qv), certiorari

(qv), or prohibition. They are of four kinds 1 Local courts of criminal or quasi-criminal jurisdiction, such as borough sessions, held by a recorder of the justices of a municipal borough, heensing sessions, held by borough justices for granting or withdrawing liquor licenses, petty sessions and special sessions, or courts held by two justices or a borough police magistrate in the exercise of a summary jurisdiction over minor offenses, general or quarter sessions of the borough and of the county, for the trial of felonies and misdemeanors within the borough or county jurisdiction, and for appeals from petty and special sessions 2 Local court courts of record, such as borough civil courts and county courts. The latter are lineal descendants of the scyresgemots of King Alfred, but their piesent constitution, jurisdiction, and practice are regulated by the County Courts Act, 1888 (51 and 52 Vict c 43) Under this statute, England, with the exception of London, is divided into 491 county-court districts, each court having a judge who must be a barrister of at least seven years' standing, and who is appointed by the Lord Chancellor, is allowed traveling expenses (except the judge within the Duchy of Lancaster, who is paid by salary), is addressed as "His Honor Judge and ranks next after knights bachelors Some of these judges have a high professional reputation From the decisions of these courts an appeal lies in many cases to the High Court, and the latter possesses the power of supervising the proceedings of the former by writs of certiorari and prohibition, and by orders to show cause, which have been substituted for the old writ of mandamus

3 The university courts of Oxford and Cambridge, which exercise civil jurisdiction in some cases in which members of the university

are concerned

4 Manorial courts, having a limited jurisdiction in some parts of the kingdom

MANOR, COURT BARON
(b) The superior courts of England, prior to
the Judicature Act of 1873, embraced those of
Common Law and of Equity, the Probate and Divorce Court, the Admiralty Court, and the London Court of Bankruptcy The superior courts of common law and of equity were evolved from the Aula Regis, or Great Council of the Kingdom It was provided by Magna Charta that "common pleas shall not follow one court, but shall be holden in some certain place" Accordingly new justices were appointed, and the Court of Common Pleas was established at Westminster Hall, with jurisdiction over all civil actions between individual litigants, i.e. over all common pleas or suits, as distinguished from pleas of the crown or criminal actions A century later Edward I detached from the Aula Regis the Court of King's Bench, the Court of Exchequer, and the Court of Chancery, thus settling the superior courts of law and equity upon the basis which they occupied until recently

Ouginally the King's Bench (or Queen's Bench during the reign of a queen) was a criminal court and the conservator of the public By a series of fictions, however, its jurisdiction was extended to civil actions

So the Exchequer, which at first was a court of revenue only, extended its jurisdiction by a series of legal fictions to a variety of suits be-

tween individual litigants
Under Edward I the Court of Chancery (qv) became an established judicial tribunal It was presided over by the Chancellor, who had the custody of the Great Seal, and with it the power to issue writs returnable in chancery, and thus to act as a check upon the common-law courts Later the Lord Chancellor was assisted in the performance of his judicial functions by the Master of the Rolls and by vice chancellors For the influence of this court upon the development of English law, see Chancery, Equity
(c) Reference has been made already to the

fact that one of the presiding officers of the Anglo-Saxon local courts was a bishop. After

the Norman Conquest the bishops ceased to take part in those assemblies and were accorded exclusive cognizance of spiritual matters. This jurisdiction was steadily extended until it embaced not simply the discipline of the clergy and the regulation of exclesiastical affairs, but also the control of marringe and divorce, and the disposition of the estates of deceased persons At present, however, exclesiastical courts in England are confined to the decision of exclesiastical questions, while divorce and matrimonial causes, as well as the probate (q v) of wills and testaments and the administration of decedents' estates, are within the jurisdiction of secular courts.

(d) The Court of Admualty is one of great antiquity, having its origin, undoubtedly, in the period when the King was in truth the source of all judicial power. After the courts of common law, described above, acquired a degree of independence of the sovereign, they did not hesitate to issue writs of prohibition to the Court of Admiralty and to treat it as an inferior tribunal. Its present jurisdiction is mainly statutory.

The London Court of Bankruptcy was created and regulated by modern bankruptcy (qv)

statutes

(e) By a series of judicature acts, beginning with that of 1873, all of the foregoing secular courts were consolidated into one Supreme Coart This consists, at present, of two permanent divisions, one of which, styled His Majestly's High Court of Justice, has original jurisdiction of all actions formerly brought in either of the superior courts of common law or of equity, or in the admiratity, or probate, or divorce, or bankruptey courts, and an appellate jurisdiction over various cases brought up from inferior courts. The other division is styled His Majestly's Court of Appeal, its jurisdiction being almost exclusively appellate. The High Court is separated into three parts, known respectively as the Chances y Division, with the Lord Chancellor as president and 14 judges, and the Probate, Division, with a president and a judge, the general character of the subjects of which each division has cognizance being indicated by its me.

The Court of Appeal consists of the Lord Chancellor, every living person who has held the office of Lord Chancellor, the Lord Chief Justice, the Master of the Rolls, the president of the Probate, Divorce, and Admiralty Division, and five judges, with the title of Lords Justices of Appeal I is an august tribinal, whose decisions of appeals from the various branches of the High Court command great respect

In addition to this permanent and impressive Appellate Division of the Supreme Court, there are divisional courts, in the King's Bench Division and in the Probate, Divorce, and Admiralty Division, composed of two judges, ordinarily, for the disposition of appeals from the petty of quarter sessions, from the county court, and from divers other inferor tribunals

(f) Above the Supreme Court, as a final court of appeal, is the House of Lords, whose appellate jurisdiction dates back to the thirteenth century. At present, however, only a few of its members take any part in the performance of its judicial functions. They are known as Lords of Appeal. The Lord Chancellor presides over them (See Lords, House of) The final cout of appeal for cases arising in India and the colonies is the Pivy Council (qv), which has also final appellate jurisdiction over judgments of the ecclesiastical courts and of the Naval Prize Court

From the foregoing sketch of the English courts it is apparent that a hitigated case may be passed upon by four successive tribunals. It may be instituted, e.g., in a county court, thence appealed to a divisional court, thence to the Court of Appeals, and finally to the House of Lords. A similar series of appeals may terminate in the Print Council.

mmate in the Privy Council
II In the United States distinct systems of
courts exist—one organized under the Federal
Constitution and statutes, the others under the
constitutions and statutes of the several States

- 1 Federal Courts. (a) Sec 1 of Art III of the Federal Constitution declares that "the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may from time to time establish" By the second section of the same article, as modified by the Eleventh Amendment to the Constitution, the judicial power of these courts is extended to all cases in law and equity arising under the Federal Constitution, laws, and treaties, to all cases affecting foreign ambassadors, ministers, or consuls, to all admiralty and maritime cases, to controversies to which the United States shall be a party, to controversies between two or more States, between citizens of different States, between citizens of the same State claiming lands under grants of different States, between a State or the citizens thereof and foreign States, citizens, or subjects, and to suits by a State against a citizen of another State
- (b) Under the power conferred upon it to establish judicial tribunals inferior to the Supreme Court, Congress has established a Court of Claims, district courts, and circuit courts, the latter having formerly an extensive original junisdiction, but now, by a recent Act of Con-gress (Judicial Code, 1911), only an appellate jurisdiction Besides these it has provided for various courts in the Territories The latter are not, however, United States courts under Article III of the Constitution, but are rather congressional courts They are called into being as an incident to the congressional authority to make all needful rules and regulations respecting the territory of the United States Their judges are not entitled to hold office during good behavior, but may be appointed for a term of years, and may be subject to suspension or removal from office by the President.

(c) The Court of Clasms was established in 1855 to hear and determine certain classes of claims against the United States, thus permitting citizens in many cases to sue the government See Claims. Court or

(d) The Commerce Court, instituted by Act of Congress for the enforcement of orders and decrees of the Interstate Commerce Commission (qv), with power to set aside, modify, or annul such orders, consisted of five circuit judges of the United States. After a biref existence it was abolished by Act of Congress, 1914.

(e) By the Act of 1789 the States were divided into 13 districts, which have increased to 76 (1906), each district usually having a judge, a clerk, a marshal, and an attorney appointed by the Federal government. The distruct courts have an extensive jurisdiction, embracing jurisdiction over admiralty (qv) and maritime causes, suits arising under the revenue laws, the civil-rights statutes, and various other legislation, prosecutions for crimes against the United States or for the recovery of penalties under Federal laws. proceedings in bankruptey, and many other subjects of Intigation See DISTRICT COURT

(f) By an Act of Congress passed in 1911 (the Judiciary Code), the appellate jurisdation formerly exercised by circuit courts was transferred to the circuit courts of appeal, of which there are nine—one in each circuit. Each of these courts consists of three judges, any two of whom constitute a quorum. Its members are selected from the following list the Supreme Court justice assigned to the circuit in question, the circuit judges and the district judges of that circuit, but no justice or judge is allowed to sit in this tribunal in a case which was trued before him while holding a circuit or district court. It is apparent, therefore, that the personnel of these courts changes frequently

(g) The final appellate tribunal of the Federal judiciary is the Supreme Court, which is unique and probably the most influential judicial body in the would See Supreme Court of the United States

The State courts are modeled after those of England It is true they do not include admiralty nor ecclesiastical tribunals, but this is because admiralty and maritime jurisdiction is confined exclusively to the Federal courts by the Federal Constitution, and because there is no state church in any of the various States That part of the powers of the English ecclesiastical courts relating to the estates of deceased persons and kindred subjects has been devolved in many States upon tribunals bearing various names, such as surrogates', probate, or orphans' courts Most of the local or inferior courts, however, as well as the superior courts of law and of equity, were copied by State constitutions and statutes from English originals In many of the States courts of chancery (qv) and of common law (qv) have been united into a single supreme court It is impossible in this article to describe the judiciary system of each of the States, for in matters of detail they differ not a little, but a brief sketch of the New York courts will give the reader an idea of those existing in other States

(a) To some extent these courts correspond to the territorial subdivisions of the State example, each town (qv)—the territorial unit in New York—is required to elect justices of the peace (qv), who are empowered to hold courts and to exercise a limited criminal as well as civil junisdiction In each county a county court is provided for, and also a surrogate's court, although in some counties these courts are held by the same judge Other local courts, with a limited jurisdiction, have been erected by the Legislature, especially in cities and large villages The Supreme Court possesses a general jurisdiction in law and equity throughout the State It is composed (1914) of 100 justices, each of which is empowered to hold court in any county, although they are not elected by the State at large, but each is chosen by the electors in one of the nine judicial districts into which the State is divided Some of these justices hold courts for the trial of cases or the determination of motions, while others, upon the selection of the Governor, constitute four courts of appeal, called appellate divisions, the State being divided into four departments, in each of which one of these courts has appellate jurisdiction. From determination by an appellate division an appeal may be taken in many cases (see Art VI, § 9, of New York Constitution) to the Court of Appeals, the highest regular judicial tribunal of the State, from whose decision there is no appeal I teonsists of a chief judge and six associate judges A Court of Impeachments is also provided for by the State constitution. This, however, is not a regular, but an extraordinary, tribunal, which rarely assembles

(b) In some States the Supreme Court possesses original jurisdiction and is also the final court of appeals. That is the case in Massachusetts, where an action brought in the Supreme Court may be tried and deedled by a single justice, and from his decision an appeal may be taken to the full court. In that State the Supreme Court is the final tribunal for appeals from the decisions of a single justice, also from the Probate Court, the Insolvency Court, and the Superior Court—the Superior Court, in turn, possessing both original and appellate jurisdiction, appeals running to it from ministral, district, police, and justice courts.

Consult Excyclopadia of the Lause of England (London, 1897), Curts, Jurisduction of the United States Courts (2d ed, Boston, 1896), Foster, Treatise on Federal Practice (Chicago, 1901), Cummings and Gilbert, Official Court Rules of New York (New York, 1900), the United States Constitution and Revised Statutes, the constitutions and statutes of the several States For a separate treatment of special courts, see individual titles such as COMMON PLEAS, COURT OF, SURROGATE, COURTS, MILITARY, PROBATE COURT, ABCHES, COURT OF, SUPPEMS COURT OF, SUPPEMS COURT OF THE UNITED STATES, ETC CONSULT also the authorities referred to under such titles as CIVIL LAW, ADMIRALTY LAW, PLEADING, ETC

COURT 1 A name originally applied to the square or space inclosed by the buildings of a feudal castle. In time it came to denote the persons immediately surrounding a feudal chief or superior. Its application is now confined to the residence and surroundings of sovereign plines, together with such peasons of distinction as are in the habit of approaching the monarch and of associating with the other members of the royal family, both in a public and a private capacity. In this sense its use is sometimes extended to the government of which the sovereign is the titular head, as when an ambassador is said to be appointed to (or "near") the court of St James, 1e, of Great Britain.

2 In architecture, an open space around which a building is constructed. The term is commonly used even where the space is not entirely surrounded, as in many modern public and commercial buildings which inclose three sides of a reserved space left open on the fourth An inclosed space is still called a "court" when roofed with glass, but not when covered with an opaque roof or vault it is then called a "hall"

In ancient times, before the invention of glazed windows, light and air for dwellings, as for temples, was obtained through unprotected openings. For greater safety and privacy such

COURT

windows, as well as the doors to the various rooms, were made to open upon a common area, walled in from the street or public land In order to economize footsteps as well as space, it early became the custom to build the house entirely around one or more such courts, as in Babylonian and Assyrian palaces, and the great Minoan palace group at Cnosus (qv) in Crete This arrangement of the house plan has persisted in various forms to the present day in the subtropical and warmer temperate climes It is seen in a highly developed form in Pompenan houses, in which different types of court were called "atrium," "cavædium," "peristyle," etc Except in the closer-built quarters of the cities, the houses in Spain and Spanish-American cities are still commonly built around a court called a patro In France, also, the larger city houses are built at the back of a court, of which the other three sides are occupied by the dependences, the entrance from the street being through an imposing doorway and passage called the porte-cochère, or carriage door

All the great palaces of Europe erected since the fifteenth century are built around courtyards (this term is synonymous with "court") In this they follow the precedents set by the later feudal fortresses and castles, as at Chambord and Saint-Germain in France, the Louvre, Heidelberg Castle, and many others, sometimes following the very outline of the mediæval bailey The Alhambra and several other Moorish buildings in Spain preserve for us the rich decoration of the Moslem courtyards of the twelfth to the fifteenth centuries. In Italy the Renaissance architects developed several types of court architecture, and made of the courts of their palaces structures of extraordinary beauty and dignity. Three main types are recognizable the Florentine, in which the upper walls of the court are borne on an arcade of arches carried by columns, the Lombard, in which the court areade is in two superposed stories, and the Roman, in which the areade in one or more stories does not carry the court walls, and is designed after the Roman fashion, with arches boine on piers fronted by columns or pilasters The Riccardi and Strozzi palaces and the Palazzo Vecchio at Palace at Bologna and the Brera at Milan, the second, the Farnese Palace at Rome, the third of these types Incomparably the finest of French courtyards is that of the Louvre at Paris Perhaps the most famous of European courts is the lesser Belvedere Court of the Vatican at Rome, which has given its name to two celebrated sculptures exposed in or near it—the Apollo and the Hercules torso, next to it in artistic fame is the court of San Damaso, with its beautiful arcades called the Loggie, decorated by Raphael and his succes-sors In England and the United States and other northern countries the court is usually less an architectural than a utilitarian feature to provide light and air, and as such its minimum dimensions are prescribed by the laws of many cities in the case of dwellings and tenements The Public Library of Boston is a fine example among the few modern public buildings in the United States which are built around an architecturally imposing court

Closely related to the courts of houses and palaces are the cloisters (qv) or cloister garths of monasteries and cathedral chapters the forecourts or atria of ancient basilicas, surrounded by arcades, as at San Ambrogio, Milan (see ATRIUM), the courts of ablution of Mohammedan mosques (see MOSQUE), and the great pillared courts of Egyptian temples House, Palace

COURT, CONTEMPT OF See CONTEMPT COURT, PRESENTATION AT What in n What in monarchical countries is considered the honor of being presented at court or formally introduced to the sovereign, is valued not only for the eclat of the ceremonial, but also for its service as a credential Having been received by his own sovereign, a person may expect to be received anywhere else, and may claim to be presented by the representative of his country at any foreign court The privilege is therefore carefully guarded from abuse Thus Queen Victoria, fully guarded from abuse. Thus Queen Victoria, during her long reign, exercised the most scrupulous personal supervision over the names of those who sought the honor, excluding all whose reputation was in the least tarnished. In England the names of those desiring to be pre-sented and of their presenters must be sent to the Lord Chamberlain's office several days previously for approbation. Those who are not British subjects may be presented by their own Ambassador An elaborate ceremonial, including the wearing of full court dress, is connected with the ceremony. For fuller information as to court dress, etc, consult Armytage, Old Customs and Modern Court Rules (London, 1883), Trendell, Dress Worn at His Majesty's Court, Issued with the Authority of the Lord Chamberlain (1b, 1908), Hodgetts, The House of Hohenzollern Two Centuries of Berlin

COURT, KOOT, ANTOINE (1696-1760). French Reformer, called the "Restorer of Protestantism in France" He was born at Villeneuve de Berg, in Languedoc, March 27, 1696. His parents were peasants, adherents of the Reformed church, which was then undergoing cruel persecution When but 17 years old, Court began to speak at the secret meetings of the Protestants, held literally "in dens and caves of the earth," and often in darkness, with no pastor present to teach or counsel He entertained a great desire to build up the church so ruthlessly persecuted, and to this end he proposed four things (1) regular religious meetings for teaching and worship, (2) suppression of the fanaticism of those who professed to be inspired, and of the consequent disorders, (3) restoration of discipline by the establishment of consisteries, conferences, and synods, (4) the careful training of a body of pastors To the performance of this great task he devoted his life From audiences of half a dozen meeting in secret, he came to address openly 10,000 at one time In 1715 he convoked the first Synod of the Desert In 1724 further fury was hurled at the Protestants in a decree which assumed that there were no Protestants in France and prohibited the most secret exercise of the Reformed religion price was set on Court's head, and in 1730 he fled to Lausanne There, after great exertion, he founded a college for the education of the clergy, of which, during the remaining 30 years of his life, he was the chief director. This college sent forth all the pastors of the Reformed church of France until the close of the eighteenth century He died at Lausanne, June 13, 1760 Court intended to write a history of Protestantism and made extensive collections for the purpose, but he did not live to do the work He wrote, however, An Historical Me-monal of the Most Remarkable Proceedings Against the Protestants in France from 1741-51 (Eng trans, London, 1732), Historie des troubles des Cérennes ou de la guerre des Camsards (1760, new ed, 3 vols, Alais, 1819) Consult his Autobiography, ed by E Hugues (Toulouse, 1885), his *Letters*, from 1739, ed by C Dardier (Paris, 1885, 1891), E Hugues, Antonie Court (1b, 1872), 1d, Les synodes du désert (3 vols, 1b, 1885-86), H M Baird, The Huguenots and the Revocation of the Edict of Nantes (New York, 1895), Bulletin de la Nantes (New York, 1999), Buttern at a Société de l'Histoire du protestantisme français (Paris, 1893-1996)—His only son, Antoine Court de Gebelin (born at Nîmes Jan 25, 1725, died in Paris May 10, 1784), who took the name of his grandmother, was a literary man of recognized rank, and rendered excellent service, first as his father's amanuensis and assistant and afterward as a scholar at the capital. He is remembered in connection with the famous case of Jean Calas (qv) by his work Les Toulousaines, ou lettres historiques et apologétiques en faveur de la religion réformée (Lausanne, 1763)

COURT BARON (Lat Curia Baronis) mediæval England, the local court of a manor Such courts were incident to every manor, barony, or lordship of land, in the Norman and Angevin period of English history, and in subsequent ages came to be regarded as the characteristic and essential quality of a manor, insomuch that Coke declares that "a court baron is the chief prop and pillar of a manor, which no sooner faileth, but the manor falleth to the ground" Being of customary origin, and custom being a matter of immemorial usage, no new courts baron, and consequently no new manors, can be created, and it is asserted by Blackstone that all manors existing in his time "must have existed as early as King Edward the First" However this may be, the manorial courts of which we have any knowledge are of great antiquity, though those that remain have by successive acts of Parliament and social changes been reduced to mere shadows of their former authority and importance, most of them having to-day only a nominal existence

The court baron was and is the court of the receividers of the manor. The lord, or his steward, is the presiding officer of the court, which is composed of those freehold tenants of the manor who owe, as one of the services or incidents of their tenure, the service of "suit," or attendance, at the court. While the judicial functions of the customs of the manor, in general it exercised an ordinary jurisdiction in civil suits among the tenants of the manor, determined proprietary rights of land, regulated rights of common, sanctioned grants of the waste, etc. Until the reform of legal procedure in England in 1833, the great proprietary action for the recovery of land, known as the "writ of right," was properly instituted in the regular tribunals of the kingdom had long since brought safer and more convenient processes within the reach of persons asserting claims to land Many of the manorial courts have ded

out from the lack of a competent number of "suntors," ie, freemen subject to attendance at court

A species of court baron existed in the manors created by royal patent in the Province of New York in the seventeenth and eighteenth centuries. These were modeled after the historic courts baron of the mother country and for a time enjoyed considerable authority. They were abolished with the manors to which they were incident in the revolutionary legislation of 1787 Consult Bolton, History of the Several Tours, Manors, and Patents of the Country of Westohester, New York, Digby, History of the Law of Real Property (5th ed, Oxford, 1898), Pollock and Maithand, History of English Law (2d ed, London, 1899), Maithand, Select Pleas in Manorial Courts (Selden Society, 1889), Introduction, Gurdon, History. of Court Earon and Court Loct (ib, 1731). COURTENAY, kert'na, Edward Henney (1803-53) An American mathematician, born in Maryland He graduated in 1821 at the United States Military Academy, where until 1824 he was an assistant professor in 1829-34 he was professor of natural and experimental philosophy there, in 1834-36 professor of mathematics at the University of Pennsylvania, and in 1842-53 professor of mathematics at the University of Virginia He was an engineer in the construction, in 1837-41, of Fort Independence in Boston haubor, and in 1841-42 was chief engineer of the dry-dock work in the Brooklyn Navy Yard He tianslated and edited the Elementary Treaties on Mechanics of Boucharlat (1833), and prepared a Treatise on the Differential and Integral Calculus, and on the Calculus of Variations (1855)

COURTESY TITLES See TITLES OF HONOR COURT FOOL From very ancient times there existed a class of persons whose business it was to while away the time of the noble and the wealthy, particularly at table, by jests and witty savings. The custom is so old that it is mentioned in the great Sanskrit epic Ramayana (qv) Plutarch speaks of a jester owned by the King of Persia Philip of Macedon, Attila, Harun al-Rashid, and even Montezuma employed them Only in the Middle Ages, however, did the office of court fool become a regular and indispensable function At the end of the fourteenth century the fashion developed lapidly Queens, dauphins, dukes, and wealthy baions all maintained their fools. The symbols of such a personage were the shaven head, the fool's cap of gay colors with ass's ears and cock's comb, the fool's sceptre, which was variously formed, the bells, which were mostly attached to the cap, but in some cases to other parts of the dress, and a large collar The rest of the costume was regulated by the taste of the master. Of these professional fools, some obtained an historical reputation, as Triboulet, jester of King Francis I of France, and his successor, Brusquet, Klaus Narr, at the court of the Elector Frederick the Wise of Prussia, and Scogan, court fool to Edward IV of England. The kings and regents of Scotland had

their jesters and the sarcastic sayings of some of these privileged personages-such as those of Patric Bonny, jester to the Regent Morton-are still remembered English court jesters died out with the Stuarts, one of the last of the race being the famous Archie Armstrong (died Besides the regular fools recognized and dressed as such, there was a higher class, called "merry counselors," generally men of talent, who availed themselves of the privilege of free speech to ridicule the follies and vices of their contemporaries. Of these, Kunz von der Rosen, lester to the Empelor Maximilian I, John Heywood, a prolific dramatic poet and epigrammatist at the court of Henry VII, and Angeli, a French courtier, were particularly distinguished for talent and wit In all times there have existed at courts persons who, without becoming jesters by profession, were allowed the privilege of castigating the company by their witty and satirical attacks, or who served as an object for the wit of others Among these were the Saxon general Kvaw, celebrated for his blunt jests, and the leained Jacob Paul Baron Gundling, whom Frederick William I of Prussia, to show his contempt for science and the artificial court system, loaded with titles. Often imbecile of weak-minded persons were kept for the entertainment of the company The custom survived long in Russia, where Peter the Great had so many fools that he divided them into distinct classes, and kept them with him wherever he went As late as the mine-teenth century the Czar of Russia kept a jester at court, and in France just before the Revo-lution Marie Antonette had her fool Consult: Nick, Die Hof und Volksnamen (Stuttgart, 1861), Flogel, Geschichte der komischen Litteratur (Leipzig, 1784), Doran, History of Court Fools (London, 1858)

COURTYHOPE, WILLIAM JOHN (1842—), An English scholar and author, educated at Harrow and at New College, Oxford, where his career was most distinguished. He was professor of poetry at Oxford (1895-1901) and was appointed honorary fellow of New College in 1896. He gave promise of distinction in the kind of poetry exemplified in his Luddhia Luna (1869) and The Paradise of Burds (1870), but scholarship and criticism of a distinctively academic stripe came to occupy him almost exclusively. Among his more important works academic stripe came to occupy him almost exclusively. Among his more important works are Addison ("English Men of Letters Series," New York and London, 1882), The Luberal Movement in English Literature (1885), Lafe to Poetry (6 vols, ib, 1895-1909). He was made CB in 1892, and received the degrees of D. Litt and LLD respectively from Durham (1895) and Edinburgh University (1898). He also edited, with biography, the last five volumes of the standard edition of Pope (10 vols, 1871-89), which was begin with Whitwell as

COURT LEET (from court + leet, AS leade, OHG. lent, Ger Leute, people; connected with OCh Slaw Gudů, Lett laudis, people, and ultimately with Skt ruh, to grow) In English law, a local customary ourt of great antiquity and of a popular character, having a limited criminal jurisdiction. It has been declarêd to be "the most ancient court in the land for criminal matters, the court baron being of no less antiquity in civil," and it is supposed to have been derived from the Anglo-Saxon "folkmotic."

in contradistinction, perhaps, to the "hallmote," or court baion, which consisted of the free-holders, sitting in the hall of the manor

Though usually found in connection with manors, the leet was not, properly speaking, a manorial court There were town leets, borough leets, and hundred leets But it was in connection with the manor, to whose internal organization it was peculiarly adapted, that the court leet reached its highest development Though held by the steward, with the aid of the freemen of the manor (they were not required to be freeholders, as in the court baron), it was still regarded as belonging to the King It was, in effect, a royal magistrate's or police court, having complete jurisdiction only of minor offenses (misdemeanors) and the jurisdiction of a committing magistrate in cases of felony and treason These latter it referred to the superior tribunals of the country for trial and punishment The court has now completely lost its importance, having been superseded by the police and county courts, though it still has a nominal existence in some manors COURT BARON, MANOR, and consult the authorities referred to under Manon, also Jacob, Law Dictionary, title "Court Leet" (London, 1809) Pollock and Mattland, History of English Law (2d ed, London and Boston, 1899), Gur-don, History . of Court Baron and Court Leet (London, 1731)

COURTLEIGH, WILLIAM LOUIS (1869-)
An American actor, born at Guelph,
Ontario, Canada In 1889 he made his first
appearance on the stage in Brother and Sister
under John Dillon He appeared in more than
50 plays in Northern Lights (1896) as John
Swittbund, in The Great Northineset (1897) as
Donelli, and in Hedda Gabler (1898), A Rich
Mar's Son (1899), Lost River (1900), The
Merchant of Venuce (1901), Sherlock Holmes
(1905), What Ails You (1912), and Divorgons
(1913)

COURT OF LIONS The most famous court of the Alhambia, taking its name from 12 white marble hons from whose mouths streams of water flowed into a central alabaster basin The tiled court is surrounded by 124 columns delicately ornamented in filigree and colors, supporting a low gallery For illustration, see ALHAMBRA

COURT OF LOVE (Fr Cour d'Amour)
The name applied in the later Middle Ages to groups of noble ladies who often, while assembled to listen to the declamations of the troubadours, took occasion to decide upon questions of courtesy and etiquette, particularly in affairs of love According to some authorities these courts formed regular institutions during the twelfth century, the custom flourishing especially in Provence There was a code (still preserved) of 31 articles called De Arte Amatoria et Reprobatione Amoris, by André, a royal chaplain, who lived in the middle of the twelfth century Decisions are said to have been based upon this code A typical example of the questions submitted to such tribunals is the following If a lady listened to one admirer, pressed the hand of another, and touched with her toe the foot of a third, which of these three was the favored suitor? Among the eminent ladies who presided over these "courts" were Queen Eleanor of Guienne and her daughter Marie de France, Countess of Champagne René of Anjou, in the fifteenth century, made an ineffectual effort to resuscitate these "courts" Consult Meray, La vie au temps des cours d'amour (Paris, 1876), and Reynouard, Choix de poésies originales des

to obsdours, vol 11 (1b, 1817)

COURT OF LOVE, THE A poem assigned to Chaucer, but possibly of later origin It ap-

pears in the edition of 1561

COURT OF REQUESTS An inferior court of equity jurisdiction, instituted in the reign of Henry VIII for the purpose of affording relief to the Lord Chancellor Its authority was limited to cases coming within the jurisdiction of the High Court of Chancery, but deemed of too small importance to engage the attention of that august tribunal It was presided over by the Lord Privy Seal, assisted by judges known as Masters of Requests It never attained great importance, and was abolished by Act of Parliament in 1641 (Stat 16 and 17 Car I, c 10).

The courts of conscience were also known as

courts of requests Sec Conscience, Courts of

COURT OF SESSION The highest civil tribunal in Scotland, instituted in the reign of King James V The object of its institution was to discharge the judicial functions which originally belonged to the King and his council, and which, since 1425, had in a great measure devolved on a committee of Parliament, as the great council of the nation The Court of Session consisted at first of 14 ordinary judges and a president One-half of these judges and the president were churchmen, and the practice of appointing ecclesiastics to the bench did not cease for some time even after the Reformation The King had the privilege of appointing, in addition to the ordinary judges, three or four peers or members of his great council to sit and vote with the Lords of Session The president of the court was the Lord Chancellor His office was abolished at the union, and the practice of appointing peers to sit as members of the court gradually fell into disuse

From its foundation, till 1808, the Court of Session consisted of one court, in that year it was divided into what are known as the first and second divisions, constituting ordinarily two separate courts possessing coordinate jurisdic-tion The Lord President is still president of the whole court when called together for consultation, but on ordinary occasions he officiates simply as president of the first division. In 1830 the number of judges in the Court of Session was reduced to 13, and that is still the full number Of the five lords ordinary, only four sit daily. The judgments of the outer house, with a few statutory exceptions, are appealable to the inner house. The youngest pealable to the nner house The youngest judge, or junior lord ordinary, officiates in a separate department of the outer house, called the "bill chamber," where summary petitions and other branches of business peculiarly re-quiring dispatch are disposed of This department alone is open during the vacations of the court, the judges, with the exception of the Lord President and Lord Justice Clerk, officiating in it in rotation Either division of the Court of Session may call in the aid of three judges of the other, when equally divided in opinion In cases of still greater difficulty, the lords ordinary are also called in, and a hearing before the whole court, or *in presence*, as it is called, takes place Since the Act 31-32 Vict, c 100, no hearings before the whole court have taken place, the cases being decided on written arguments sub-mitted to the judges The judges of the Court of Session are appointed by the crown and hold their offices for life No one is eligible to the

Vol. VI --- 13

office unless he has served as an advocate or principal clerk of session for five years or as a writer to the signet for 10 years. See Court

WITET to the signet for 10 years. See Court COURTOIS, knortwar, Gustave Claude ETIENNE (1852— ) A French figure and portrait painter, born at Pusey, Haute-Saone He studied with Geröme in Paris and in 1889 won the gold medal at the Paris Exposition. His genre and historical pictures include "Narcisse" (Marseilles) and "Dante and Virgil in Hell" (Besançon). Among his recent works, exhibited at St Louis in 1904, are "Adam and Eve in Eden," 'Cupid Feasting," and a portrait of Mine G. From 1880 to 1890 he was the most fashionable portrait painter in Paris

COURTOIS, JACQUES (1821-76), called Le Bourgignon (the Burgundian) and known in Italy as Giacomo Cortese and II Borgognone. A Roman battle and historical painter and etcher. He was born in St Hippolyte (Franch-Comté) and was a pupil of his father, Jean Courtois, but went to Italy at the age of 15 and spent three years with the Spanish army in Lombardy He then worked in Bologna, Florence, Siena, and Rome, influenced successively by Guido Reni and Francesco Albani in Bologna, and by Cerquozzi and Pieter de Laar in Rome. Cerquozzi encouraged him to make battle scenes his specialty. His compositions, which usually represent cavalry combats, are remarkable for their fresh and spirited conception and their masterly treatment of light and atmosphere. They excited great admiration and found many imitators, and are to be seen in most of the principal galleries of Europe At the age of 36 he entered a Jesuit convent and thereafter de-voted himself to religious pictures. His brother GUILLAUME, or Guglielmo, also called Il Borgognone, painted frescoes in the Quirinal Palace

gognous, painted treates at the same and in several Roman churches, among others the Lateran Basilea and San Marco COURT PARTY, The A term applied as early as 1620 to the supporters of the political policy of the Stuart dynasty as opposed to the Country party, during the disputes of King and Commons At the end of the century the party represented high Toryism, Jacobitism, and High

Church principles

COURTRAI, koor'tra' (Flemish Kortryk). A town in the Province of West Flanders, Belgium, on the Lys, 26 miles southwest of Ghent (Map Belgium, B 4). Courtrai is built on both sides of the river, surrounded by walls, has a castle, a citadel, a fine old bridge flanked with Flemish towers, a noble town hall, and a beautiful Gothic church, founded in 1238 by Baldwin, Count of Flanders The town hall, dating from the sixteenth century and now restored, contains fine chimney pieces, frescoes, and statuettes Behind it is the museum of antiquities. In the church of Notre Dame is one of Van Dyck's most celebrated paintings, "Raising of the Cross." An old belfry is an interesting antique Table damask, cotton, woolen, and bleached goods, sugar, tobacco, and oils are the articles of manufacture for which Courtran is celebrated, as well as its Valenciennes lace and the excellent flax grown near by The city boasts a college, an academy of painting and architecture, and an industrial school. Pop., 1890, 30,400, 1905, 34,760, 1910, 35,872 Courtral dates back to Roman times, when it was called Cortornacum During the Middle Ages it On July was an important industrial centre 11, 1302, the Flemings, citizens of Ghent and

Bruges chiefly, numbering 20,000, won a splendid victory over 47,000 French beneath the walls of Courtrai. More than 700 pairs of golden spurs, worn by the Fleinch nobility, were gathered by the Fleinings, and the battle was henceforth called the "Battle of the Spurs" The town suffered greatly in the French wars of the seventeenth and eighteenth centuries

COURTS, CHILDREN'S OF JUVENILE See

JUVENILE OFFENDERS

COURTS, MILITARY Military courts are distinguished from evil courts both in their organization and procedure. They are divided into courts-martial and courts of inquiry, which in their various forms are described below.

their various forms are described below Courts-Martial (F1, military courts) statutory institutions for the enforcement of order and discipline in armies and navies. The American army is governed by a military code mainly derived from that of England The military tribunals instituted in America and England for the administration of this code do not differ materially in composition, power, or procedure The court of the constable and marshal recognized in the Statute of Richard II, c 2, appears to have been the first in England to administer military justice The office of high constable was abolished in the reign of Henry VIII, and with it lapsed all the criminal jurisdiction of this court. From this time until 1689, when military courts were recognized by statute, military law was administered by means of commissioners, by the general in command of troops, or by means of deputies appointed by him commissioners or deputies were usually officers of the aimy and constituted courts or councils of war. Some time prior to the passing of the Mutiny Act these councils of war were called courts-martial, and with few modifications are now the existing military tribunals

American courts-martial are instituted by authority of Congress, in pursuance of a power .. conferred by the Constitution, to try offenses committed while the party is in the military These courts are (1) the general courtservice martial, (2) the special courts-martial, (3) the summary courts-martial The jurisdiction of the general court-martial extends to every person subject to military law for any offense within the cognizance of a military court. It is the only military court that can try a commissioned officer, and it takes cognizance of the serious offenses committed by enlisted men The power to assemble a general court-maitial is given by statute to the President of the United States, the commanding officer of a territorial division or department, the superintendent of the military academy, the commanding officer of an army, a field army, an army corps, a division, or a separate brigade, and, when empowered by the President, the commanding officer of any district or of any force or body of troops The statute provides that a general court-martial may consist of any number of officers from 5 to 13 inclusive, and that it shall not consist of less than 13 when that number can be convened without manifest injury to the service The officers who are competent to appoint a court-martial are competent to appoint a judge advocate for the same judge advocate prosecutes in the name of the United States and is, under certain circumstances, counsel for the prisoner. He summons witnesses for prosecution and defense The original charges are sent to this officer, and if he considers any amendment necessary he communi-

COURTS

eates with the officer appointing the ccurt. When the convening officer has satisfied himself that the charge preferred discloses an offense under the Articles of War (qv), and that the evidence forthcoming is sufficient to justify the trial of the accused, he issues an order defining the place and time of the meeting of the count, and naming, in the order of their rank in the service, the offices who are to compose it

When a commissioned officer is to be tried, the officer appointing the court details, if he can, without piejudice to the service, officers of rank equal or superior to that of the accused He also avoids detailing the officer who has investigated the charges against the accused, or one who will be a principal witness against him, or the immediate commanding officer of the accused A member of a court of inquiry respecting the matter on which the charges are founded, or an officer who has a personal interest in the case, is not detailed. An officer who is the accuser or is a witness for the prosecution is forbidden by statute from sitting as a member of the courtmartial for the trial of the case in which he is such witness or accuser Court-martial procedure does not differ materially from that of the ordinary criminal courts of the country This court is, however, a judge of the law as well as of the facts of the case it tries Before it proceeds upon any trial the judge advocate administers an oath to each member which requires him, as a juroi, to well and truly try and determine, according to evidence, the matter before him, etc , and as a judge to duly administer justice without partiality, favor, or affection, etc This oath includes also one of secrecy as to the votes of members, and of the sentence of the court, until approved The judge advocate is also required to take a similar oath of secrecy Congress has power to prescribe not only the organization and jurisdiction of courts-martial, but also their practice, and the mode of executing their sentences It has secured to the accused a right of challenge to a member of his court, and immunity from a second trial for the same offense It has fixed the period of time within which the accused must be prosecuted. The form of procedure for a general court-martial is laid down in works treating of the subject of military law and in the "Manual for Courtsa government publication issued gen-Martial," erally to the service

Special Courts-Martial were established by the Act of Manch 3, 1913, which became effective July 1, 1913 By the operation of this act the garrison and regimental courts formelly provided for cases not capital were abolished. Special courts-martial may consist of any number of officers, from three to five inclusive, and a judge advocate. The same eligibility rules as in general courts-martial apply. Special courts-martial may be appointed by the commanding officer of a district, garrison, fort, camp, or other place where troops are on duty, and the commanding officer of a brigade, regiment, detached battalion, or other detached command, may appoint special courts-martial may in second courts-martial may in any case be appointed by superior authority when by the latter deemed desirable. Special courts-martial may tray any person subject to military law, except an officer, for any crime or offense not capital made punishable by the Articles of War. These courts have power to adjudge punishment not to exceed confinement at hard labor for six

months or forfeiture of pay for six months, or both, and in addition thereto reduction to the ranks in cases of noncommissioned officers. The procedure and record are the same as for general courts-martial, except that testimony is not ordinarily recorded

Summary Courts-Martial consist of one officer and may be appointed by the commanding officer of any fort, garrison, or other place where troops are on duty or of any regiment, battalion, or detachment Its proceedings are summary in character, and its record is meagre. It may try any soldier, except one holding a certificate of eligibility to promotion, for any offense not capital and may adjudge punishment not to exceed confinement at hard labor for three months or forfeiture of three months' pay, or both, and in addition thereto reduction to the ranks in cases of noncommissioned officers. The authority appointing a summary court approves or disapproves its action This court, as instituted in the United States, has no power to try capi-tal cases or commissioned officers In England this court has been instituted for the purpose of trying offenses committed in active service, which, with due regard to the public service, could not be tried by the ordinary courts. It is competent to try any officers, soldiers, or other persons subject to military law for any offense, and, if composed of three officers, can award all the punishments of a general court-martial

A Court of Inquiry is, in its function, analogous to a grand jury in civil procedure convened to examine into the nature of any transaction of, or accusation or imputation against, any officer or soldier in the service Unless specially ordered to do so, it does not give an opinion on the merits of the case it investigates. A dissenting opinion is authorized A court of inquiry may be ordered by the President or by any commanding officer, but shall never be ordered by a commanding officer, except upon a demand by the officer or soldier whose conduct is to be inquired into. It consists of one or more officers, not exceeding three, and a recorder The order convening a court of inquiry details the members and recorder by name, specifies the subject matter of inquiry, and directs a report of the facts, or of the facts with opinion Under the military laws of the United States a court of inquiry and the recorder thereof have the power to summon witnesses and to take evidence on oath. This is not so in the English service, where it has no judicial power, and is simply a board directed to collect evidence with respect to a transaction into which the commanding officer himself cannot conveniently inquire A court of inquiry, wrote Sir Charles Napier, "ought generally to be a closed court, no one allowed to enter but such individuals as are called for, and who, being privately examined, are sent out . It is generally objectionable to make a

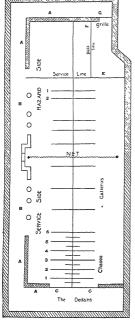

court of majury an open court."

Military Courts of Other Countries. In the army of Germany there are general and regimental courts in trials of enlisted men a certain proportion of the members of the court are of the rank of the accused. In the Russian army there is a supreme tribunal at \$\frac{1}{2}\$ the expension of the courts martial. In the French army individual officers have large powers of imprisonment, and there are regiments and courts of dissipline for hard characters. In the Austrian army there are courts of first instance, and courts of appeal from the former.

Military lawyers are also attached to each regiment to help in the administration of military justice

Bibliography A Manual for Cowts-Martal was prepared by direction of the Secretary of War for the use of the army of the United States in 1910 and has been amended to contain all changes up to August, 1910 For the English piactice, Simmons, Courts-Martial (London, 1873), may be consulted See Millyamy Law COURTSHIP OF MILES STANDISK,

COURTSHIP OF MILES STANDISH,
THE A hexametric poem by Longfellow (1858)
COURT TENNIS Indoor tennis (see diagram) Usually the court occupies an entire

COURT TENNIS

building and is lighted from the roof The playing space is usually about 96 by 32 feet, surrounded on thee sides by a corridor about 6 feet wide (the penthouse), which has a sloping roof about 7 feet ligh. The spectators occupy the dedons, or the part of the penthouse situated in the rear of the court, and separated from the same by an open grating. The most complete courts have floors of asphalt, and cement walls painted black to a height of 18 feet The nets divide the court, and also the service and hazard side, resembling a chimney, and

near it (in the penthouse) is the grille chases are numbered on the floor (from 1 to 6) and are employed to divide part of the court into the number of spaces required by the game In playing the game the server must stand in the service court and serve the ball over the penthouse, it being required to strike on the penthouse roof and then roll off into the receiving court The player on the hazard side strikes it on the bound wherever he chooses, if only it first strikes the ground on the opposite side of the net, eg, he may strike it against the nearest wall, so that it rebounds across the net A "chase" is called when the player fails to strike the ball before the second bound, unless he is on the hazard side and beyond the service line Further, a record is made of the cross lines at which the ball bounds, which, however, does not affect the score unless the game stands at 40, in which event sides are changed and the contestants play for the "chase" The player responsible for the "chase," by permitting the same to be made, will attempt to return the ball nearer to the end wall than the point at which it was marked, to insure its bounding a second time, making the attempt as often as his opponent returns the ball until he either succeeds or misses In the former event he is credited with the 'strike", while in the latter his opponent scores For more detailed information regarding the game, its scoring, and its history, see TENNIS

COURT THEATRE, THE A playhouse for comedies and farces, situated in Sloane Square, London. Originally a chapel built in 1818, it was turned into a theatre

COUSA, JOHN See ALEXANDER JOHN I COUSE, E (ANGER) IRVING (1866- ) American painter He was born in Saginaw. Mich, and studied at the Art Institute, Chicago, the National Academy of Design, New York, and in Paris at the Ecole des Beaux-Arts and Académie Julian under Bouguereau and Robert Fleury He lived 10 years in France, where he painted charming scenes of the Normandy coast After his return to America he devoted himself to depicting the life and habits of the Taos Indians, a Pueblo tribe in New Mexico He reveals the poetical and philosophical rather than the savage and warlike side of the Indians, and his skillfully executed pictures are full of sentiment. Among those in public galleries are "Elikfoot" (National Gallery, Washington), "The Forest Camp" (Brooklyn Museum), "The Tom-Tom Maker" (Lotos Club, New York), "Medicine Fires" (Montelair Gallery, New Jersey), "Shapanagons, a Chippewa Chief" (Detroit Museum) He was elected to the National Academy of Design in 1911 Among his more recent works are "Mending the War Bonnet", "Making Pottery" (awarded the Carnegue prize), "Rushing Water" (1912), "Twilight, prize), "Rushing W Taos Pueblo" (1913)

COUSIN, k50°-2an' The name of two prominent French artists of the sixteenth century—
JEAN the elder (1400-1560), sculptor, painter, and wood engraver, was probably born at Sens, where he passed most of his life, and is said to have designed some of the stained-glass windows in the cathedral. In 1540 he was occupied in Paris with the festive decorations for the entry of Emperor Charles V His only authentic painting is "The Last Judgment" (Louvre), although many others have been ascribed to him. As a sculptor he modeled the line tomb of

Admiral Chabot, now in the Louvre, and the sculptures formerly in the chapel of Pagny (Burgundy) A large number of wood engravings have also been credited to him Shortly before his death he published Livie de Perspective de Jean Cousin, Senonois (1560) —His son and pupil, JEAN the younger (c 1522-94), was born in Sens He certainly designed the glass windows and probably the sculptures of the castle of Fleurigny (Sens), and probably the glasses in the church of Saint-Gervais, Paris, but not those of the Sainte-Chapelle at Vincennes He painted five portraits of the Bouvyer family, and was the author of a book on The True Science of Portraiture, and also probably a Book of For-tune, containing 200 drawings He is said to have illustrated many other works, including Ovid and Esop Consult Roy, "Les deux Jehan Cousin," in Mem de la Société Archéol de Sens, vol xxiv (1909), Dimier, French Painting in the Sixteenth Century (1904), id, Bulletin de l'art ancien et moderne (1909)

COUSIN, VICTOR (1792-1867) A French philosopher and historian He was born in Paris and studied with such brilliant success at the Ecole Normale that in 1815 he was appointed assistant to Royer-Collard in the chair of philosophy at the Sorbonne He threw himself heartily into the reaction against the sensationalistic philosophy and literature of the eight-centh century, which was then in possession of the field (See SENSATIONALISM) In 1817 he visited Germany, where he was introduced to bolder and more speculative systems of philosophy than any he had yet known, becoming acquainted with Jacobi, Schelling, Hegel, and Goethe During a later visit to Germany, in 1824-25, he was suspected of revolutionary tendencies, and imprisoned in Berlin, where he was detained for six months He took advantage of his compulsory detention in Prussia to study the philosophy of Hegel, which had no small influence on his susceptible intellect. On his return to France he took a decided stand against the reactionary policy of Charles X, and in 1828, when the comparatively liberal ministry of Martignac came into office, Cousin, who had for some years been suspended from his professorial functions, was reinstated in his chair Meanwhile he had become known as an author by his editions of Proclus and Descartes (1820-26), and by the earlier volumes of his celebrated translation of Plato, which was finished in Cousin reached the height of his popularity and influence as a philosophic teacher in the years 1828-30, when often as many as 2000 enthusiastic hearers gathered around him HΑ was young, simple, and pure in his habits, his doctrines were for the most part new to his audience, bold, and in harmony with the spirit of the time The finest qualities of the national genius appeared in his lectures—a wonderful lucidity of exposition, an exquisite beauty of style, such as few philosophers have equaled, a brilliancy of generalization and criticism, and a power of coordinating the facts of history and philosophy so as to make each illustrate the other and reveal their most intricate relations At this period Cousin was one of the most influential leaders of opinion among the educated classes in Paris After the revolution of 1830, when his friend Guizot became Prime Minister, he was made a member of the Council of Public Instruction, in 1832 a peer of Fiance, and later director of the Ecole Normale and virtual head of the University His efforts for the organization of primary instruction are to be seen in the valuable reports which he drew up from personal observation on the state of public education in Germany and Holland His influence shows itself in this sphere even to the present In 1840 he was elected a member of the day Academie des Sciences Morales et Politiques, and in the same year became Minister of Public Instruction in the cabinet of Thiers After the revolution of 1848 Cousin aided the government of Cavaignac, and published an antisocialistic brochure called Justice et charité After 1849 he disappeared from public life

Cousin was greater as an expounder of historical systems of philosophy than as an original At first a disciple of Royer-Collard and the Scottish school, he was attached to the psychological method of investigating, afterward a keen student of the German school, he expounded the views of Schelling and Hegel with such enthus asm that he might legitimately enough have been considered a "German idealist" But he endeavored to mediate between the German standpoint of an impersonal reason and that of empirical psychology In the later years of his life his views carried him to a modified Car-

tesianism See Descartes.

Cousin's chief works, besides those already mentioned, are Fragments philosophiques (1826), Du vrai, du beau, et du bien (1837. Eng trans, 1854), Cours d'histoire de la phi-losophie morale au XVIIIe siècle (1839-42, containing discussions of the Sensationalistic school, the Scottish school, and Kant), Cours de philosophie (1828, containing an introduction to philosophy of the seventeenth and lectures on the philosophy of the seventeenth and eighteenth centuries). He also contributed a great variety of papers to the French reviews Besides his philosophical work he rendered a very real service to the history of the seventeenth century in France by his luminous and stimulating sketches of Mesdames de Longueville, de Hautefort, de Sablé, and a number of other great personages of the period. Consult Hamilton, Dissonages of the period. COUSIN PONS, koo'zăn' pôn, Le A novel by Balzac (1847), dealing with the last moments and death of an old bachelor whose invaluable collection of paintings made him an object of solicitude and intrigue to relatives and strangers

COUSINS, kūz'nz, SAMUEL (1801-87). An English mezzotint engraver He was born in

Exeter and was early apprenticed to the mezzotint engraver S W Reynolds The famous
plates of Lady Acland and children, and of
Master Lambton (after Lawrence) are among his
first independent works These were followed by
many portraits and pictures after Reynolds,
Lawrence, Gainsborough, J E. Millais, Wilkie,
Landseer, and others His work is characterized
by extreme delicacy and versatility of treatment
and interprets the originals in a truthful and
graphic manner The British Museum contains
a large collection of his mezzotints Cousins was
the first to receive the rank of Academician Engraver (1855) Consult his biography by A.
Whitman (London, 1904)

COUSSEMAKER, kms/ma/kar/, Charles Edmonn Hern to [1805-76) A French instorian of music, born at Bailleul (Nord) He studied at the Douar Lycée and complèted his musical education under Moreau and Lefebvre He devoted himself principally to researches on medieval music and published Historie de Planmonie au moyen-deg (1852), Drames hturquues du moyen-deg (1861), Les harmonistes des XIIème et XIIIeme siccles (1864), Les harmonistes du XIVeme siccle (1869), and Songtores de Musica Medis Zen (1866-75), his revenuel vertic suprincia by Messer un 1968

principal work, reprinted by Moser in 1908
COUSTOU, koo'stoo' A family of French sculptors -Nicolas (1658-1733), born in Lyon's, studied first with his father, François, a wood carver, and later with his uncle Antoine Coyzevox in Paris After three years in Rome he returned to Paris, where he was appointed rector of the Academy in 1720, and chancellor in 1733 His extremely numerous works include decorations for the palaces of Versailles, Trianon, and Marly, in which he was assisted by his brother Guillaume, they include "Union of the Seine and the Marne" and "Daphne Pursued by Apollo," in the Garden of the Tuileries, statues of Julius Cæsar and of Louis XIV, in the Louvre, and "The Descent from the Cross." in the choir of Notre Dame. His younger brother, GUILLAUME THE ELDER (1677-1746), studied under his father and Antoine Coyzevox and spent several years in Rome, where he assisted Pierre Besides work done in collaboration with his brother, and many portrait busts and mythological statues, he modeled the kneeling statue of Louis XIII in Notre Dame, the fine group of "Ocean and Mediterranean," and the vigorous and spirited marble groups of the "Horses of Marly" at the entrance to the Champs Elysées, which inaugurated a new and more natural era of French sculpture. He was appointed director of the Academy in 1735—GUILLAUME PRIE YOUNGER (1716-77), son and pupil of the former, won the Prix de Rome in 1735 His works include religious and mythological statuse, such as "Apotheous of St François Yearney" with Erlies South Buil Paris. Xavier" in the Eglise Saint-Paul, Bordeaux, and "Mars and Venus" in the eastle of Sans Souci, Potsdam, and the tomb of the Dauphin, father of Louis XVI, in the cathedral of Sens Consult Lady Dilke, French Architects and Sculptors of the Eighteenth Century (1900), and "Les Coustou," Gazette des Beaux-Arts, vol 1 (1901)

COUTANCES, kevetlars' A pucturesque town in the Department of La Manche, France, on the Soulle, 41 miles south of Cherbourg (Map) France, N, D 3) An old city, it is built on a conical hill 7 miles from the English Channel, and is the seat of a bishopric. Its cathedral of Notre Dame is one of the finest specimens

of ecclesiastical architecture in the early Pointed style of Normandy Other noteworthy features are the Gothic church of Saint-Pierre, the public gardens and museum, and the ruins of an ancient aqueduct Coutanees has manufactures of muslins, lace, yarns, cotton goods, pianos and organs, and a trade in grain Marthe is quarried, and there is a good market for horses and cattle Pop., 1891, 8145. 1901, 6901, 1911, 6599 The town is the Constantia of the Romans For a history and description, consult Annuaire guide de Coutanees (Coutanees, 1897), U Chevaller, Reportoire des sources et topobibliographie (Montbeliard, 1894-99).

COUTHON, Koōton', Georges (1755-94) A

French politician and revolutionary leader, born at Orsay, in Auvergne, Dec 22, 1755 He practiced law successfully at Clermont, where he acquired great popularity on account of his fine intellectual powers and grave gentleness of char-At first a moderate Republican, he was elected to municipal office and later, in 1791, was sent by the electors of Puy-de-Dome to represent them in the Legislative Assembly became more and more radical with the progress of the Revolution, and, though a chronic invalid, he poured forth invectives against royalty and the Church from the tribune He voted for the death of the French monarch without delay or appeal to the country Elected to the Convention, Couthon attached himself to Robespierre, was appointed a member of the Committee of Public Safety in 1793, and sent against the insurgent city of Lyons. After the entrance of the Republican army Couthon showed compara-tive moderation and controlled the soldiery. Only 24 of the insurgents were put to death, and though property was ruthlessly destroyed, the lives of the citizens were respected until the arrival of Collot d'Herbois (qv). Couthon returned to Paris, formed with Robespierre and Saint-Just a supreme tribunal, and made himself conspicuous by his extreme virulence against England He assisted Robespierre in destroy-ing the partisans of Hébert and Danton, but was himself involved in the ruin which overtook his chief After a vain attempt at suicide Couthon was borne to the guillotine, July 28, 1794, together with Saint-Just and Robespierre. Mège, Correspondance de Couthon Consult (Paris, 1872), Aulard, Les orateurs de la légis-lative et de la convention (Paris, 1885-86), Morse-Stephens, The French Revolution (New York, 1891)

COUTRAS, kōō'tra' A town in the Department of Gironde, France, on the left bank of the Dronne, 26 miles northeast of Bordeaux (Map France, S, D 3) Coutras has a trade in flour, and the district produces red wine and brandy The place is noteworthy on account of the bloody victory gained here in 1587 by Henry of Navarre over the forces of the Catholic League. Pop., 1891, 4231, 1901, 4062, 1911, 4807

COUTURE, GUILLAUME (1851— ). A Canadian musican and composer, born and educated in Montreal He early manifested an unusual talent for music and, when 13 years old, became organist of St Bridget's Church, Montreal, and, when 16, organist of the church of St James Later he studied for five years in Paris, where he was admitted to the National Society of Music and the Paris Conservatory of Music and was appointed organist of Sainte-Clothilde's Church. He returned to Canada in

1878, founded the Société des symphonistes, and in 1880 became director of the Montreal Philharmonic Society He was appointed professor of musical theory in several educational institutions in Montreal, including the McGill Conservatory of Music, and became director of the Amateur Operatic Club and of the Montreal Symphony Orchestra He published many musical compositions, some of which were accepted and performed by the National Society of Music, Paris—the only Canadian compositions thus honored In 1900 he was named, by the French government, Officier d'Institut Public

COUTURE, kōō'tur', Thomas (1815-79). A French historical and genre painter He was born at Senlis, Dec. 21, 1815 He studied under Gros and Delaroche without being a follower of either In 1837 he obtained the Prix de Rome, and in 1845 his picture, "The Thirst for Gold" (Toulouse Museum, replies in Amsterdam), brought him a wide reputation His "Romans of the Decadence" (1847) obtained a first-class medal and created a great and lasting sensation and is now in the Louvre Among his other works are the "Falconer" (1855), "Damceles" (1872), and "Day Dreams" (1855, in the Metropolitan Museum) Under Napoleon III he became court painter, but he was not enough of a courtier to please the Emperor and resigned his position In 1869 he retired to Villiers-le-Bel. near Paris, where he died He was neglected in France, but his pictures were purchased by foreigners, especially by Americans He also painted the frescoes in the chapel of the Virgin, Saint-Eustache, Paris, and during his last period many portraits, of which there are frequent examples in the museums of southern France The chief beauty of his art is its rich, glowing color, and it is also good in line. He was very important as a teacher, counting Fuerbach, Victor Muller, Puvis de Chavannes, Manet, and many Americans, Russians, and Germans among his pupils His book, Conversations on Art Methods, was translated by Stewart and published in New York in 1879 Consult Healey, "Couture," in Van Dyck's Modern French Masters (New York, 1896), Claretie, Peintres et sculpteurs contemporains (Paris, 1873), Flat, "Un peintre assimilateur," in Revue Politique et Littéraire

(Paris, 1913).
COUVADE, koo'vad' (Fr., a brooding, from couver, to hatch, from Lat cubare, to he down). A custom of certain primitive peoples in accordance with which the father of a new-born babe adopts the rôle of invalid while the mother goes about her ordinary occupations The custom was well developed on both hemispheres On the authority of Strabo and later writers it was ascribed to the Basques of Europe, a theory which has been much discussed, while Ripley is skeptical as to the present existence of the custom among the Basques Traces of it are found in Asia and in North America, and it has been well observed in South America by Rodway (In the Guana Forest, 1895) and others. Indeed, South America and the West Indies are the areas in which the couvade has been developed to the highest degree Tylor was at first inclined to explain the usage as implying a physical bond between parent and child, so that the father's actions are believed to affect the child's condition. Later Tylor adopted Bacho-fen's theory that the couvade was the signpost of a change from maternal to paternal descent, the motive he originally assigned to the practice

remains valid, but the "sympathetic prohibitions may be interpreted as originally practiced by the mother only, and afterward adopted by the father also" This later explanation was in accord with the theory, until recently current among anthropologists, that maternal descent invariably preceded paternal descent This position, however, has been so vigorously assailed that Tylor's original interpretation of the couvade as simply a result of belief in sympathetic vade as simply a result of belief in sympathetic magic seems preferable. Consult further Ripley, The Races of Europe (1899), McGee, "The Seri Indians," Itih Rep Bur Am Ethnology, Tylor, Researches unto the Early History of Mankind, pp. 201 ft, id, 'On a Method of Investigating the Development of Institutions," Journal of the Anthropological Institute, Vol XVIII, pp. 254 ff (1889), Ploss, Das Weib (1897), etc See Max, SCIENCE OF COUXIA, körő'she-a, or COUXIO, körő'she-6. COVA'RIANTS See FORMS

COVE (AS cofa, chamber, Icel. koft, hut, MHG hobe, Ger Koben, stall) In architecture, a long concave surface approximately a quarter circle in section, interposed in place of a cornice between the wall and ceiling, or employed to support a projecting story or balcony, or even to form a crowning feature to a structure, as on the gateway of the Certosa at Pavia, or the front of San Lorenzo fuori at Rome The coves (or coving) of many splendid Italian and French ceilings of the sixteenth to the eighteenth centuries were intersected by vaulted lunettes called penetrations, and both coves and penetrations were richly decorated with paintings, stucco rehef, and gilding. Famous examples are in the library of Siena Cathedral and the Loggia of the Farnesina at Rome, decorated by Raphael and his pupils

and his pupils

COVENANT (OF. covenant, Fr. convenant,
It convenente, from Lat convenure, to agree,
from com., together + venure, to come). A term
much used in theology, derived from the Hebrew
berth of the Old Testament and the Greek
dauthēks of the New, both meaning "covenant." It was emphasized in the federal theology during the constructive Protestant period (by Cocceius, 1603-69 (qv)), and was incorporated in the Westminster Confession. God is represented as making successively, with Adam, Noah, Abraham, and all Israel, covenants, which are substantially the same covenant, under which Israel is adopted as God's special and chosen people and is bound to Him in close and mutual obligations. The covenants of the Old Testament are all substantially "covenants of works," putting blessing upon the basis of obedience, the one covenant of the New Testament, which replaces the others, conditions blessing upon faith in Jesus Christ See FEDERAL THEOLOGY

COVENANT. In English law, a contract by deed or specialty, ie, one in which the validity of the promise does not depend upon consideration (qv) as in the case of simple contracts, but upon the formality of execution of the contract by sealing and delivery. The essential characteristic of covenants distinguishing them from other specialties is the express promise to pay a sum of money or to perform a certain act. Thus a bond differs from a covenant only in that it is a mere acknowledgment of indebtedness without an express promise to pay the amount of the bond.

The term "covenant" is also used in a nar-

rower sense to indicate the promise or stipulation contained in a specialty or deed which is incidental to its main purpose, as, eg, the covenants of warranty contained in a deed of conveyance Although consideration was not required to render a covenant valid and enforceable at law, courts of equity deemed the seal to be presumptive evidence of consideration only, and would not compel the covenantor to perform his promise if it appeared that no consideration was given for it. This is probably the effect of modern statutes providing that the seal on sealed instruments is only presumptive evidence of consideration

In general, covenants, from their nature, are required to be expressed in the instrument by which they are cleated, but in certain exceptional cases they are implied from the character of the instrument itself, as, eg, the covenants

implied in a lease (qv)
At common law the form of action used to recover damages for breach of covenant was also known as covenant Under modern codes of procedure and practice acts, the action of covenant has become obsolete, the same office being performed by the various statutory forms of contract action. Covenants contained in the same instrument are said to be mutual, concurrent, or dependent Covenants are said to be mutual when performance by each of the parties entering into the covenant is a condition of performance by the other, so that no action for breach of covenant will he unless the party suing has performed or tendered performance of his covenant before bringing his action. An independent covenant is one which must be performed by the covenantor, irrespective of the performance of the covenantee's covenant in the same instrument

Real covenants, or covenants which at early common law bound the covenantor's heirs to the extent to which they inherited real estate, are now of slight importance, since all of the propcity of a deceased person, real as well as personal, may be subjected to the payment of his

See Administration

Covenants running with the land are real covenants which relate to the use of real estate or require the covenantor to do something with reference to it Their peculiarity is that any subsequent transferee of the real estate is entitled to the benefit of the covenant, and may sue upon it, and that, in certain exceptional instances, when the covenant imposes a burden upon the owner of the real estate, the liability to perform the covenant passes to the transferee of the real estate Strictly speaking, at common law, the burden of a covenant will run with the land only where the relation of landlord and tenant subsists between the parties or, in some of the United States, where the covenant relates to a subordinate interest, as an easement, which the covenantee has in the land of the covenantor In equity, however, land may be subjected to certain restrictions by covenant of the owner which are enforceable against a subsequent purchaser with notice See Assignment, Easement

Covenants for title are particular forms of covenant which run with the land and are made by the grantor in a deed or instrument conveying real estate The usual covenants for title are "The covenant of seism (ie, that the grantor is seised of the estate which he undertakes to convey), the covenant that the grantor has the right to convey, the covenant for quiet enjoyment (i.e., that the grantor will not interfere with the use or enjoyment of the real estate by his grantee), the covenant for further assurance (1e, that the grantor will make any further necessary conveyance to perfect his grantee's title), and the covenant of warranty, which binds the covenantee to warrant and defend the title against any one claiming under paramount title or interest in the real estate conveyed

Formerly the effect of the covenant of warranty was to require the covenantor or his heirs to give the grantee other lands in case the title proved to be defective In modern practice the effect of breach of any covenant for title is to entitle the covenantee or his grantee to recover damages Covenants for quiet enjoyment and warranty, however, are not deemed to be broken until the giantee is actually disturbed in his possession An important effect of certain covenants for title is to estop the giantor, and all claiming under or through him, from claiming any interest in the property conveyed, thus conferring upon his grantee a title by estoppel See ESTOPPEL, WARRANTY

Covenants to stand sessed, formerly of great importance, were covenants by the owner of real estate to hold it to the use of, or in trust for, a

relative See Uses, Trust

COVENANTERS See COVENANTS, THE, Presbyterianism

COVENANTS, THE A term by which the Scottish people denoted association of "bands" under oath to support each other in times of danger or to maintain some principle The most famous ones are the National Covenant of 1638, and the Solemn League and Covenant of 1643, which are often referred to simply as the Covenant, though they should be clearly distinguished The National Covenant was an agreement signed by all classes in Scotland to resist by force the introduction into Scotland by Charles I of a modified form of the English Book of Common Prayer, and a new body of canons increasing the nominal power of the Scottish bishops The nobles disliked the increased power of the bishops because they were beginning to look upon them as rivals, and because they feared that Charles would proceed to a recovery of the church lands, while the commons disliked the Prayer Book, not only because it was English, but also because they looked upon it as a popish innovation The Covenant was based upon a previous one of 1581, whose object was to maintain the Scottish Presbyterian church against a Catholic conspiracy, but it added numerous citations of parliamentary acts bearing upon the subject of religion, and a mutual oath "to labor by all means lawful to recover the purity and liberty of the gospel as it was established and professed before the aforesaid innovations" It became the basis of the Scotch resistance to the King, which culminated in the two Bishops' wars and the termination of Charles's arbitrary rule

The Solemn League and Covenant was an agreement between the English and Scottish parliaments by which the Scotch came with an army to the assistance of the English Parliament in the war against Charles I on condition

that Presbyterianism should be introduced into England and Ireland The Parliament accepted the condition somewhat unwillingly, but in view of the Royah-t successes in 1643, Scottish and seemed indispensable The Covenant was generally signed by the members of the House of Commons and the Assembly of Divines It was imposed by ordinance upon all persons over 18 years of age, upon members of the universities, and upon officers and soldiers of the New Model, although the ordinances could not be strictly enforced It was not only the bond of union between England and Scotland during the war, but was used as a test against the rising Independents and, as such, encountered lively opposition The signers took oath to labor for the preservation of the reformed religion in the Church of Scotland, in doctrine, worship, discipline, and government, . the reformation of religion in the kingdoms of England and Ireland, in doctrune, worship, discipline, and government, according to the Word of God, and the example of the best reformed churches," and to endeavor "to bring the churches of God in the three kingdoms to the nearest conjunction and uniformity in religion, confession of faith, form of church government, direction for worship, and catechizing" The force of the Solemn League and Covenant of 1643 was greatly ham-pered in England by the success of Cromwell and the Independents, who desired a wider form of toleration, but the final blow did not come until the Restoration, when both covenants were abolished and their adherents severely persecuted That the idea of the Covenant has not died out among the Scotch is seen by the Covenant drawn up in 1912 by the Scottish Presbyterians of Ulster in their resistance to the Irish Home Rule Bill introduced by the Liberal govenment of Mr Asquith This solemn covenant was first signed by Sir E Carson on September 28 In its general phases it follows the earlier covenants, viz, in its declaration of resistance to religious change or anything that might en-danger Protestantism This new Covenant new Covenant proves how deep-seated is this method of piocedure with Scottish Presbyterianism

The covenants of 1638 and of 1643 are printed in Gardiner, Constitutional Documents of the Purstan Revolution (London, 1897) Consult also Gardiner, History of England (ib., 1883-84), id., Great Civil War, vol 1 (ib., 1880), Smelhe, Men of the Covenant (New York, 1904) COVENT (kiv'en) GARDEN (properly

Convent Garden, from having been originally the garden of Westminster Abbey) A square in London, chiefly notable for its celebrated history and for its great market of fruit, vegetables, and flowers As the kitchen garden of the Westminster monks it was a walled inclosure, which extended from the Strand to Longacre came, as a crown gift, into the possession of the Bedford family in 1552, and remained in the same hands until sold by the Duke of Bedford Dec 16, 1913. The price paid was from \$25,-000,000 to \$50,000,000 and closed the largest real estate deal ever made in London The square was laid out by Inigo Jones in 1632, and the ancient garden was perpetuated by the continued sale of vegetables (See COVENT GARDEN MARKET ) Here also is the famous opera house (See Covent Garden Theatre ) In the seventeenth century the neighborhood of Covent Garden was a very fashionable quarter of the town, and frequent allusions are made to the place in plays of Charles IF, time It has attistic associations of Marvell, Diyden, Fielding, Steele, Otway, Foote, Ganiek, Hogarth, Voltane, De Quincey, Chailes and Mary Lamb, Turner, and other celebrities

COVENT GARDEN JOURNAL A short-lived bi-weekly periodical first issued in January 1752, by Hemy Fielding, under the name of "Sir Alexander Drawcansir, Knight of the Censon of Great Britain" It soon involved Fielding in Internity quarrels

COUENT GARDEN MARKET A great London vegetable, furt, and lower market, established in the first half of the seventeenth century by small gardeners from the suburbs In 1829 the rough sheds were succeeded by a market house, covering about three acres of ground, from designs by M fowler In 1859 a flower market, covered with glass, was built on the south side of the Open House

COVENT GARDEN THEATRE A famous London theatre on Bow Street, the home of grand opera. It was built in 1731 by the harlequin Rich, under a patent from Charles II to Sir William Davenant, 1662. It has been several times rebuilt. It was bunned in 1808, and rebuilt in 1809 at great cost. The increased prices of admission, intended to defray part of the expenses, gave rise to the Old Prices Riots. In 1847 it was called the Royal Italian Opera House On March 4, 1856, it was burned again, and the present structure was creeted in 1858.

COVENTRY, kuv'en-tri (OE Coventre, AS cofatieo, cove tree, from cofa, cove + treo, tree, or tree of Cofa, popularly etymologized as Convent Town, from the convent established there by Leofiic) A manufacturing city, parliamentary and municipal bolough in Warwickshire, England, on the Sherbourne, 18½ miles east-south-east of Birmingham (Map England, E 4) It stands on a gentle eminence in a valley with a ridge of hills on the south, and contains many old houses with timbered fronts projecting into nairow streets and belonging to the fifteenth and sixteenth centuries The modern part of Coventry, however, is well, though not regularly, built Its most interesting public buildings are the three churches composing the "three tall spires" of Coventry. St. Michael's, built of red sandstone, in the Perpendicular style, about the fourteenth century, is said to be the largest parish church in England, Trinity Church, another Perpendicular structure, has a spire over 230 feet high, the third of the spires is that of the old Gray Friars' church St Mary's Guildhall, built in 1450, for the united guilds, is one of the finest examples of ornamental architecture in England The rapid industrial growth of Coventry is responsible for the recent extension of its boundaries and the widening of many of the old streets. The municipality owns its water supply, on which it nets a substantial annual profit. It also supplies gas and electricity and maintains public baths, libraries, a technical institute, markets, crematory, and cemeteries The city has an excellent modern sewerage system, with which is connected a sewage faim The chief manufactures are libbons, artificial silk, watches, sewing machines, and naval ordnance It is the centre of the cycle and motorcar industries The town sends one member to Pallament Pop, 1891, 58,500, 1901, 69,900, 1905 (est), 75,134, 1911, 106,377

History Coventry is a very ancient place. In 1044 Earl Leofric and his wife, Lady Godiva,

founded here a magnificent Benedictine monastery. For many years the traditional deed of In Godiva (q v ) was celebrated by a procession 1344 the town was incorporated In the fifteenth century religious mysteries or plays were often acted here by the members of the various guilds before kings Henry VIII demolished the beautiful cathedral of Coventry, as well as the ancient walls which formerly surrounded it Here occurred the famous meeting for the intended trial by battle between the Dukes of Norfolk and Hereford, immortalized in Shakespeare's Richard II. Two memorable parliaments were held in the monastery of Coventry in the fifteenth century. The one contained no lawyers, while the other passed many attainders against the Duke of York, etc In the fifteenth and sixteenth and seventeenth centuries Coventry was famous for woolens, broadcloths, caps, and blue thread bonnets. Consult Fietton, "Antiquarian Losses in Coventry," in Archæological Journal, vol xxxvi (London, 1880), and Dormer, History of Coventry (New York, 1898)

GOVENTRY A town in Kent Co, R I, 13 miles (direct) southwest of Providence, on the Pawtinxet River, and on the New York, New Haven, and Hartford Railroad (Map. Rhode Island, B 3). The cheef industries are agriculture and the manufacture of cotton and woolen goods, and dyeing, bleaching, and mercerizing The government is administered by town meetings Coventry, taken from Warwick and incorporated in 1741, was the home of Gen. Nathanael Greene (qv ) after 1770 Pop. 1809.

COVENTRY PLAYS. A set of 42 plays, combining the "Morality" and the "Mystery," acted during the sixteenth century at Coventry or thereabouts on Corpus Christi Day and proba-

5279, 1910, 5848

or thereabouts on Corpus Christi Day and probably written by the clergy They were extremely popular and widely attended. The following reference is made to them by the elder Heywood

"Thys devyll and I were of olde acquentaunce, For oft in the play of Corpus Christi He hath played the devyll at Coventry"

COVE OF CORK See QUEENSTOWN

COV'ERDALE, MILES (1488-1568) An English Bible translator He was born at Coverdale, in Yorkshire, was educated at Cambridge, was ordained in 1514 at Norwich, and became the same year an Augustinian at Cambridge. By 1526, however, his religious opinions had so far changed that he left his convent and devoted himself earnestly to the work of the Reformation Dressed like a secular priest, he preached against confession and image worship. Shortly after that he went abroad In 1535 he brought out his first translation of the Bible "out of Douche (German) and Latyn into Englishe," with a dedication by himself to Henry VIII. This was the first complete translation of the Bible printed in the English language Psalms of this translation are those still used in the Book of Common Prayer The vexed in the Book of Common Frayer Ine vexed question as to the printer of the volume has been settled, probably, by recent discoveries in favor of Christopher Froschouer, the famous Zurich printer it also seems probable that Jacob Van Meteren, the Antwerp printer, employed Coverdale to make the translation, which was done in Antwerp The basis was the Zurich Swiss-German Bible and Tyndale's New Testa-

ment, along with the Vulgate It was reprinted in London in 1537, with the royal license In 1538 Coverdale, with the consent of King Henry VIII and with the permission of Francis I, went to Paris to superintend another English edition of the Scriptures, his reason for going to Paris being that paper and workmanship were there cheaper and better than in England The Inquisition, however, notwithstanding the royal license of Francis, interfered, seized the whole impression, consisting of 2500 copies, and con-demned them to the flames But through the cupidity of one of their executive officers, who sold a considerable number of the heretical books to a haberdasher as waste paper, some copies were saved and brought to London, along with the presses, types, etc, which had been employed in printing them Several of the workmen also came over to London, and Grafton and Whitchurch, the noted printers of that day, were thus enabled to bring out in 1539, under Coverdale's superintendence, the "Great Bible," as it is called on account of its size Coverdale also in 1540 edited a second edition, commonly called Cranmer's Bible, because that prelate wrote a preface to it. From 1540 to 1548 Coverdale was on the Continent He married in the former year On his return he became a royal chaplain and in 1551 was appointed to the see of Exeter, the duties of which office he discharged with great zeal, until the accession of Mary in 1553, when he was ejected and thrown into prison, from which he was only released after a year's confinement, on the earnest intercession of the King of Denmark, whose interest was evoked by his chaplain, Coverdale's brotherin-law, and on the condition that he should leave the country Coverdale went to Denmark and subsequently to Westphalia, Deux Ponts, and Geneva In 1558 he was in Geneva and is said to have had some part in the preparation of the Geneva Bible In 1559, after the accession of Elizabeth, he returned to England, but certain notions concerning ecclesiastical ceremonies, imbibed at Geneva, operated against his restoration to the see of Exeter, and made him refuse an appointment as Bishop of Llandaff In 1564 he was collated to the rectory of St Magnus, London, but, owing to age and infirmities, he resigned it in 1566 and died about two years afterward. He was buried Feb 19, 1568 Coverdale was the author of several tracts designed to promote the Reformation and made various translations from the works of the continental reformers His works and letters were published with a memoir, by the Parker Society (Cambridge, 1844-46). Consult also Memorials of Myles Coverdale (London, 1838), and F Fry, The Bible by Coverdale (1b, 1867). For his work on the English Bible, consult Hoare, The Evolution of the English Bible (ib, 2d ed, 1902), and Pollard, Records of the English Bible (Oxford, 1911)

COVERED WAY, or COVERT WAY. A term used in fortification to describe a passage constructed on the side of the ditch towards the enemy. As its name indicates, this passage affords covered communication along the ditch for sentinels and small bodies of men posted therein. See FORTIFICATION.

COVERLEY, kūv'ēr-li, Str Roger de Andold English dance, so called from the time used during its performance Neither the author of the tune nor the date of its composition is known, but the editor of the Skene Manuscript

claims the tune as Scotch, on the authority of a manuscript dated 1706, and says that north of the Tweed it is known as the "Mautman comes on Monday" The tune is variously called "Old on Monday" The tune is variously called "Old Roger of Coverly for evermore, a Lancashire Hornpipe", "Roger of Coverly", "Roger a Coverly," in Gay's opera Polly, and "Roger de Coverly," in Robin Hood, and 'Sir Roger de Coverly," in Fielding's Tom Jones A song, "O Brave Roger de Coverly," is contained in Pulls to Purge Melancholy The dance is an oldfashioned country dance (or contredanse) and is known in the United States as the "Virginia reel" Addison took the name for his Sir Roger de Coverley in the Spectator
COVERLEY, SIR ROGER DE. A quaint and

amiable country gentleman who makes repeated appearances in Addison's Spectator The portrayal of Sir Roger and his friends, by its completeness, vitality, and literary deftness, and by the ingenious selection of incident and situation as vehicles for expressing character, had a marked effect upon the development of English fiction The papers concerning Sir Roger have been many times collected and published and now are accepted as English classics See Addison, Joseph

COVERSED (kô-vērst') SINE See TRIGO-

NOMETRY COVERTURE (OF coverture, Fr. couver-ture, covering, from ML coopture, from Lat. cooperue, to cover, from co-, together + cooperue, to cover, from co-, together + operure, to cover, for opverure, Lith uzh-veru, I shut). Under the common law, the legal condition or status of a married woman By that law an unmarried woman, whether spinster or widow, is a "complete juristic person," having the same standing before the law as a man. Upon marrying, however, ie, coming under the protection of a man, her legal position is radically altered, and in many respects completely merged in that of her husband. This is especially true of her property rights Her goods and chattels at once become his property acquires custody of her claims against others (choses in action) and may collect them for his own benefit Her land passes under his control, and he acquires a joint seisin with her therein and may take the rents and profits to his own use during the continuance of the marriage On the other hand, he becomes liable relation to pay her debts, those contracted before as well as those contracted after marriage, and under some circumstances he is responsible for her torts and crimes. The modern legislation which has almost restored to the married woman her lost personality will be described under the titles HUSBAND AND WIFE and MARRIED WOMAN Consult the authorities referred to under these titles, and also those under COMMON LAW

COVIELLO, kô'vyěl'lô. The clown of old Italian popular comedy.

COVILHÃO, kō've-lyoun'. A town of Portugal, in the modern District of Castello Branco (but formerly included in the Province of Beira), situated on the southeastern slope of the Serra da Estrella at an altitude of 2180 feet (Map Portugal, B 2) It is commanded by a castle and is one of the chief centres of cloth manufacturing in Portugal Pop, 1890, 17,562, 1900, 15,469

CO'VILLE, FREDERICK VERNON (1867- ) An American botanist, born at Preston, N Y He received his education at Cornell University and was instructor in botany there from 1887 to 1888. In the latter year he became connected with the United States Department of Agriculture, and after serving five years as assistant in botany, was made botanist and also curator of the United States National Herbarium he was elected president of the Biological Society of Washington His publications include a monograph on the Botany of the Death Valley Expedition (1893), the author having taken part in the expedition during 1890-91. He also prepared a number of reports, including Botany of Yahutat Bay, Alaska (1896), Crimson Clover Hair Balls (1896), Experiments in Blueberry Culture (1910), The Agriculture Utilization of Acid Land (1913)

COVINGTON, knv/ing-ton A city and the county seat of Newton Co, Ga, 41 miles east-southeast of Atlanta, on the Georgia and the Central of Georgia railroads (Map Georgia, Cellege (Methodist) is situated 1 mile to the north Covington is in a fertile cotton-growing region and has cotton and oil mills, marble works, and manufactories of ice and fertilizer The water works and electric-light plant are owned by the municipality. Pop, 1890, 1823,

1900, 2062, 1910, 2697

COVINGTON. A city and the county seat of Fountain Co, Ind, 72 miles west by north of Indianapolis, on the Cleveland, Cincinnati, Chicago, and St Louis, and the Wabash railroads, and on the Wabash River (Map Indiana, B 2) There is a canning factory, and the city has a Carnegue library and municipal water works and electric-light plant. Pop., 1900, 2213, 1910, 2069

COVINGTON. A city and one of the county seats of Kenton Co, Ky, at the junction of the Ohio and Licking rivers, opposite Cincinnati, of which it is practically a suburb (Map Kentucky, F 1) It is on the Louisville and Nashville and the Chesapeake and Ohio railroads, and electric railroads also connect it with the neighboring towns. Bridges to Cincinnati and to Newport, Ky, add to the facilities for communication, the great suspension bridge to the former city being a noteworthy specimen of engineering (See CINCINNATI) Covington occupies an area of about 51/4 square miles on a beautiful plain partly surrounded by hills, and resembles Cincinnati in its general arrangement The city has many fine residences, a public library, city hall, race track, and a Federal building noteworthy as a specimen of modern Gothic, and among charitable institutions, a hospital for contagious diseases, Catholic and Protestant orphan asylums, and a home for aged Covington is an important centre of Roman Catholic influence, the cathedral, a type of flamboyant Gothic, being one of the finest ecclesiastical structures in the State Connected with this denomination there are also a Benedictine priory, a convent, a hospital and foundling asylum, Notre Dame Academy, and La Sallette Academy. The facilities for transportation, both by rail and by water, placing the city in communication with a wide territory possessing valuable natural advantages, have contributed to the city's commercial importance. Its industrial interests are also important, and include extensive pork-packing establishments, distilleries, breweries, steam-engine factories, tobacco factories, cotton factory, ironworks, and manufactures of vinegar, furniture, stoves, tinware, bricks, tile, pottery, rope, contractors' machinery, metal signs, automobile trucks, X-ray machines, circus tents, pianos, cordage, etc Covington has adopted the commission form of government There are municipal water works, built in 1887, furnishing an abundant supply of water drawn from the Ohio River at a distance of about 13 miles above the city Covington's annual budget approximates \$660,000, the main items of expense being \$108,000 for schools, \$111,000 for nterest on debt, \$47,000 for police department, \$35,000 for the fire department, \$55,000 for street expenditures, and \$15,000 for public library fund Settled in 1812 and laid out three years later, Covington was chartered as a eity m 1834 Pop, 1860, 16,471, 1880, 29,720, 1890, 37,371 1900, 42,938 1910, 53,270

COVINGTON A city and the parish seat of St Tammany Parish, La , 66 miles by rail north of New Orleans, with which it has steamboat connection on the Bogue Falaya River, on the New Orleans Great Northern and the Yazoo and Mississippi Valley railroads (Map Louisiana, It contains St Paul's College, St Scholastica's Academy, a fine public park, and high school There are lumber, turpentine, bottling, and canning interests Pop , 1900, 1205, 1910,

COVINGTON A city and the county seat of Tipton Co, Tenn, 37 miles northeast of Memphis, on the Illinois Central Railroad (Map: Tennessee, A 3) It is a shipping point for cotton and oil, and has flour and saw mills, cotton and cottonseed-oil mills, cotton compress, etc The water works and electric light plant are owned by the city. Pop, 1900, 2787, 1910, 2990

COVINGTON A town and the county seat of Alleghany Co, Va, about 50 miles (direct) northwest of Lynciburg, on the Chesapeake and Ohio Railroad, and on the Jackson River (Map: Virginia, D 4) It has several manufacturing plants including a large pulp and paper mill iron-furnace, tannery, foundry, ice, extract and fertilizer plants, and planing and flouring mills. The town contains a home for homeless boys and owns its water works Pop, 1900, 2950; 1910, 4234

CO'VODE, JOHN (1808-71) An American legislator, born in Westmoreland Co, Pa He worked for several years on a farm, was apprenticed to a blacksmith, and afterward attained considerable wealth as a woolen manufacturer He served for two terms in the Pennsylvania Legislature and was a member of Congress, first as an anti-Masonic Whig and then as a Republican, from 1855 to 1863, and again from 1867 to 1870 In politics he took a leading part as a supporter of Lincoln and as an opponent of Johnson, but is chiefly remembered for his connection as chairman with the special congressional committee appointed in 1860 to investigate the charges brought against President Buchanan in connection with the passage of the Lecompton Bill. See COVODE INVESTIGA-TION

COVODE INVESTIGATION gation (1860) by a congressional committee of five, headed by Covode of Pennsylvania, into the charge made by two anti-Lecompton Demociats that the administration had endeavored to persuade them corruptly to support the Lecompton Bill. (See LECOMPTON CONSTITUTION) Plessdent Buchanan vigorously protested against the appointment of a committee for such a purpose, on the ground that it would detract from the dignity and independence of the executive office, but his protests were unheeded, and in June the committee made its report, the Republican majointy supporting the charge and the Democratic minority denouncing it. The committee, however, was considered to have brought forward sufficient evidence to prove Buchanan's favoritism and his questionable use of patronage report was printed in a bulky volume For a defense of Buchanan, consult Curtis, Life of Buchanan (New York, 1883)

COW See CATTLE, DARRYING

COW'AGE, COW'HAGE, or COW'ITCH

(from Hind Kawanch, Koanch) Short, slender, brittle hairs, which grow on the outside of the pods of plants of the genus Mucuna, natives of the tropical parts of America and Asia. The genus belongs to the family Leguminosa and has a knotted, two-valved pod, divided by transverse partitions The species, about 25 in number, are twining plants, shrubby or herbaceous, with leaves of three leaflets That which yields most of the cowage brought to market is Mucuna prunens, a native of the East Indies, with racemes of fine purple flowers, which have a disagreeable alliaceous smell, and pods about d unches long Mucuna urens, the oxeye bean of the West Indies, yields cowage of similar quality. The hairs readily stick in the skin and cause intolerable tiching. Cowage is sometimes used in medicine, acting mechanically in killing and expelling worms, particularly the species of Ascaris (qv) That it does not act on the inner surface of the intestinal canal is supposed to be owing to the mucous secretion It is generally administered in syrup or honey fore the pods of cowage plants are ripe, they are used as a vegetable, like kidney beans, and are very palatable Mucuna utilis, velvet bean, is usually considered specifically the same as Mucuna pruniens, but velvet-bean pods are without the stinging hair of the other The velvet bean has lately attracted much attention as a forage crop It is well adapted to Florida and the Gulf States, having about the same value as the better varieties of cowpeas. As a green manure and mulch crop for orchards, it is highly considered

COW ANT See Horse Ant

COWARD, EDWARD FALES (1862- ). An American playwright, born in New York City and educated at Lyons Collegiate Institute and at Columbia College. During a long period of active interest in amateur dramatics lie played more than 150 parts For two years he was dramatic editor and critic of the New York Evening Sun, and for more than six years, of the New York World He also wrote for The Theatre, adapted The Belle's Stratagem, collaborated on The Lady from Chicago, and Around New York in 80 Minutes (musical comedies), and wrote Hearts Are Trumps, a comedy, and King Stephen An Historical Drama in Seven Tableaux Completed from John Keats' Fragment (1912)
COWBERRY. See CRANBERRY

COW'BIRD. A small North American blackbiid (Molothius ater), closely related to the redwing, remarkable for its parasitic habits, and frequenting in small flocks fields where cattle pasture, often alighting upon them to eat parasites, or clustering about their feet to snap up the insects disturbed by their movements, to this habit it owes its names, cow blackbild, cowpen bird or bunting, buffalo bird, etc.

common species (see Plate of BLACKBIRDS) 15 about 8 inches long, the adult male is rich glossy black, with greenish reflections, except the head, which is chocolate brown, the female and young are simply brownish gray, paler beneath The cowbird is found throughout the United States, from Texas northward nearly to Hudson Bay In the north it is migratory, but south of the Ohio it is a permanent resident is to be seen in small bands frequenting fields and pastures, where its principal tood is vegetable (mainly seeds of weeds), with insects caught upon the ground and about cattle There are usually several more males than females in each band, for these bilds do not pair, and the antics and spluttering and guttural squeaks with which the males try to attract the females are most queer and amusing In the autumn they gather in large flocks and associate with Other species are found in other blackbirds Other species are found in the southwestern United States, in Mexico and Central America, and several in various parts of South America

The parasitism of the cowbirds is their most striking characteristic, their behavior resembling that of the European cuckoo None, except one, takes a mate, or makes a nest, or incubates its eggs. Instead of this, when the breeding season (May and June) is at hand, the female ready to lay an egg quietly leaves the flock and stealth-ily seeks the home of some bird, from which the mother is temporarily absent, incubation not having begun There she deposits her egg (see Colored Plate of Eggs of AMERICAN SONG BIRDS), to which she pays no more attention It matters not whether the nest she visits has already its full supply of eggs, or even whether it already contains one or several eggs of her own species, she will sometimes throw out eggs of the owner to make room for her own The egg of the cowbird usually hatches in less time than do the eggs of the bird on which it is imposed, whereupon the rightful eggs may be abandoned or thrown out, or, if some of them hatch, the young are speedily starved or smothered or elbowed out of the nest, while the foster parents devote themselves to the care of the greedy stranger He remains in the nest until it is really outgrown, but even after he has left it he is called for, for a time, by the birds that brought him up But at last, when well able to fly, he seeks out others of his own kind, and the birds that have devoted themselves to him so assiduously have nothing to reward their pains Over 100 species of birds are thus burdened with more or less frequency, but some will desert the nest rather than incubate the strange egg, others build a second story on the nest, leaving the cowbird's egg to perish below, while they raise their own brood in the superstructure

The egg of the cowbird is a rather blunt oval, measuring, on the average, 84 by 65 of an inch, and is white or grayish, profusely speckled with browns, the general effect of which is indistinct and pale, it is not easily mistaken for any other bird's egg of its size. Several species of cowbirds inhabit Central and South America, and have similar habits, except in one instance, the bay-winged cowbird (Molothus badaus) of Argentina and Bolivia, which differs from the odinary type in several ways, among others in having a low and pleasing song, which it delivers more or less all the year around. It does not abandon its eggs to the care of other nurses, but

forms conjugal ties and occasionally makes a nest of its own, more often, however, it seizes upon the nests of other birds and in their despoiled property lays its eggs and reans its own young A circumstantial listory of this interesting group and a discussion of bird paiasitism may be found in Selater and Hudson, Aigentiae Onathology (London, 1888-80), largely reputed by Bendile, in "The Cowbinds," in Report of the National Museum for 1893 (illustiated, Washington, 1895).

COWELL

COW BOYS. 1. The name applied during the Revolutionary War to robbeis, usually of cattle and sometimes of other property, who infested the roads east of the Hudson River between the British and American lines. They professed to be Tories A similar band, professing to be Wings, called "Skinners," plundered wayfarers at the same period and in the same places. See Cooper's romance The Spy

2 The name given to the mounted headsmen hired by the owners of cattle in the United States to look after their stock. In the great herding districts of the West, where cattle roam over vast areas without fences or roads and with only scattered and irregular places for water and shelter, the cowboys occupy an important place. It is their business to keep the cattle together, to guide them to pasture, to prevent their being mixed with other droves, to protect them from Indian and other theves, to brand them at the

proper seasons, and to drive them to the shipping point when they are "beef"

COW CREEK INDIANS An Athapaskan tribe in Oregon and also a division of the Seminoles in Florida.

COW'DRAY, OF MIDHURST, WEETMAN DICKcapitalist. He became president of the contracting firm of S. Possession of the contracting firm of the c tracting firm of S Pearson and Son, Ltd, and in this connection he superintended the construction of the Dover Harbor Works, the tunnels under the East River, New York, and the Blackwall Tunnel, London. In 1894 he was made a baronet and in 1910 a baron He was a mem-ber of the House of Commons for Colchester from 1895 to 1910, when he took his seat in the House of Lords and also became high steward for Colchester. The Pearson syndicate acquired extensive oil concessions in Ecuador and in Mexico. Its interests in the latter country, which were obtained from the Porfirio Diaz government, covered an area of more than 500,-000 acres and represented a capitalization of \$50,000,000 (Mexican currency, \$25,000,000 American). It is considered by many that the rival giant oil interests of Mexico, the Pearson syndicate and the Standard Oil Company represented by the Waters-Pierce Oil Company, had an important if not a leading part in the revolutions of that country It is known that Francisco Madero, the leader of the successful revolt (1913) against the Diaz régime, was favorable to the interests of the Standard Oil Company, and, although Lord Cowdray denied the charge, it was asserted that the Pearson interests aided Huerta and Felix Diaz in the counter revolution against Madero In November, 1913, Lord Cowdray formally requested the United States government to protect his oil properties in Mexico. See Mexico, History

COW'ELL, EDWARD BYLES (1826-1903) An English Sanskrit scholar Born at Ipswich, he was educated at Oxford He went to Calcutta in 1856, where he was professor of history in

the Presidency College and later (1858) principal of the Sanskrit College He left India in 1864, and in 1867 he was made professor of Sanskrit in the University of Cambridge His contributions to advancing the knowledge of India were made not only through his writings, but also through the inspiration he gave to his pupils, whose numbers were large His association with Edward FitzGerald of Omar Khayyam fame is of interest in English literary history. Among Cowell's more important works may be among Cowen's more important works may be mentioned The Prich'rt Grammar of Vararuos (1854, 2d ed, 1868), The Black Yajur Veda, books i. n., edited in collaboration with Roer (1858-64), the Kusumāḥals (1864), The Hundu Law (1871), The Hundu Digest (1873). The Aphoisms of Sāndilya (1878), The Savadarsana-Samgraha, translated conjointly with Gough (1882), The Harsa-Carita of Bana Bhatta (1897), and The Buddha-Carita of Aśvaghoṣa, ın Sanskrıt and English (1892-94). At the time of his death he was editing the translations of The Jataka, or, Stories of the Bud-dha's Former Births (7 vols, 1895-1913), of which the sixth volume, published in 1907, was translated by him in conjunction with Rouse His Life and Letters were edited by George Cowell, his kinsman (Oxford, 1904)

COWEN, kou'en, SIR FREDERIC HYMEN (1852-) An English musician, born at Kingston, Jamaica His paients took him to London when four years old, and he became a pupil of Benedict and Goss in that city In 1865 he went to Leipzig, where he studied under Hauptmann, Moscheles, Remecke, Richter, and Plaidy. In 1882 he became director of the Edinburgh Academy of Music, and in 1887 succeeded Sir Arthur Sullivan as conductor of the London Philharmonic He was musical director of the McIbourne Centennial Exhibition (1888-89), and in 1896 was chosen conductor of the Liverpool Philharmonic and of the Manchester Concerts. In 1900-10 he was conductor of the Scottish Orchestra at Glasgow. In 1903, 1906, 1909, and 1912 he directed the Crystal Palace Handel festivals He was knighted in 1911 His compositions include the operas Pauline (1876), Thorgrim (1890), Signa (1893), and Harold, or the Norman Conquest (1895), A Phantasy of Life and Love (1901), Coronation Ode (1902), Indian Rhapsody (1903), four oratorios, The Deluge (1878), St Urusla (1881), Ruth (1887), The Veil (1910), and a number of cantatas, including *The Corsair* (1876) and *John Cilpin* (1904), six symphonies; four overtures, three suites for orchestra, a piano concerto, a string quartet, a tilo, and over 300 songs. He published his memoirs under the title My Art and my Friends (London, 1913)

COWES, kouz A seaport and watering place on the north coast of the Isle of Wight 12 miles southeast of Southampton (Map England, E 6) It consists of East and West Cowes, lying on opposite sides of the Mcdina West Cowes is the headquarters of the Mcdina West Cowes as the headquarters of the Royal Yacht Squadron, located since 1856 in an old castile once used as a fort Over 2000 of the pick of English sailors are employed as crews of the numerous yachts of the members Several regatts are held annually, the one held in the month of August attracting crowds of visitors Near East Cowes are several fine countryseats, whippingham Church, East Cowes Gastle, and Osborne House, the former royal

seaside residence of Queen Victoria, now, with its grounds, a public memorial and park, donated to the nation by Edward VII Cowes is famous for its vacht-building yards and engineering works, and has a considerable trade as the port of the island Pop, 1901, 11,834, 1011, 14,294

"GOWFISH (so named from the shape of its head) 1 A trunkfish (Lactophrys trucorns) of the tropical Atlantic, varicolored in bright hues, and also called "cueckold" (See Cow Pilor and Plate of Piecrockath Fishes) 2

A grampus (qv) 3. A cow shark (qv) 2 COW'GATE, THE A well-known street in the Old Town, Edinburgh It was once a fashonable place of residence, but is now given over

to the poorer classes COW/HAGE. See COWAGE.

COW'HEEN. The local name in eastern Canada of the long-tailed duck, or old squaw (qv) Harelda, or Clangula, hyemalis). COWICHAN. See Salishan Stock

COWIE, kou'i, FREDERICK WILLIAM (1863-A Canadian civil engineer. He was born in Haldimand Co, Ontario, and graduated at McGill University in 1866 three years (until 1889) he was a member of the engineering staff of the Montreal Harbor Commission, organized to increase the capacity of Montreal as a great shipping port, and in 1907 he was appointed chief superintending engineer of this commission. Meanwhile, in 1889-97, he had been chief assistant engineer of the Department of Public Works, Ottawa, and in charge of the St. Lawrence channel between Quebec and Montreal, chief superintending engineer of the channel from 1897 to 1907, and in 1892-97 engaged in making surveys and reports on most of the haibors of the Great Lakes When a Royal Commission was appointed in 1903 to inquire into the St Lawrence route and winter navigation, Cowie became its consulting engineer. He invented a contrivance for facilitating the loading and discharging of ships' cargoes, and he published Report on British and Conand he published Report on British and Con-tinental Ports, with a View to the Develop-ment of the Port of Montreal and Canadian Transportation, with G. W. Stephens (1908), Winter Navigation (1908), designed to show that the Hudson Bay route is not practicable, and Navigation on the St Laurence River (1910).

COW'ITCH. See COWAGE

COWIL (AS. culle, cubie, usple, Icel kuff, OHG. ougolā, Ger. Kugel, Kogel, OF coule, It ouculla, cocolla, from Lat oucullus, cap) A hood, varying in length in different ages, generally attached to a loose cloak and worn on the head It was common in England in the Middle Ages, but has come to be used chiefly by monks or members of some religious order, such as the Benedictines and Franciscans See Costume, ECCLESIASTICAL

COWLES, kölz, HENRY CHANDLER (1869—

) An American botanisi, born at Kensington, Conn He was educated at Oberlin College and at the University of Chicago, and in 1894—

55 was professor of natural sciences at Gates College (Neb) and a special field assistant of the United States Geological Survey At the University of Chicago he was instructor in botany in 1902—07, assistant professor in 1907—11, and in 1911 became associate professor He contributed to the first edition of the New INTERNATIONAL ENCYCLOPEDIA His publications in

clude Vegetation of Sand Dunes of Lake Michi-(1899), Text-Book of Plant Ecology (1911), Plant Societies of Chicago and Vicinity

COWLES, kölz, WILLIAM LYMAN (1856-) An American scholar and educator, born at Belchertown, Mass He graduated at Amherst College in 1878, was instructor in Latin there from 1880 to 1883, studied at the universities of Berlin, Gottingen, and Leipzig in 1883-84, and became associate professor of Latin at Amherst in 1884 In 1894 he was appointed a professor. From 1886 to 1894 he was lecturer in Latin literature at Smith College, where he was also acting professor of Latin in 1899-1900 In the study of classical archæology traveled extensively throughout the Italian peninsula His publications include, besides articles for periodicals, an annotated edition of the Adelphæ of Terence (1896), Selections from Catullus (1900), and Selections from Ennius, Catullus, Tibullus, and Propertius, with Parallel Passages from Horace, Ovid, and Martial (1909)

COWLES, kölz, WILLIAM SHEFFIELD (1846-). An American naval officer, born at Farmington, Conn. After graduating from the United States Naval Academy in 1867, he was promoted through the various grades to be captain in 1902 and rear admiral in 1908 Besides serv-ing at the Mediterranean, North Atlantic, Pacific, and Asiatic stations he was on duty at the Isthmus of Panama in 1884 to guard the property of American citizens He was naval aterty of American citizens taché at London in 1893-97, assistant to the Bureau of Navigation and aid to the President in 1899, commanded the Missouri in 1903-05, and became chief of the Bureau of Equipment and a member of the Board of Construction in 1906. He was in Mexican waters on the cruiser Pittsburgh in 1913-14, looking after American interests during the Mexican troubles.

COWLEY, kou'li, ABRAHAM (1618-67). English poet and essayist He was born in London and was educated at Westminster School and Trinity College, Cambridge According to his own statement, he received his poetical inspiration from Spenser's Facure Queene, a copy of which lay in his mother's parlor. A volume of poems, entitled Poetical Blossoms, was published by him at the age of 15, and one of the pieces contained theirin was written when he was only 10 years old At Cambridge he obtained distinction for the elegance of his translations, and while there he composed the greater part of the Davideis, an epic in four books on the life of David—a work which he never com-pleted. He was attached to the court party, and, in consequence, was ejected from his col-lege in 1643, after he had taken his degree of M.A. In 1646 he followed the Queen to Paris, where he remained 10 years, and on his return to England, being under suspicion, he was seized and bound in heavy securities for his future behavior In the same year (1656) he published an important collection of his poems, including his elegies on Harvey and Crashaw, Pindaric odes, The Mistress, and the Davideis. He now studied medicine, receiving his degree the following year After the Restoration he obtained a lease of the Queen's Lands at Cheri-sey in Surrey, whither he retired in 1665 He was buried in Westminster Abbey, near Chaucer and Spenser Cowley belongs to what Dr Johnson called the "metaphysical" school of poets

He abounds in subtleties of thought and expression, enjoyed in his own day, but long since out of fashion To us his fanciful love poems, displaying no emotion, seem very strange Of his longer poems, the elegies cited above are the best. His most natural verse is scattered through his essays, which are graceful and beau-tiful Convenient modern editions are Complete Works (ed Grosart, London, 1880-81), Poems (ed A R. Waller, Cambridge, 1905), Essays, Plays, etc. (ed A R Waller, 1b, 1906). Johnson's Lives of the Poets may be consulted.

COWLEY, ARTHUR ERNEST (1861- ). An English Hebrew scholar He was educated at St Paul's School and at Trinty College, Oxford He was assistant master at Sherborne School in 1885-80, became fellow of Magdalen College, and, in 1900, sublibrarian of the Bod-leian Library He wrote for reviews and reference works on Hebrew language and literature and cognate topics, and published The Original Hebrew of a Portion of Ecclesiasticus (1897, with Neubauer); an English version of Gesenius' Hebrew Grammar (1898, 2d ed., 1910), Aramaic Papyri (1906, with Sayce), the second volume (1906) of a Catalogue of Hebrew MSS in the Bodleian Library, The Samaritan Liturgy (1909)

COWLEY, HANNAH (1743-1809). An English poet and playwright. She was born at Tiverton, Devonshire, where her father, Philip Parkhouse, was a bookseller It was not until several years after her marriage to Cowley, a captain in the East Indian service, that began to write plays Her first production, The Runaways, she wrote in less than a fortnight It was presented by Garrick at the Drury Lane ın 1776, and was ınstantly successful Her other comedies include the following, played at Drury Lane, Who's the Dupe? (1779), and at Covent Garden The Belle's Stratagem, which is still popular (1780, pub, 1782), Which Is the Man? (1782), More Ways than One (1783), and A Bold Stroke for a Husband (1783)

COWLEY, HENRY RICHARD CHARLES WELLES-LEY, first EARL (1804-84) An English diplomatist, nephew of the Duke of Wellington and of Marquis Wellesley. He was an attaché at Vienna in 1824 and was promoted to be Secretary to the Legation at Stuttgart and to the Embassy at Constantinople He became Minister Plenipotentiary to Switzerland (1848) and to the Germanic Confederation (1851), and in 1852 succeeded the Marquis of Normanby as Ambassador at Paris, and he held the appointment, whether his party was in or out of office, through a particularly trying period, till 1867, when he resigned With the Earl of Clarendon he represented Great Britain at the Paris Congress of 1856 He was created Viscount Dangan and Earl Cowley in 1857

COWLITZ See Salishan Stock COW PARSNIP (Heracleum) A genus of plants of the family Umbelliferæ One species, Heracleum spondylium, is a native of Great Britain, the common cow parsnip, or hog weed, called kiesh in Sociland, a common and rank weed, with coarsely harry leaves, and stem about 3 to 5 feet high. It is gathered in some parts of England for fattening hogs and is said to afford wholesome food for cattle. Some Siberian species are much larger and have been recommended for cultivation on account of the great quantity of herbage which they yield very early in the season, particularly Heracleum

grances, which sometimes attains a height of 10 feet, and whose noof leaves are 3 to 5 feet long Heracleum landium, a tall, stout, wooly perennal with grooved stems and large commound leaves, is known as cow parsinp in the United States and Canada, being quite widely distributed. In Alaska the leafstalks are peeled and eaten. It is there sometimes called 'wild celety' The stalks when drying crude a sweet substance, and they are said to be fermented and a liquor distilled from them in Siberia.

COW'PEA (Vigna sinensis) A leguminous plant closely related to the asparagus bean (V sesquipedalis) and the catjang (V catjang), the other cultivated species of the genus. All readily hybridize, and intermediate forms exist. The cowpea, by far the most important of the group, was cultivated in piehistoric times in India, China, and the Malayan region, and was known in southern Europe at the beginning of the Christian era It is now widely distrib-nted in the torild and temperate zones. It was introduced into the United States early in the eighteenth century At present it is a very com-mon forage crop in the South, and is also grown to some extent in the Northern States The tendency of the cowpea to vary in habit of growth, color of leaf, stem, and pod, and in the shape and color of the seed, gives rise to numeious varieties. These include prostrate, procumbent, bushy, and fall and elect forms. (For illustration, see Plate of Legumes ) In addition to being a very important forage plant, it is especially valuable as a soil renovator, having the power of gathering the free nitrogen of the air in common with the clover (qv). Consult United States Department of Agriculture, Farmers' Bulletin 318, and Bureau of

Plant Industry, Bulletin 229
Food and Feeding Value—The green fodder Food and receiving value—In green router has the following average percentage composition water, 83 8, protein, 24, fat, 04, nitrogen-free extract, 71, cude fible, 48, and ash, 17, the cowpea hay the following water, 107, protein, 166, fat, 29, introgen-free extract, 22, cude fibre, 201, and ash, 75. The slage 422, cude fibre, 201, and ash, 75. The slage resembles the green crop in composition, containing some 80 per cent of water, 3 per cent of protein, and 8 per cent of nitrogen-free extract, in addition to small amounts of the other constituents Young pigs thrive on the cowpea forage and well-filled pods, and it is a custom to turn them into the fields planted for green manuring about the time the first pods are ripening An acre will pasture 15 or 20 pigs for several weeks The manure more than compensates for the vines eaten Turkeys and chickens eat the ripe peas and do well on them Cattle, sheep, and horses are sometimes pastured on cowpea, but the safest and most economical method is to cut or pull the vines and feed them partially wilted Cattle and sheep are hable to bloat if they are allowed to eat too ravenously of cowpea vincs, as is the case with other succulent crops Cowpea hay compares favorably with other leguminous hays in digestibility, 59 per cent of the total dry matter, 65 per cent of the protein, 71 per cent of the nitrogen-free extract, and 42 per cent of the crude fibre being digested on an average Like other leguminous seeds, the cowpea seed is rich in protein. It contains on an average water, 148, protein, 208, fat, 14, nitrogen-free extract, 557, crude fibre, 41, and ash, 3.2 per cent Cowpeas, whole or ground, are

sometimes fed to faim animals, but it is usual to haivest only enough for seed

As a food for man, some valieties of cowpeas are much relabed. The shelled peas are cooked in the same way as shell beans or garden peas. The whole pod when young is also eaten like string beans. For winter use the dry cowpeas are cooked like other dry beans and have a very agreeable flavor. In composition and digestibility cowpeas closely resemble navy beans and are an important foodstiff. The plant is injured by a weevil (Bruchis chinensis), to be incognized by two elevated, rivorylike lobes on the thorax, and by the September brood of the bollworm (in y).

COWPEN A town in Northumbeiland, England, on the south shore of the Blyth Estuary, 61% miles east-southeast of Morpeth The town owns its malkets and water works. Its industries are coal mining, glass manufacture, and shipbuilding Pop, 1891, 13,000, 1901, 17,879, 1911, 21,295

COWPENS. A town in Spartanburg Co, S C (pop, 1909, 1101), noted chiefly for the battle which took place there on Jan 17, 1781, between 1100 British under Colonel Taileton and about 1000 Americans under General Morgan This engagement, sometimes called the "Bennington of the South," for its decisiveness, was won for the Americans, partly by the rashness of the impetuous Tarleton, but especially by the daining position assumed by the American commander and the tactical skill he displayed in defending it Losses—British, 800 killed, wounded, and captured, American, 12 killed, 60 wounded

COWPER, koo'pēr or kon'pēr, Francis Thomas de Grey, Earl. (1834—1905). An English statesman He was educated at Christ Church, Oxford, and succeeded to the hereditary title in 1856. His grandmother's death (1860) and his mother's (1880) greatly enlarged his eaters. He was a Liberal in politics and would have entered Parliament as a caneer, had he not so early succeeded his father. He was Loid Lieutenant of Ireland, with W. E. Forster as Clief Secretary, from 1880 to 1882, when he was succeeded by Loid Spencer, and proved an able administrator during the critical period of the Land League. He opposed Gladstone's Home Rule policy. He was one of the founders of the Unionst party and presided as chairman at the so-called "Opera House Meeting" to oppose the first Home Rule Bill. Upon the installation of Loid Salabury he was appointed chairman of the commission in the Irish Land Act of October, 1881. He was also a member of the Gresham University Commission of 1892.

COWPER, FRANK CADORAK (1877— ).

An English genre and instorical painter. He was born at Wicken (Northamptonishire) and studied at St John's Wood School, the Royal Academy, and under Abbey and Sargent He began as a portiait painter, then turned to imaginative genre in the English Pre-Raphaelite style, which quickly brought him into prominence. Among the best known of his paintings are "The Churchyard Scene from Hamlet" (1902, National Gallery, Brisbane), "St Agnes in Prison" (1904, National Gallery, London), "The Devil and the Nuis" (1907), "Venetian Ladies Listening to the Serenade" (1909) His water colors, which are usually illustrations of fairy tales and fanciful stories, are brilliant in color and charming in conception Good ex-

amples are "Molly, Duchess of Nona" (1905), "Patient Griselda" (1807), "Rapunzel Sings from the Tower" (1908) In 1910-12 he painted, in a cleverly archaic style, a series of mural decorations in the east corridor of the London Houses of Parliament He was elected associate of the Royal Academy and a member

of the Water Color Society COWPER, WILLIAM, EARL (c 1664-1723) An English judge, the first Lord Chancellor of Great Britain He was called to the bar in 1688, joined the Prince of Orange as soon as he landed, and was made King's Counsel in 1694 In the following year he entered Parliament, where he became known as an excellent debater, and was made Lord Keeper of the Great Seal. In 1706 he was one of the commissioners to negotiate the union of Scotland with England and was made a peer In 1707 he was made Lord Chancellor, in 1716 Lord High Steward, and in 1718 became an earl. He was a great orator, but neither a logical nor well-trained lawyer Consult his Private Diary, ed-Consult his Private Diary, edited (1833) by Hawtrey, covering 1705-14, and Lady Cowper's Diary for the next two years, edited (1864) by Spencer Cowper

COWPER, WILLIAM (1666-1709) lish surgeon, born at Petersfield in Sussex He was made a barber surgeon in 1691 and became known not only as a skillful practitioner, but also as a thorough anatomist and pathologist. Among his permanent contributions to anatomical science the discovery of the now so-called Cowper's glands (qv) will preserve his name In 1696 he was made a fellow of the Royal Soor lety His published works include the following Myotoma Reformata (1694, 2d ed, rev by Jurin, Pemberton, and Tanner, 1724), The Anatomy of Human Bodies (1698; 2d ed, 1737), the best English work on anatomy up to that date, Glandularum Quarundam nuper Detec-tarum Ductuumque earum Excretionum De-

scriptio cum Figuris (1702)

COWPER, koo'per or kou'per, William (1731-1800). An English poet, son of John Cowper, DD. He was boin at his father's rectory at Great Berkhampstead, Hertfordshire Losing his mother when he was only six years old, Cow per, who was naturally a delicate and sensitive child, became, as a boy, very deeply melancholy and depressed Just after his mother's death he was placed in the school of a Dr Pitman, in Market Street. Hertfordshire Removed bein Market Street, Hertfordshire cause of crucl treatment by another boy, he was sent, at the age of 10, to Westminster School The period he spent here was very miserable and laid the foundation of that settled gloom which oppressed him till death. It is to the remembrance of these wretched days that we are indebted for the fierce invective that burns in the Tironnium, or a Review of Schools (1784) Shortly after leaving Westminster Cowper was artheled to a Mr Chapman, an attorney in London Upon leaving Chapman's office he entered the Middle Temple In 1754 he was called to the bar, but never practiced His father died in 1756 and left him a small patrimony In 1759 he removed to the Inner patrimony In 1759 he removed to the Inner Temple, but his hatred of the law was so great that he seldom opened a book that bore on his profession Yet he was industrious enough, he scribbled poetry, read Homer, and, in conjunction with his brother, translated some of the books of Voltaire's Henriade In 1763 his cousin Major Cowper offered him the office of Vol. VI -14

clerk of the journals of the House of Loids, which he accepted, but having to undergo an examination at the bar of the House, he was seized with nervousness and could not appear. He even attempted suicide, but fortunately failed for want of courage In December, 1763, he was removed to the private asylum of Dr Cotton at St Albans, a prey to the deepest remorse After his iemoval from St Albans (1765) he went to reside in the town of Huntingdon. Here he met Mrs Unwin-the Mary of his poems-an acquaintance which iipened into the deepest friendship and continued till death. After a few months in lodgings he resided with the Unwins and enjoyed much tranquil happiness under that religious roof Soon after the death of M1 Unwin (1767) Mrs Un-win and Cowpei removed to Olney in Buckinghamshire. Here Cowper's malady retuined At this time he was engaged to mairy Mis Unwin She carefully tended him through his long and slow recovery He found amusement in gardening, writing playful poems, and in building the famous summer house Mrs. Unwin also suggested, as a subject suited to his genius, The Progress of Error During the winter of 1780-81 he wrote Truth, Table Talk, The Progress of Error, and Expostulation, published in 1782 In 1781 Cowper made the acquaintance of Lady Austen, who suggested to him The Task, urged him to translate Homei, and—what the world is perhaps still more grateful for—she related to him the history of John Gilpin The Task. was begin in the summer of 1783 and published in 1785 Its success was great, and Cowper began to be considered the first poet of his day In 1784 he began the translation of Homer, In 1704 he began the transaction of alones, which appeared in 1791 It was received with great appliance. Though Cowper wrote after this the beautiful and tender poem To Mary, his powers rapidly declined. He died at East Dereham, Norfolk. The centenary of his death was appropriately observed at Olney Cowper's poetry is emmently healthy, natural, and unaffected He and Burns brought back nature anected the and Durins brought back hautte to English poetry Besides being a poet, he was perhaps the most delightful letter writer in the English language Nothing can surpass the charm of his epistles—full of humor, gentle saicasm, anecdote, acute remark, and a tender shadow of melancholy thrown over and toning down the whole. See Southey, Lrfe and Letters, etc (15 vols, London, 1834-37, and reprinted in Bohn Library), Poems of William Couper (1995 etc.) (1905, ed J C Bailey), the Globe Edition of Poetrcal Works, ed. COWPER'S GLANDS (discovered by the William Cowper) Two

English anatomist William Cowper) Two small yellow glands, which are situated beneath the anterior portion of the membranous urethra in the male. The glands are of the racemose variety (see GLANDS), each one being made up of a number of small lobes, which are again subdivided into lobules. The acim are lined with columnar epithelium. The gland secretes mucus, which is carried by a small duct, nearly an inch in length, to the posterior part of the bulbous urethra. These glands diminish in size as age advances. The vulvovaginal glands, or glands of Bartholin of the female, are the analogues of Cowper's glands.

COW-PILOT. A small fish (Pomacentrus saxatilis), so called in Bermuda because it is believed always to accompany the cowfish (Ostracium). It is one of the demoiselles and is

COWPLANT. See GYMNEMA.
COWPOX. Variola vaccina, or "cowpox," as it is more commonly known, is a contagious disease of cattle characterized by an elevation of temperature, a shrinkage in milk production, and characteristic pustular eruptions, especially upon the teats and udders of dairy cows. The disease, which is benign in its course, is quite common in the United States, especially in the Eastern States. The cowpox virus, which appears to be ultramicroscopic, is usually transmitted from one animal to another by the hands of milkers, by calves, or by direct contact. In about a week after a cow becomes infected small pimples appear on the skin, which at first con-tain a watery fluid and later turn to pus. After the pustule is broken a thick dark seab forms, which later comes off, leaving a small pock mark.

Cowpox can be transmitted to man by direct inoculation as by sores on the hands, the fluid from the pustules being used to vaccinate per-

sons against smallpox.

Treatment consists in the application of softening and disinfecting agents, such as carbolized vaseline and zinc oxide ointment. In more persistent cases a milking tube may be used in order to prevent opening of the pustules during milking.

Milk from affected cows should not be used for food, since it may become contaminated from the pustules and ulcers on the teats and in the sinuses of the udder, and produce in-fection by the alimentary canal of young children if it is consumed in a raw state.

Consult Hutyra and Marek, Pathology and

Therapeutics of Diseases of Domestic Animals, vol. i, and E. W. Hoare, A System of Veterinary Medicine, vol. i. See also VACCINA-

TION; SMALLPOX.

COW'RY (Hind. kauri, Beng. kari, from Skt. kapardikā, shell). A gastropod mollusk of the family Cypræidæ, whose shells are shaped somewhat like coffee beans, richly enameled and often beautifully marked. They are most abundant and attain their largest size in the seas of warm

A LIVING COWRY.

The animal is shown in the attitude of creeping (towards the leif). The mande is, however, withdrawn somewhat, revealing the normally clothed and protected shell. The short siphons and long tentacles appear, the last bearing the eyes, one of which appears as a black dot.

climates. The money cowry (Cypraa moneta) has long been in general use as a substitute for coin in many parts of Asia and Africa. It is yellow or white, about an inch long and nearly as broad; is found on the Indian coasts, and in particular abundance on those of the Maldive Islands, and has been one of their principal exports. In Bengal 3200 cowries were reckoned (in 1900) equal to a rupee, so that a cowry was then about equal in value to  $\frac{1}{280}$  of a cent. Yet cowries to the value of 200,000 rupees are said to have been at one time imported annually into Bengal. Many tons of cowries are annually used in trade with west-central Africa, but their circulation is fast disappearing. Consult Stearns, "Ethno-conchology: A Study of Primitive Money," in Smithsonian Reports for 1897, part ii (Washington, 1889). See SHELL MONEY; also Colored Plate of MARINE GAS-TROPODS with the article GASTROPODA.

COW SHARK. A large shark of the tropical family Hexanchidæ. See Plate of LAMPREYS

AND DOGFISH.

COW'SLIP (AS. cūslyppe, cūsloppe, from cū, cow + slyppe, sloppe, sloppy droppings, from slupan, to dissolve, Eng. slop; alluding to the pastures where it is usually found; according to a euphemistic popular etymology cow's-lip) (Primula officinalis or Primula vulgaris). A common native of pastures in Europe; a deli-cate and modest little flower, a universal favorite, both for its beauty and its fragrance. (For illustration, see Plate of CRANBERRY, ETC.) The flowers have sedative properties and are sometimes used as an anodyne and antispasmodic. They are fermented with sugar to make cowslip wine, an agreeable and favorite soporific domestic medicine. The name "American cowslip," or "shooting star," is given to Dodecatheon meddia, a perennial plant, also of the family Primulacese, a native of North America, with a stalk about 8 inches high, bearing an umbel of gracefully pendant lilac, rose-color, or white flowers, the petals reflexed over the calyx, the stamens and pistil long, and the anthers of a golden color. It is very ornamental in the flower border, resembling a cyclamen. There are a dozen or more additional species and numerous varieties in the United States. See PRIMULA.

COWTREE. See GALARTODENDRON.

COX, DAVID (1783-1859). An English painter in water colors and oils, the greatest English water-colorist. He was born at Deritend, near Birmingham, April 29, 1783, the son of a blacksmith. He studied drawing under Joseph Barber of Birmingham, and water color under John Varley in London. He was at first a scene painter in theatres, and for a long time supparticle in metales, and to a long time state of a ported himself by teaching drawing and selling water-color sketches, until at length there came patronage sufficient for his moderate desires. In 1805 he traveled in Wales, the scenery of which from this time became the favorite subject of his paintings. In 1813 he was made a member of the Society of Painters and Water-Colorists, and in 1814 he published his Treatise on Landscape Painting and Effect in Water Colors. He did not begin the study of oil painting until his fifty-sixth year, under Müller in London, but he attained great proficiency. Indeed, there is some reason to believe that had he practiced it from the beginning he might have equaled Constable. In 1841 he retired to Harbourne, near Birmingham, where he resided until his death on June 7, 1859. Although his true greatness was never recognized during his lifetime, Cox is certainly the most important of the successors of Constable. His work

is bold and aims at a general effect, disregarding small and conflicting details. His colors are those of nature, pure, fresh, and rich, and he handles light with consummate skill His treatment of atmosphere and atmospheric mood is of the highest order His small productions are usually better than the larger He is the great painter of Welsh scenery, of which he was particularly fond The British Museum and the South Kensington Museum possess some of his water colors and drawings, but the best of his work is in the Birmingham Art Gallery and in private possession. Several general exhibitions of his work have been held, the best of which was that of Manchester in 1887. Among his best water colors are the "Hay Field" (1843), "Bolton Abbey" (1847), and the "Welsh Funeral" (1850), among his oils, the "Vale of Clwyd" and "Peace and War" His son DAVID Cox, the younger (1809-85), was also a water-colorist of repute, but not of the same ability as his father Consult Hall, Biography of David Cox (London, 1881), Memoir of David Cow (ib, 1875), Baldry, in Masters of English Landscape Painting, ed by Charles Holmes (New York, 1903)

COX, GEORGE ALBERTUS (1840-1914). Canadian capitalist and financier. He was born at Colborne, Ontario, and was educated at the Colborne grammar school In early life he became an employee of the Montical Telegraph Company, but removed to Peterboro in 1858, where he entered municipal life and lived for thirty years He was mayor during seven terms. He engaged in many and various business enterprises with much success and rapidly amassed a considerable fortune, which was greatly in-creased after his removal to Toronto in 1888. In 1890-1907 he was president of the Canadian Bank of Commerce He was also president of the Canada Life Assurance Company, and either president of, or a prominent director in, a large number of financial, manufacturing, and industrial concerns. In 1872 he was an unsuccessful Liberal candidate for the Ontario Legislature, and in 1887 he was again an unsuccessful Liberal candidate for the House of Commons In 1896 he was appointed to the

COX.
SIR GEORGE WILLIAM (1827–1902) A
British divine and author He was born at
Benares, Inda, but was taken to England when
eight years old He studied at Rugby and Oxford, took orders in 1850, was appointed curate
of Salcombe Regis, near Sidmouth, and later
was rector of Scrayingham, York, from 1881
to 1897 He was a leading exponent of the
sun-myth theory in comparative mythology, and
published Poems, Legendary and Historical
(1850), with E A Freeman, Life of 88 Boniface (1853), Tales of Ancient Greece (1863),
Latin and Teutonic Christianty (1870), Mythology of the Aryan Nations (1870), Historical
(1881), Lines of Greek Statesmen (1885–86),
Latin Greece (1874), The Orusades (1874), The
Life of Bishop Colenso (1888), The Church
England and the Teaching of Bishop Colenso
(1888) In 1891 he was chosen Bishop of Natal
by the friends of Bishop Colenso (q.v.), but
the archbishops and bishops of England refused
him consecration

COX, HAROLD (1859 - ) A British editor and economist, educated at Jesus College, Cambridge. He lectured on political economy for the Cambridge University Extension Society, made special investigation of farm-labor conditions in Kent and Surrey, and taught mather for two years in the Mohammedan College at Ahgarh, India After his return to England in 1887 he studied for the bar, but eventually gave up law for journalism as a profession He was secretary of the Cobden Club (1899–1904), a member of Parliament (1906–09), alderman in the London County Council (1910–12), and published Land Nationalization (1892), American Progress and British Commerce (1902), and pamphlets on free trade and economics In 1912 he became editor of the Edubungh Review

COX, ISAAO JOSLIN (1873—). An American professor of history, born at West Creek, Ocean Co, N. Y, and educated at Dartmouth College and at the universities of Texas, Chicago, Wisconsin, and Pennsylvania Between 1896 and 1906 he was instructor and vice principal at San Antonio (Tex) Academy and instructor in history at the University of Cincinnati, where he was afterward assistant professor In 1911-12 he was Shaw lecturer at Johns Hopkins University. Besides writing articles for the first edition (1903) of the New INTERNATIONAL ENCOCOPEDIA, he published The Journeys of Lo Salle and his Companions (2 vols, 1905), The Barly Exploration of Louiscana (1906), The Indian as a Diplomatic Factor in the History of the Old Northwest (1910)

COX, JACOB DOLSON (1828-1900). An American soldier, politician, educator, and military historian He was born in Montreal, Canada, was taken by his parents to New York City in 1829, graduated at Oberlin College in 1851, taught school at Warren, Ohio, in 1852, and there in the following year began the practice of law From 1859 to 1861 he was a member of the State Senate, and in April, 1861, upon the outbreak of the Civil War, was appointed brigadier general of Ohio volunteers. He took an important part in the Kanawha Valley campaign under McClellan in the summer of 1861; commanded the Ninth Corps of the Army of the Potomac in the battles of South Mountain and Antietam in 1862, was promoted major general of volunteers, Oct 6, 1862, commanded the Federal forces in West Virginia in the winter of 1862-63 and the military district of Ohio from April to December, 1863, was occasionally commander of the Twenty-third Army Corps during General Sherman's Atlanta campaign, was recommissioned major general of volunteers in December, 1864, having been reduced from this rank in April, 1863, on account of the number of appointments being in excess of those provided for by law, and early in 1865 was sent to North Carolina to open communications with General Sherman, with whom he effected a junction at Goldsboro soon afterward In 1866 he resigned from the service. After the close of the war he served as Governor of Ohio in 1866 and 1867, attracting attention by his opposition to the policy of his party (the Republican) on the question of negro suffrage, and from Maich, 1869, until December, 1870, when he resigned, was Secretary of the Interior in the cabinet of President Grant He then again practiced law, was president of the Wabash Railroad for several years, was a Republican member of Congress from 1877 to 1879, was dean of the Cincinnati Law School from 1881 to 1897, and from 1885 to 1889 was COX

also president of the University of Cincinnati. He wrote many magazine articles, mostly on subjects connected with the Civil War and with microscopy, in which he attained considerable eminence, and published the following works on the military history of the Civil War Atlanta (1882). The Maich to the Sea Finillian and Nashville (1882), The Second Battle of Bull Run as Connected with the Fitz-John Porter Case (1882), The Battle of Finillian (1897) His Muttay Reminiscences of the Civil War (2 vols) were published posthimnously in 1900 Consult J R Ewing, Public Sevices of Jacob Dolson Coa (Weshington, 1902).

COX, JAMES M (1870 - ) An American newspaper proprietor and public official, born at Jacksonburg, Ohio After a public-school education he worked in a printer's office, taught a country school, then became a newspaper 1c-porter, and was for a time on the editorial staff of the Cincinnate Enquiver. In 1898 he became proprietor of the Dayton Daily News and in 1903 also of the Springfield Press-Republic, thus forming the News League of Ohio From 1909 to 1913 he was a member of Congress Rebecame Governor of Ohio for the term of 1913-15.

COX, KENYON (1856-). One of the fore-CULY, RESYON (1850- D). One of the fore-most American mural and figure painters, also a writer on at He was born in Warren, Ohio, the son of Gen J D Cox, who later became Governor of Ohio He studied at the academies of Cincumata and Philadelphia and for five years in Paris under Carolus Duran and chiefly under Gérôme On his return to America he settled in New York, becoming a prominent leader of the younger element which founded the Society of American Artists, and for years he was an influential teacher in the Art Students' League (q v) He soon became known for his figure subjects and especially, among his fellow artists, for his nucles, painted in conservative academic manner But his great conservative academic manner But his great reputation rests upon his mural paintings, which rank among the finest in America Inportant examples of the latter are "Vennee," Bowdom College, Me, "Art and Science," in the Library of Congress, Washington, eight lunetics illustrating "The Progress of Civilization," in the State House, Des Moines, Iowa, "The Beneficence of the Law," in the Essex County Courthouse at Newark, N J, and paintings in the Appellate Court, New York, the State Capitol at St Paul, the Citizens Bank and Federal Building in Cleveland, the Luzerne and Federal Building in Cleveland, the Luzerne County Courthouse at Wilkes-Barre, Pa, and the Public Library at Wilnona, Minn Among the best of his pictures are "Hope and Memory," in the collection of J D Cox, Cleveland, "The Hunting Nymph," in the Lotos Club, New York, "A Book of Pictures" (1910, awarded the Isdor medal), "A Vision of Moonrise" (1911), "October Afternoon" (1913) In the Metapoulten Museum New York, are his "Harp and Federal Building in Cleveland, the Luzerne Metropolitan Museum, New York, are his "Harp Player" and the portrait of Saint-Gaudens (1887), awarded a medal at the Paris Exposi-tion Cox is one of the most prominent representatives of the academic tendencies in American painting His line is strong and vigorous, yet ihythmic, the figures show sound knowledge of anatomy, his composition is dignified, but the color is sometimes harsh. He received medals at various expositions, and was awarded the medal of honor for mural painting by the Archi-tectural League in 1909 He was elected a member of the National Academy of Design

in 1903 His sound and scholarly writings on att subjects include Mired Beasts (1904), Old Masters and New (1905), Painters and Sculptors (1907), The Classic Point of View (1911)

COX, LOUISE HOWLAND KING (1865— ). An American painter, boin in San Francisco. She studied at the New York Academy and Art Students' League under Kenyon Cox, the well-known figure painter, whom she married in 1892 Mis Cox ranks amongst the foremost American women artists Her decorative work is similar to that of her husband and, if less robust, is more graceful Good examples are her mural painting of "The Fates" (1894) and the decorative canvases "Fsyche" (1893), "The Annunciation" (1895), and "Fomona" (1896, third Hallgarten prize) She is at her best, however, in her charming pottraits of children, whom she pottrays with a delightful naturalism Good examples are "Master Austin Smithers" and "Lucile" (1910), "My Children" and "Mrs. Homer Saint-Gaudens and Child" (1913). She was elected a member of the National Academy of Design, and won, besides the third Hallgarten prize in 1896, a bronze medal at the Paris Exposition of 1900

COX, PALYER (1840— ) An American illustrator and author, born in Granby, Province of Quebec He lived for a time in Calfornia and began his career by writing for the Golden Era and other Western papers, but in 1875 went to New York City, where he still lives Mr Cox's productions are almost exclusively in the field of humorous fancy, the most widely known being his sprightly verses and drawings of the Brownes, whose expe-

riences fill several volumes

COX, Rtomann (1500-81) An English bishop boron in Buckinghamshine He was educated at Eton and Cambridge and was tutor to Prince Edward, who, when he became King, made Cox one of the Privy Council and King's almoner. In 1537 he had been made chaplain to Archibishop Crammer and in 1542 to Henry VIII, and a member of the commission that nullified the marriage of Anne of Cleves In 1549 he was made Dean of Westminster and one of the seven royal visitors who led Edward's attack on religious, educational, and charitable establishments Mary put him in prison, but he escaped to Frankfort, where he became the bitter opponent of John Knox Elizabeth restored him to the see of Ely (1550), from which he resigned in 1580 after a quairel with Elizabeth over a grant to Sir Christopher Hatton He translated the Gospels, the Acts, and the Epistic to the Romans, for the Bishop's Bible, and helped compile the Book of Common Prayer COX, SARUEL (1826-93) An English Bap-

tst biblical expositor, born in London He graduated at Stepney Baptist Theological College, London, in 1831, was pastor at Southsea (1852–54) and at Ryde, Isle of Wight (1854–59) He was compelled by throat trouble to stop preaching for a while, but was pastor in Nottingham from 1863 till 1888, when failing health compelled his resignation. He died at Hastings, March 27, 1893 His fame rests upon his biblical exposition and his connection with The Espositor, a monthly devoted to biblical topics, which he originated and whose first 20 volumes he edited (1875–84) Having become an advocate of Universalist views, he was obliged

207 COXE

to resign his position. His publications were very popular and merited their wide sale of them may be mentioned. The Private Letters of 88 Paul and 81 John (London, 1867), The Quest of the Chief tood (1868, 1ewritten as The Book of Ecclesiastes u.th a New Translation, 1890), In Exposition 8 Yole-Book (1872), The Pilgrim Psalms (1874), Saluator Mindá (1877) and The Large Hope (1880), which two books on eschafology stirred up much contoversy 4 Commentary on the Book of Job, uith a Translation (1880), Expositions (4 vols, 1885-99), The Bird's Nest and Other Serious for Children of All Jees (1886), The Hebrew Truns 4 Vindication of God's Ways uith Jacob and Esau (London, 1894) Consult the pictatory memori by his wife in the last-mentioned work

COX, SAMUEL HANSON (1793-1880) An American clergyman, born at Rahway, N. J., of Quaker ancestry. He began to study law, but left it for theology, and was ordained a Presbyterian minister in 1817. Four years later he took charge of a church in New York City, where he was mobbed for his antislavery sentiments, his house and church being sacked. He was one of the founders of what is now New York University. In 1834 he became professor of sacred rhetoric in the theological seminary at Auburn, N. Y., and in 1837 pastor of the First Presbyterian Church in Brooklyn, where he remained until 1854, being professor of ecclesiastical history in Union Theological Seminary, and a leader of the "New School" Presbyterians. In 1854 his voice failed, and he i esigned his pastorate. He wrote Quakerism not Christianity (1833) and Intervieus, Memorable and Useful (1853)

COX, SAMUEL SULLIVAN (1824-89) American politician and author, born in Zanesville, Ohio He graduated at Brown University in 1846 and was later admitted to the bar, but for sook the law in 1853 to become editor of the Ohio Statesman at Columbus For one year he was Secretary of Legation in Peru He represented Ohio in Congress for eight years (1857-65), and New York, whither he removed in 1866, for 20 years (1869-85, and 1886-89) In 1885-86 he was Minister to Turkey. He was popularly known as the "letter-carriers' friend" in reference to legislation proposed by him for increase in their salary and the concession to them of a vacation with pay A statue of him was erected by the letter carriers in New York City Mr Cox wrote and lectured a great deal, City Mr Cox wrote and lectured a given usen, some of his works being Eight Years in Congress (1865), The Buckeye Abroad (1851), Why We Laugh (1876), Arato Sunbeams (1882), Orient Sunbeams (1882), Three Decades of Federal Legislation (1885), Diversions of a Diplomat in Turkey (1887), A glowing piece of descriptive writing published in the Statesman during his editorship won him the nickname "Sunset," which clung to him through

COXAL/GIA (Nec-Lat. from Lat comm, hp., GR ähyos, algos, pann), or Coxiris An obsolete name of hip-joint disease Inflammation, with or without suppuration, occurs in the joint, with the result that its usefulness is destroyed either from stiffness or necrosis

COXCIE, kök'se, or COXIE, MICHIEL (1499-1592) A Flemsh painter He was born in Mecklin and studied with Barend von Orley in Brussels, spent many years in Italy, and

though probably not a pupil of Raphael, unitated him clossly He was the first Fleming to attempt life-size frescoes in the style of the Roman school, which gives historical importance to his decoration of the Santa Bubara Chapel in Santa Maria dell' Anima He was appointed court painter by Philip II of Spain brothers Van Eyek (qv) in Ghent Although his art is cold and rather unpleasing, he was something of an innovator, and his style is clearly defined Good examples of his painting are in the Escorial and the Museums of Brussels, Antwerp, Madrid, Venna, and Prague COXCOMB, köks'köm, The A comedy by

Beaumont, Flétcher, Rowley, and others (1612)' COX'COX'. The legendary Noah of the Mexcean tribes, who with his wife escaped the Deluge In its present form the legend shows probable Christian influence from early Spanish missionalies

COXE, ARTHUR CLEVELAND (1818-96) An American piclate, second Protestant Episcopal Bishop of Western New York, son of Samuel Hanson Cox He was born at Mendham, N. J. gnaduated at the University of New York in 1838, and at the General Theological Seminary in 1841, and in 1842 was ordained priest Rector in Hartford, Conn (1842-54), Baltimore, Md (1854-63), and New York City (1863-65), he was in 1865 appointed Bishop of Western New York In 1872 he visited Haiti, to establish churches and ordain clergy. He also founded the Christian Literature Company, of whose publications he edited a series of the Ante-Nicene Fathers. His writings include several volumes of verse, of which the Christian Ballads (1840), rev ed, 1887) is the best known, and several theological works, such as The Criterion (1866), in opposition to the Tractarians, though he had been in sympathy with the earlier Oxford movement, Apollos, or the Way of God (1873), The Institutes of Christian History (1887)

COXE, HENRY OCTAYUUS (1811-81)
COXE, HENRY OCTAYUUS (1811-81)
English scholar He was born at Bucklebury
and was educated at Oxford From his appointment as underlibrarian at the Bodlean Library in 1838 until his death he devoted himself to the compilation of the colossal catalogue,
comprising 723 folio volumes In 1857 he was
sent by the British government to inspect the
libraries in the monasteries of the Levant, and
in 1860 he became chief librarian of the Bodleian Library. His other important publications include Roger de Wendover's Chromaca
sive Flores Historiarum (5 vols, 1841-44),
Metrical Life of Edward the Black Prince (written in French, by Chandos Herald), with a
translation and notes (1842), Gower's Vox
Clamantis (1850).

COXE, Tencri (1755-1824) An American economist, born in Philadelphia. He served in the Continental Congress (1788) and was appointed Assistant Secretary of the Treasury in 1789. In the same year he proposed the introduction of Sir Richard Arkwright's cottonspinning frame into the United States. The extensive planting of cotton in the South was due chiefly to his mintative, for this reason he is frequently called the "father of the American cotton industry". Among his works on economic subjects are An Inquiry into the Principles for a Commercial System for the United States (1757), "View of the United States

208

COXE

(1787-94), On the Navigation Act (1809), Statement of the Arts and Manufactures of the United States for the Year 1810 (1814)

COXE, WILLIAM (1747-1828). An English He was born in London and was eduhistorian cated at King's College, Cambridge In 1771 he took the curacy of Denham, but soon resigned to become the tutor of several young noblemen. With them he spent many years in travel, and with great industry collected information of all kinds, which appears in many volumes of travels and history, all of which are characterized by close observation, care, and research he became a vicar again He was made prebend of Salisbury in 1791 and archdeacon of Wiltshire in 1804 One of his best-known works is his History of the House of Austria from 1218 to 1792 (1807) He also wrote Memours of the Bourbon Kings of Spain from 1700 to 1788 (1813), Memoirs of John, Duke of Marlborough (1818-19), a Life of Gay, published separately from his Fables (1897), Memours of Sir Robert Walpole (1798), Memoirs of Horatio, Lord Walpole (1802)

COXIE, MICHIEL See COXCIE, MICHIEL COX/SWAIN (also cockswain, from cook,

COX/SWAIN (also cocks:cocin, from ofe, from OF, Fr coque, boat, probably from ML concha, small boat, from Lat concha, Gk κόγχη, konché, Stk śańkha, shell + suzam, AS swem, from Icel swemn, OHG swem, herdsman) A petty officer in the navy who has charge of a boat and crew in the absence of officers. In double-banked boats he steers, and has a small seat in the corsican's box, or after part of the boat abaft the stern sheets. The coxswain of a steem launch or large motor launch always stands while steering. The steering station is forward, aft, or on deck, depending upon the size and type of boat. In single-banked boats the coxswain usually julls the stroke our. The steersman of a racing or other crew is also known as a coxswain.

COX'WELL, HENRY TRACEY (1810-1900). An English aeronaut He was born at Wouldham, near Rochester Castle, and was educated at the Chatham Military School He invented a balloon from which aerial torpedoes could be discharged, and made hundreds of ascensions, the most important being that undertaken with Glaisher in 1802, when the balloon sailed to a height of seven miles. (See AERONAUTICS) During the Franco-German War he joined the aeronautic corps of the German Army In 1845 he established the Aerostatic Magazine Consult his Life and Balloon Emperences (1887-89).

GOYLE, Robert Francis (1850— Manerican Presbyterian clergyman, born in Roseneath, Ontario He got his early education in Canada, graduated at Wabash College in 1877, studied theology at Auburn Seminary, and was ordained to the Presbyterian ministry in 1879 He held pastorates at Fort Doleg, Chicago (1855–81), Oakland, Cal (1891–1900), and Denver, and in 1903 was moderator of the General Assembly He wrote Foundation Stones (1887), Workingmen and the Church (1890), a volume of sermons called The Church and the Times (1905)

COYOTE, kt-5/th or kyot (Sp., from Mex. coyoth) The modified native Mexican name of the prairie wolf (Canna latrans), now universally adopted throughout the western United States The coyote in several varieties is abundant almost everywhere from the Plains to the Pacific, south of central British Columbia, and

18 famous for 1ts monotonous and resterated yelping at night This more resembles the banking of a dog than the howl of the ordinary wolf, and an early name was "barking wolf" One thinks half a dozen are yelping in chorus as he listens to it It generally travels in packs, like other wolves, but, unlike them, it never attacks human beings It is of rather small size, about as big as a setter dog, of a light-reddish or yellowish-gray color, the longer hairs of the back tipped with black. The pelage is rather full and soft, the tail is bushy, the ears are upright, and the muzzle is slender and pointed About 12 species are recognized by naturalists, while there are a number of subspecies or wellmarked geographical races Coyotes live in hollows among rocks, or take possession of old burrows in the ground, and usually produce four puppies in late spring, although the number varies from three to ten They hunt chiefly in the dusk They are very fleet of foot, and two or three by acting in concert will run down a pronghorn, they seek to detach and seize the fawns, however, rather than to pull down adults Their food consists mainly of gophers, ground squirrels, mice, ground-nesting birds, and similar small animals; and they have become a great nulsance in the neighborhood of ranches and isolated settlements, especially in winter, by attacking sheep, poultry, calves, etc To such an extent do they destroy sheep that many of the Western States offer a bounty for the scalp and forepaws Adapting themselves thus readily and having extreme cunning in avoiding traps and having extreme cunning in avoiding traps and poison, they survive among the sparser settlements of the West and in some regions increase rather than diminish They will cross with the domestic dog, producing fertile hybrids, and the Indians were accustomed to induce such mixture of blood. This animal entered more largely than almost any other into the mythology and folklore of the aborigines, especially west of the Rockies Consult Ingersoll, Wild Neighbors (New York, 1897), Elliot, Synopsis of Mammals (Chicago, 1901); and especially Seton, Life Histories of Northern Ammals (New York, 1909) See Wolf, and illustrations on Colored Plate of CANIDÆ and on Plate of WOLVES AND WILD DOGS with the article Wolf

kwa'pĕl' A family of French COYPEL, painters -NoEl (1628-1707), the eldest, was a follower of LeBrun, in whose theatrical style he painted, though with more individuality and greater regard to color than most of his contemporaries He was employed by Louis XIV on decorative work in Versailles, the Trianon, the Tuileries, and the Hôtel des Invalides, he also painted religious pictures and published several works on art. In 1672 he was appointed director of the French Academy in Rome, and in 1695 director of the Academy in Paris —His son and pupil ANTOINE (1661-1722) became a member of the Academy at 20, enjoyed high protection at court, and was charged with important commissions by the King He furnished many cartoons for tapestries, and his paintings are found in most French museums His art marks the transition from the style of LeBrun to that of Watteau. His color is cold and hard, especially in his later works, and his manner artificial—His half brother, NOEL NICOLAS (1690-1734), painted mythological and religious pictures and portraits in pastel—CHARLES AN-TOINE (1694-1752), son and pupil of Antoine CRAB

Coypel, was the most celebrated of the family He was admitted to the Academy at 21 and was appointed director in 1747 He painted religious pictures in many churches, and decorations for Versailles and the Trianon, but was most suc-cessful in his genre pieces Modern critics re-proach him with lack of originality, power, or charm His discourses at the Academy, published in 1721, and theatrical pieces written for the court, procured him quite a literary reputa-Consult Caylus, Vie des peintres (Paris, 1910

COYPU, koi-poo' (native South American name), or NUTRIA An aquatic rodent (Myopotamus coypu, or Myocastor coypus), widely common in South America Its name in Chile is "coypu," and on the Pampas "quinya," but it is allways called by Spanish-speaking people of education "nutria" ("otter"), by which name its fur is known in commerce. It is not an otter, however, but is nearly allied to the beaver, yet somewhat smaller, and with a ratlike tail It is dull brown, with a grayish muzzle and bright red incisors, the nostrils are very high, allowing it to breathe with only the tip of the nose above water, and the teats are high on the flanks When the beaver became scarce, the fur (nutria) of this animal was in great demand for making hats, etc, and the coypus were nearly exterminated, but with less demand and the protection of local laws they have again become numerous It is thoroughly aquatic, dwelling preferably in the permanent ponds (lagunas) of the La Plata valley, and inhabiting burrows in the banks, where there are banks, or making a platform nest among the rushes "Of an evening they are all out swimming and playing in the water, conversing together in their strange tones, which sound like the moans and cries of wounded and suffering men, and among them the mother coypu is seen with her progeny, numbering eight or nine, with as many on her back as she can accommodate, while the others swim after her, crying for a ride" For further interesting facts, consult Hudson, The Naturalist on the La Plata (London, 1875), Proceedings Zoological Society (1b, 1894), Semper, Animal Life (London and New York, 1881) See Plate of Beaver, ETC

COYZEVOX, kwa'z'-vŏks', ANTOINE (CHARLES ANTOINE) (1640-1720) A French sculptor He was born in Lyons, studied with Lerambert, and also trained himself by careful study of the antique He was admitted to the Royal Acadantique He was admitted to the Royal Acad-emy in 1676 and was employed by Louis XIV in decorating Versailles and the palace at Marly His most notable works are many portrait busts and statues of the most famous men of the day They include Richelieu, Mazarin, Bossuet, Condé the Great, Fénelon, Racine, Charles LeBrun, also Louis XIV, Louis XV, and Maria Theresa of Spain. Coyzevox also carved

a number of memorials

COZENERS, kŭz"n-ērz, The. A comedy by

Samuel Foots (1774)
COZENS, ktz'nz, John Robert (1752-99).
An English landscape painter in water color
His father was one of the two natural sons of Peter the Great of Russia by a woman of Deptford He traveled in Italy and the Tirol and left valuable drawings made on that tour Towards the end of his life he became insane In his day water-color landscapes were very conventional in drawing and dry in color Cozens was one of the first to show the value of this medium in the poetical quality of his work,

and attained hitherto unseen atmosphere effects. His conception of nature ranks him as a precursor of the Impressionists Turner and Constable owe much to Cozens and have spoken in terms of admiration of his landscapes are a number of them in the British and South Kensington museums, but the most famous in his day was "Hannibal Crossing the Alps" (1776), which cannot now be located COZUMEL, kö'söö-mal' An island off the

east coast of the Mexican Province of Yucatan, w. (Map Mexico, P 7) It is about 40 miles long and about 15 miles wide. Its surface is low, and the coasts are bordered by reefs There is a small Indian settlement at San Miguel The chief industry is cattle raising The island was discovered in 1518, and here in 1519 Cortés

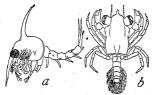

first landed

COZZENS, kŭz'nz, Frederick Swartwout 1818-69) An American humorist, born in (1818-69) New York City He became in early life a wine merchant, and later editor of the Wine Press. He had previously contributed humorous poems and articles to magazines, and in 1853 he issued his first volume, Prismatics, under the pen name "Richard Haywarde" Then came the Sparrowgrass Papers, his best performance, first published in the Knickerbocker Magazine, and in 1856 as a widely read volume. They dealt with the trials of a city man who undertakes to run a country home (near Yonkers), and although their humor is mild, they are still fairly readable Three years later (1859) he published a volume of travel sketches, Acadia, or, A Sojourn among the Blue Noses Soon after the war he failed in a business for which he had Labored earnestly, especially by promoting the sale of native wines, and retired from Yonkers to Rahway, N J Of his other works only Poems (1867) and a Memorial of Fitz-Greene Halleck (1868) need be momed (CRAB) (ASS. brabba, Leel. krabb, Ger.

Krabbe). A crustacean of the order Decapoda and suborder Brachyura, characterized by the small size of the abdomen, which resembles a short tail curved under the thorax, all important viscera being included in the thorax The term extends also to some of the suborder Anomura (purse crabs, hermit crabs, etc.), characterized by a condition of abdomen intermediate between that of the Brachyura and that of the Macrura, or long-tailed decapod crustaceans, such as the lobster, crayfish, etc All the crabs, besides many other crustaceans, were comprehended in the Linnman genus Cancer, but the num-ber of species is very great, considerably more than 1000, and the Brachyura alone are now arranged in many genera and families

These various crabs differ very much in the form of the carapace (the back), which in some is orbicular or nearly so, in some, much broader than it is long, in others, longer than broad, in some, prolonged in front into a kind of beak, etc , also in its smoothness, or roughness with hams, tubercles, or spines, in the length of the legs, etc. The eyes are compound, with hexag-onal facets, and are elevated on stalks, which are generally short, but sometimes considerably lengthened, and which have the power of motion, so as to turn the eye in different directions. The first pair of limbs are not used for locomotion, but exhibit in great perfection the characteristic claws or pincers (chelæ) of the decapod crustaceans. Crabs are inhabitants of CRAB

almost all seas: most of them, however, are found chiefly near the coast. Some crabs inhabit fresh water, particularly in the warmer parts of the world; and others, known as land crabs, live among moist herbage, or burrow in sand or earth. Crabs are generally flesh or carrion eaters, though some forms seem to prefer a vegetarian diet. They are always active and are noted for running sideways rather than straight ahead. Some have the last pair of limbs expanded at the extremity into a broad blade for swimming, and some have even all the four pairs of limbs intended for locomotion thus expanded, and sometimes occur far out at sea.

LARVAL STAGES OF CRABS.
a, zoea stage; b, megalops stage.

Their development is accomplished by metamorphosis through succeeding stages. "In the crabs the nauplius stage (see CRUSTACEA) is passed through in the egg, and the young is hatched in the form of a peculiarly modified zoea, with an immense cephalothorax produced into spines, large stalked eyes, and a slender abdomen. This passes by successive molts into the megalops stage, which resembles an adult macruran [and] . . passes by successive molts into the adult form."

Crube, like all arthronods (see Arthronoda), most or change their shell, not at fixed intervals or seasons, but according to the exigencies of their growth, the change being made with great frequency when they are very young, but rarely in advanced age; indeed, from the mollusks and other animals sometimes found adhering to the carapace, it is inferred that the same covering is sometimes worn for a number of years.

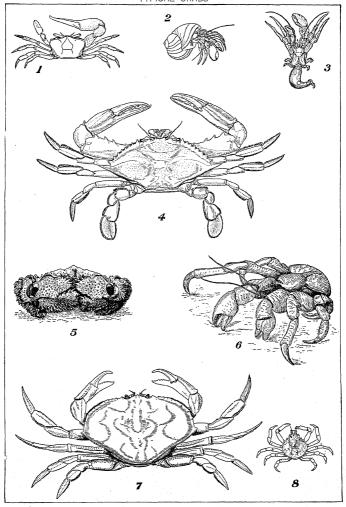

Crabs become interesting in the aquarium from their readiness in seizing food, their ac-tivity in tearing and eating it, and their pugnacity. The number of specimens is apt, how-ever, to be soon diminished by the stronger killing and eating the weaker. Crabs vary greatly in size and color, as might be expected from the great number of species and their wide distribution. The giant crab of Japan (Macrocheira kæmpferi), although only a foot across the disk, which is 18 inches long, has such long legs as occasionally to be 15 to 18 feet from tip to tip of the first pair. The great stone crab of Tasmania, which has short and very thick legs. has been known to reach a weight of over 30 pounds. On the other hand, many species of crab are only a fraction of an inch across. In color crabs vary from black to white, through all the colors of the rainbow. Shades of green, blue, and gray are perhaps the most common, but the brightest shades of red and yellow are by no means rare. The sexes of crabs are easily distinguished, as the females are usually larger, and their abdomens broader and more oval,

while males have the chelæ more powerfully developed—notably so in the fiddlers.

Economic Importance of Crabs.—These animals supply food for food fishes, are of great service as scavengers, and are used as human food in various parts of the world. In the United States the principal crab so used is the blue crab (Callinectes hastatus), hundreds of thousands of which are sent to market every year from the waters of Chesapeake Bay alone. The little pea crabs (Pinnotheres) often found in oysters (see Commensalism) are regarded as a great luxury. In Europe the species most frequently used are those of the genus Cancer, especially the great Cancer pagurus, and there is no reason why the two eastern American species of this genus, the "rock" and "Jonah" crabs (qq.v.), should not be far more utilized as food than they are. To this group belong the principal edible crab of the American Pacific coast (Cancer magister), and others smaller which are eaten by the Chinese, etc. This species usually measures 7 to 9 inches in breadth of body and abounds from Alaska to Mexico, usually below low-tide level on sandy bottom. Crabs which have just shed their shell, and are covered only by a soft skin, are regarded as best and are called "shedders" or "soft-shelled."

The ways of fishing are various. Many are taken in wicker traps or "pots," baited with meat or offal; another common method is to sink shallow hoop nets of coarse material and mesh, which are baited and hauled up rapidly at intervals, bringing the crabs with them. Hand-line fishing, with bundles of meat to which the crabs cling until lifted out of water, is more a sport than a method of market fishing; but in the Gulf of Mexico trawls or "trot-lines" are set in several ways, and vast quantities of crabs are thus taken. They are kept for market in floating pens or "cars," and shipped alive packed in wet seaweed. They are also preserved by canning, etc. Consult Calman, "Crustacea" in Lankester's Treatise on Zöölogy (London, 1009) and Calman, The Life of Crustacea (New York,

Fossil Forms. With the exception of some doubtful genera (Gitocragnon, etc.) from later Paleozoic rocks, no unmistakable fossil crabs are known from deposits antedating those of Mesozoic age. Fossil crabs first appear in the Jurassic, where occur members of the family Dromiacea, much smaller than the modern species, such as the genus *Prosopon*, which continues into the Cretaceous. In the Upper Cretaceous Dromiopsis is the ancestor of Dromia, which latter appears in the Eccene and continues to modern time. Several other small genera of this same family are found in Cretaceous rocks, in which the family enjoyed its greatest expansion. The Raninoidea, with elongated carapaces, broadly truncated in front; began in the Upper Cretaceous, had its maximum in the Eocene, and has since then declined to the present. Large numbers of the Oxystomata, or round crabs, are found fossil in the Upper Cretaceous and Eocene rocks. The Oxyrhyncha, which at present are very abundant, have few fossil ancestors, and these are of small size. The arcuate crabs, of the family Cyclometopa, contain the largest number of fossil genera. They appeared in the Cretaceous, attained a great expansion in the Eocene, declined during the later Tertiary, and in modern times seem to be again on the increase. This family con-

tains most of the modern genera, such as Cancer, Carcinus, Portunus, Xantho, Neptunus, Panopæus Certain of these are of old age Xantho began in the Cretaceous, had a representative (Xanthopsis) that is very common in the Eocene of England, France and Germany, and continued with little change to the present day Lobocarcinus, with its broad, nodose carapace, deeply denticulate on the front margin, is a common and often beautifully preserved fossil cab from the Eocene tocks of Wuittemberg, Germany, and Cairo, Egypt The Catometopa, or quadrangular clabs, have many ancestors of Eocene age The first land crab of the modern genus Gecarcinus, and the first fresh-water crab, also of a modern genus, Telphusa, both members of this family, are found in the Miocene deposits of Oeningen, Germany

From the above remarks it will be seen that all the families of modern crabs, with the single exception of the Oxyrhyncha, were initiated during Cretaceous time, that they expanded rapidly so that their periods of maximum evolution were during the Eocene, when indeed crabs formed the dominant feature of the fauna in certain seas, that during the Miocene the general expansion was less than before, although certain genera were extremely abundant in particular localities, and that those of the Pliocene are mostly of recent species During the present time the crabs seem to be enjoying another period of expansion, but along different lines from those of the Eocene evolution The best collecting grounds are found in the Eocene deposits of the south of England, the nummulitie limestones of southern France, Switzerland, southern Germany, and of northern Italy, and those of central India, and the Miocene beds of Italy, Austria, Hungary, and Germany Consult. CRAB APPLE See APPLE

CRABB, GEORGE (1778-1851). An English lawyer and author, born at Palgrave (Suffolk). He was educated at Oxford, admitted to the bar at the Inner Temple (1829), and practiced his profession in London For a time, also, he was instructor in the classics in a Yorkshire school His best-known work is the Dictionary of English Synonymes (1816, 10th ed., 1849), a careful, if not always scholarly, reference book, which has appeared in numerous editions. Others of his publications are a History of English Law (1829), a laborious Digest and Index of All the Statutes at Large (4 vols, 1841-47), Mythology of All Nations (1847)

CRABBE, GEORGE (1754-1832). An English He was born, Dec 24, 1754, at Aldeburgh, Suffolk, where his father was collector of salt duties. Crabbe showed early a love for books, with a bias towards poetry. After some schooling he was apprenticed first to a village doctor and then to a surgeon By 1772 he was contributing verses to Wheble's Magazine, and two years later he published at Ipswich a moral poem entitled Inebriety At this time he was in love with Sarah Elmy, whom he addressed in his poems as "Mira" and whom he afterward married Continuing his studies in London, he began the practice of medicine in the place of Disliking a profession in which he his buth was not succeeding, he went to London in 1780 to begin a literally career. In that year appeared a poem called The Candidate, which was received coldly Much distressed, he called upon Burke, who after reading some of Ciabbe's verses took him under his protection, getting Dodsley to publish The Library (1781) While staying with Burke at Beaconsheld, he began his best-known poem, The Village (published 1783) At Burke's suggestion Crabbe took or-After a short period as rector of Aldeburgh, he was appointed chaplain to the Duke of Rutland (1782) and thus made Belvoir, Leicestershire, his home After occupying several other church livings, he was given that of Trowbridge, Wiltshire (1814), where he remained till his death (Feb 3, 1832) Besides the poems already cited, Crabbe wrote The Neuspaper (1755), The Parish Register (1807), The Borough (1810), Tales in Verse (1812), Tales of the Hall (1819) Crabbe was a popular poet in his own time, numbering friends among the greatest He was lavishly praised by Dr Johnson, Scott, Wordsworth, and Byron Jane Austen, chained with humor akin to her own, declared that, were she ever to marry, she could fancy herself Mrs Crabbe Though his reputation has declined, he nevertheless occupies an important place in the progress of English poetry Crabbe's stern descriptions of English life in old East Anglia were in marked contrast to Goldsmith's idyllic scenes and led the way to the realism of Wordsworth. What he lacked was the imagination necessary to give lasting interest to his subject. His great excellence is the directness with which he portrays the tragic life of men and women whom he knew and the scenes in which they lived Consult Works, with memoir, by his son G Crabbe sult Works, with memoir, by his son G Crabbe (8 vols, London, 1834–35, I vol, 1901), selections from poems, by Lamplough (ib, 1883), and by Holland (ib, 1899), Stephen's essay in Hours in a Library (London, 1876), Readings in Grabbe (selected by Edward Fitzgerald, London, 1882), Courthope's essay in Ward, English Poets (ib, 1884), the Life, by Kebbel (ib, 1888), Ainger, Crabbe, in "English Men of Letters Senies" (New York, 1902), René Huchon, George Crabbe and his Times (1907), trans from the French by F Clarke An excellent recent edition of the Works is that of Ward (1906) in Cambridge Press Classics Ward (1906) in Cambridge Press Classics CRAB-EATER, or COBIA See SERGEANT

CRABETH, krabet, Dirk and Wouter Dutch painters on glass They were biothers, born at Gouda, in South Holland, and they flourished in the latter half of the sixteenth century As the brothers worked together and were the most famous glass painters of their time, they cannot be separated in biography Very little is known of their lives, but they executed a number of excellent works in the churches of Bel-gium, France, and Italy. Their chief works are 13 of the 46 colossal windows of the great church at Gouda Among the best of these are the "Baptism of Christ" and "John the Baptist Preaching," by Dirk, and the "Nativity" and the "Sacrilege of Heliodorus," by Wouter The latter is superior in drawing and composition but Dirk excels in brilliancy of color The works Dirk excels in brilliancy of color The works of both show a somewhat mannered imitation of the Italian, but they still retain much of the brightness of the mediaval coloring Dirk died in 1577, his brother about 1590 Consult Westlake, History of Design in Painted Glass, vol. ıv (London, 1894)

CRAB GRASS. A name applied to Panicum sangumale, also known as Digitaria sangumalis, an annual grass common throughout many parts of the United States It is frequently seen to spring up in fields after the period of cultivation has passed It grows to a height of 2 to 3 feet, bearing at the top 3 to 12 spreading purplish spikes which carry the flowers and seed. In many places it is considered a weed, but in the South it is valued for the hay it yields as well as for pasturage The hay must be cured without rain falling upon it or its value is greatly impaired It ranks close to Bermuda giass in value and in the cheapness with which a crop may be produced. Eleusine indica is sometimes called crab grass

CRABIER, kra'bya' (Fr, crab-eater). The name in the French West Indies and Jamaica for several herons, especially the common night See NIGHT HERON herons (Nyctroraw) See NIGHT HERON CRAB'S EYES. See ABRUS, CONCRETION

A spider of the family CRAB SPIDER Thomiside, so named on account of the short, broad body and the fact that, like a crab, it runs more successfully sideways or backward than forward. These spiders spin no web, but await their prey hidden among foliage, and are colored in harmony with their background, but a few species are bright-colored and hide in flowers The most common American form (Misumena vatra) is milk white, occasionally with light-crimson markings Another species (Philodroma vulgars) eats house fles almost exclusively Consult Emerton, The Common Spiders of the United States (Boston, 1902), and Fabre, The Life of the Spider, trans by De Mattos (New York, 1913). Compare BIRD

CRAB'S PLOVER. A singular shore bird (Dromas ardeola) nearly related to the oyster catchers, but set apart in a family, Dromadida, of its own, which is to be found sparingly on the coasts and islands of the Indian Ocean. "Its habits remind us both of the plovers and the terns, and so do the unusually large eggs," but in India, according to Hume, it nests in burrows in sand hills

CRABTREE, CHARLOTTE (1847-She was American actress, known as Lotta. born in New York and when a child of six began her career in California After starring for a time in the West, she came again to New York about 1860. In 1867, as Little Nell and the Marchioness in a dramatization of Old Curiosity Shop, she made her first great impression there and became a popular favorite Her success was entirely due to her personal charm Critics found little to approve in the pieces in which she appeared, such as The Little Detective, Zip, Musette, and The Firefly, but her stage appearance was characterized by a naturalness and grace which won the hearts of the

She retired from the stage, still audience unmarried, in 1891, having acquired a fortune Consult Welch, in McKay and Wingate's Fa-mous American Actors of To-Day (New York, 1896), and Clapp and Edgett, Players of the Present, Dunlap Society Publications (1b, 1899) CRACKED HEELS See Horse.

CRACK'ER See BISCUIT

CRACKERS. A name given in the southern part of the United States to the poor and ignorant whites, probably because of their usual diet, which is cracked corn ground into a coarse meal The term "corn-crackers" is employed in the same sense

CRACKER STATE. Georgia. See STATES, POPULAR NAMES OF

CRACK'LIN, or CRACKLE WARE A kind of china ware, the glazing of which is purposely cracked in the kiln, as an ornament, the effect being produced by a glaze which tends to contract in the burning more rapidly than the vessel itself. This ware is produced for the most part in China and Japan, but it has also been made at a pottery at Dedham, Mass, where two varieties of crackle ware are made Both have a gray body, resembling true poncelain and are fired at a high temperature To one of these various colored glazes are applied, ranging through various shades of red, green, and olive, while the other, the gray crackle ware, differs only in color and is usually decorated in blue Consult "American Art Pottery" in Special Reports of the Census Office, Manufactures, part in, 1905 (Washington, 1908)

CRACOW, kra'kō (Pol Kraków, Ger Krakau, Fr Cracovie, Lat Ciacovia, Carodunum, said to be named after its founder, Krakus, a legendary Slavic chief). The ancient capital of the Kingdom of Poland and residence of the Polish kings, now a fortified city of the Austrian Crownland of Galicia (Map Austria, F 1) It is situated on the left bank of the Vistula, at its confluence with the Rudowa, about 10 miles from the frontier of Russian Poland and 200 miles north-east of Vienna Cracow, with its numerous churches, towers, and old castle, presents an imposing aspect from without It consists of the inner town and a number of suburbs. The old walls surrounding the inner town have been demolished, and promenades laid out on their site Cracow is one of the oldest cities of Poland (according to tradition, a stronghold was built here about 700 AD ), and it bears the marks of its age in its imposing buildings as well as in its general appearance. The city has about 40 churches, scarcely more than half the number it formerly had, and about 25 convents The most important church is the Stanislaus Cathedial, a Gothic structure, situated near the castle It was erected under Casimir the Great, being consecrated in 1359 Here the Polish kings were crowned and here are they buried, together with many national heroes, including Sobieski, Poniatowski, and Kosciuszko. Also the remains of St Stanislaus, the patron saint of the Poles, are said to rest here. The church is also adorned said to rest here with numerous monuments, several of them by Thorwaldsen, and with notable paintings and other objects of art The church of St Mary, Gothic basilica, was founded early in the thirteenth century and has been rebuilt several It contains a magnificent high altar by times Vert Stoss and a number of monuments sides these churches there are a number of other very interesting mediæval ones Among the interesting secular buildings is the former royal castle, situated on a broad hill at the southwestern end of the town, it was built in the thirteenth century (and subsequently enlarged) and suffered greatly from conflagrations Until 1610 it was the residence of the Polish kings, from 1846 it was used as a barracks and military hospital, but it is now restored The old cloth hall, dating from the thirteenth century, is now used as an art museum, and contains paintings by Polish artists, such as Matejko, Siemiradzki, and others In front of the cloth hall is a bronze statue of Mickiewicz, one of Poland's greatest poets Among other notable buildings and historical monuments are the old and new theatres and the Rondell, a relic of the old fortifications The chief educational institution is the famous university, styled the Jagellonian University, founded by Casimir the Great in 1364. It developed very rapidly and eventually became the intellectual centre of Poland. It has faculties of jurisprudence, medicine, philosophy, and theology, with an attendance (1911) of 2805 students The university library contains over 300,000 volumes, besides numerous manuscripts, engravings, ancient documents, etc tached to the university are also an observatory, a botanical garden, a natural-history museum, and a number of other institutions The uni-versity occupies a splendid Gothie building erected in 1881-87, the library is housed in the old fifteenth-century buildings Among other prominent educational establishments are the Royal Academy of Sciences, and the art school (until 1893 under the supervision of Matejko), several seminaries, and a number of artistic and literary societies. The Czartoryski Museum contains a collection of sculptures and antiquities and a fine picture gallery, with examples of the Italian and Dutch schools Cracow re-mains the intellectual centre of the Polish

There are manufactures of machinery, textiles, leather, chemicals, etc., but industrially Cracow has not greatly developed. It is more important for its trude in grain, timber, salt, textiles, and cattle. In the vicinity of the city is situated Kosciuszko Hill, a mound 65 feet high, erected in 1820–23 by the residents of Cracow, in honor of Kosciuszko, and since converted into a fort. The fortifications of Cracow are very extensive. Eight miles southeast of Cracow is Wielczka, famous for its salt mines. Across the Vistula from Cracow is the town of Podgorze, with 29,293 inhabitants. In 1900 the city had 91,323 inhabitants, the census of Dec 31, 1910, returned 151,886. Of the latter, the vernacular of 133,158 was Polish, Roman Catholics numbered 116,656, Jews, 32,321. In 1912 Plassow (pp. 2256) was annexed to Cracow.

Cracion rose into importance in the Middle Ages as the seat of a bishopric and a centre of commerce and trade, its prosperity being enhanced by the influx of German immigrants. It suffered terribly at the hands of the Tatars in the thirteenth century. It became the capital of Poland early in the fourteenth century, and after having been superseded by Warsaw in 1610, it still remained, until 1764, the place where the Polish kings were crowned and buried It later became exceedingly impoverished, so that at the end of the eighteenth century its population was only about 10,000. In 1655 and 1702 the town was taken by the Swedes It was the starting point of the rising of the Poles for

independence under Kosciusko in 1794, and came into the possession of Austria at the third partition of Poland, in 1795 From 1809 to 1815 Cracow formed a part of the Ducly of Warsaw The short-lived Republic of Cracow, established at the Congress of Vienna in 1815, under the protectorate of Russia, Prusua, and Austria, was the last remnant of an independent Poland It consisted of the city of Cracow and some adjacent territory, with a total population of about 140,000 The participation of a portion of the population in the Polish uprising of 1830 gave Russia an opportunity for military occupation After that Cracow was repeatedly occupied by foreign troops The little republic took a leading part in the Polish insurrection of 1846 The patriots were at first successful, but their overthrow soon ensued, and Cracow was annexed to Austria in the same year. In 1849 it was incorporated with Galicia Cracow remains to the present day a great focus of Polish national life.

CRACOW, UNIVERSITY OF See CRACOW CRAD/DOCK, CHARLES EGRERT The nom de plume of Mary N. Murfree (qv), the Southern novelist

CRADLE OF LIBERTY, THE The name popularly given to Faneurl Hall, Boston, as the scene of early popular protests against British

CRADOCK, kráďok, Sie See Caradoc CRAFTON. A borough in Allegheny Co, Pa, 4 miles west of Pittsburgh, on the Pittsburgh, Cincinnath, Chicago, and St Louus Railroad (Map Pensylvania, B 6). It is in a coalmining and oil district Pop, 1900, 1927, 1910, 4583.

CRAFTS, James Mason (1839-American chemist He was born in Boston and received his education at the Lawrence Scientific School of Harvard In 1859 he went to Germany and studied at the Academy of Mines of Freiberg and at the University of Heidelberg At the latter institution he acted for some time In 1861 he as private assistant to Bunsen went to Paris, and there, in Wurtz's laboratory, he first met Charles Friedel, in conjunction with whom he later carried out some of his most brilliant researches. In 1865 he returned to the United States, and, after devoting some time to mining, accepted the position of head professor of chemistry and dean of the faculty at Cornell University, where he remained until 1870 During the following four years he acted as professor of chemistry at the Massachusetts Institute of Technology, but in 1874 took leave of absence, joined Friedel in Paris, and devoted himself exclusively to scientific research His investigations were mainly in the field of organic chemistry, but his name is connected also with many interesting achievements in physics and in physical chemistry. He invented a new hydrogen thermometer, measured the densities of iodine at very high temperatures, demonstrated an interesting regularity in the variation of the boiling points of chemically allied substances with the external pressure, prepared a number of new compounds of the element silicon, which are interesting because of their chemical resemblance to the corresponding compounds of carbon, and also prepared new compounds of arsenic But his most important achievement was the discovery, jointly with Friedel, of one of the most fruitful synthetic methods in organic chemistry. Hundreds of new carbon compounds have been brought into existence by this method, which is based on the catalytic action of the chloride of aluminum

In recognition of Crafts's services to science the French government made him a chevalier of the Legion of Honor (1885), and the British Association for the Advancement of Science made him one of its coil esponding members In 1891 he again returned to this country, and from 1892 to 1897 acted as professor of organic chemistry at the Massachusetts Institute of Technology In 1898 he became the president of the institute, and in the same year Haivard University conferred upon him the honorary degree of Doctor of Laws In 1900, however, he resigned the presidency of the Institute of Technology, and again turned to the investigation of problems in organic and physical chemistry The numerous results of Di Crafts's researches were published in various scientific periodicals, mainly foreign He also wrote a textbook of Qualitative Analysis (1869, and several later editions)

CRAFTS, Wilsum Fisk (1850—) An American cleigyman He was born in Fryeburg, Me, graduated at Wesleyan University in 1869 and at the Boston University School of Theology in 1872, left various positions in the Methodist Episcopal chuich, and in 1880 became a Congregational minister From 1883 to 1888, however, he was the pastor of the First Union Presbyterian Church of New York. He conducted an International Sunday-School Parliament at the Thousand Islands in 1876–77, worte many books for the Sunday school, and founded the American Sabbath Union in 1898 and the International Refoim Bureau in 1895. He also published Must the Old Testament Op (1883), Successful Men of To-Day (1883), The Sabbath for Man (1985), The Maich of Christ down the Centures (1902); That Boy and Givl of Yours (1905); Internationalism (1908); World Book of Temperance (1908), Prohibition Hand Book (1911).

CRAFTSMÁN, THE A powerful journal organized in 1728 by Bolingbroke and Pulteney, with Nicholas Amhunst, who conducted it under the name of "Caleb D'Anvers of Gray's Inn" It was the organ of the Opposition against Sir Robert Walpole

CRAG MARTIN, or Rock SWALLOW A swallow (Cluveola \*upest\*is), dosely alhed to the bank swallow (qv), which is found from Portugal castward to China in the breeding season, migrating to the topics for the winter. It frequents mountains and rocky liver banks among hills, but does not ascend to Alpine regions. It builds in miches of the locks a large, open-topped nest of mud, occasionally (as in the villages of the Pyrenees) placing this on the timbers of buildings or among luins, and lays profusely speckled eggs "The general color of the adult bird is a light ashy brown above, the lower paits being creamy buff, and the tail feathers are daik brown, the central and outer pairs being conspicuously spotted with white." Consult Sharpe and Wyatt, Monograph of the Hundanda (London, 1885-94)

CRAIG, Inlg, CHARLES FRANKLIN (1872—)
An American sumy officer and bacteriologist He was born in Danbury, Conn, graduated from the Yale Medical School in 1894, was appointed acting assistant surgeon in the United States army in 1898, and in 1908 became captain and assistant surgeon. Thereafter as biologist and bacteriologist he served in army hospitals at

Chickamauga Park, Ga, Fortiess Monroe, Hanan, the Presidio, Cal, and Manula In 1896-97 he was a member of the Army Board for the Study of Triopical Diseases, after 1909 he was assistant curator of the Army Medical Museum in Washington, at the same time acting as instruction in clinical microscopy and bacteriology at the Army Medical School in Washington, and in 1910-11 he was also assistant professor of bacteriology in the medical department of George Washington University He published The Washive-Autumnal Malarual Fevers (1901), The Malarual Fevers and the Blood of Protozoa of Man (1909), The Parastic Amerbe of Man (1911), also "Malarual Fevers," in Osler's Modern Medicine (1907), "Parastic Disease," in Hare's Modern Treatment (1911)

CKALG, EDWARD GORDON (1872- ) An English actor, producing manager, and writer on the theatre, the son of Ellen Terry He was born near London, played his first part in a London theatre when only six years old, and appeared again in Chicago when he was 13, but his regular début was made in 1889 under Sir Henry Irving, his mother appearing in the same performance. He continued with Irving till 1897, when he left the stage and devoted himself to the study of drawing and wood engraving In 1900 he began a series of operatic and theatrical productions in which he put in practice some novel ideas in regard to scenery and the mechanical details of stage management His success with these innovations led him to devote his time wholly to the art of production, and in 1913 he founded a school in Florence, Italy, for the dissemination of his theories of theatrical art He published, besides numerous magazine articles The Art of the Theatre (1905), On the Art of the Theatre (1911), Towards a New Theatre (1913)

CRAIG, FRANK (1874- ). An English painter and illustrator He was born in 1874 in Abbey Wood (Kent), and studied at the Royal Academy under Edwin Abbey He began as a painter of modein English life and contemporary history, such as the Boer War, and as an illustrator for Kipling's poems and for the London Graphic and other magazines In 1905 he joined the new Pre-Raphaelite movement, and thereafter painted historical pictures full of expressive figures and quaint costumes, in their general color scheme often resembling Gobelin tapestries Good examples are "The Heretic" (1906, National Gallery, London), "The Mad" (1907, Luxembourg), and "The Meeting House of Nonconformists" (1908) Among his more recent work the curiously characteristic portraits of Sir John Jardine and Major General Douglas Scott (1910) deserve mention A good example of his early style is the "Communion on the Velt" (1900, Durban Museum, South Africa)

CRAIG, JAMES ALEXANDER (1855-)
An American Semitic scholar, born at Fitziov
Harbor, Ontario He was educated at McGil,
Yale, and Leipzig universities, was instituctor
and adjunct professor at Lane Theological Seminary (1886-90), professor of 10d Testament
Hierature and exegesis at Oberlin Theological
Seminary (1891), and, after 1893, professor of
Semitic languages and literatures and Hellemistic Greek at the University of Michigan In
1904 he was a member of the Congress of Arts
and Sciences at St Louis Besides editing The
Semitic Services of Handbooks his publications in-

215

Inscriptions of Salmanassar, King of Assyria, 859-826 BC (1887), Metrical Translatow of the Epic of Ishtar, Hebrew Word Manual (1890), Assyrian and Babylonian Religious Texts (2 vols. 1895-97), Astronomical-1strological Texts of Babylonians (1899)

CRAIG, SIR JAMES HENRY (1748-1812) An English soldier, born in Gibraltar, son of the Judge-Advocate-General there In 1763 he was gazetted an ensign, and in 1771 was appointed captain in the Foity-seventh Foot He accompanied his regiment to America, was wounded at Bunker Hill, in 1776 was transfeired to Canada, and in 1777 was at the capture of Fort Ticonderoga General Burgovne before Saratoga intrusted him with dispatches to England He was promoted to be major in the Eighty-second, proceeded to Nova Scotia, and in 1781 served under Lord Cornwallis in North Carolina In 1795, having then risen to the rank of major general, he was placed in com-mand of the expedition to the Cape of Good Aided by Rear Admiral Elphinstone and Major General Clarke, he obtained the surrender of the colony on September 14 He went in 1797 to India, was promoted lieutenant general in 1801, and in 1805, as a local general in the Mediterranean, landed with 7000 troops at Castellamare, with orders to cooperate with the Russian foices under General Lacv in an attack upon the French After Austerlitz he withdrew to Sicily In 1807 he was appointed Governor General of Canada After a somewhat vexed administration he resigned in 1811, and in 1812

was promoted to be general CRAIG, JOHN (1512-1600) A preacher of the Scottish Reformation He was born in Aberdeenshire and educated at St Andrews entered the Dominican Order, but soon fell under the suspicion of heresy and was cast into prison On his release (1536) he traveled on the Continent, and after some time was, through Cardinal Pole's influence, made novice master in the Dominican convent at Bologna and later was rector While here Calvin's Institutes fell in his way and converted him to Protestant doc-trines He was brought before the Inquisition and sentenced to be burnt-a fate from which he was saved by the mob, on the death of Pope Paul IV, breaking open the prisons of Rome Craig escaped to Vienna and obtained favor at the court of Maximilian II, but the Pope demanded his surrender as one condemned for heresy The Emperor, however, instead of com-plying with the request, gave Craig a safe-conduct out of Germany He now returned to Scotland (1560) and was appointed the colleague of John Knox in the parish church of Edinburgh. Thinking the marriage of Queen Mary and Both-well contrary to the Word of God, he boldly refused to proclaim the banns, but afterward yielded under protest In 1572 Craig was sent "to illuminate the dark places" in Forfarshire until 1579, when he was appointed chaplain to King James VI He now took a leading part in the affairs of the Church, was the compiler of part of the Second Book of Discipline, and the writer of the national covenant signed in 1580 by the King and his household He was a man of great conscientiousness and was not slow to oppose the proceedings of the court when he deemed them contrary to Scripture and to speak wholesome but unpleasant truths to majesty itself He died Dec 12, 1600 Consult the black-letter facsimile reprint of Craig's Catechisms (Edinburgh, 1885), with introduction by T Graves Law

CRAIG, KATHERINE L An American edu-tor She attended Missouri Valley College, was elected superintendent of public instruction of Colorado in 1904 (reelected 1906), and became field secretary of Colorado Woman's College in 1909 Besides annotating the school laws of Colorado and compiling Arboi Day, Flag Day, and Washington and Lincoln Day books for the public schools, she is author of Primary Geography and a novel, Judge Greyburn and Kathlene Lee (1902)

CRAIG, SIR THOMAS (1538-1608) tish lawyer, author, and poet Educated at St Andrews and in Paris, he passed as advo-cate at the Scottish bar in February, 1563, and was appointed justice depute He gained the favor of James VI, who, notwithstanding his modest and persistent refusal, created him a knight in 1603 Besides some much-admired Latin verse and prose, he wrote Jus Feudale (ed. Burnet, 1655, new ed, with notes and corrections by James Baillie, 1766) This learned work is still an authority on feudal law

CRAIGENPUTTOCK, krā'gen-put'tŭk farm in the southwestern part of Dumfriesshire, Scotland, situated 12 miles north of Castle Douglas and celebrated as the residence of Thomas Carlyle It belonged to Jane Welsh before her marriage to the author The Carlyles lived there most of the time between 1828 and 1834 Much of Carlyle's writing was done at Crargenputtock, and there are frequent references to it in his published correspondence "Homes and Haunts of Carlyle," in Westminster

Gazette (London, 1895)

CRAIGHILL, krā'gil, WILLIAM PRICE (1833-1909) An American military engineer, born at Charlestown, W Va He graduated in 1853 at the United States Military Academy, in 1854-55 superintended the building of Fort Sumter, and in 1858 that of Fort Delaware, and was for several years an instructor at the academy In 1863 he constructed the defenses of Pittsburgh and in 1865 was brevetted a lieutenant colonel for service in the defense of Cumberland Gap He was promoted to the rank of major, and from 1865 to 1867 was in charge of the defenses of Subsequently he was con-Baltımore harbor cerned with several public works, such as the improvement of the Potomac River (1870-74) and the Delaware River (1873) He was chief of engineers of the United States army, with the rank of brigadier general, from 1895 until his retirement at his own request in 1897. In 1894 he was president of the American Society of Civil Engineers. His publications include an Army Officer's Pocket Companion (1862) and a translation of Dufour's Cours de tactique (1863)

CRAIGIE, krā'gê, PEARL RICHARDS. HOBBES, JOHN OLIVER.

CRAIGLEITH (krāg'lēth') STONE siliceous sandstone belonging to the Carboniferous series, quarried at Ciaigleith, near Edin-burgh It is largely used in that city for building purposes, for which it is admirably adapted by its purity, durability, and the ease with which it can be wrought

CRAIK, krāk, Dinah Maria (1826-87) English novelist, better known as Miss Mulock She was born at Stoke-upon-Trent, Staffordshire In 1849 she published The Ogilores, her first novel, and rapidly afterward Olive (1850), The Head of the Family (1851), Alice Lear216

mount (1852), Agatha's Husband (1853, 6th ed, 1865), John Halifax, Gentleman (1857), A Life for a Life (1859), Christian's Mistake (1865), and a great number of short papers A pension of £50 was granted to her in 1864 In 1865 she married George Lillie Crark Among her later works is Sermons Out of Church (1875) Her literary reputation rests chiefly upon John Halifax, Gentleman, a classic picture of middle-class English life, which had a remarkable success and appeared in frequent later editions Some of her Poems of That y Years, New and Old (1881), such as 'Douglas' and 'Philip, my King," have been popular She wrote several stories for her own children that ian through many editions These include The Adventures of a Browne (1872, new ed. 1911), and The Little Lame Prince (new ed. 1909) GRAIK, GEORGE LILLE (1798-1866) An English miscellaneous writes He was boin at

Kennoway, Fifeshire, and was educated for the Church at St Andrews University, but, preferring a literary career, he went to London in 1826 His first work of importance was the Pursuit of Knowledge under Difficulties (1830-31), forming part of the series of publications issued by the Society for the Diffusion of Useful Knowledge He also contributed largely to the Penny Magazine and the Penny Cyclopædia 1837 Craik became editor of the Pictorial History of England, some of the most valuable chapters of which were written by himself, and afterward enlarged and republished separately as independent works Such are his sketches of the History of Literature and Learning in England from the Norman Conquest to the Present Time (1844-45), and his History of British Commerce (1844) In 1845 he published Spenser and his Poetry, and in 1846-47 Baoon and his Writings In 1849 Crank was appointed to the chair of history and English literature in Queen's College, Belfast, a situation which he occupied till his death In 1848-50 appeared his Romance of the Peerage; in 1851 his Outlines of the History of the English Language, which has passed through various editions, and in 1856 his essays on The English of Shake-speare, which passed through several editions. His Manual of English Literature was reprinted (1910) in "Everyman's Library'

CRAIK, James (1731-1814). The physician of George Washington, who referred to him as "my compatriot in arms, my old and intimate friend." He was boin in Scotland He accompanied Washington in the Braddock expedition and subsequently entered the medical service of the Revolutionary army and was director of the hospital at Yorktown He was active in the disclosure of the plot to remove Washington from command during the winter at Valley Forge (see Conway, Thomas) and was present at the surrender of Lord Cernwalls at Yorktown After the war he settled near Mount Vernon and attended Washington in his last illness

CRAIK, ROBERT (1829-1906). A Canadian physician and surgeon He was born in Montreal and was educated at the public schools and McGill University, where he graduated with the highest honors in 1854. He then became house surgeon to the Montreal General Hospital and in 1856 also entered McGill University as demonstrator of anatomy, becoming professor of clini-cal surgery in 1860 While in this position he distinguished himself for his work in the resection of joints and for operations in ovariotomy In 1867-79 he was professor of chemistry In 1889 he became dean of the medical faculty and from 1889 to 1901 was also professor of hygiene and public health In addition to his professional work Crark ably assisted in the organ-ization and extension of the medical department during the 17 years that he was dean. He aided in obtaining additional university endowments, in promoting the building and opening of the Royal Victoria Hospital, and in the remodeling of the Montreal General Hospital As early as 1854 he wrote on the germ theory of infectious diseases His other publications include Papers on Purpura and Tetanus (1885), Medical Education (1890), Hospital and District Nursing (1897)

CRAILSHEIM, or KRAILSHEIM, krils'-him A town of Wurttemberg, Germany, on the Jagst, 47 miles northeast of Stuttgart (Map German Empire, D 4) Its municipal offices are situated in the ancient castle of the Hohenlohes, the fifteenth-century church of St John, a Gothic edifice, contains paintings and other features. It has considerable trade, and manufactures of woolens, cement, leather, lumber, and machinery It is a centre for agricultural products Pop, 1900, 5255, 1905, 5747, 1910, 6101.

CRAIOVA, or KRAJOVA, kra-yō'va The capital of the Province of Doljiu, Rumania, on the river Jiu, 112 miles west of Buchaiest (Map Balkan Peninsula, D 2). It is the centre of a rich agricultural and forest region, and trades in tunber, agricultural produce, and cattle Salt is extensively mined in the neighborhood. It is a garrison town and has large governmental industrial establishments for the manufacture of leather, rope, and carriages Trade in cattle, cereals, fish, linen, pottery, and glue is important. Being headquarters of the First Army Corps, it has a military training school. It has two old ruined monasteries, Obedeanu and Saint-Démètre. The ancient Roman Castra Nova, in the Middle Ages it became the residence of a ban and the capital of Lower Wal-

lachta. Pop, 1899, 45,438, 1905, 45,756
CRAIT See KRAIT
CRAKE, or CORN CRAKE (from Icel. kraka, crow, so named from the cry). An English name for the landrail (*Orew orew*), formed in imitation of its familiar cry, "crek, crek," which is heard from every field of grain in valleys and low grounds in Great Britain in early summer and is associated with all that is pleasant in and is associated with an end of printing little pleasant season. It is a very pretty bird, of a reddish-brown color, marked with dark brown in streaks along the middle of the feathers, lighter below (See Plate of RAILS, ETC ) Several other similar short-billed rails of the genera Crew and Porzana are often termed "crakes," as the spotted crake (Porzana porzana), which is smaller than the corn crake and is very similar to the American sora

CRAKE, AUGUSTINE DAVID (1836-90). An English author He was educated at London University, entered the ministry of the Church of England, and after holding pastorates at Blox-ham and in the Isle of Wight, became vicar of Cholsey, near Wallingford, in 1885, where he remained until his death. He was the author of a number of devotional books and of a long series of historical storybooks, illustrating the history of the Church in England His works include Emilius (1871), Evanus (1872), Edwy the Fair (1874, 5th ed., 1885), Alfgar the Dane

(1874), Fairleigh Hall (1882), The Last Abbot of Glastonbury (1884), Yule-Log Stories (1887), Stories from Old English History (1887) His best-known historical work is a History of the Church under the Roman Empire

CRAKE/BERRY. See CROWBERRY.

CRAM, RALPH ADAMS (1863-American architect and author, born at Hampton Falls, N H He began practice as an architect in 1889 As senior member of the firm of Cram, Goodhue, and Ferguson he helped to plan some of the most notable academic and ecclesiastical buildings in the United States These are Graduate College and Cleveland Tower, Princeton University, Rice Institute, Houston, Tex, Richmond and Sweet Briar colleges (Virginia), buildings for Williams College and Phillips Exeter Academy, and St Alban's Cathedral, Toronto, Canada, St Paul's Cathe-Gaineirat, 100000, Gaineia, 58 Fathers adiedral, Detroit, Mich. St. Thomas's Church, New York, Calvary Church, Pittsburgh, Pa, Euchd Avenue Presbyterian Church, Cleveland, Ohio, Fourth Presbyterian Church, Chicago, III Hecame consulting architect for the Cathedral of St John the Divine, New York City, and, in 1914, professor in Massachusetts Institute of Technology His writings include Church Building (1901), The Rumed Abbeys of Great Bittain (1905), Impressions of Japanese Archivatain (1905), Impressions of Japanese Archivatain (1905), Impressions of Japanese Archivatain tecture and the Allied Arts (1906), The Gothic Quest (1907)

CRAMBE See SEA KALE
CRAMER, kta'mër, Gabriel (1704-52) A
Swiss mathematician He was born in Geneva and was subsequently professor of mathematics there His chief work is a treatise on algebraic curves (Geneva, 1750), but he contributed to the subject of equations (q v ), revived the study of determinants (qv), which had been begun by Leibnitz, and wrote on the physical cause of the spheroidal shape of the planets and the motion of their apsides (Paris, 1730) He also edited the works of Johann Bernoulli (4 vols, Lausanne, 1742) and Jakob Bernoulli (2 vols, Geneva, 1744) In his investigation of curves Cramer generalized the problem of Pappus, to inscribe in a given circle a triangle whose sides produced shall pass through three collinear points, proved Newton's rule for determining the infinite branches of a curve, and completed the classification of cubic curves Consult Cantor, Geschichte der Mathematik (Leipzig, 1898), and Muir, Theory of Determinants in the Historical Order of its Development (London, See CURVE

CRAMER, JOHANN ANDREAS (1723-88) German pleacher and poet, born in Johstadt, Saxony He studied theology in Leipzig, and in 1750 became chief court preacher in Quedlinburg In 1754 the influence of his friends Klopstock and Bernstorff secured for him an appointment to a similar position in Copenhagen, where he became professor of theology Owing to the antagonism of Struensee, he was banished, and accepted an appointment as superintendent in Lubeck, whence he was recalled to Denmark after Struensee's execution in 1772, and appointed professor of theology and chancellor at the University of Kiel (1774) As a preacher he was unexcelled in his day, and his odes and hymns were very popular Many of them, such as "Er ist gekommen her," "Dem bin ich, Herr," and "Der Herr ist Gott und Keiner mehr," are still frequently sung in the Prot-

estant churches of Germany, and some have been translated into English A hymnal he edited in 1780 remained in use for a century His collected poems were published under the respective titles, Samtliche Gedichte (1782) and Consult Blu-Hinterlassene Gedichte (1791) emeke, Bertraege zur Kenntnis der Lyrik Johann Andreas Cramers (Greifswald, 1910)

CRAMER, JOHANN BAPTIST (1771-1858) German planist and composer He was born in Mannheim, but in his infancy went to London with his father, the violinist Wilhelm Cramer, who was also his first teacher Having completed his studies under Clementi, he appeared in public with great success at the age of 17, and after a concert tour in 1788-91 settled in London as a teacher He repeatedly traveled on the Continent, and from 1832 lived in Paris, whence he returned to London in 1845 He was much admired as a pianist for his correct technique and sympathetic interpretation, his numerous compositions for the pianoforte are now antiquated, with the exception of the Eighty-Four Studies, Op 50, which in their raie combination of superior technical requirements with the highest musical value have become an accepted classic and are used in the entire musical world as models of fundamental studies for the acquirement of solid and tasteful pianoforte playing

CRAMER, JOHN ANTONY (1793-1848) An English classical scholar, born at Mitlodi, Switzerland, of German parentage, and educated at Christ Church, Oxford He was professor of modern history at Oxford from 1842 until his death, and during the last four years of his life was also dean of Carlisle. The following are a few of his principal works Dissertation on the Passage of Hamibal over the Alps (in collaboration with H L. Wickham; 2d ed, 1828), an important work, Anecdota Græca e Codicibus Manuscriptis Bibliothecarum Oxoniensium Descripta (4 vols, 1835-37), Catenæ Græcorum Patrum in Novum Testamentum (8 vols, 1838-44)

CRAMER, kra'mēr, Karl Eduard (1831-1901) A Swiss botanist, born in Zurich He studied there and in Freiburg, taught for several years at the technological institute of Zurich, and in 1861 was appointed professor of botany at the Polytechnikum In 1880 he became professor in the university there, and in 1882 was made director of the botanic garden in Zurich. His published works include the following Pflanzenphysiologische Untersuch-ungen, jointly with Nageli (1855-58), Unterungen, joints, with Ragen (1905), othersuchungen uber die Ceramiaeen (1863), Bildungsubveichungen bei einigen wichtigeren Pflanzenfamilien (1864) He was also the author of a number of important monographs on botanical subjects, published in periodicals

CRAMP (OHG. chrampfa, Ger. Krampe, cramp, from OHG krampf, curved, Icel krappr, narrow, connected also with AS, OS cramb, OHG kramp, Ger kramm, crooked) An irregu-Units Erumn, cere Erumn, crooked) An irregular, involuntary, and generally painful contraction of a voluntary muscle, without insensibility or other disturbance of the general system Cramp is often the effect of cold, and has proved fatal to swimmers by attacking them suddenly when in the water. It is readily removed by what the action of the contraction of the contractio warmth and friction, when due to a strained position, to cold, or prolonged contraction of a group of muscles, as in lifting a weight above the head A swimmer attacked with ciamp in the legs should turn on his back and, while floating, grasp and knead the affected muscles violently Cramps are a distressing symptom in cholera (qv). They occur in cohe (qv), in tetanus (qv), and in some cases of poisoning. Writers camp is an "occupation neurosis" (qv) consisting of a spasmodic closure of the hand on attempting to write, which turns the pen over and prevents its moving. Telegraphers, brakemen on railroads, ballet dancers, eigan makers, glass blowers, violinsts, claimet and cornet players, and many others suffer from a cramp in the group of muscles which they use constantly in their occupations.

CRAMP, CHARLES HENRY (1888-1913) An American shipbuilder, born in Philadelphia He became a partner in, and later president of, William Cramp & Co, the largest shipbuilding enterprise in the United States, which has built many of the finest naval and merchant vessels affoat He built inonclads and mointons for the United States government in the Civil War and assisted in the reconstruction of the United States navy and the reestablishment of the United States merchant marine. The destroyed battleship Maine was built at the Cramp yards, in whose 31 acres of ground nearly 6000 workmen are employed. Canalt Buell, Memous of

then are employed. Coulsing both, in the most of O II Cramp (New York, 1906)

CRAMPEL, Kanx'pél', Patr. (1863-91). A French travelet in Africa IIe first went to the French Congo in 1886 as secretary to Savorgna de Brazza, and in 1888-89 conducted most successfully an expedition from the Ogowe River into the Fan country north and back to Corisco Bay In the following year he was commissioned by the Comité de l'Afrique Française to penetate to Lake Chad, and started from Stanley Pool with a small force of 30 Senegalese soldiers and 250 carriers and accompanied by three Europeans Having marched under great difficulties from Bangul on the Ubangi River notthward to El Kuti, he was abandoned by his carriers, and, while tying to force their way farther north, he and his remaining companions were surprised and massacied by the Senussi Moslems Only one European escaped to bring the news to the Congo (July, 1891)

CRAMP'FISH' (so called from the temporary paralysis caused by its shock) The electric ray. See Torredo

CRAMP'TON, CHARLES ALBERT (1858-An American chemist, born at Davenport, Iowa. He received his education at the University of Michigan, became assistant chemist in the United States Department of Agriculture in 1883, and, seven years later, was made chemist and in 1893 chief chemist to the Internal Revenue Bureau In 1910 he became chief of the division of food and drugs products He carned out a number of investigations in agricultural chemistry and published memons and reports on special topics of the chemistry of food and agricultural products, including the composition of plant tissues, the composition of butter and other fats, etc. He contributed to the first edition of the NEW INTERNATIONAL ENCYCLO-PÆDIA

CRAMPTON, HENRY EDWARD (1875-) An American zoologist, boin in New York City. He was educated at the College of the City of New York and at Columbia College, where he was an assistant in biology in 1893-95, and to which, after one year as instructor in the Massachusetts Institute of Technology, he returned to be fellow, lecturer, and institution in zoology, adjunct professor in 1901–04, and thereafter professor. He was a member of scientific expeditions to the islands of the South Pacific Ocean in 1906, 1907, 1908, 1909, and to British Guinna and the interior of Brazil in 1911 Besides his monographs in scientific publications he is author of The Doctrine of Evolution (1911, 2d ed, 1912)

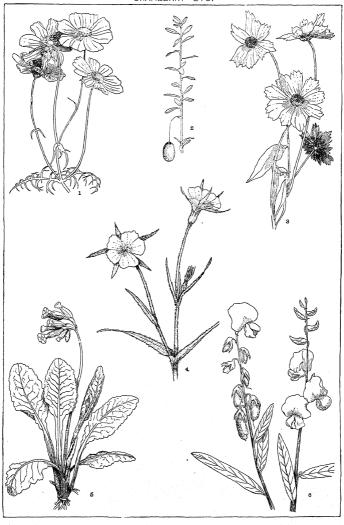

CRAMPTON, Tromas Russell (1816-88) An English laulway engineer. He was born in Kent and was educated by private tutors. Entering the engineering profession, he early tuined his attention to locomotive and railway building. In 1843 he designed and patented the locomotive nown by his name, which won him the closs of the French Legion of Honor from Napoleon III in 1855. His best-known work was the successful laying of the telegraphic cable from Dover to Calais in 1851. He also constructed the Smyrna Railway, the Varina Railroad in Bulgaria, various lines in England, and the Beilin Water Works.

CRANACH, kra'nag, Lucas the Elder (1472-1553) A German painter of the Renaissance He was born at Cionach in Upper Franconia There is much dispute in regard to his family name, according to Schuchardt, on Cranach's own testimony, it was Muller, others say Sunder Cianach was a pupil of his father, and in 1504 became court painter to Frederick the Wise, Elector of Saxony, at Wittenberg, by whom he was held in high repute His office included the duties of master of ceremonies at court, and besides this he found time for different business ventures at Wittenberg In 1519 he was elected chairman of the town council, he became burgomaster in 1537 and again in 1540 Cranach was in equal favor with the two following Electors of Saxony, and for two years remained with John Frederick during his imprisonment He died at Weimar, Oct. 16, 1553

Cianach has been called the painter of the Reformation, because of his active part in spreading its doctrines. This he did by means of paintings and woodcuts ridiculing the Pope and explaining the teachings of the reformers, and by his numerous portiants of Luther (see Plate of Luthers) and Melanchthon, who were both his personal friends Because of this activity and also on account of his great productiveness he became the controlling influence in the art of middle and northern Germany and founded what may be called the Saxon school He painted with great facilityin fact, the inscription upon his gravestone gives him the title of "celerrimus pictor" His early paintings were carefully executed, but in later life he did much negligent work. He paid great attention to detail, for which reason his smaller pictures were more attractive. His color was bright and clear, but his drawing was deficient, and he failed utterly whenever he attempted to represent the nude on a large scale His work was always original, and though we see the influence of the Renaissance in his mythological subjects, his art was thoroughly German and na-tional. It was, moreover, naif and rich in fantasy, being best wherever there was a chance

for genre Cranach's works survive in large numbers, especially in the German galleries. But he intrusted so much to his large school of pupils that it is difficult to decide how much is actually

## CRANBERRY ETC.

<sup>1.</sup> COSMOS (Cosmos tenuifolius). 2. CRANBERRY (Vaccinium macrocarpon). 8. COREOPSIS (Coreopsis lanceolata).

<sup>4.</sup> CORN COCKLE (Lychnis githago). 5. COWSLIP (Primula veris). 6. SUNN HEMP (Crotalaria Juncea).

due to him Among his best works are the "Repose in Egypt" (1504), now in the Berlin Museum, "Christ Blessing the Children," in the Baring collection in London, "Samson and Delılah," in the Museum of Augsburg, and the "Fountain of Youth," in the Berlin Museum. All of these pictures possess a charming naivete Of his larger religious paintings, good examples are the 'Marriage of St Catharine," in the cathedral of Erfurt, of his earliest period, and his last great work, the "Crucifixion," in the town church of Weimar This depicts the object of the Reformation, quaintly introducing the figures of Luther and of Cranach himself His best works are probably his portraits, for in these the detailed execution is more appropriate. But even here he falls far short of the strength of character of Durer and Holbein Among the best are "Cardinal Albrecht of Mainz as St. Dest are Caranan American of Mania as is.
Jerome," in the Berlin Museum, John Frederick
of Saxony, in Dresden, and an "Unknown Female" (No. 291), in the National Gallery, London. Cranach was also an excellent painter of miniatures, as may be seen in the album of the University of Wittenberg, now at Halle, and especially in John Frederick's 'Book of Tourneys," now at Coburg, a work of 144 leaves. He also executed a few copperplates and a large number of drawings for woodcuts.

Consult Schuchardt, Crancoh des alteren Leben und Werke (Lepzig 1851-71), Dodgson In Bibliotheque des bibliographies critiques (Paris, n d), Flechisg, Tafeibilder Lucus Cranaches die Alteren, Cranach Studien (Lepzig, 1800); also the monographs by Heller (Bamberg, 1844), Warnecke (Gorlitz, 1879), Lindau (Lepzig, 1883), and Michaelson (ib, 1902) CRANACH, Lucus (1615-80) THE YOUNGER.

CRANACH, Lucas (1615-86) THE YOUNGER.
A German painter, the second son and pupil of
the preceding His works are hard to distinguish from his father's and are often assigned to
him. His coloring is brighter than his father's,
and his drawing is worse A number of his
authentic works are in the Dresden Gallery, including "Elijah and the Priests of Baal," "Hercules with the Pygmics," and a portrait of Elector Maurice of Saxony and his wife A portrait
by him of "An Unknown Woman" is in the
Boston Ait Museum

CRAN'BERRY (from crane + berry). A name given to the fruit of a few creeping, vinelike species of the genus Vaccinium, family Ericacea. The smaller cranberry (Vaccumum oxy-coccus) grows wild in the peaty bogs and marshlands of the temperate and colder regions of both Europe and America The larger cranberry (Vaccinium macrocarpum) is native in similar situations in the United States and is extensively cultivated for commercial purposes in Massachusetts, New Jersey, Wisconsin, and a few other Noithern States The cranberry is a firm, red, acid herry, of good keeping quality, and is used for sauce, tarts, and the like In the improved commercial culture of cranberries natural swamps or bogs are selected which can be drained by open ditches and flooded when desired The native moss and swamp growth are sired. In a native moss and swamp growth are removed, and the peat covered 2 to 4 inches deep with sand. The vines are planted about 14 inches apart, cuttings 6 to 8 inches in length being used. The sand keeps down the weeds, makes cultivation easy, and helps retain the processing in the scale bears. moisture in the soil below. Additional sandings are given every four or five years, which keep the vines short and close In some localities sanding is omitted altogether. The object of flooding is to protect the vines in winter and from early fall and late spring frosts, to destroy insects, prevent drought, and protect against fire. The berries are gathered preferably by hand, but often with special rakes and combs. There are three principal types of cultivated vanieties, determined by the form of the betries—bell-shaped, bugle-shaped, and cherry-shaped—with many varieties of each Over 1,000,000 bushels of cranberries are marketed in the United States annually

The cowberry, or mountain cranberry (Vaccinium vitis-ideea) is common in both Europe and America, and, like Vaccinium oxycoccus, is gathered and sold in considerable quantities, but is not cultivated. The shrub Vibunum opulus is known as the high-bush cranberry. The fruit is tart, but is of little value and is seldom eaten. The Tasmanian cranberry is the fruit of Astro-loma humfisum, of the family Epicridaces. Consult Corbett, "Cranberry Culture," Farmers' Bulletin, No. 176, United States Department of Agriculture (Washington, 1903). Year Book of the Department of Agriculture (Washington, 1911)

CRANBERRY DISEASES. The scald and spot are the most serious fungus troubles of the cranberry, the names being derived from the appearance of the fruit. They are of fungus origin, the scald is due to Guignardia vaccinii, and the spot to Pestalozzia quepini vaccinii and may be recognized by the appearance of soft spots on one side of the berry The skin becomes tense and of a reddish-brown color. Later the berry becomes shriveled and may or may not fall to the ground Distinct brownish spots may also be seen on the leaves The diseases are most troublesome in hot moist seasons, and the most satisfactory treatment, where it can be followed, is to cover the bog with a thin layer of sand, which can best be done when the bog is flooded, and spraying with Bordeaux mixture, to which is added a resin-fish oil mixture These diseases have been known to destroy more than half the berries on a bog in a short time A gall-producing fungus, Synchytrium vaccinii, is common on the cranberry and related plants. The presence of the fungus on the leaves and other parts of the plant causes the formation of red galls. Burning over the bog in autumn is recommended as a preventive means, since the spores are ripened the second year. Common and conspicu-ous malformations of leaves, flowers, and young shoots of the cranberry are due to Exobasidum vaccinii The parts attacked are swollen and the green color replaced by rose or red This disease is seldom severe Consult Shear, "Cranberry Diseases," United States Department of Agriculture, Bureau of Plant Industry, Bulletin 110 (Washington, 1907)

TRANBERRY INSECTS The worst enemies of the eranberry are two moth caterpillars—the black-headed fireworm (Rhopobata vaccunusua), which defoliates the bushes, and a spanwoim (Aorobass vaccunus), which attacks the fruit For the first, Prof J. B Smith, author of a treatise on "Insects Injuriously Affecting Cranberries," in Special Bulletin K, New Jersey Agraultural College Experiment Statum (New Brunswick, N J, 1890), recommends reflowing the land and application of Kerosene or Paris green, for the second, Paris green or London purple applied after the leaves are mostly gone and the berries are set. A scale, a leaf

Vol VI -15

hopper, and certain locusts and cickets are also harmful Consult Franklin, 'How to Fight Cranberry Insects,' Bulletin 126, Massachuset's Igricultural Experiment Station (Amherst, 1908)

CRAN/BEOOK. A town in the Kootenay valley between the Selkirk and Rocky Mountains, Kootenay District, British Columbia, Canada It is a divisional point on the Crow's Nest branch of the Canadian Pacific Railway, 36 miles west (direct) of Feine, and is about 330 miles east (direct) of Vancouver (Map British Columbia, F 5). It is in a rich fruit-growing, agricultural, and mining region, and is the geographical and distributing centre of the south-east part of Kootenay District. Its growth dates from 1901. The principal public edifices are the provincial buildings, and it contains a high school and a manual training school. The mininfacturing industries include sash and door factories, saw and planing mills, brickworks, aeratedwater works, and foundries. Pop., 1911, 3080.

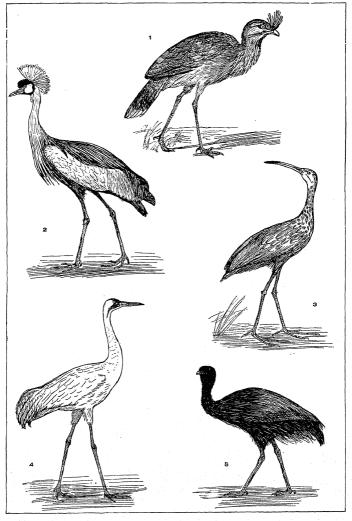

CRANDEDOCK, GATHORNE GATHORNE-HARDY, first EARL or (1814-1906) An English statesman, born at Bradford He was educated at Oxford (BA, 1880), studied law, and was appointed Undersecretary of State for the Home Department in 1858, two years after his election to Parliament in 1858 he was again elected to Parliament as the representative of the University of Oxford, defeating Gladstone In 1867-68 he was Bome Secretary and was subsequently Minister of War (1874-78), Secietary of State for India (1878-80) under Lord Beaconsfield, and Lord President of the Council under the Marquis of Salisbury (1885 and 1886-92) He was a sated to the pecage in 1878 as Viscount Cranbrook and was created Baion Medway in 1892 He was a strong chuichman Consult the Memory (London, 1910) by A E Gathorne-Hardy

CRANCE, CHRISTOPHER PEARSE (1813-92) An American artist and poet, boin at Alexandria, Va. He studied theology at Cambridge, Mass, and became a Unitation clergyman In 1842 he retired from the ministry. He associated himself with the Transcendentialists, and words verse for The Dial, but in 1846 went to Europe to study art, remaining there until 1863. He retired to America in 1894, but after 1871 devoted himself wholly to literature, to which he had already contributed Poems (1844), two juveniles, The Last of the Huggomuggers (1856), and Robboticeo (1857). His later works include notably The Burd and the Bell, with other poems (1875), and Arel and Cabban (1887). He was a man of genuine culture, who, growing up in the midst of more grifted spirits, failed to make a deep impression upon his generation.

roan judge, born at Weymouth. He graduated at Harvard, and was admitted to the bar in 1790 In 1801 he was appointed a justice of the United States Orient Court for the District of Columbia and in 1805 was made Chief Justice, and this office he held until his death. He published Reports of Cases in the United States District Court of the District of Columbia (1801-41) and the Supreme Court Reports (1800-141) and the Supreme Court Reports (1800-141).

CRÁN/DALL (PHÍLLEO), PRUDENCE (1808-90) An American educator and philanthropist She was born at Hopkunton, R. I, of Quaker parentage; was educated at-the Friends' School in Providence, R. I, taught for a time at Plainfield, Com, and in 1831 established a private school for girls in Canterbury Early in 1833 she admitted a colored girl into the school and thereby aroused the violent opposition of her neighbors This led her to abandon her original plan and to open her school unreservedly to young ladies and little misses of color" cordingly she issued an announcement to that effect in the Liberator of March 2 and early in April received 15 or 20 colored pupils. Her neighbors then began a systematic course of persecution and endeavored by boveott, insult, and abuse, and by enforcement of an obsolete vagrancy law, to break up the school meetings were called, petitions were circulated, and on May 24 the celebrated "Black Law" of Connecticut was passed forbidding any one to "set up or establish in this State any school, academy, or literary institution for the instruction or education of colored persons who are not inhabitants of this State," or to instruct or teach in any such school For refusing to obey this law Miss Crandall was arrested, was imprisoned in the Canterbury pail, and in October was convicted, though the Court of Errors reversed the decision of the lower court on a technicality, in July, 1834 Soon afterward Miss Ciandall's house was assaulted and partially destroyed, and she finally decided to abandon her project The whole affair attracted much attention throughout the country and served to intensify the conflict between the abolitionist and anti-abolitionist elements among the Northein people A shoit time after giving up hei school Miss Crandall married the Rev Calvin Philleo, and passed the rest of her life in New York, Illinois, and Kansas Consult May, Recollections of the Anti-Slavery Conflict (Boston, 1869).

GRANE. The largest of the watching Grande, Grande They constitute the family Grunde, (Grallæ) which occupies a very distinctive position between the trumpeters and the rails, being connected with the latter by the limpkins, or Aramide All are tall, long-legged, long-necked birds, with the head more or less naked, but sometimes tufted, lather long, straight, compressed beaks, short but powerful wings, short tails, the feet unwebbed, and the hind toe greatly elevated, they are like herons in appearance, but resemble rails in structure. One remarkable feature is the enormous development of the windpipe within the keel of the breastbone, where it is coiled and twisted before emerging into the neck, the extreme development of this is found in our American whooping crane, where the trachea reaches 4 or 5 feet in length in old age (it is perfectly straight and simple at birth), and the convolutions act like those of a French hunting horn in producing the extraordinary resonance of tone for which the voice of this species (see IBIS) is noted. About 18 species of crane are known, representing three genera and all parts of the world except South America and the Malayan and Polynesian archipelagoes The best known, perhaps, is the European crane, which is about 4 feet high, ashy gray, with a blackish face and throat The tertial feathers of the wings are so prolonged as to droop over the quils, then webs are fibrous and discon-nected, and formerly they were much used as ornamental plumes This peculiarity characterizes most other species to a greater or less extent, and some species have the power to clevate these plumes at will, forming a striking ornament All the cranes of the temperate zone migrate,

SERIEMA (Seriema cristata).
 CROWNED CRANE (Balearica pavonina).
 TRUMPETER (Pophia crepitans).
 TRUMPETER (Pophia crepitans).

CRANE CRANE

some going annually to the far north to breed, and the coming of flocks in the spring, always in a V-formation, and the extraordinary "dances" with which some accompany courtship, have been observed for centuries and have caused a large body of myth and folklore to grow up about the bird during classical and medieval times On this point, consult C de Kay, Bird Gods (New York, 1898)

The remote breeding of the European crane (Grus grus) in Lapland and along the northern border of Russia was little known until the mystery was solved by J. Wolley in 1853, who discovered among other new facts that the young un about as soon as they leave the egg, and that the sitting bild would not carry away eggs that had been handled, as had been commonly believed The birds make their nests on the ground in the marshy plains that border the Arctic Sea The whole account (Ibis, London, 1859) is exceedingly interesting, and is largely quoted by Stejneger in the Standard Natural History, vol ıv (Boston, 1885) Other cranes of the Old World are the northwest African crowned or Balearic ciane (Balearica paronina), which has a topknot like that of a peacock, and the smaller Numidian crane or demoiselle (Grus viigo), which in summer resides and breeds from Turkey eastward to China, and which is the one most famous for its dancing The Manchurian crane (Grus japonensis, or viridirostris) is especially common in winter in Koiea, where it is trapped in large numbers and sold to the Chinese and Japanese, who are especially fond of it and endow it with many folklore qualities The large Australasian crane (Grus australasiana) is one of the most conspicuous biids of that region and is known to the Australians as "native companion" because of its friendly disposition will sometimes follow the plowman, picking up the insects he turns out of the soil. Consult Blyth, Natural History of the Cranes (London, 1881), and Blaauw, A Monograph of the Crancs (Leiden and London, 1897)

American cranes are of three species greatest is the whooping clane (Grus americana, or Limnogeranus americanus), which is larger than the European crane and is seldom seen except on the Western plains, where it has become rare In fact, it may be wholly extinct at present, as none have been seen for several years. There are a few living in zoological gaidens. Two others are also species of the Western interior and are diminishing in numbers, one is the sand-hill crane (Grus mexicana), and the other the little brown crane (Grus canadensis) -both until recently regarded as one species. Consult Coues, Birds of the Northwest (Washington, 1874) See Plate of CRANES, ETC

CRANE (AS. cran, cornoch, OHG cranuh, chranth, Ger Kranich, crane, connected with Welsh, Corn, Bret. garan, OChurch Slav sherail, Lith gérue, Gk. yépavos, geranos, crane, so called from the resemblance of the arm of the machine to the neck of the bird) A term used in applied mechanics to designate a hoist which can also move the load in a horizontal or lateral direction Cranes are divided into two classes, as to their motions-viz, rotary and rectilinearand into four groups as to their motive powerviz, hand, when operated by manual power; power, when driven by power derived from line shafting; steam, electric, hydraulic, or pneumatic, when driven by an engine or motor attached to the crane, and operated by steam, electricity, water, or air transmitted to the crane from a fixed source of supply, locomotive, when the crane is provided with its own boiler or other generator of power and is self-propelling, usually being capable of both rotary and recti-linear motion Rotary and rectilinear cranes are thus subdivided (1) swing clanes, having rotation but no trolley motion, (2) jib cranes, having rotation and a trolley traveling on the horizontal jib; (3) column cranes, identical with the jib crane, but rotating around a fixed column, which usually supports a floor or roof above, (4) derick cranes, having the head of the mast held in position by guy rods, instead of by attachment to a roof or cerling, and a boom whose outer end is raised and lowered from the top of the mast to secure the radial motion of the load; (5) pillar cranes, having rotation only, the pillar or column being supported entirely from the foundations, (6) pillar jib cranes, identical with the last, except in having a jib and tiolley motion, (7) walking cranes, consisting of a pillar or jib crane mounted on wheels and arranged to travel longitudinally upon one or more rails, (8) locomotive cranes, consisting of a pillar crane mounted on a truck, and provided with a steam engine capable of propelling and rotating the crane and of horsting and lowering the load, (9) bridge cranes, having a fixed bridge spanning an opening and a trolley moving across the bridge, (10) tram clanes, consisting of a trunk or short bridge, traveling longitudinally on overhead rails and without trolley motion, (11) traveling cranes, consisting of a bridge, traveling longitudinally on overhead tracks, and a trolley moving transversely on the budge, (12) gantries, consisting of an overhead bridge carried at each end by a trestle traveling on longitudinal tracks on the ground, and having a trolley moving on the bridge, (13) iotaly bridge cranes, combining rotary and rectilinear movements and consisting of a bridge pivoted at one end to a central pin or post and supported at the other end on a cucular truck, provided with a tiolley moving on the bridge

Cranes are built of wood and iron, but at the present time cast iron and steel are employed nearly exclusively. Hand cranes are employed for handling comparatively light loads, and the manual power is usually applied by means of a crank or cranks operating a windlass, around the drum of which the hoisting rope is wound and unwound. For heavy loads some form of mechanical power is always employed, which is applied through a suitable train of mechanism for performing the various movements of hoisting, rotation, and horizontal travel variety of such mechanisms are in common use for each of the principal kinds of motive power, and for details the reader should consult special treatises on hoisting machinery and the catalogues of manufacturers Cranes are built with capacities of from a few hundred pounds to as much as 150 tons The traveling crane in the gun shop at the Washington navy yard has a capacity of 150 tons, the span of the bildge is 591/2 feet, the maximum travel of the trolley lengthwise of the bridge is 44 feet 2 inches, and its traveling speed is from 25 to 50 feet per minute, the effective lift is 40 feet, with four speeds of hoist; the speed of travel of the bridge is from 30 to 60 feet per minute

The Finnisston Quay, at Glasgow, Scotland, is equipped with a pillar crane of 150 tons' ca-pacity. The jib is formed of two steel tubes, each 39 inches in diameter and 90 feet long, the radius of sweep for heavy lifts is 65 feet, the jib and its load are counterbalanced by a weight of 100 tons, and in a test a 130-ton load was lifted at a rate of 4 feet per minute, and a complete revolution was made with this load in five minutes The floating ciane at Cramp's ship-yard, in Philadelphia, Pa, has a steel mast 116 feet high and 3 feet in diameter, carrying a horizontal jib 65 feet long with a counterbalance arm 50 feet long which is staved to the bottom of the mast and to the hull of the barge barge is 69 feet long, 62 feet wide, and 13 feet This crane has a lifting capacity of 125 A floating crane owned by the Chapman tons Wrecking Company, of New York City, has a mast 92 feet high and a jib 98 feet long, and is capable of lifting a load of 265 tons

Shears, or shean legs, is a type of crane for shippard use, in which a long boom made of two converging members is pivoted at the bottom on the ground, and carries the pulley or hoisting purchase at the upper end. It has a small horizontal range by reason of the in-and-out swing of the long-legged boom, but considerable vertical range. It is used for placing boiles and engines

in the hulls of vessels

On board ship cranes are fitted for handling cargo coal, boats, anchor, etc The boat crane of a large modern man-of-war is built up, box-grider fashion, it rises 20 or 25 feet showe the skid beams on which the boats are stowed, and extends 10 or 15 feet beyond the ship's side when turned out for the purpose of lowering or hosting a boat. The power is either electricity or steam and serves to host and lower the boat, run it in or out on the horizontal arm of the crane, or train (i.e., tuin horizontally) the latter Consult Glynn, Treatise on the Construction of Cranes and Other Hosting Machinery (London, 1837), Marks, Notes on the Construction of Cranes and Idity Machinery (b. 1889), and Towne, A Treatise on Oranes (New York, 1883). See Derrick (Elexators)

He was ) An American landscape painter born in New York, Oct 17, 1857, and studied there under Alexander Wyant, and later in Europe His landscapes are idyllic in character and show the influence of the painters of Barbizon They are veracious but highly poetical interpretations of commonplace nature, treating such subjects as broad stretches of plowed or snow-covered fields, finely modulated in color and often of a 11ch golden color Good examples are "Autumn Uplands" (Metropolitan Museum, New York), "Autumn" (National Gallery, New York), "Autumn" (National Museum), "March" (Brooklyn Museum), "Ralfumore), Washington), "Maich" (Brooklyn Museum), "Spingtime" (Peabody Institute, Baltimore), "The Hills," awarded the Saltus prize (National Academy), "Autumnal Hills" and "Indian Sundandemy), "Awaring" and "Golden Af-Academy), "Autumnal Hills" and "Indian Sum-mei" (1912), "Grey Morning" and "Golden Afternoon" (1913) He was elected a member of the National Academy of Design (1901) and of the American Water Color Society and received numerous medals and prizes.

CRANE, Frank (1861 — ) An American clergman and author, born in Ubana, III, and educated at Illinois Wesleyan University He was ordained to the Methodate Episcopal minetry in 1882 and preached in Chicago Methodast churches from 1896 to 1903, when he entered the Congregational ministry From 1904 to 1909 he was pastor of the Union Congregational Church of Worcester, Mass, and then devoted

himself to authorship He wrote articles for syndicated new spapers, daily and weekly, and for women's monthlies, on subjects of contemporary interest, and published in book form The Reliquon of Tomorow (1899), Vision (1907), The Song of the Infinite (1900), Human Confessions (1911), God and the Democracy (1911), Laure and Lovely (1912)

CRANE, ICHADOD The hero of the adventure with the Headless Horseman, in Irving's "Legend of Sleepy Hollow," in The Sketch Book

CRANE. STEPHEN (1870-1900) An American journalst and novelist, born at Newark, N J He was educated at Lafayette College and Syracuse University, began active hie as a reporter and newspapes write; was correspondent for the New York Journal in the Geoc-Tulkah War (1897) and in Cuba, and then removed to England His flist essay in fetton was a stoye of slum life, Magqie, a Gril of the Streets (1891) This was followed by a collection of verses. The Black Enders and Other Lines (1895) The Red Badge of Courage (1896), a realistic though imaginary presentation of horiors in the Civil War, brought him deserved reputation Less significant are Geogrés Moher (1896), The Luttle Regiment (1897), The Open Boat (1893), Whilomoville Stories (1900), and other tales, although in such a short story as The Master he showed that he still possessed great power Posthumous manuscripts have been collected by his wife under the title Wounds

(1900) In 1903 appeared O'Raday, written in collaboration with Robert Bair CRANE, THOMAS FREDERICS (1844—). An American folklorist and educato, born in New York He graduated in 1864 at Princeton, was appointed professor of modern languages at Cornell, and in 1868 professor of the Romance languages In 1902 he became dean of the general faculty of the university, and in 1909 professor emerities His researches in the history of the development of European folklore are especially valuable. His works include Italian Popular Tales (1885), The Exempla, or Illustrative Stories from the Scrinorse Vulgares of Jacques de Vitry (1890), Chansons popularies de la France (1891), Tableau de la révolution française (6th ed., 1892). He also câtted La romantisme français (1887, 5th ed., 1907)

the Rain (1900) and Great Battles of the World

CRANE, WALTER (1845-One of the foremost English illustrators, also a painter, decorator, and writer He was born in Liverpool, Aug 15, 1845, received instruction from his father, Thomas Crane, a miniature painter, and afterward studied wood engraving under Linton in London Although influenced by the Pre-Raphaelite painters, Rossetti, Holman Hunt, and Millars, he was largely self-taught During his travels in Italy in 1871 and 1888 he was strongly influenced, especially in his painting, by the early Florentines, above all by Botticelli He is, however, preeminently an illustrator, who has popularized Morris's ideas of bookmaking, and on the Continent he, rather than William Morris, is considered the leader of the Romantic movement in British decorative art Morris, he also seeks to identify art with Socialism and to introduce it into social and domestic life He is perhaps best known for his illustrations-mostly of juvenile books-published in collaboration with Edmund Evans, contributing largely in reforming the artistic conception of decorative illustration His drawings, executed in a kind of antique style, mostly in outlines, are full of imagination, chaim, and almong show complete mastry of the medium Among the best are "The Babv's Opera" (1877), "Pan Crumm's Household Tales (1882), Grimm's Household Tales "Echoes from Hellas" (1888), "Flora's (1882), "Echoes from Hellas" (1888). "Flora's Feast", "Queen Summer" (1889), Shakespeare's Works (1883-94), and Spenser's Faerie Queene As a painter, he is classed with the Pre-Raphaeltes (qv) Among his best-known paintings are "The Birth of Venus" (1877, Tate Gallery), "The Chariot of the Hours" (medal at Munich, 1895), "Mask of the Four Seasons" "Prometheus Unbound" (1906), por-(1905), trait of himself in the Uffizi Gallery (1912) is also known as a designer for glass windows, tapestries, wall paper, and the like, and as a writer, with pedagogical intent, upon subjects of general artistic interest. He received many medals and was chosen president of the Arts and Crafts Society of London Consult the monographs by Von Berlepsch (Vienna, 1897) and Schleintz (Bielefeld, 1902), and Konody, The Art of Walter Crane (London, 1902)

CRANE, WILLIAM HENRY (1845-American comedian He was born in Leicester, Mass, and was educated in the Boston schools In 1863, after some amateur experience, he made his debut at Utica, N Y, with the Holman Opera Company, taking the part of the notary in Donizetti's Daughter of the Regiment In 1870 he became a member of the Alice Oates Company, with which he remained for four years In 1874 he played at Hooley's Theatre in Chicago, filling the leading comedy rôles, and later he acted in San Francisco for nearly a year Returning East, he made his first marked success with Stuart Robson (1877), at the Park Theatre, New York City, in Grover's farcical play Our Boarding House Among their other successes were those in the Comedy of Errors and The Henrietta (1889), after which he separated from Mr Robson His subsequent plays include The Senator, The American Minister, On Probation, A Fool of Fortune, A Virginia Courtship (1898), David Harum (1900), Business is Business (1905), She Stoops to Conquer (1906-07), Father and the Boys (1907), The Senator Keeps House (1911), The New Henrietta, a revision of The Henrietta (1914)

GRANE, WINVINDO MURRAY (1853— ). An American politican and a manufacturer, born in Dalton, Mass, and educated in the public schools In 1897 he was elected Lacutemant Governor of Massachusetts, and in 1900 Governor From 1892 to 1900 and from 1904 to 1912 he was a member of the Republican National Committee He was appointed to fill the vacancy in the United States Senate caused by the death of Senator Hoar in 1904 and later was elected for the term ending in 1913, when he retared

from public life

CRÂNE FLY (so called from its long legs)
A big, slender-bodied fly of the family Tipulidæ, having excessively long, slendel legs These flies appear, often in swarms, in late summer, and about 300 of the 1000 or more known species belong to the United States Their modes of life and reproduction are not well known "The larvæ of most species," according to Howard, "The in the earth, but some live in water, in decomposing wood, and even upon the leaves of plants Some of the earth-inhabiting forms destroy grass and grain by injuring the roots.

but are sometimes beautifully marked and spotted" See DADDY LONGLEGS

CRA'NIUM See SKULL

CRANK A meclanical device consisting of a bend or arm on an axle or shaft by which reciprocating motion is converted into rotary motion. The reciprocating motion of the piston rod of a steam engine is converted into lotary motion of the engine shaft by means of a crank. The crank may consist of an arm on the end of a shaft or of a similarly located disk with a crank pin, or of a U-shaped bend in the shaft between the ends. The piston rod transmits its

1, single crank at end of an axle, 2, double crank in the middle of a shaft, 3, bell crank.

motion to the crank by means of an intermediate connecting rod The connecting rod exercises the maximum force on the clank arm when this arm is at right angles to the line of motion of the connecting rod, and it exercises no force tending to produce iotation when the crank arm is parallel to the line of motion of the piston rod Maximum force occurs at two points in the rotation of the crank, and no force occurs at two points nearly at right angles to the points of maximum force. The two points of no force are called the "dead points"; and in order to carry the crank shaft past these dead points, where only a single crank is used, the shaft is provided with a heavy flywheel, the momentum of which supplies the necessary power to keep up rotation when the connecting iod is not supplying power When two connecting rods are connected with the shaft by separate cranks, the two crank arms may be set at right angles to each other, so that one rod is exerting its maximum force while the other is at the dead points of the revolution

CRANMER, THOMAS (1489-1556) Reformer of the English church and the first Protestant Archbishop of Canterbury He was born at Aslacton, in the County of Nottingham, on July 2, 1489 In his fourteenth year he went to Jesus College, Cambridge, of which he was elected a fellow in 1510, but lost his position temporarily by marriage, being reelected on his wife's death In 1523 he took his degree of D D and was appointed lecturer on theology In 1529, during the prevalence of the sweating selcaess in Cambridge, he retired with two pupils to Waltham Abbey; and Henry VIII, in company with Gardiner and Fox, afterward bishops of Winchester and Hereford, happening to be in the neighborhood, the event proved a turning point in the life of Cranmer The King was then taking steps to secure his divorce from Catharine of Aragon, and in conversation on the subject with Gardiner and Fox, Cranmer suggested that if the

universities could be induced to declare that, in their opinion, the first marriage was unlawful, the King would be free to marry again Henry was greatly pleased with this idea, and is said to have sworn, "by the Mother of God, that man hath the right sow by the ear" Cranmer was asked to reduce his suggestion to writing and to have it submitted to the European universities After this he was appointed archdeacon of Taunton and one of the royal chaplains He was also sent to Rome on a special embassy in the matter of the divorce, but met with little success. Subsequently he was dispatched to the Emperor Charles V on the same errand, and while in Germany he mairied a second time, a niece of the German divine Osiander Shortly afterward, on the death of Archbishop Warham, he was recalled to fill the vacant see of Canter-bury He was consecrated Archbishop March 30, 1533. Under his auspices Henry's divorce was speedily carried through the Archbishop's Court at Dunstable, and on May 28 he announced the legality of the King's marriage to Anne Boleyn, which had taken place four months before Anne's subsequent disgrace, and again in the affair of Anne of Cleves, the Archbishop took a part not very creditable to him. His position was no doubt a difficult one, but his character was naturally phable and timid rather than re-solved and consistent. The same spirit characterizes the measures of religious reform which were promoted by him On the one hand he joined actively with Henry in restricting the power of the Pope, though he seems to have had less to do with suppressing the monasteries, but, on the other hand, he was no less active in persecuting men like Frith, Foriest, and others, who on matters of religious faith were disposed to advance further than himself or the King The key to the dilemma probably lies in Cranmer's idea of the royal supremacy. To his mind the power of the King in ecclesiastical affairs was absolute, and the duty of the Archbishop was to carry out the views of his royal master. Hence his advocacy of the "via media" under Henry, his advanced Protestantism under Edward VI, and, perhaps, his recantations under Mary. He did what he could, however, to resist the reactionary movement which took place in 1539, and which is known by the institution of the sia articles He was also instrumental in promoting the translation and circulation of the Scriptures. On Henry VIII's death Clanmer was appointed one of the regents of the kingdom and, along with Latimer and others, largely contributed to the advance of the Protestant cause during the reign of Edward VI He assisted in the compilation of the service book and the articles of re-ligion The latter are said to have been chiefly composed by him I four of the homilies He was also the author of

On the accession of Mary he was committed to the Tower, together with Latimer and Ridley. In March, 1554, they were removed to Oxford and confined there in the common prison, called the "Bocardo" Latimer and Ridley bore their cruel fate with magnanimous courage, but the spirit and principles of Grammer temporally gave way under the seventy of his sufferings. He was induced to sign no fewer than seven recantations, though there is no ground for supposing that a hope of pardon was held out to him. On March 21, 1566, he suffered martyrdom, as his fellow reformers had done, opposite Ballol College. His courage returned at the end,

and he showed an unexpected fortitude in the midst of the flames

Cranmer's pinenpal writings have been edited by Jenkyns, Remains of Aschishop Cranmer (Oxford, 1833), and by Cox, for the Parket Society, under the titles Writings and Disputations Relative to the Lord's Supper (Cambridge, 1844) and Misscellaneous Writings and Letters (th, 1846) Additional material is to be found in the appendix of Strype, Memorials of Thomas Cranmer (Oxford, 1848-54), and his Ecclesiastical Memorials (th, 1822), in Nichols, Narratives of the Reformation, Camden Society, from the papers of John Foxe (London, 1859), but above all in Brewer and Gairdner, Calendars of Letters and Papers, Foreign and Domestic, of the Region and Henry VIII (th, 1862-80) Among older works, consult Foxe, Acts and Monuments (th, 1877), Burnet, History of the Reformation (New York, 1842), and the Luves by Todd (London, 1861) and Le Bas (th, 1833) More recent works are Dean Hook, "Thomas Cranmer," in his Lives of the Archivishops, is (b, 1868), Gleen, History of the English People, vol in (New York, 1879), Froude, History of Bangland, vols. i-vi (th, 1877), Polland, T., Cranmer and the English Reformation, 1/89-1856 (London, 1904)

CRAN'NOGS, or CRANNOGES (Ir crannog, Gael crannag, pulpit, top of a mast, from Ir, Gael crann, tree, Welsh prenn, Corn pren, tree, probably connected with Gk κράνον, kranon, Lat cornus, cornel tree, Lith kirna, OPruss kinno, shrub) Ancient lake dwellings of Ireland and Scotland Usually the dwellings were extended into villages, often occupying islands, they were analogous to the lake dwellings (qv), or palafittes, of Switzerland, and to types of structure still existing in various regions Commonly they were supported wholly or in part on piles set in the lake bottom and were connected by plat-The type persisted in Ireland from an forms early prehistoric period, when stone implements were used, until the present millennium. The later examples were built by means of bronze and even iron tools, which are sometimes found in the ruins The refuse heaps below the ancient structures are rich sources of relics, indicating the industrial and artistic status of the builders, their food habits, domestic and game animals, etc. Historical references to the structures began with the earliest Irish annals, about the ninth century, and continued until the middle of the seventeenth century. The archæologio survey and excavation of the ruins began in The archæologic 1839, when Wilde explored a crannog in Lake Lagore, County Meath. Consult Wilde's Catalogue of the Museum of the Royal Irish Academy, Munro's Lake-Dwellings of Europe, An-orent Scottish Lake-Dwellings, or Crannogs, etc., Reeve's "Crannogs in Antrim and Derry," in Ulster Journal of Archwology (Belfast, 1903-04), Arcy's "Account of the Excavations of Two Lake Dwellings," in Journal of Royal Society of Antiquaries of Ireland (Dublin, 1900)
CRAN'STON. A residential city in Provi-

CRAN'STÓN. A residential city in Providence Co, R I, including several villages, on the New York, New Haven, and Hartford Railroad, and on Providence River (Map Rhode Island, C 2) Within the preemets of the town are four village libraries, State reformatories for boys and girls, the State prison, almshouse, insane asylum, and workhouse The principal industries are market gardening, brewing, darring, and the manufacture of cotton and principal and the manufacture of cotton and principal states.

goods, tubing, and wire The government is administered by a major and city council Cranston, settled in 1638, was set off from Providence and incorporated as a town in 1754 and as a city in 1910 It receives its water supply from Providence Pop, 1900, 13,343, 1910, 21,107 CRANSTON, EARL (1840- ). An Ameri-

). An American Methodist Episcopal bishop, boin at Athens, After graduating at Chio University in 1861, he entered the Ohio infantry, served until 1864 in it and the West Vilginia cavally, and was advanced to the rank of captain. He was oldained to the ministry in 1867, held various charges, and was publishing agent of the Methodist Episcopal church from 1884 to 1896, when he was elected bishop In 1904 he became Resident Bishop of Washington In 1898-1900 he made a tour through China, Japan, and Korea

CRAN'TOR (Lat, from Gk Κράντωρ, Krantor). A Greek academic philosopher, who flourished about 300 BC He was born at Soli, in Cilicia He was the first commentator on Plato and wrote among other works, Περί Πένθους, Peri Penthous, On Affliction, a letter of condolence to a friend on the death of his children, praised by Cicero, Academica, 11, 135, as "a book not large, but golden, and to be learned by heart to the last word" Cicero used the treatise in writing his De Consolatione, parts of it appear, too, in Plutarch's Consolatio ad Apollonium Consult Kayser, Dissertatio de Crantore Academico (1841), Buresch, "Consolationum a Græcis Romanisque scriptarum Historia Critica, Lerpziger Studien, ix (1886), Ritter and Preller, Historia Philosophia Graca (9th ed; Gotha, 1913)

CRAN'WORTH, ROBERT MONSEY ROLFE, BABON (1790-1868). An English jurist, born at Cranworth, Norfolk He was educated at Cambridge, was called to the bar in 1816, and was a member of Parliament and Solicitor-General from 1832 to 1839, when he became a Baron of the Exchequer In 1851 he was raised to the peerage, and in the following year was chosen Lord Chancellor in Lord Aberdeen's cabinet. He resigned in 1858, but again occupied the post in 1865-66. Consult J. B. Atlay, Lives of the Chancellors, vol. 11 (London, 1908)

CRAPAUD, kra'pô', Jean, or Johnny. An English nickname for a Frenchman, from the popular belief that all Frenchmen were frog eaters, crapaud meaning a 'frog or toad'

CRAPE (Fr crêpe, OF. crespe, crinkled, from Lat crispus, crisp) A thin fabric made of raw silk which has been tightly twisted, without removing the viscous matter with which it is covered when spun by the worm It is simply woven as a thin gauze, then dressed with a thick solution of gum, which in drying causes the threads partially to untwist, and thus gives a wrinkled and rough appearance to the fabric It is manufactured both in black and colors Black crape is usually worn as mounning apparel, a use of the material which originated at Bologna, Italy. The Japanese and Chinese crapes are often white or highly colored and sometimes are adorned with ornamental designs Crape cloth is made to imitate the silk fabric by passing a form of woolen cloth through rollers which impart the crinkled surface

CRAPPIE (possibly connected with Fr. crape, crab fish). A sunfish (Pomows annularis) of the rivers of the Mississippi valley and Alleghanies, a food fish resembling in appearance and habits the calico bass. Also called "bachelor," "new light," 'Campbellite," etc. See Plate of Bass

CRAPS. A game of chance, played by any number of persons with two diec The person holding the diec "shoots' Should his first throw be 2, 3, or 12, it is "ciaps," and he loses, should he shoot 7 or 11, he wins Should he throw any other number, then he continues to "shoot" until he throws that number again and wins, or 7 and loses

CRAP'SEY, ALGEBNON SIDNEY (1847 - ). A former American Protestant Episcopalian clergyman, born in Hamilton Co, Ohio He prepared for the ministry at St Stephen's College, Annandale, N. Y, and at the General Theological Seminary, where he graduated in 1872 He was ordained to the priesthood in 1873, and in 1874 was placed on the permanent staff of Trinity Church, New York, from which he resigned in 1879 to accept the rectorship of St Andiew's Church, in a newly organized parish in Roches-Y. In 1906 Dr Crapsey was tried by an ecclesiastical court of his diocese, found guilty of heresy, and deposed, for heterodox views in sermons in 1904-05 denying the doc-trine of the virgin birth of Christ, and the resurrection and ascension of the literally physical body of Christ, though he had admitted the spiritual verity of the resurrection founded in Rochester a brotherhood His publications include. The Five Sorrowful Mysteries (1883), The Five Joyful Mysteries (1885), A Voice in the Wilderness (1897), Religion and Politics (1905), containing the "heretical" ser-

mons, The Rebuth of Religion (1907) CRASH'AW, RICHARD (c 1613-49)

lish poet He was the son of a clergyman in the English church and was educated at the Charterhouse and at Cambridge, where he obtained a fellowship in 1637. In 1643 he was ejected from his fellowship by the Parliament for refusing to take the covenant He went to France, adopted the Roman Catholic faith, and suffered great pecuniary distress, until, through Cowley's influence, he was introduced to Queen Henrietta Maria, who recommended him to Cardinal Palotta at Rome. The Cardinal made him an attendant, and afterward subcanon in the church of Our Lady of Loretto Just after this latter appointment Crashaw died, Aug. 25, 1649 In 1634 Crashaw published a volume of Latin poems, in which appeared the famous line on the miracle at Cana, Nympha pudica Deum vidit et erubuit ('The modest water saw its God and blushed') In 1646 appeared a volume of poems in two parts, one containing religious and the other secular poems, under the titles (abbreviated) Steps to the Temple and The Delights of the Muses Another (third) edition, with additions, was published in Paris in 1652 This volume is ornamented with 12 vignette engravings, drawn by Crashaw himself Later editions of Crashaw are by W D. Turnbull (1858), A B Grosart (1872, with supplement in 1888), and A. R Waller, "Poems," in Cambridge English Classics (1908)

CRA'SIS See ORTHOGRAPHY, FIGURES OF CRAS'SUS, LUCIUS LICINUS (140-91 BC). A Roman orator, who excelled all others of his time In 95 BC he was elected consul, with Quintus Mucius Scavola (who had been his colleague in all his previous offices) During their consulship was enacted the Lew Lioinia Mucia de Civibus Redigundis, banishing from Rome to then own entes all freemen who had not the full nights of citizens. This embitted the feelings of foreigness towards Rome and partly led to the Social War. As censor (92 nc) he closed all the schools of the rhetors, asserting that they exercised a bad influence on the minds of young men He died in consequence of the excitement attending a debate in the Senate Crassus is one of the chief speakers in Cierco's De Oratore, representing Cierc's own point of your Consult the Introduction to Williams's edition of that work, 8–13 (2d ed, Oxford, 1999).

CRASSUS, Marcus Licinius (e 115-53 BC). A Roman triumvii He was a zealous partisan of Sulla, and rendered him efficient service in the battle at the Colline Gate (q v.), 82 BC, which sealed the fate of the Marians As prætor he crushed the revolt of the gladiators under Spartacus in 71 Bc, and in the following year was made consul with Pompeius, a colleague whom he hated On the other hand, Casar valued the friendship of Ciassus, the most wealthy of Roman citizens During his consulate Crassus gave a feast to the people, which was spread months Plutaich estimates the wealth of Plutaich estimates the wealth of Crassus at more than 7000 talents, and Pliny states that his lands were worth 8000 talents In 60 BC Casar, Pompeius, and Ciassus entered into the first triumvilate (See Cæsar) In 55 BC, as consul with Pompeius, he obtained the Province of Syria, and professed to make preparations of war against the Parthians, but the acquisition of more wealth seems to have been his main object, and this he effected by plundering the towns and temples in Syria At length, however, he undertook a campaign in 54 BC, after which he returned to Syria In the following year he set out again, but was misguided by a treacherous Arab, and utterly defeated at the river Bilechas by the Parthians Crassus now retreated to the town of Carrhæ, intending to pass into Armenia, but was beguiled into a conference with the Parthian general, Surenas, and was slain at the appointed place of meeting His quæster, Cassius, with 500 cavalry, escaped into Syria, but the remaining Romans were scattered and made prisoners or put to death

CRATÆ'GUS (Neo-Lat, from Gk. κράταιγος, krataigos, a kind of thorn) A genus of plants of the family Rosacew, very nearly allied to Mespilus (medlar) and Pyrus (pear, apple, etc). The species, which are difficult of limitation, are natives of the temperate parts of the Northern Hemisphere, being well represented in North America, and in general have flowers in beautiful terminal corymbs They are all large shrubs or small trees, more or less spiny, hence the name "thorn" has been very generally applied to them The only native of Great Britain is the common hawthorn (q v ) (Cratægus oxyacantha) Most of the species resemble it in habit, size, form of leaf, etc. A number of species are now frequent in plantations and shrubberies Of these, perhaps the most common is the cockspur thorn (Cratæqus crus-gallu), a native of North America from Canada to South Carolina Its leaves are not lobed, its fruit is rather larger than that of the hawthorn The azarole (Cratagus azarolus), and the aronia, a native of the south of Europe and of the Levant, are occasionally cultivated for their fruit, which 18 about the size of the Siberian crab and 18 used either for dessert or for pies Cratagus

orientalis and Crategus tanacetyfolus have also fruit of considerable size. The latter is much eaten in Armenia. Grategus meancana has a large, but inedible, apple-like fruit. It is, however, very cornamental. After the cockspur thorn, the best known of the American species are probably the scallet thorn (Grategus coorenea), Washington thorn (Grategus coordata), Grategus douglasii, and Crategus punctata. The wood of most of the species much resembles that of the hawthorn. It is common to graft the raier species on the hawthorn

"CRATCH CRADLE (from OF creche, Ger. Krippe, cuib), also called Car's Cannia and Scratch Crable A children game played by two persons folding an endess string symmetrically in the fingers of the two hunds, and taking it off each other's hands so as to form a new pattern at once

CRATCH'IT, Bob The father of Tiny Tim in Dickens's Christinus Carol—a good-hearted little man, the poorly paid clerk of the miserly Scrooge

CRATER See VASE

CRATER (Lat, from Gk κρατήρ, krater, mixing bowl, from keparrurai, kerannynai, to mix). The bowl-shaped or conical cavity through which materials are ejected during a volcanic eruption At the bottom the crater communicates by a pipe or chimney with the heated interior of the earth When of small size a volcano usually erupts through a single crater at the summit, but, as the mountain mass increases by accumulation of material, the lava may find lines of lesser resistance through fissures in the sides In this way subsidiary craters are formed, one of which in the course of time may become the principal crater, or they all may be builed beneath the renewed outpourings of the primary crater The Peak of Teneriffe has a number of minor funnels on its sides and summit In volcanoes of an explosive type the whole top of the mountain may be blown off during an eruption, forming an immense crater, within which subsequently new cones may arise in concentric arrangement This structure, called "cone-in-cone," is shown by Vesuvius, whose active crater is partially encircled by a rampart (Monte Somma) many miles in diameter Volcanello of the Lipari Islands has three craters on the summit The craters of extinct or dormant volcanoes are sometimes filled with water, and thus are formed crater lakes Many of the beautiful lakes of Italy and the well-known Crater Lake of Oregon originated in this way Scc Volcano CRATER, THE A novel by James Fenimore Cooper (1847), describing a Utopian settlement

on the Pacific coast

CRATER LAKE. See CRATER LAKE NA-

TONAL PARK

CRATER LAKE NATIONAL PARK

A United States government reservation in the
Cascade Mountains, in Klamath Co, Oreg, created by an Act of Congress approved May 22,
1902 (Map Oregon, C 5) It has an area of
249 square miles Its principal feature is Crater
Lake, lying in the crater of an extinct volcano
which destroyed what geologists believe to have
been a mountain more than 16,000 feet high, perhaps the loftiest peak on the western coast of
what is now the United States. The lake is in
about the centre of the park, is approximately
6 miles long by 4 miles wide, and has a water
surface of 20¼ square miles

The nearly perpendicular walls of the great calders in which

the lake lies tower from 500 to 2000 feet above its surface, which is 6177 feet above sea level Soundings have been taken showing a depth of It was discovered in 1853 by John 2001 feet Hillman, the leader of a party of gold hunters, and was known to United States army officers and enlisted men as early as 1865, but not to the general public until about 1885, since when its remarkable beauty and the majestic grandeur of the surrounding landscape have attracted thousands of tourists to its shores In 1913 the park contained two hotels (one on the rim of the lake and the other 5 miles distant), and a telephone service connected various buildings within the reserve. Several wagon roads are maintained, and these means of communication are being increased and improved. All hunting is forbidden within the reserve, but fishing is permitted, and the lake contains an abundance of rainbow trout, with which it has been stocked by the government There are no other fish in the lake, and none in the other waters of the Consult Diller, Geological History of Crater Lake, Oregon, pub by the Department of the Interior (Washington, 1912)

CRATERUS (Lat, from Gk Kparepės, Krateros) A favorite geneial of Alexander the Great He commanded a division of the royal bodyguard in the Asiatic campaigns, and was sent to Macedoma as regent in 323 BC After the death of Alexander, Craterus received, jointly with Antipatei, the government of Macedoma, Greece, Illyria, and Epirus, Antipater taking command of the military forces and Craterus attending to civil affairs He foimed an alliance with Antigonus (q v) against Perdicas and invaded Asia with an army, but was defeated and slain by Eumenes in Cappadocia (321 BC).

and claim by Eumenes in Cappadocia (321 bc).

CRATES, krā'tēz (Lat, from Gk. Kpārns,
Krātēs) An Athenian comic poet of the fifth
century b c He began his career as an actor in
Cratinus' plays, and won his first victory in
449 b c Aristotle says that he was the first
Attic poet to give up personal satire in comedy,
he likewise made the innovation of introducing
a drunken character on the stage We have the
titles of 15 plays and scanty fragments Corsult Kock, Comicorum Atticorum Fragmenta
(Leipzig, 1880)

CRATES A cynic philosopher of Thebes, of the fourth century BC scorning the large property which he inherited, he moved to Athens and became an eager disciple of Diogenes and one of the most eminent of the Cynics. He was an excellent orator and skillful poet. As the teacher of Zeno, the founder of Stoicism, Crates formed the link between Cynicism and Stoicism Interesting fragments of his poetry have been edited by Bergk, Poeta Lyric Graco. (Leipzig, 1882) Diogenes Laertius states that he wrote letters and tragedies on philosophic subjects. The 36 letters which bear his name are, however, generally thought to be spurious. They are edited by Hercher, Epistolograph Graci. (Paris, 1873). Consult also Zeller, Philosophic der Griechen, vol. 1 (Tultingen, 1892)

CRATES OF MALLOS A Greek grammarian and Store of the second century Be, head of the Pergamene Library and the chief opponent of Aristarchus He devoted himself to the interpretation of Greek authors, especially of Homer; he likewise defended the grammatical theory of anomaly in opposition to the Alexandrian doctrine of analogy. (See Anomalists and Analocists) He enlarged and catalogued the Persons in the enlarged and catalogued the Persons and Sandard and Catalogued the Persons and Sandard Sandard

gamene Library, his work on the Attic dalect was much employed by later grammarians About 167 Bc he was sent by King Attalus on an embassy to Rome, where he introduced the study of formal grammar Consult Suctionus, De Grammaticus, 2; Wachsmuth, De Craticle Mallota (Lepizg, 1860), Susemihl, Geschichte der griechischen Litteratur in der Alexandrinereit, vol 11 (ib. 1892), Sandys, A History of Classical Scholarship, vol i (2d ed, Cambridge, 1906)

CRATI'NUS (Lat, from Gk Kparivos, Kratinos) (9-e 421 BC) An Athenian comic poet He was born in the latter part of the sixth century BC, and was one of the seven poets of the Old Comedy named in the Canon Alexandrinus (qv) He first presented a comedy in 453, in all he left 21 plays, with which he had won nine victories He was among the first to give comedy a political turn By the introduction of a third actor he placed comedy on a level with tragedy. A follower of Cimon and the Conservative party, he sharply attacked Pericles in two plays, in his 'Apxl\lambda\chi\circ\text{o}, Archilochoi, he represented a contest of poets which may well have been Aristophanes' model in his Frogs Aristophanes defeated Cratinus in 425 with his Acharmans, and in 424 with the Knights In the parabasis of the latter play he refers to his elder rival as "an ancient ruin," "a doting drunkard," whereupon Cratinus retorted in 423 with his Wineflash, which won the first prize over Aristophanes' Clouds fragments of his work then known were collected by Kock, Comicorum Atticorum Fragmenta, vol 1 (Leipzig, 1880). In the Oxyrhynchus Papyri, vol iv (1904), appeared the newly discovered argument of a play, Dionysalexander, of which nine fragments had been known, though they did not reveal the plot, on this consult Korte, Hermes (1904), and Morgan, Addresses and Essays, 25-33 (New York, 1910)

CRATTP.PUS (Kadrawas, Kratappus) An Athenian historian, of the fourth century Bc, of whom very little is known. He has gained importance in recent times because of an historical fragment discovered by Grenfell and Hunt, and published by them in Osyrhynchus, Papyri, vi (1907-08). The fragment, which has some to be known as the Hellenica Osyrhynchus, has been seribed to Cratippus by various scholars Consult Hunt, in The Year's Work in Classical Studies (London, 1908). The present tendency is to ascibe the work rather to some one other than Cratippus Consult Walker, The Hellenico Osyrhynchia Its Authorship and Authority (Oxford, 1913) See Erious

CRATTPPUS (Lat, from Gk Kaárurwo, Kratuppos) A Peripatetic philosopher He was a native of Mitylene and a contemporary of Cicero He appears to have been held in the highest estimation by the great men of his age Cicero calls him the prince of all the philosophers whom he had known Cratippus accompanied Pompeius in the latter's flight after the consolations of philosophy, and Brutus went to Athens, where Cratippus and Erutus went to Athens, where Cratippus had lately settled, to listen to his lectures even while making preparations to meet Octavius and Antonius. Nothing that Cratippus wrote has survived

to the to determine and Antonios.

That Crathpus wrote has survive hourne Désiré (1827-1905) A French sculptor, born in Valenciennes. He was a pupil of Pradier, Ramey, and Dumont, and won the Prix de Rome in 1851 His

works are to be found in many of the public buildings and churches of Paris and the provinces They include the monument to Admiral Coligny (1889), before the Oratory in the Rue de Rivoli, Paris, the tomb of Cardinal Lavigerie in Carthage (1900), and the ideal works 'Youth and Love' (Luxembourg) and "Omphale," in the courtyard of the Louvre He was one of the most popular portrait sculptors of the Second Empire, and among his stitels were the Empress Eugenie (1863), Marshals McMahon and Niel (1861), General Gallitet, and Casmu Péner CRAVEN, ALFRED WINGATE (1810-79) An

American civil engineer, boin in Washington, D C He was appointed engineer commissioner to the Croton Water Board in New York City in 1849, and his connection with that board was notable for the number and value of the works which he projected and superintended Among these were the Central Park Reservoir, completed in 1867, the reservoir at Boyd's Corners, and the survey of the Croton valley The establishment of the sewerage system of New York is largely due to his endeavors. He was president of the American Society of Civil Engineers ın 1870-71

CRAVEN, ELIJAH RICHARDSON (1824-1908)
An American clergyman, boin in Washington,
D C He graduated at the College of New Jersey (later Princeton University) in 1842 and at Princeton Theological Seminary in 1848 and became a trustee of the former (1859) and a director of the latter (1865) In 1878-84 he was chairman of the committee to revise the Book of Discipline of the Presbyterian church, and he was moderator of the General Assembly in 1885 He was president of the board of directors of the Newark German Theological Seminary, Bloom-field, N J, in 1889-1902, and for more than 30 years (1854-87) was pastor of the Third Piesbyterian Church in Newark, N J In 1887-1904 he was secretary of the Presbyterian Board of Publication and Sabbath School Work He revised (1874) Moore's translation of Lange's

Commentary on Revelation
CRAVEN, ELIZABETH BERKELEY, LADY See

ANSPACH, MAEGRAVINE OF CRAVEN, PAULINE DE LA FERRONAYS, MA-DAME AUGUSTUS (1820-91) A French religious romancer, born in Paris She is best known for her Histoire d'une sœur (1866), an idyllic pie-ture of an aristocratic Roman Catholic French family and of the slow passing away, through consumption, of a simple-minded, noble, and deeply religious woman Madame Craven's father was at one time French Ambassador to Beilin In 1834 she married an Englishman, Augustus Craven, a descendant of the famous Maigravine of Anspach, he is known only through his Le prince Albert de Saxe-Cobourg, époux de la reme Victoria (1883) She traveled widely, and after marriage lived much in England, writing articles on English politics, and biographical sketches of Sister Nathalie Narishkin and of Lady Georgiana Fullerton, as well as Reminiscences of England and Italy She died in Paris, April 1, 1891 Her novels have been as popular perhaps in English translations as in the original The best are Anne Severin, The Enigma's Answer, and Fleurange, in all of which she pleads persuasively the cause of Roman Catholicism and seeks in emotional ecstasy the only life that seems to her worth the living To some her books will seem morbid, to others strong, but her fervid spirit appeals to all

Consult Mary Bishop, Hemoir of Mrs Craven (London, 1894), and J F A Smith, The Life and Literary Works of Mrs Augustus Craven, née de la Ferronays (Numberg, 1910) CRAVEN, TROMAS TINEY (1808-87) An

American naval officer, born in Washington, D C He entered the navy in 1822, took part in the capture of the pirate Federal in the West Indies in 1828, and commanded Captain Wilkes's flagship in the Antaictic exploring expedition in 1838 He was commissioned captain in 1861, commanded the Potomac flotilla, and in the same year took part in the capture of New Orleans and the operations on the Mississippi. In 1866 he was assigned to the command of the Mare Island Navy Yard and was raised to the rank of rear admiral He was retired in 1869

CRAVEN, TUNIS AUGUSTUS MACDONOUGH 1813-64) An American naval officer, brother (1813-64)He was boin in of Thomas Tingey Claven He was boin in Portsmouth, N H, entered the navy in 1829, Potsmouth, M. H., entered the may in 1822, took part in the conquest of Califorma, and in 1857 made a survey of the Isthmus of Darien for a prospective ship canal. He saved the fort at Key West for the United States government at the beginning of the Civil Wai and was promoted to the Lank of commander. While chasing the Confederate ram Tennessee in the battle of Mobile Bay, his vessel, the monitor, Tecumseh, struck a torpedo and sank, with Craven and

nearly every one else on board CRAW/FISH, or CRAY/FISH (OF crevice, cievisse, Fi écrevisse, from OHG chiebiz, Ger Kiebs, clawfish) A fiesh-water or terrestrial crustacean (Astacus fluriatilis), nearly allied to the lobster, from which, however, it differs in having the middle plate of the tail fin transversely divided by a suture It inhabits the rivers and streams of many parts of Europe, making burnows in clayey banks, and coming forth at night in search of food, which consists chiefly of mollusks, small fishes, larvæ of aquatic insects, and animal substances of almost any kind. It is esteemed for the table, and is leadily attracted by a bait of decaying flesh or animal garbage inclosed in a net or in a bundle of twigs, by which many crawfish may be captured at a time The use of the name has been extended until it is now applied to any of the fiesh-water species of the family Astacidæ In the United States it is universally applied to any one of several species of Cambarus, which agree very closely in structure and habits with the common crawfish of Europe. They are 6 niches or so in length and of a greenish-brown color. They frequently do much damage to dikes and levees by opening water passages, as told m Proc Assoc Econom Entomologists for 1895 (United States Department of Agriculture, 1896) For general facts, consult Huxley, The 1896) For general racts, consult Huxley, The Cruyfish An Introduction to Zoology (London, 1887), "Revision of the Astacide," Memoris Museum Comparative Zoology, vol x, No. 4 (Cambridge, Mass, 1885), Sterle, The Cruyfish of Missoure (Cincinnati, 1902), Fisher, "Crayfish fish as Crop Destroyers," in Year Book of the United States Department of Agriculture (Wash-

ington, 1912) CRAW'FORD, ALEXANDER WILLIAM CRAW-FORD LINDSAY, EARL OF (1812-80). An English author After graduating at Cambridge he traveled extensively in Egypt and Asia Minor He took a considerable interest in astronomical investigations, and the expedition to the island of Mauritus in 1874, to observe the transit of

Venus, was organized by him For some mexplicable reason his body was stolen shortly after its burial at Dunecht, and was not discovered until about 14 months later in the woods near Among his publications are Lives of the Lindsays (1835), Letters on Lypt, Edom, and the Holy Land (1838) Sketches of the History of Christian 1st (3 vols, 1847, 2d ed., 1885); Asgo, or the Conquest of the Golden Fleece, an epic in 10 books (1876), The Earldom of Marchester 1986, 1886, (1882)

CRAWFORD, COE ISAAC (1858-American legislator, born near Volney, Iowa He graduated in 1882 from the law department of the University of Iowa, practiced law for one year in that State and for 15 years in Pierre, S Dak, was member of the Dakota Territorial Legislature in 1889, and upon the admission of South Dakota into the Union in that year became a member of the first State Senate; was Attorney-General in 1892-96, and, after removal to Huron, S Dak. (1897), was attorney for the Chicago and Northwestern Railway Company until 1903 In 1907 he was elected Governor of South Dakota on the Republican ticket and in the following year United States Senator for

the term expring March 3, 1915 CRAWFORD, FRANCIS MARION (1854-1909) An American novelist, chiefly resident in Europe He was born at Bagni di Lucca, Italy, a son of the sculptor Thomas Crawford Of cosmopolitan education in America, England, and Germany, his first literary venture was as editor of the Allahabad Indian Herald (1879-80) His voluminous fiction was begun by Mr Isaaes, a story of modern India (1882), which promptly brought him a popularity and a fame at home and abroad that its many successors served to widen and make more secure The more significant of his other works are: Dr Claudius (1883), A Roman Singer (1884), Zoroaster (1885), A Tale of a Lonely Parish (1886), Saracinesca (1887), Paul Patoff (1887); Greifenstein (1889); Sant' Ilario (1889); A Cigarette Maker's Romance (1890), The Witch of Prague (1891), Don Orsino (1892), Pretro Ghisleri (1893), The Ralstons (1894); Casa Braccio (1895), Colleone (1897), Via Crucis (1899); In the Palace of the King (1900); Manetta, a Maid of Venice (1901), The Heart of Rome (1903), Whosever Shall Offend (1904), Somano, a portrat (1905), Farr Margaret (1905), and its sequel, Prima Donna (1908) The Saracinesca series, stones of modern Rome, is generally regarded as his most important performance His strictly American fiction is less popular A romantic novelist, Marion Crawford probed no depths of human nature and untangled no complex psychological knots, but he had the beguiling gift of the born story-teller who has also become an accomplished master of the art of fiction Ingenious plots, a varied company of interesting dramatis personce faithfully studied and freshly portrayed, picturesque settings, and behind all the attractive personality of an intelligent and cultivated man of the world - these and other characteristics explain and fully justify the delight with which, for more than a quarter of a century, an immense audience, American and European, welcomed the annual appearance of one of the long series of his novels. Though his fame rests on his fiction, he showed, in Ave Roma Immortalis (1898), Rulers of the South (1900), and Gleanings from Venetian History (1905), a gift of conjuring up the life of the Italian past in a manner that makes the spirit and the facts of history as entertaining as a romance

CRAWFORD, GEORGE WASHINGTON (1798-1872) An American lawyer and statesman He was born in Georgia, graduated at Princeton in 1820, and in 1822 was admitted to the bar From 1827 to 1831 he was State Attorney-General, and from 1837 to 1842, with the exception of one year, was a member of the State Legislature In 1843 he was in Congress, in 1843 and 1845 was elected Governor of Georgia, and from 1849 to 1850 was Secretary of War in President Taylor's cabinet

CRAWFORD, ISABELLA VALANCY (1851-87) A Canadian poet She was boin in Dublin, Ireland, went to Ontario as a child, and lived at Peterboro and Toronto She wrote verse showing marked originality and lyrical power, comprised mostly in Old Spookses' Pass, Malcolm's Katte, and Other Poems (1884). Consult the appreciation prefixed to Poems (Toronto, 1905, ed by Garvin) by E Wetherald

CRAWFORD, JAMES LUDOVIC LINDSAY, EARL OF (1847-1913) A British astronomer, boin at Saint-German-en-Laye, France He was educated at Eton and at Timity College, Cambridge, and from 1874 to 1880 was a member of Parliament. He was also for a time president of the Astronomical Society His Bibliotheca Lindesiana was published in parts from 1883 to 1913, his philatelic library was bequeathed to the Butish nation

CRAWFORD, JOHN WALLACE (CAPTAIN JACK) (1847 - ) An American author, born in County Donegal, Ireland He served in the Forty-eighth Pennsylvania Volunteers in the Civil War, and while lying wounded in the hospital at West Philadelphia was taught to read and write by a sister of charity. As a scout he served under General Crook in the Sitting Bull campaign in 1876 and later against the Apaches in New Mexico In 1886 he retired from the army, was a miner and ranchman in New Mexico, was in the Klondike (1898-1900), and finally became a public lecturer many poems, several songs, and more than 100 short stories, "Captain Jack" is author of The Poet Scout—A Book of Song and Story (1885), Campfire Sparks (1888), Tat, a drama produced in San Francisco in 1900, Colonel Bob, a drama, with Marie Madison (1909), What' the Hand o' God is Seen and Other Poems (1911)

CRAWFORD, MARY CAROLINE (1874-An American author, born in Boston She was educated at Radchile College From 1898 to 1902 she was literary critic of the Boston Budyet and in 1907-08 was secretary of the Women's Trade Union League, she then became secretary of the Ford Hall meetings Her publications include The Romance of Old New England Rooftrees (1902), The Romance of Old New England Churches (1903), The College Girl of America (1905), Among Old New England Inns America (1909), Among Ota New Engine and Intelligence (1907), St. Botolph's Toom (1908), Old Bovton Days and Ways (1909), Romantic Days in Old Boston (1910), Goethe and his Woman Friends (1911; 2d ed, 1913), Romantic Days in the Early Republic (1912), The Romance of the American Theatre (1913)

CRAWFORD, THOMAS (1813-57) American sculptor He was born in New York, March 22, 1814, and in 1834 he went to Rome where he studied under Thorvaldsen He passed much of his life in Rome, where his studio was the resort of travelers and lovers of art Although his life was comparatively short, he left many interesting examples of his work, and is justly considered one of the most important pioneers of American sculpture Judged from the pseudoclassic standpoint of his day, his work ranks high, and it always has a distinct literary and poetic flavor But it is rarely inspired, and in modeling is cold and hard. The figure of 'Liberty" on the dome of the Capitol at Washington, the statue of James Otts in Mount Auburn Cemetery, Cambridge, and the statues of Patrick Henry and Jefferson, be-longing to the Washington Monument in Richmond, have originality, strength, and nobility He was less happily inspired in the main figure of the Richmond monument, an equestrian statue of Washington, and in the pediment and bronze doors of the Senate wing of the Capitol Other interesting works are the bust of Beethoven, now in Symphony Hall, Boston, the casting of which was enthusiastically celebrated in a great festival in Munich, "The Indian" (New York Historical Society), "Orpheus" (Boston Art Museum), "Adam and Eve after the Expulsion" and a bust of Josah Quincy (Boston Athenseum), "The Dancer," "Dying Indian Maiden," and "Flora" (Metropolitan Museum, New York) Crawford executed many bas-reliefs, and 87 of his plaster casts were presented by his wife to the Commissioners of Central Park, who arranged them in a building for public exhibition They have since been destroyed by fire Consult Lorado Taft, History of American Sculpture (New York, 1903), and Tuckerman, Book of the Artist (1b,

CRAWFORD, WILLIAM (1732-82). An American soldier, born in Berkeley Co., Va He was for a time assistant surveyor to George Washington, and he served as ensign of Virginia Rifles in the French and Indian War He accompanied Braddock's luckless expedition against Fort Duquesne in 1755, served through the Pontiac War (1763-64), and in 1776 was appointed lieutenant colonel of the Fifth Viiginia Regiment In 1781 he resigned from the army with the rank of colonel At the request of Washington and of General Irvine, he assumed command in 1782 of an expedition against the Delaware and Wyandot Indians near the Sandusky River, who had long devastated the fiontier On June 4, on the plains northeast of the present site of Sandusky, he encountered a combined force of about 300 Indians and British soldners from Detiont His troops having been discounaged by the accession of reinforcements to the enemy, he ordered a retreat which soon became a confused flight He was himself separated from the main body, captured by a band of Delawaies, and burned at the stake amid fearful torture Notwithstanding his wholly creditable Revolutionary record, his leadership on this occasion appears scarcely to have been efficient Consult Butterfield, Expedition against Sandusky (Cincinnath, 1873), Roosevelt, The Winning of the West, vol 1 (New York, 1886), N N Hill, "Crawford's Campaign," in Magazine of Western History Campaign," in (Chicago, 1885)

CRAWFORD, WILLIAM HARRIS (1772-1834) An American politician. He was born in Amherst Co, Ya, Feb 24, 1772, but removed with his parents to South Carolina in 1779 and to Georgia in 1783, where in 1798 he was admitted to the bar In 1802 he was chosen a member

of the State Senate and in 1807 was chosen to fill a vacancy in the United States Senate During the canvass he fought two duels, in the first of which he killed a man, while in the second he was himself wounded He was elected to the Senate in 1811 and in 1812 was chosen president pro tempore of that body. He at first opposed, but finally supported, the war with England In 1813 he was appointed Minrister to France, where he became a general favorte and in particular was an intimate friend of Lafayette In 1815 he was made Sectedary of War and the next year Secretary of the Treasury, an office which he retained until 1825 Crawford had been a candidate for the presidential nomination in 1816 and in 1824 thought himself entitled to succeed Monroe as President, and was regularly nominated by the congressional caucus which was then controlled by him, but the caucus system was then tem-porarily superseded (see CAUCUS), and there putarily superseded (see UAUGUS), and there were four other candidates against him—Calhoun, John Quincy Adams, Jackson, and Clay. Calhoun was pacified with the vice presidency, to which he was chosen by 182 out of 260 votes. There was no choice for President, the vote being Jackson, 99, Adams, 84, Crawford, 41, Clay, 37 About the time of the election Crawford, vise stripler with an almost from which ford was stricken with paralysis, from which he never wholly recovered His condition ren-dered it impossible to consider him a candidate when the election came to be decided in the House of Representatives, although, even in such a condition, he received four of the 24 votes From this time Crawford was out of the political field He served as judge of the northern circuit of Georgia from 1827 until his death, which occurred Sept 15, 1834

CRAWFORD, WILLIAM HENRY (1855—
An American educator, born at Wilton Center,
Ill He graduated at the Northwestern University and the Gailett Biblical Institute and
became a minister in the Methodist Episcopal
chuich He was appointed professor of historical theology in the Gammon Theological
Seminary, Atlanta, Ga, in 1889, and in 1893
became president of Allegheny College (Meadville, Pa.) His publications include Life of
Saconarola (1906), The Church and the Slums

(1908), Thobusn and India (1909)
CRAWFORD NOTCH. A defile in the White
Mountains, N H, at an elevation of 1915 feet,
between Mount Webster and Mount Willey, each
about 4000 feet high The Saco River, entering
through a narrow passage, traverses the Notch,
which is remarkable for its impressive rock
scenery

CRÂWFORDSVIILE. A city and the county seat of Montgomery Co. Ind. 43 miles west-northwest of Indianapolis, on the Cleveland, Chemanat, Chreago, and St Lours, the Vandala, the New York Central, and the Chreago, Indianapolis, and Lousville railroads (Map Indiana, C 2) It is the seat of Wabash College, established in 1832, and contains a fine county courthouse, a community house for women, a country club, and a Carnegie library The city is the home of five insurance companes, has manufactures of matches, paving bricks, burnal furnishings, flour, foundry products, lumber, metal polish, barbed wire, etc. Settled in 1822, Chawfordsville was incorporated in 1863 and is governed under a charter of that date, which provides for a mayor, elected every four vears, and a city council. The electric-light

plant is owned by the city Crawfordsville was the home of Gen Lew Wallace, author of Ben Hur, to whom a monument has been erected

Pop, 1900, 6649, 1910, 9371

CRAW'FURD, JOHN (1783-1868) A Scot-tish Orientalist, born in the Island of Islay, Hebrides He went as a physician to India and served for five years in the army of the Northwest Provinces Transferred to Penang, Malay Peninsula, he acquired a knowledge of the Malay language, which proved valuable on the occasion of Lord Minto's conquest of Java (1811). From 1811 to 1817 he held various posts in Java, in 1821 was sent as envoy to Siam and Cochin China, from 1823 to 1826 administered the government of Singapore, and in 1827 was sent on a difficult diplomatic mission to the court of Ava He published, in addition to an account of this He published, in addition to an account of this mission (1829) History of the Indian Archivelago (3 vols, 1820), Grammar and Dictionary of the Malay Language (2 vols, 1852), Descriptive Dictionary of the Indian Islands and Adjacent Countries (1856), China and its Trade (1858), and, finally, the journals of his embassies to the courts of Siam and Cochin China (London, 1828) and to the court of Ava (1829, 2d ed, 2 vols, 1834)

CRAWL-A-BOTTOM. A local name in the Mississippi valley for two small fishes 1 The largest of the darters (Hadropterus nigrofasciatus) See Darter 2. The hog sucker, or stone

roller

oller (q v ) CRAW'SHAW, WILLIAM HENRY (1861-An American educator and author, born at Newburgh, N Y He graduated in 1887 at Colgate University, where thereafter he was an instructor (1887–89), associate professor of Eng-lish (1889–83), professor of English (after 1893) and also (after 1897) dean He was also acting president during several years The University of Rochester conferred on him the degree of Litt D (1909), and Syracuse University that of LL D (1910) He published an edition of Dryden's Palamon and Arotte (1898), two excellently suggestive little works in criticism, The Interpretation of Literature (1896) and Literary Interpretation of Life (1900), and The Making of English Literature (1907)

CRAYER, kri'er, Fr pron kra'ya', Gaspar, or Jasper de (1584-1669) A Flemish historical and portrait painter, born in Antwerp studied under Raphael Coxcie (son of Michiel Coxcie) in Brussels, where he lived many years, and in 1664 went to Ghent, for the churches of which he painted more than 20 altarpieces He was appointed court painter to the Cardinal Infant Ferdinand and afterward to King Philip II of Spain. Though perhaps the most prolific of all religious painters and prone to exaggerated sentiment, he yet maintained a certain excellence in composition and execution He was strongly influenced, especially in color, by his friend Rubens His works are to be found throughout Flanders and Brabant and in the provincial museums in France, where many were carried during the France, where many were carried during the French invasion Among the best known are "The Four Crowned Martyrs" (Lille Museum), six pictures celebrating the entrance of the Cardinal Infant (Ghent), "Alexander and Diogenes" (Metropolitan Museum, New York), "Glorification of St Catharine" (in St Michael's, Ghent), "The Miraculous Draught of Fishes," "Adoration of the Shepherds" (Brussels Museum), "Decapitation of St John the Baptist" (Ghent Cathedral), "Judgment of Solomon" and "Martyrdom of St Blasius" (1668), his last work, both in the Ghent Museum His portiants include those of the Cardinal Infant (Prado) and Philip IV (Uffizi) Jan van Cleve, the most important of his pupils, assisted him in many of his works Consult his biography by Maeterlinck, in Bulletin de la Societe d'Histoire et d'Archéologie de Gand (Ghent, 1900)

CRAYFISH See Crawfish

CRAY'ON (Fr crayon, from crate, chalk, from Lat creta, chalk) A term usually applied to pencils made of charcoal, pipe clay, or chalk, colored with various pigments and used for drawing on paper, wood, or other materials Blackboard crayons are made largely of chalk, while black crayons are composed of pipe clay and lampblack Those used for drawing on lithographic limestone are commonly made of a mixture of wax, lampblack, soap, and resin Pastel is a mixture of chalk and coloring materials, worked into a paste with gum water. The vegetable colors used are turmeric, litmus, saffron, and sap green, but should in every case be free from acid, as the latter reacts on the chalk Vienna white, used by artists, is simply purified chalk Red chalk is made from an ochery clay, 1e, one containing much non oxide Briancon chalk and French chalk are popular names for soapstone, which is very different from chalk in its composition, being a silicate of magnesia

CRAYON, GEOFFREY The nom de plume adopted by Washington Irving in The Sketch-

Book, etc

CRAZY HORSE. A distinguished chief of the Oglala Sioux, who was joint leader with the famous Sitting Bull in the War of 1875 and was prominent in Custer's defeat He was shot while resisting arrest in September, 1877. Consult Miles, Personal Recollections (Akron, 18961

CREAM (OF. cresme, Fr. crême, from Lat. emor, thick juice) The thick, light-yellow cremor, thick juice) substance, rich in fat, which rises to the surface of milk on standing The methods of creaming milks, by setting and by the separator, are described under BUTTER MAKING The composition of cream is influenced by the method and condition of creaming, and varies within wide limits Cream contains the same constituents as milk. but in very different proportions. The fat may vary from 10 to 70 per cent, good cream for butter making, or for household use, contains from 18 to 25 per cent of fat, and very rich cream from 25 per cent of The richness of cream from 35 to 40 per cent cream raised by the separator can be regulated at will Cream is sometimes thickened artificially by adding gelatin, isinglass, etc Cream which has been pasteurized, or heated to prevent souring, loses some of its thickness or viscosity, and the addition of sucrate of lime has been proposed to make it whip better The famous clotted or "clouted" cream of Devonshire, England, is prepared by heating milk which has stood for 24 hours in a shallow pan over a slow charcoal fire for a half to three-quarters of an hour, without boiling, allowing it to stand for 24 hours, and then skimming off the cream, which is sprinkled with sugar

CREAM'ERY. A factory where butter is made by machinery from milk or cream, furnished by the neighborhood. It is an American institution, and originated in New York about 1864, being suggested by the success of the cheese factory (q v), which had been in operation for several years. Within the past 15 or 20 years the growth of the creamery system has been very rapid, and creamenes are now thickly distributed over the principal dairy regions. They differ in their form of organization and also in the method of operation Cooperative factories are owned by the farmers ("patrons"), who supply the milk, and who choose from their own number a managing committee, or board The cost of running the factory, and the proceeds of sales, are divided pro rata according to the milk, cream, or butter fat contributed. This is the oldest and in many respects the most desirable form of organization In the jointstock and proprietary cleameries the milk or cleam is bought of the farmers under a contract, or the factory may make butter and dispose of it for its patrons for a fixed charge per pound The milk may be delivered at the creamery, where the cream is separated by power, the farmers receiving the skim milk for feeding, or the cream may be raised or separated by the farmers themselves and sent to the factory every two or three days The latter are called "gathered-cream creameries" The cream-gathering plan originated in Wisconsin, and was the basis upon which creameries were established in New England, where it continues popular The cream is raised by gravity in deep cans or by means of hand separators, and is paid for by the "space" The "space" has been shown to be an unreliable measure, as the value of a space of cream for butter making varies widely, and payment on the basis of the fat furnished, as determined by test, is now generally adopted

Where the whole milk is furnished to the creamery, it is delivered daily, which involves a great deal of labor in hauling. In almost all cases the hauling devolves upon the milk producer, often the farmers hving near together cooperate in this, or contract with some person who makes a business of doing the hauling. The milk was formerly paid for by the pound, this being a convenient means of measurement, but the mustice of this to the the injustice of this to the producers of rich milk, and the introduction of the Babcock milk test, have led to payment on the basis of the butter fat The milk of each pation is weighed as it is received and a sample taken for testing; usually the samples for a week or so are combined into a composite, to reduce the labor of testing From the amount of milk delivered, and the fat content, the amount of butter fat furnished by each patron is calculated at the end of the month In most of the leading creamery districts the separator factory is now the favorite system. In many places these creameries have located "skimming stations" at points convenient for the pations, where the milk is run through the separator and the cream then taken to the creamery This reduces the labor of hauling to a minimum The system of making butter at creameries is, in many respects, a vast improvement over the ordinary farm dairy practice The use of machinery reduces the cost of butter making, and the milk and cleam are handled by experienced butter makers according to the most approved methods The result is a uniform product, equal to the best of the single dairies, and a great improvement over the average, which sells for a high price. Furthermore, there is less loss of fat in making than at farm dairies, and hence a larger quantity of butter is

produced from the same cows The labor and expense of making and marketing the butter are removed from the farms and households Cream-eries have been of great advantage to the farmers where they are located, and the payment for milk on its fat content has stimulated the farmers to keep better and more profitable cows Some of the more modern creameries have a very large capacity The Frankin County Creamery, at St Albans, Vt, was formelly the largest in the country, having a capacity of five or six tons of butter a day There are now five or six tons of butter a day There are now a considerable number equally as large, and several much larger, running up to 15 tons of butter a day in some cases A large creamery in Nebraska has over 100 skimming stations connected with it The thirteenth census reported 4783 creameries in operation in the United States in 1909, which made 624,764,653 pounds of butter, as compared with 420,126,546 pounds ın 1899 Wisconsin led all other States in creamery output The first Danish cooperative creamery was put in operation in Jutland in 1882. The number at present mounts into the thousands. The creamery or factory system of butter making has spread generally throughout European countries, Australia, and South America, wherever butter is made on an extensive scale In some countries the cooperative plan predominates, and in others the factories are more largely proprietary or operated by private

nore megyl proprietary or operated by private firms. See Butter Makino CREAM OF TARTAR (OF tartre, from ML tartarum, MGk ráprapor, tat taron, tartan, probably fom Lat Tartarus, GK. Táprapor, Tarpobably fom Lat Tartarus, GK. taros, hardly a corruption of Ar durd, diegs, from darida, to lose the teeth) A potassium bitartrate that is contained in argol (qv) and is prepared by dissolving the argol in hot water and removing any coloring matter by means of clay or egg albumen, the cleam of taitar is then separated from the filtered solution by crystallization and may be purified by recrystallization Cream of tartar is a white ciystalline compound that is soluble in water and is used in medicine as a refrigerant and purgative With sodium bicarbonate it is used as a substitute for yeast in maising bread It is also the source of tartairs acid and of tartrates CREASE See Kris

CREASOTE. See CREOSOTE

CREASY, krē'sī, Sir Edward Shepherd (1812-78) An Énglish historian, born at Bexley, Kent. He became fellow of King's College, Cambridge, in 1834 and in 1837 was called to the bar In 1840 he was appointed professor of modern and ancient history in the University of London, and in 1860, when he was knighted, Chief Justice of Ceylon—a post he held for 10 years He is most widely known for his Fifteen Decisive Battles of the World (1852), a work which has been very favorably received alike by the critic and the general reader. His other works, less known, but in many cases of almost equal merit, include an Historical and Critical Account of the Several Invasions of England (1852), History of the Ottoman Turks (1854-56), Imperial and Colonial Constitutions of the British Empire (1872), and two excellent books on Eton

CRE'ATIN. See KREATIN CREATININ, krė-živinin See KREATININ (Lat create, from creare, to CREATION (Lat create, from creare, to grow) The create, connected with erescere, to grow)

act or acts by which the world is supposed to have been brought into existence When man's mind matures sufficiently to reflect upon cause and effect, it is apt to raise a question as to the origin of the objects by which he is immediately surrounded, and this gradually leads to inquiry in regard to the beginnings of the whole scheme of things Curiosity, which is the mainspring of all scientific progress, suggests the lines of inquiry and credulity, which is the brake preventing excessive speed, has a tendency to be satisfied with the easiest explanation As man became himself a creator, fashioning things for his purposes, and grew conscious of the value of his achievements, he naturally began to wonder how various objects had been formed The simplest explanation occurring to him was that some one had made them. Nor was he at a loss for an answer to the question as to who these producers could have been They must have been in his neighborhood once and then gone away to live somewhere else They were not gods, since no wor-ship was paid to them, nor ance-tors, since the secret of fatherhood had not yet been discovered, but beings conceived of as man, or animals, or partly human and partly animal, possessed of that extraordinary power which makes some things objects of special interest, wonder, and dread Such are the conceptions of peoples that have lived until recent times in Stone-age conditions in Melanesia, Polynesia, Australia, America, and Africa, and such in all probability were the ideas of Stone-age peoples in the remote past Studies of the Melanesian mana, or power, the Polynesian tabu, or danger attaching to objects possessed of mana, the American totem, or the animal (or other object) increasing and helping the tribe, the Australian altjiranga-mitjina, or the uncreated totemistic producers of early times, and the mystery cults and exogamy of various tribes, the results of which may be best seen in the recent works of Durkheim, Malett, Frazer, W Schmidt, and Sodelblom, as well as of the W Schmidt, and Soderblom, as weil as of the notions that come to view in man's earliest pictorial representations of himself in the Magdalenian period of the Pale-lithic age (see Man), have led to a growing appreciation of the importance of these primitive creators Soderblom has shown in his latest work on the subject (1914) that this crude idea of "makers" possessed of extraordinary power cannot be adduced as evidence of an original monotheism, as has been done by Andrew Lang and W Schmidt, but reveals one of the roots of the god belief, and may be traced into historic times, eg, in the case of the Chinese Shang Tr.

The predynastic Egyptians represented Horus as a falcon His totemistic origin is obvious, but, however probable it may be, it has not yet been proved that he was then considered as a ceator But Khnumu, the god of the cataract district, who fashioned on his potter's wheel heaven and earth, gods and men, is always represented with a ram's head, the unmistakable sign of his original character as a totem Thoth of Hermopolis, who created heaven and earth, had the head of an ibis, probably, before he became the god of the moon, the conception grew up, how early cannot be determined with certainty, that Keb and Nut were created at his command Ptah, who always appears as a man, formed the sun egg

and the moon egg on his potter's wheel, but the priests of Memphis at an early time emphasized that he thought before he spoke, and that things came into existence when he spoke Re was a beetle before he became the sun god and may already, before this transformation, have been considered, as he was later, the father of gods and fashioner of men and things Osiris is always represented as a man and may Osiris is always represented as a man and may have been thought of as such before he became the god of the Nile and the vegetation dependent upon it He made the earth and the creatures upon it In Babylonia the great Sumerian detices—Ellil of Nippur, Anu of Uruk, Ea of Eridu, and Marduk of Babylon who act as creators are all thought of as men, though connected with earth, heaven, and sea. The earliest version of the Sumerian story of creation, published by Poebel in 1913, assigns different parts to Ellil, Anu, and Ea, which may indicate a fusion of three stories Another version in Sumerian with an Akkadian translation was already known, and the longest re-cension, in which Marduk, after a struggle with the chaos monster Tiamat and her helpers, creates heaven and earth, was found in the palace of Asurbanipal in 1875 and deciphered by George Smith Before that time only the fragmentary quotations from Berosus (qv) The German excavations at Assur were known (qv) have brought to light the fact that Sennacherib ascribed the creation of the world to Asur (see Assur) The worshipers of Ahura Mazda in Iran regarded him as the creator Already Dailus Hystaspis, in his inscription at Behistun (qv), declares that he has created "this earth and yonder heaven" In the Avesta a distinction is introduced between the good things in the world (light, virtue, love, good spirits, life) that are created by Ahura Mazda, and the evil things (darkness, vice, hatred, demons, death) that are the work of Angra Mamyu The dualism resulting from this is, however, overcome by the ultimate victory of Ahura Mazda In India the primitive notions of a heaven father and earth mother who made all things, or the Purusa, the male principle which originated them, gave place to the idea of Brahma, the creator, which in turn yielded to the pantheistic conception of the universe that left no room for an extra-cosmic divinity or a creation (see VEDANTA) among the more thoughtful, while even the popular cults of the Trimurti (qv) and Kali, the symbol of the ruthless forces of nature, are based on the rudiness forces or nature, are based on the assumption of the infinite and eternal character of the world. Early Greek thought, as seen in Homer, Hesnod, and the Orphic hymns, explained the origin of gods and men by a primeval triad—Night, Heaven, and Earth—and did not attempt to go further. The Ionian philosophers endeavored to find the essential nature of things which would explain the forms they assume, thus, Heraclitus regarded the first principle as on one side Fire, on the other Intelligence An independent and immaterial world-forming agency, expressing itself in Love and Discord, was assumed by Empedocles, while Anaxagoras found it in Reason To Plato's thought matter is eternal, and creation means the activity of God by which he impresses upon the shapeless material foims of patterns, con-ceived of as a system of ideas "The Creator made the universe because he was good and desired that all things should be as like himself as possible" (Timeus, 111, 613), but there is something in the intractable material that resists the creator, and in the residue beyond his power evil has its place. Aristotle rejected the system of ideas, but himself retained the essential dualism which Epicureanism sought to overcome by a materialistic, Stoicism by a more idealistic, monism Ovid's Metamorphoses and Fasts reveal some of the popular conceptions in the Latin world on the subject of creation, while De rerum natura by Lucretius is the grandest and most characteristic effort of the Roman mind to explain the origin of things along Epicurean lines The Icelandic Gylfaginning and Voluspa have been suspected of showing Christian influence Such a coloring in transmission is not impossible, but it is likely to have affected the figure of Balder and the eschatology more than the story of the original chaos and the struggle with its powers, the creation of the world by the three Esir, and the fashioning of the first human pair out of the trees Ask and Embla, and it is difficult to prove anywhere

In the Hebrew account of creation there seem to be indications of more than one original version Gen i I-11. 4a gives a complete de-scription of how the heavens and the earth and all that is in them, including the human race, came into existence during a period of six days at the command of God, who then rested upon the seventh day On the first day light was produced and day and night divided, on the second day the filmament (q v) was created and the waters separated, on the third day the dry land appeared and plant life began, on the fourth day the heavenly luminaries were made, on the fifth day fishes and birds were made, on the sixth day land animals and man were created The Greek version by its ev doxii, en arche, without the article shows that the first word was read berëshith and not barëshith already in the third century B.C. The construct relation with what follows, thus demanded by tradition, is of importance as it suggests this translation "When God began to fashion the heavens and the earth, the earth was in a chaotic state, and darkness lay upon the great abyss, though the spirit of God was brooding over the waters, but God said, 'Let there be light' and light came' The correctness of this rendering seems to be indicated also by the fact that the heavens are created on the second day and provided with luminaries on the fourth, and the earth is made on the third fourth, and the earth is made on the third Chaos, with its darkness and its waters, appears, therefore, to have existed before God began to form it into a Cosmos, and the "brooding" hints at the underlying conception of a world egg. The creation of the human race is preceded by a council in heaven, the words "Let us make men in our image" are understood by many scholars as a remnant of the original polytheistic setting, the image referring to the outward form, while others think of the persons of the Trunty, God and His angels, or a plural of majesty (which, however, is without analogy in Hebrew literature), and of "the image of God" as referring to those godlike qualities that distinguish man from the animals. As there are two works on the third and two on the sixth day, it has been supposed that a division into eight classes preceded the arrangement into a week of six days followed by a sabbath. The practical purpose

of giving a reason for hallowing the sabbath day is obvious That an earlier form of the story has been worked over may be inferred from the fact that Job ix 13, xxii 12, 13, Isa li 9, Ps lxxiv. 12 fl, and other passages show how familiar the Jewish mind was with the struggle between Yahwe and the chaos monster (Rahab. Tehom, Leviathan) before creation, while this nature myth seems to have been intentionally suppressed in Gen i The statement in Isa xlv 7, I form the light and create darkness, I make peace and create evil," is probably not meant either as an attack upon this myth or a correction of the dualism of Avesta, but only as an assertion that prosperity and adversity alike come from Yahwe, the only living God As the original Mazdaism and Plato, Gen 1 emphasizes the goodness of all the objects in nature as they came from the hand of the creator Gen 11 4b-25 seems to be an excerpt from another story of creation It begins by relating how on the day when God made earth and heaven there was no vegetation, because no rain had fallen and man did not exist to till the ground, but that a stream began to rise so as to water the ground, from which God then fashioned a man and blew into his nostrils the breath of life There follows the description of the planting of a garden, the making of animals which are brought to man to be named, and since none of them proves a "help" to him, the creation of a woman out of a rib taken from him while in a deep hypnotic sleep There is no account of the creation of heaven such as the introduction leads the reader to expect, and it is probable that this version has also been abbreviated by the suppression of some original features. Many scholars consider it the work of a writer whom they call the Yahwist (see Elohist and Yahwist), but N Schmidt has shown, in Journal of Biblical Literature, xxxiii, l, pp 25 ff. (1914), that the original text had "Elohim" everywhere, and not "Yahwe Elohim" As to the age of the two nariatives in their earliest form nothing is known with certainty. Babylonian influence, mediated through the Amoustes, is not improbable, and may be much older than is generally thought in view of the spread of Babylonian myths in the Tell el-Amarna period (see ADAM), but the native element need not be limited to a gradual elimination of the polytheistic features A creation out of nothing is first taught in 2 Maccabees vii 28, though the ex minio of the Latin version is more unmistakable than the ούκ ὄντων, ouk onton, 'things not existing,' of the Greek

The early Christians adopted the views prevalent among the Jews Those influenced by Hellenistic thought regarded the things seen as having come from "things not seem" (Heb. Xi. 3), and the Logos (John 1 3), or the Son (Col 1 15 ff.), as the medium of creation. Origen considered the work of creation as without beginning or end, and Augustine looked upon the preservation of the world as a continuous creation of the world in the sense of meture as eternal as himself in the sense of nature as eternal as himself in the sense of nature naturems the word has been used even by thinkers who disavow its parthesistic implications, whether denying all

teleology or simply accepting it as inherent in and Haeckel has published a Natur-copfungsgeschichte The use of such a liche Schopfungsgeschichte term may to some extent be justified by the etymological connection with crescere, to grow, but has been criticized, not altogether unjustly, on the ground of its departing from the historic meaning attached to the word, though in a measure this criticism also applies to every attempt made in recent times to square the idea of a creation with what are regarded as the established results of natural science. Consult Lukas, Die Grundbegriffe in den Kos-Sult Lukas, Die Giundeegisfe in den Aos-mologien der alten Volker (Leipzig, 1893), Tylor, Primitive Cultuse (2 vols, New York, 1891), Andrew Lang, Mading of Religion (3d ed, New York, 1910), Marett, The Threshold of Religion (London, 1900), Schmidt, Grund-linien einer Vergleichung der Religionen und Mythologien der austronesischen Volker," in Denkschriften d k Ak d Wiss in Wien (Wien, Denoisentylen a k Ak a Wiss in Wen (Wen, 1910), Durkheim, Les formes élémentaires de la vie religieuse (Paris, 1913), Soderblom, Gudstions upplomst (Stockholm, 1914), Erman, Die aegyptische Religion (Berlin, 1909), Breasted, Religion and Thought in Anient Egypt (New York, 1912), Jastrow, Die Religion to 1912), Jastrow, Die Religion to 1912), Jastrow, Die Religion to 1912, Jastrow, Die Religion to 1914, Die R gion Babyloniens und Assyriens (Giessen, 1902gion Babyloniens una Assyriens (Giessen, 1902-12), id, Hebrevo and Babylonian Traditions (New York, 1914), Poebel, in Babylonian Publications of the Museum of Archaeology of the University of Pennsylvania, vi (Philadel-phia, 1913), Rogers, Cuerjon m Parallels to the Old Testament (New York, 1912), Ryd-beig, Gemanisk mythologi (Stockholm, 1866-89), Mullenhoff Deutsche Alter timellunde beig, Gemanisk mythologi (Stockholm, 1800, 89), Mullenhoff, Deutsche Alter tumslunde, v (Berlin 1892). CREATION, THE 1 A philosophical poem by Sir Richard Blackmore (1712), which was highly commended by Addison and Johnson 2 A celebrated oratorio by Haydn, first produced

ın Vienna in 1798.

CREATIONISM. A term applied in the latter half of the nineteenth century to the theory of the origin of man which is opposed to evolution. (See Anthropology, Evolution ) As a theological term, it has long been in use to designate the theory of the origin of man's soul by the special creative act of God in the case of each individual. It is opposed to "traducianism," which is the theory that the soul of the individual is derived by generation from the souls of his parents as truly as is his body Scriptures give no decision upon this question Creations goes back of the Christian Church and is found in Aristotle. It was the prevailing view in the Church after the fifth century and was held by Jerome and Pelagius and by most of the schoolmen. In modern times it has been frequent in the Reformed (Calvinistic) churches and is generally approved to-day in Catholic teaching Aquinas distinguished between the sensitive or animal soil, which man has in common with brutes and which is inherited, and the soul which is the basis of the human intellect, which comes directly from God to every individual by creation This distinction, under the terms of "spirit" and "soul," was often made later by both Catholic and Protestant theologians Traducianism was advocated by Vol VI-16

Tertullian (c 200), by Gregory of Nyssa, and some of the other Greek fathers. In modern theology it has been the prevailing Lutheran theory. Augustine is claimed for both sides He seems to have been really a creationist, but saw some of the difficulties so clearly that he sometimes expressed ideas which imply traducianism. In a letter to Jerome (iii, 166) he begs to know how, if the soul comes from God by creation, it contracts guilt so that children need baptism, but he does not turn to the refuge of traducianism The ancient Church found arguments for cleationism in those passages of the Bible which represented God as the creator of the individual man, in the simplicity of the soul, which could not be divided and so propagated, in the sinlessness of Christ, reasoning that only if souls come fresh from the hand of God could Christ's soul be truly human and yet sinless, in the marked individuality of persons, and in the immateriality of the soul. The doctrine of original sin constituted the great source of argument for traducianism How could man of argument for traducianism How could man be guilty of sin unless he had descended, in soul as well as in body, from the source of human sin in Adam? It was also claimed that the theory was analogous with God's action in nature, and that it best explains the complex facts of human heredity It accords well with the theory of realism, which Augustine held, that human nature was deposited in Adam, and all men share it from him. Many theologians, both ancient and modern, have regarded the whole subject as a mystery and have been willing to agree with Augustine's modest statement, "When I wrote my former book, I did not know how the soul derives its being, and I do not know now " Modern studies of personality and heredity have shifted discussion from this problem to the scientific consideration of the facts of human life, so that most of the historic theoretical arguments on both sides command little interest now See Traducianism, Original Sin

CREATIVE EVOLUTION (L'Evolution créative) A memorable philosophical treatment of evolution by Henri Bergson (1909), presenting a new and stimulating consideration of its processes in nature and man See Bergson, HERRI

CRÉBILLON, krå'be'yon', CLAUDE PROSPEB JOLYOT DE (1707-77) A noted French storyteller and wit He was born in Paris, Feb 14. 1707, the son of the dramatist Prosper Jolyot Crébillon Except for a five years' exile for political and theological allusions in his novels, especially concerning the papal bull Unigenitus, which led also to a brief imprisonment in the Bastile, he passed his life in Paris Though he occupied at one time the office of literary censon, through the good graces of Madame de Pompadour, his fiction is a byword for its licentious suggestiveness It shows a graceful talent, how-ever, which was unfortunately wasted, together with a thorough mastery of style and keen powers of observation, in the most trivial manner His best-known tales are L'Ecumone ou Tanzan et Néadarné (1734), followed in 1736 by the notorious Les égarements du cœur et de l'esprit, and no 1746 by Le sopha, than which it has not been possible to descend further in the refinements of immorality not a gross word and not a decent thought The conversation is witty, the manners refined after their kind This smirking voluptuousness is only the completest literary expression of the spirit of the time, that was sapping the foundation of national strength and character and preparing the way for the Revolution Strange to say, he was irreproachable in his private hie and proved to be a model husband to Lady Henrietta Maria Stafford, an Englishwoman, who fell in love with him after reading his works He died in Pails, April 12, 1777 Consult C H Amanton, Pai treularités sur les deux Crébillon (Pans, 1835)

CRÉBILLON, PROSPER JOLYOT DE (1674-1762) A noted French tragic poet, born in Dijon, Jan 13, 1674 He abandoned the law for the stage on the success of Idoménée (1705), and with Atrée et Thyeste (1707) took first rank among the tragic poets of his time Among the more noteworthy of his subsequent tragedies are: Electre (1708) Rhadamiste et Zenobie (1711), his best work, Pyrihus (1726), Catiline (1748) Crebillon became an Academican in 1731 and held several minor public offices, among them that of stage censor Later he became indigent, but died in comfort through the profits of an edition of his Works (1750) made at the royal order and charge He died n Paris, June 17, 1762 Crebillon suffered, as did his fame, from the envy and enmity of Voltaire, himself a tragic poet of greater polish, though less rugged power He is apt to mistake the hornble for the grandiose, and infla-tion for energy in diction, as did Corneille, whom among French dramatists he most resembles both in his qualities and his defects time when Fiance no longer possessed a great tragic poet of the calibre of Racine, capable of fathoming the depths of the human soul, Crébillon was most useful to the diama of his day if only by the example of his jugged genius for inventing tense and tragic situations, in which very far-fetched mistaken identities helped to prolong the suspense Voltane himself used four of Crébillon's plots Crébillon's Works have been often edited, best perhaps by Didot (1812). There is a Lafe by the Abbé de la Porte, and a discriminating critical essay on Crebillon's place in the development of French diama in Brunetière's Epoques du théâtre français Consult also Dutrait, Etude sur Ciébillon (1895), and C H. Amanton, Particularités sur les deux Crébillon (1835)

CRECHE See NURSERY, DAY NURSERY

CRÉCY, krá'se' A small town of France, in the Department of Somme, on the Maye, about 12 miles north of Abbeville (Map France, N , G 2) It is celebrated as the scene of a brilliant victory gained Aug 26, 1346, by Edward III, with about 19,000 English and Welsh soldiers, over a French army amounting to about 60,000 men under the command of Philip VI In this great battle vast numbers of the French nobility perished as well as King John of Bohemia and ll other princes, who were fighting on the side of France Altogether about 30,000 of the French army fell. At Crécy the Black Prince greatly distinguished himself and gained his spurs Consult George, Battles of English His-tory (New York, 1895), and Oman, History of the Art of War (London, 1898)

CREDÉ, krá-dá', Karl Sigismund Franz (1819-92)A German gynecologist, born in Beilin He studied medicine in Berlin and in Hendelberg, and in 1852 was made director of the School of Midwifery and of the obstetric department of the Charite in Berlin Four years later he was made professor of obstetrics and director of the lying-in hospital in Leipzig His published works include the following Klinische Vortrage uber Geburtshilfe (1853-54), Die preussischen Hebammen, ihre Stellung zum Staat und zur Geburtshulfe (1855), Observationes de Fœtus Situ inter Graviditatem (1862-64); Die Verhutung der Augenentzundung der Neugeboinen (1884), Gesunde und kranke Wochnerunen (1886), Lehrbuch der Hebammen (6th ed., 1evised by Leopold and Zweifel, Leipzig, 1897) From 1853 to 1869 he was coeditor of the Monatsschrift fur Geburtshunde and, for

many years, of the Archiv fur Gynahologie CRE/DENCE (It credenza, belief, cupboard, ML credentia, from Lat credere, to believe) side table, buffet, or sideboard, on which dishes were placed or kept before meals, a cupboard in which stores or household gear were kept Also, in the ecclesiastical terminology of the Roman Catholic and Episcopalian churches, a small table or shelf near the altar or communion table on which the bread and wine are laid before being consecrated, in the Greek church it is called the trapeza prothesis. The Oxford movement was largely responsible for its reestablishment in the Episcopal churches of Great

Biitain and America

CREDI, kiá'dě, Lorenzo di (1459-1537). A Florentine painter of the Renaissance He was born in Florence and was a pupil of Andrea Verocchio, at the same time with Leonardo, and Perugino His style was at first severe, like that of Verocchio, but in later life his manner became softer He executed his work with great care-in fact, he paid almost too much attention to detail, and, though full of delicate sentiment, his pictures are lacking in originality. Throughout his life he was influenced by the quality of Da Vinci's ait His favorite subject was the Madonna and Child, fine examples of which are in the Louvre, the National Gallery, London, and the galleries of Dresden, Turin, Mainz, and the Holden collection, Cleveland He also painted the "Adoration of the Shepherds" many times, among the finest examples being those in the Querini Stampaglia Gallery, Venice, and the Florence Academy Credi is seen at his best in the "Annunciation" and the "Venus" in the Uffizi He is represented in the Metropolitan Museum, New York, by a "Madonna Adoring the Christ Child" and in the Boston Art Museum by a beautiful boy's head He was also a sculptor, and was designated by Verocchio to complete his statue of Colleon.

CRED'IT (Fr. crédit, from Lat. creditum, a loan, neut pp. of credere, to trust) In political economy this term indicates broadly the confidence which is reposed in the ability and purpose of men to meet future obligations. It is defined by J. S. Mill as permission to use another's capital, and by H. D. MacLeod as "a right of action". While it rests etymologically upon trust in human nature, the term embraces many operations in which this plays a small part, in which by the establishment of claims to portions of the debtor's estate the creditor assures himself of the repayment A familiar illustration of such transactions are the loans of bankers upon collateral security

From an objective point of view the essence of a credit transaction is that on one side the transfer of goods or money is immediate, on the Personal other that the return is deferred credit resting solely upon the good faith of the creditor is the earliest form in which credit appears, and is still widely prevalent, as in the book accounts of retail metchants. But in the larger transactions of commerce ciedit could not have gained its prominent place without the intervention of instruments of ciedit. These assume various forms, notes, that's, mortgages, bonds, etc., but all have a common purpose—to msure the transferability of the claim against the debtor. Without them the lender—for whatever form the credit may assume it is always in the nature of a loan—must await the pleasure of the debtor or the termination of the contract before he can enter into posses-ion of his own With these instruments of credit he practically has control of his capital wheneve he desires to use it. By transferring his claim to others he can secure his capital at any time.

Credit rests ultimately upon the fact that many persons possess wealth who have no present use for it and are willing that it should be employed by others. If circumstances arise, as in times of panic, when each seeks to secure for himself the actual possession of his wealth, then credit cannot be obtained, and those whose transactions require it must either pay evorbitant prices for it or be clushed out. This explanation of credit will serve to indicate the important function which banks play in the world of business They are reservous of credit In them are gathered claims upon the unemployed wealth of the community, and through them this wealth is directed by loans into channels of usefulness It is brought together in small and large quantities from all classes of persons who do not immediately need it, and who are unable or unwilling to loan it directly From the point of view of individuals credit is frequently spoken of as capital, because, like capital, it increases their productive power But credit from a national point of view is to be regarded as capital only in so far as it diminishes the amount of wealth which would otherwise he idle and increases that which is devoted to productive purposes An effective organization of credit does not produce wealth, but draws out wealth and enhances its usefulness. Hence a nation in which credit, as in Anglo-Saxon communities, is highly organized will have a higher productive capacity than one in which a primitive organization prevails Credit is not without its dangers, and when the credit organization is out of joint the results are disastrous. This is the price of progress As the disasters to a railroad express train are more severe than those which overtake the lumbering wagons which preceded it, so the commercial disasters of a highly organized nation with a broad development of credit are more serious than those of less advanced peoples The remedy is not to go back to the wagons, but to apply every device to to the wagons, out to apply every device to insure the safety of the modern vehicle. For a clear analysis of credit, consult MacLeod, Theory of Credit (London, 1889-01), Dunbar, Chapters in the History and Theory of Banking Chapters in the History and Theory of Banking (New York, 1892), Report of Comptoller of the Currency, 1896, Veblen, The Theory of Business Enterprise (New York, 1904), W. C. Mitchell, Business Cycles (Berkeley, Cal, 1913), Taylor, The Oreat System (New York, 1913)

See BANK, BANKING, CRISIS, ECONOMIC CREDIT, AGRICULTURAL See RURAL CREDIT CREDIT, LETTER OF. This term is applied in general to commercial instruments, usually in the form of a letter in which one party addresses a second, requesting him to pay certain sums of

money to a third It is in effect a draft, except that the amount to be paid is stated, not absolutely, but as a maximum not to be exceeded It presupposes that arrangements exist by which the party who sends the letter shall reimburse him who makes the payment Such letters of ciedit may be diawn on one or on several par-ties, being in the latter case sometimes called "circular letters of ciedit" They are much used by travelers, and the leading houses issuing them have correspondents in all parts of the world Those who issue them are generally so well known to the banking fraternity that any banker, whether a correspondent or not, will, upon proper identification, make payment on the letter. When the letter is issued, the person to letter When the letter is issued, the person wo whom it is given either pays outright the amount named in the letter, or furnishes acceptable security that the maker shall be reimbursed for the drafts upon him

The alternative for the letter of credit is the travelers' note. This differs from the letter in being issued in coupons, sometimes expressed on the face of the coupons for the currences of other countries. Such travelers' notes were formerly issued extensively by the Cheque Bank of London, but the business in the United States has recently passed largely into the hands of the express companies. Such travelers' notes are sometimes designated "circular notes".

CRÉDIT FONCIER, krá'dê' fôn'sya' (Fr. landed credit). The French name for a method of borrowing money on the security of landed property which is widely practiced in France and other continental countries The borrower takes a loan, in return for which he contracts to make certain annual payments, which are so adjusted as to make provision for the interest and for the gradual extinction of the principal, which is fully paid when the term of the contract has been concluded. These contracts are generally made with companies organized for the purpose of loaning their capital in this fashion. Another variety of this form of credit is found in the Pfandbrief institute of the large landowners of Germany. Loans are made in the same way, but in return for the debt the borrower receives the securities of the association He does not actually contract a debt until he sells these securities, which he may do in whole or in part

CRÉDIT MOBILLER, SOCIÉTÉ GENERALE DU, KRA'GÉ' MO'DÉ'Ya' A financial institution chartered by the French government in 1852, with a capital of 60,000,000 france. As its name indicates, it was intended to furmish loans on personal property, in contrast to the various credit foncier institutions, which loaned upon real property. The declared object of the new bank was especially to promote industrial enterprises of all kinds, such as the construction of railways and the opening of mines, by placing loans and handling stock. Various privileges were conferred upon it under its claiter, among others it was allowed to acquire shares in public companies, and to pay calls made upon it in respect of such shares by its own notes or obligations; also to sell or give in security all shares thus acquired. The operations of the society were conducted upon a very extensive scale. In 1854 it subscribed largely to the government war loan, raised during the Crimean campany, to the General Omnibus Company of Paria,

and to various other important undertakings The dividend declared for 1854 was 12 per cent In 1855 it loaned two sums to the governmentthe one of 250,000,000 and the other of 375,000, 000 francs, its operations were vast during this year, and the net dividend declared amounted to 40 per cent The directors then proposed to avail themselves of their privilege of issuing their own obligations under two forms-the one at short dates, the other at long dates, and re-deemable by installments The proposed issue was to amount to 240,000,000 francs, but the public became alarmed at the prospect of so vast an issue, and in March, 1856, the French government prohibited the carrying out of the proposed scheme This was a severe blow to the institution In 1856 its dividends did not exceed 22 per cent, in 1857 they were only 5 per cent Several attempts to resuscitate its credit failed, and finally, in November, 1871, it was reorganized and put under a new board of management In 1877 its assets were 77,000,000 francs, but its shares, the par value of which was 500 francs, sold for 200 francs only In 1878-79 the capital was first reduced to 32, 000,000 francs and then raised to 40,000,000 In 1884 it was reduced to 30,000,000 francs, but the company never regained its lost ground. The Crédit Mobilier was undoubtedly useful in developing the industrial power of France, but its operations were hazardous, and had they not been checked in time, they would in all probability have ended in disaster See CREDIT MOBILIER OF AMERICA

CRÉDIT MOBILIER OF AMERICA

joint-stock company, whose alleged corrupt operations in connection with the building of the Union Pacific Railroad gave rise, in 1872-73, to the greatest congressional scandal in American history The company was chartered as the "Pennsylvania Fiscal Agency" in 1859, was organized for a general loan and contract business in 1863, and was reorganized under the above name in 1867, for the purpose of building the Union Pacific This work, completed in 1869, was paid for largely in stock and bonds of the Union Pacific, so that the stockholders of the two companies soon came to be identical. The Mobilier stock, at first almost worthless, soon began to pay enormous dividends, suspicions were aroused, and in the presidential campaign of 1872 the company was charged with gross dishonesty, and many prominent Republicans, including the Vice President, the Speaker of the House, three Senators, and a number of well-known Representatives, were freely accused by the Democratic press of having been bribed in 1867-71 to use their influence and votes in favor of the Union Pacific, the alleged bribes having consisted of the sale of Mobilier stock to the accused at prices below its actual value. A prolonged investigation, conducted in 1872by special committees in both the Senate and the House, resulted in a recommendation of the expulsion of one Senator, upon which, however, no action was taken, and the censure of two Representatives, Oakes Ames of Massachusetts and James Brooks of New York, respectively, for having sold Crédit Mobilier stock to members of Congress "with intent to influence the votes of such members" and for having indirectly received such stock. The scandal caused intense excitement throughout the country, and the Mobilier Company met with almost universal execuation, but subsequent investigation has shown that the charges were greatly exaggerated and were at least never conclusively proved Consult Crawford, The Crédat Mobiler of America 1ts Origin and History (Boston, 1880). and Hazaid, The Crédat Mobiler of America (Providence, 1881). the latter being a paper read before the Rhode Island Historical Society in February, 1881 For an impartial account of the affair, see Rhodes, History of the Umited States from the Compromise of 1850, vol vi (New York, 1906) CREDITON, kréditon, colloquially, kurton, or KIRKTON, A market town of Devonshire,

OREBITON, Freet-ton, conoquality, alrown, on KIRK-TON A market town of Devonshire, England, in a valley on the Creedy, a tributary of the Exe, 8 miles northwest of Exeter (Map England, C 6) Its chief industry is the manufacture of boots and shoes, also chemicals, tin plate, and confections In the Middle Ages it was noted for its looms, and the saying "as fine as Kirton spinning" was proverbial Crediton was the britiplace of the Anglo-Saxon Winfrid, or St Bomface It was the seat of the bishopric of Devonshire until 1050, when the see was removed to Exeter Pop, 1901, 3974, 1911, 3640

CREDITOR (Lat oreditor, one who trusts, from order, to trust). In its broadest sense, any person in whose favor a legal obligation exists, whether that obligation arises from the mutual assent of the parties, as in the case of contract (qv), or from a rule of law, as in the case of a tort (qv), or from a judgment or decree of a court of competent jurisdiction In legal parlance, however, as in ordinary usage, the term is otherwise the contract of the one who has voluntarily given credit to another

A general (simple or unsecured) cieditor is one who has no lien (qv) on any pioperty of his debtor, but only a personal claim or right of action. If a hien on property has been given to him by way of collateral security, mortgage, or pledge, he is called a secured creditor. If the debtor or the law secures a priority to one creditor, or to a class of creditors over others, such favored ones are said to be preferred creditors. In the absence of statutory provision to the contrary, a debtor may pay one creditor in preference to others, or he may make an assignent for the benefit of creditors, and direct that one or more shall be paid in full before anything is paid to the others.

The common law gave certain creditors a priority over others. For example, creditors of a deceased person were to be paid out of his estate in the following order (1) those having claims for funeral and probate expenses, (2) the State; (3) judgment creditors, (4) land-lords having claims for rent, and bond creditors, i.e., those who held bonds or scaled contacts of the deceased, (5) creditors by simple contract. This order has been modified to some extent by statute in the different States, and such legislation must be examined for detailed information on this point. The United States Bankruptcy Law of 1898 secures a preference to workmen, clerks, or servants for wages earned within three months before the commencement of proceedings, not to exceed \$300 to each claimant.

When a person obtains a judgment for money against another, he is called a "judgment creditor", and if an execution is issued and levied, he becomes an "execution creditor" "See Arrest; Attachment, Debton, Composition, etc., and consult the authorities there referred to.

CREDITOR'S BILL A proceeding in equity by a creditor to reach assets which could not be levied upon under a common-law execution because of their character or the disposition made of them by the debtor. Thus an interest of a debtor in a trust estate or property conveyed by a debtor in fraud of his creditors, not being legal assets in the hands of the former and therefore not subject to execution on attachment in a common-law proceeding, can be made available for the creditor only by a proceeding in equity See BILL IN EQUITY

CREDNER, krad'ner, Hermann (1841-1913) A German geologist, son of the following, born at Gotha and educated at Clausthal, Breslau, and Gottingen He made extensive geological investigations in North and Central America (1864-68), the results of which were published in the Zeitschrift der Deutschen Geologischen Gesellschaft and the Neues Jahrbuch fur Mineralogie In 1870 he became professor of geology at the University of Gottingen, and director of the Geological Commission for the Kingdom of Saxony In 1895 he became regular professor of geology at the University of Leipzig In addition to a geological chart of the Kingdom of Saxony (1877 et seq ), and numerous works on the geological formations of that country, his works include Elemente der Geologie (8th ed, 1897). Die Stegocephalen und Saurie (1881-93), Die Urrunflussler des sachsischen Rothliegenden (1891)

CREDNER, KARL FRIEDRICH HEINRICH (1809-A German geologist, born at Waltershausen, near Gotha He studied at the universities of Freiberg and Gottingen, and in 1836 was appointed by the ducal government warden of the mint In 1839 he became surveyor of mines, in 1850 mining councilor, and in 1854 state and mining councilor He was in 1858 appointed by the government of Hanover superior mining councilor, and reporting councilor to the Finance Ministry, in which capacity he had under his supervision all the Hanoverian mining works, including the important ones of the Harz From 1868 until his death he was mining privy councilor and director of mining in the Halle district. As a scientist, he was known for his study of the geology of those regions of Germany connected with his duties in the mining industry He discovered a compound of oxides of copper and manganese, called in his honor "Crednerite," and published some valuable treatises, including Versuch einer Bildungsgeschichte der geognostischen Verhaltnisse des thuringer Waldes (1855), and Ueber die Gliederung der oberen Juraformation und die Walder-Bildung im nordwestlichen Deutschland

CREE, krē (possibly a corruption of creek). One of the largest and most important tribes of Algonquian stock, living chiefly in the British-American territories of Manitoba, Assiniboia, Saskatchewan, about Lake Winnipeg and the Saskatchewan River, and eastward around James Bay They are on friendly terms with the Assimboin, but until brought under government control were constantly at war with the Sioux and Blackfeet They have numerous bands, commonly grouped under two main divisions, viz, Plains and Wood Crees Soon after obtaining firearms from the traders they began a war of conquest against the weaker Athabascan tribes, as far even as the Great Slave Lake and the Rocky Mountains, but afterward retired to their present position. They number now probably 10,000, on several reservations within the territories mentioned Consult Skinner, Notes on the Eastern Cree and Northern Saulteaux (American Museum of Natural History, 1911)

CREECH, THOMAS (1659-1700). An English translator He was educated at Wadham College, Oxford, elected fellow of All Saints College in 1683, and was head master of Sherborne School from 1694 to 1696 He afterward returned to Oxford and in a state of melancholy committed suicide Creech was a man of solid learning He translated Lucietius (1682), Horace (1684), elegies of Ovid, two eclogues of Vergil, some of Plutarch's Lives, Theorritus, thirteenth satire of Juvenal, etc The Luci etius was long ranked by the side of Dryden's Vergil and Pope's Homer

CREECH, WILLIAM (1745-1815). A Scottish publisher and author He was born in Edinburgh, and in 1770 was the traveling companion of Lord Kilmaurs, afterward Earl of Glencairn, on the tour of that nobleman through central and western Europe His publisher's shop in Edinburgh was much frequented by men interested in literary pursuits. Among the works published by him were those of Burns, Blair, Beattie, Cullen, Mackenzie, and other notables of the time. He made a rather poor translation of Horace, and this led Pope, in the preface to his imitation of Horace, to add the couplet.

"Plain truth, dear Murray, needs no flowers of speech, So take it in the very words of Creech"

Burns's poem Willie's Awa' was addressed to him

CREEDE A city and the county seat of Mineral Co., Colo, about 165 miles (direct) southwest of Denver, on the Denver and Rio Grande Railroad (Map. Colorado, C 4) It is in a narrow gulch on Willow Creek, high up among the mountains, and is engaged exclusively in mining, having been formerly noted for its highly productive silver mines. Since 1903, however, the mining of lead and zinc has been more profitable Wagon Wheel Gap, Hot Springs, and Antelope Springs are of scenic interest and make the region attractive for tourists Creede was founded in 1890 by N C Creede, who had established a mining claim there the previous year. It was nearly destroyed by fire in 1892, the year of its incorpora-

tion Pop, 1910, 741 CREED/MOOR. A village on Long Island, in the county of Queens, now included in New York City, 14 miles east of the borough of Brooklyn (Map Greater New York, G 5) The rifle range located here was founded as a private enterprise by the National Rifle Association and was later acquired by the State of New York It is now being used by the New York State Armory Commission Creedmoor is the seat of a State Insane Asylum Pop, 1914 (est), 600

CREED OF PIUS IV See PIUS IV, CREED OF CREEDS AND CONFESSIONS (AS crēda, OF, Fr., Prov, Portug. Sp, It credo, creed, from Lat. credo, I believe, the first word of the Apostles' and Nicene creeds) The names given to the authorized expressions of the doctrine of the Church at large, or of the several main sections into which it is divided. Such statements of doctrine sprang up naturally in the course

As controversy and of the Church's progress discussion alose, the final opinion of the Church was expressed in a clear, definite, and compact The great creeds mark the chmax of successive contioversial epochs in the Church and are the varying expressions of the Christian consciousness and reason, in their efforts more completely to realize, completend, and express the growing thought of the Church Each creed was evolved to meet a special need.

We find that the creeds of Christendom increase in complexity, in elaborate analysis and precision of doctrinal statement, as they succeed one another The first are comparatively brief and simple in sense and form, the last are prolix and largely didactic From the Apostles' Creed to the decrees of the Council of Trent, or the chapters of the Westminster Confession of Faith, there is a wide change, during which the Christian consciousness has grown

from a comparatively simple faith to a body of comprehensive critical opinions.

In the Christian Church creeds may be divided into ecumenical creeds, Oriental creeds, the creeds of the Catholic church after the Reformation, and the creeds of the Protestant churches Ecumenical creeds are those which arose before the great historic divisions of the Church, and which are recognized as being the expression of the faith of the early united Church, at least in the West The simplest, and in its original form the earliest, is that called the Apostles' Creed The name is a misnomer, the result of a late tradition The early form of the creed is known as the Old Roman Symbol and was used as a baptismal confession in the church at Rome Its earliest preserved form in Latin is given by Rufinus (c400), who, in commenting on the creed used in his church at Aquileia, Italy, gives the variations between it and the Roman form. A Greek version is given by Marcellus of Ancyra, in Galatia (336-341) These do not agree exactly. Tertullian and Irenaus, at the close of the second century, give such informal quotations as make it possible to reconstruct the creed used in Rome between 150 and 200 In English such reconstructions are available in McCiffert's The Apostles' Creed (New York, 1902) and an article by Harnack, Numeteenth Century, July, 1893 The following is from McGistert: "I believe in God the Father Almighty and in Christ Jesus His Son, who was born of Mary the Virgin, was crucified under Pontius Pilate and buried, on the third day rose from the dead, ascended into Heaven, sitteth on the right hand of the Father, from whence He cometh to judge the quick and the dead, and in the Holy Ghost, and resurrection of the flesh" This earliest symbol seems to have been made to guard the Church against the Gnostic (qv) heresies, which were rife in Rome in the second century, perhaps especially against the doctrines of Marcion (qv), who held that Jesus was not the son of the Creator of the world, but of a higher God, that he was wholly spirit, and so was not born in the flesh, did not die nor rise in the flesh, and that the Christian resurrection is from the flesh, not in the flesh The creed, with its omission of all mention of the ministry and teaching of Jesus, affirms exactly the points that the Gnostics denied (In both Greek and Latin forms it states the resurrection of the flesh, not of the body, as in the English translation ) The most

important of the clauses added before the time of Rufinus were 'holy church, and forgiveness of sins" These seem to reflect the Novatian controversy, as to whether the Church could remain holy if it forgave and took back those who had lapsed under the stress of persecution. In the sixth century Rome dropped the use of the Apostles' Creed and put the Nicene Creed in its place as a baptismal symbol. Perhaps this was the better to exclude Arians, who near the end of the fifth century took Rome Meantime the Roman Symbol lived on, with various changes, in the provinces, and at last, in the time of Charlemagne, was brought back to Rome in its final form, probably from southern Gaul From here it spread, in the ninth and tenth centuries, throughout the Western church first quotation of it in its final form is given in a book entitled Scarapsus, by Pirminius, a Benedictine missionary in southern Germany Consult Harnack, in Herzeg, Apostolisches Symbolum, also his Geschichte der alt-

christlichen Litteratur (Leipzig, 1893)
The Nicene, or rather the Niceno-Constantinopolitan, Creed sprang out of the conflict, which had begun even in the second century, as to the explanation of the Christ From the beginning Ebionitism had looked upon Christ as merely a Jewish teacher of distinction, Theodotus and Artemon openly taught such a doctrine in Rome towards the close of the second century Others, on the contrary, taught a doctrine which identified Christ with God absolutely in such a manner as to destroy all distinction of persons in the Godhead Monarchianism, as it was called, which held rigorously and formally to the unity of God, was the ruling principle of both doctimes, opposite as were the expressions it assumed in the two cases

The controversy thus begun in the second, perpetuated itself in the third, century under various modifications. The problem was to explain the divine nature of Christ. Arius, a preshyte of Alexandra, brought forward the doctume that Christ, although in a true sense drynne, or the Son of God, was yet not the very God He demed that He was 'of the substance of God,' or "without beginning", He was only the highest created being, "promoted" to divinity, but not the same in substance with the Father, nor equal with Him in power and glory. Athanasius, also an Alexandiian, came foiward

as the opponent of Arius
The Council of Niewa was summoned in 325 by Constantine, with the view of settling this controversy, and the Nicene Creed was the result. There were three parties in the council the Athanasians, or extreme orthodox party, the Euschians, or middle party, and the Arians, or heietical party. The heretics were few in number and possessed but little influence, but the Eusebian's were a strong party, and for some time resisted certain expressions of the orthodox or Athanasians, which seemed to them extreme and unwarranted, but at length the Homoousians, as the Athanasians were called, carried the day, and Christ was declared not merely to be of like substance (homoiousios), but of the same substance (homoiousios) with the Father

The creed was formed by extending the Apos-The creed to include the new definitions The essential parts are "And [I believe] in one Lord Jesus Christ, the only-begotten Son of God, begotten of the Father before all worlds, Light of Light, very God of very God, begotten, not made, consubstantial [of one substance, homoonistors] with the Father" The Council of Constantinople (381) simply readirmed this creed. Later the so-called Nieno-Constantinopolitan Creed are the heaptismal confession of the Niene Creed in the haptismal confession of the Church at Jetusalem, and was erroneously recognized by the Council of Chaledon (451) as the creed of Constantinople It adds definitions as to the Holy Spirit, 'Lord and Giver of Life, proceeding from the Father [Latin form adds and the Son' (see FLIJOQUE)] who with the Father and Son together is wor-lipped and glorified, who spake by the prophets" It also adds the word 'one' to the definitions or the Church and of Baptism, putting the latter, "We confess one baptism for remission of sins' See Nicens CREED.

The Nicene Creed affirmed the full divinity of Christ, but left undefined the relation of His human nature to His divine nature A series of controversies arose (see Christology) which finally issued in the creed of the Council of Chalcedon (451) This creed affirms that Christ 'is consubstantial with the Father according to His Godhead, and consubstantial with us according to His manhood—two natures concurring in one person and one substance." This was the final statement of a full and complete humanity and divinity of Christ

This series of creeds still leaves a certain subordination of Christ to the Father, which was always congenial to Greek thought. The Athanasian Creed does away with the last vestige of subordination and affirms the perfect equality of Christ and the Father. This creed—often called, from its first words, the Queunque Vult—originated in the Latin church, perhaps in Gaul or Africa, after the fifth century. It is first found in its modern form not earlier than the close of the eighth century and was never given full authority in the Greek church. It is longer than the earlier creeds, and affirms that belief in the equality of the persons of the Godhead is necessary for salvation. "The Father is God, the Son is God, and the Holy Spirit is God, and yet there are not three Gods, but there is one God." See Athanasian Creeo

The creeds of the Oriental churches are of less importance The Orthodox Greek churches, priding themselves on their unchanging adherence to the ecumenical creeds, have found little need for new creeds The most important are the confession or catechism of Peter Mogila (1640), the Decrees of the Synod of Jerusalem (1672), and the Confessions of Gennadius (1453) presented to the Sultan as a statement of the Christian faith The Russian standards are embodied in the Longer and Shorter Cate-chism of Philaret (1839, 1840) After the Athanasian Creed no important symbol was produced in the Western church till the Reformation. At that time new creeds and confessions began to spring up On the one hand, Protestantism had to defend and state its position and its scriptural authority, and, on the other hand, the Church of Rome, after many delays, gave forth at the Council of Trent (1545-63) an extended creed This creed was the result of patient and long-continued labor, and is an elaborate statement of the position of the Roman Catholic church on all the subjects of the controversy in the Reformation. It is divided into Decrees and Canons The Decrees are the full statements of doctrines, and the Canons following the several Decrees are brief statements and condemnations of the opposing positions, ending with anothemas. The creed is one of the guatest, cleavest, and most important statements of religious belief that any of the religions of the world possesses. The Decices of Trent, with the additions made in 1854 and 1870, are the fixed authoritative symbol or confession of faith of the Church of Rome See TRENT, CRIMINIO, 69

See TERENT. COUNCIL OF Of the Protestant churches, the most notable confessions of fauth are the Lutheran, the Continental Calvinistic or Reformed, the Anglican, or Thuty-nine Articles of the Church of England, and the Puntan, or Westminster Confession of Fauth.

The Lutherans call their standard books of faith and discipline Libri Symbolice Ecclesian Econoglica, and reckon among them, besides the three Catholic creeds, the Augsburg Confession, 1530 (qv), the Apology for that confession by Melanchthon, the Articles of Smalkald drawn up by Luther, 1371, Luther's catechisms, 1529, and, in some churches, the Formula of Concord, 1576, or the Book of Torgau

The most important of these is the Augsburg Confession, which is a statement, clear in expression and moderate in tone, of the points on which the German reformers agreed with and differed from the Roman church and also on which they differed from the Zwinglians and the Anabaptists It touches on practically all the points regarded as important to Christian and the Anabaptists of the confession of the conf

tian belief in that period

The Reformed (Calvimstre) churches produced over 30 creeds Most of these were either local or were superseded by later creeds No one has the universal authority among the Reformed churches that the Augsburg Confession has among the Lutherans. The First Helvetic Confession (1538) was the earliest reformed creed of national authority, but was superseded by the Second Helvetic Confession (1666) These represent the Zwinghan theology of the Swiss reformers The Gallican Confession (1569) is based on a first draft written by Calvin, and was the creed of the French churches. Netherland Calvimsin produced the Belgic Confession (1561), the Canons of the School of Dort (1619), against the Ariminians, whose Remonstrance is in the form of a brief creed (1610) Calvinism in Germany issued the Tetrapolitan Confession (1530) and the Heidelberg Catechism (1563). These creeds are authorities in the Dutch and German Reformed churches.

England has produced two important creeds For the Thurty-wine Articles of the Church of England see Articles, The Thirry-Nine They were originally 42 and are supposed to have been chiefly composed by Cranmer In 1571 they were revised and approved by Convocation and Pailnament The Lambeth Articles, 1505, and the Irish Articles, 1615, became of great importance as affecting essentially the contents of the next great creed, the Westminster Confession of Faith. This was the product of the great Puritan agritation of the seventeenth century It was produced by the Westminster Assembly (qv), was completed in the third year of the Assembly's sessions (1646), and laid before Parliament in the same year It was approved by the General Assembly of the Church of

Scotland in 1647, and again in 1690, taking the place of the Scottish Confession, a Calvinistic creed which had been the standard from 1560 to 1688

The Confession of Faith is the latest of the great Protestant creeds, and the creed of the Presbyterian chuiches throughout the world It is also one of the most claborate of all creeds to 33 chapters, beginning with Holy Soripture and ending with The Lass Judgment The tone of the doctrinal chapters is that of the later and formal Calvinism which spread from Holland among the English Puntans. The ecclesiastical spirit is Puntan-Presbyterian. "God alone" is declared to be "Lord of the Conscience", yet the "publishing of opinions contrary to the hight of nature, or to the known principles of Christianity," is at the same time declared to be matter of censure by the church and of punishment by the civil magistiate. Sec COMMANNIA.

The work of forming creeds did not, however, cease with Westminster The great Methodist revival in the eighteenth century led to a revision of the Articles of the Church of England for the use of the newly arisen body, the Unitarian controversy in New England at the beginning of the nineteenth, to the formation of many more or less elaborate church and seminary creeds The Congregationalists of America put forth a new creed in 1883, the Piesbyterians of England one in 1900, and the Northern Presbyterian Church of the United States in the General Assembly of 1902 adopted the revision of certain articles of the Confession of Faith and a declarative statement of 16 articles, which was substantially a new creed The best work on the subject is Schaff, Creeds of Christendom (3 vols, New York, 1877-78), history and texts Consult also: Winer, Comparative View of the Doctrines and Confessions of the Various Communities of Christendom (Edinburgh, 1873), Green, The Christian Creed and the Creeds of Christendom (London, 1898), Curtis, History of Creeds and Confessions (Edinburgh, 1911)

CREEK CHUB The horned dace See Dace CREEK FISH. See Chub Sucker

CREEKS (so called from the numerous creeks running through their land), or Muscogee, mus-kö'ge (Algonquin mashoki, creeks). An Indian confederacy, formerly holding the greater portions of Alabama and Georgia, and second in importance among the Gulf tribes only to the Cherokee The ruling tribe was the Muscogee, whose language was the court language, besides which there were the Alabama, Hichitee, Koasatı, and others of the same Muskhogean stock, with the Uchee and Natchez (qv), and a considerable incorporated band of Shawano The Seminole of Florida were an offshoot from the Muscogee confederacy They were agricultural, but warlike, living in villages of log houses, plastered on the outside with clay, and arranged in a rectangle about a central space reserved for public ceremonies, chief of which was the annual "busk," or green-corn dance. In the Colonial wars and during the Revolution they generally adhered to the English side. They made a treaty of peace with the United States in 1790, but in 1813, instigated by the English, again took up arms against the Americans, beginning hostilities by the terrible massacre of Fort Mims They were completely crushed by General Jackson in a brief but bloody campaign,

in three battles in which they lost respectively 200, 300, and 800 warriors killed Utterly broken, the Creeks were compelled to sue for peace, which was granted only on submission to a peremptory "demaid" for the surender of more than half their ancient territory. Other cessions quickly followed, until in 1832 they sold all their remaining territory and agreed to remove beyond the Mississippi to their present habitat in Oklahoma. A few small groups, however, still reside in Alabama and other States. Like the other Southern tribes, they were divided in sentiment during the Civil War and suffered severely in that struggle. Under the name of the "Greek Nation" they formerly conducted an autonomous government, similar in form to that of the Cherokes (qv). In 1910. the Creeks proper numbered 6945.

CREEL/MAN, JAMES (1859- ). An American editor and newspaper correspondent, born in Montreal, Canada He was first asso-ciated with the New York Herald (1877) and eventually became editor of its London Paris editions. During the war between China and Japan he was correspondent for the New York World in 1894, and in the Turco-Greek War for the New York Journal in 1897, and this paper he also represented at Santiago during the Spanish-American War, where his gallant conduct met with wide and well-deserved recognition. He was a voluntary aid on General Lawton's staff during the Philip-pine insurrection From 1900 to 1906 he was a special and editorial writer on the New York World, and from 1906 to 1910 was associate editor of Pearson's Magazine was a member of the New York Board of Education (1911-12) and president of the Municipal Civil Service Commission (1911-13), and during the following year covered important political assignments for the Evening Mail. His publications include On the Great High-Wanderings and Adventures of a Special Correspondent (1901), Eagle Blood (1902), Why We Love Lincoln (1908), Diaz, Master

of Memco (1911) CREEP (from creep, AS creopan, Icel kryapa, OHG. chriochan, Ger kriechen, to cieep). A miner's term for the depression which takes place in underground workings from the removal of beds of coal or ore Masses of the coal seam, like huge pillars, are left by the miners for the support of the superincumbent strata, the pressure, however, of these beds is so great that in course of time the 100f gradually sinks, or, as is more frequently the case, because of the roof consisting of hard rock, the softer shale pave-ment rises up, until the intervening spaces between the pillars, left by the removal of the coal, are filled up. A consequent depression takes place in the beds above, as also an altera-tion of the surface level But this, being so gradual, is seldom noticed, except when it is made evident from the accumulation of surface water, or in districts where railways pass over the coal fields. The term is also used in geology to designate the movement of soil or rock outcroppings down a slope

CREEPTER A name very generally applied to any bird, especially if of small size, which seeks its food by running or creeping about upon the trunks of trees. It is more properly applied to the members of the family Certhida and especially of the genus Certhia. They have

CREEPERS

threptes collaria).

5. MERICAN BROWN CREEFER Conthis anactions.

6. ARRENGE SHEN OF CONTRACTOR TRANSPACED CONTRIBUTION SANATORNA.

7. ALPINE WALL-CREEPER (Tichodroms muratin). 1. BANANA QUIT (Gereba bahamensis). 2. NATAL COLLARED SUNBIRD (Anthothreptes collaris). 3. HAWAIIAN OĞ (Acru-ceercus noblis).

a slender, arched, and pointed bill, a long, narnow, sharp-pointed tongue, jagged near its tip, the tail rather long, and the tips of the tail feathers firm and pointed, extending beyond the webs The feet are rather slender, the hinder toe about as long as the other toes this conformation of feet and tail great use is made in climbing trees, the stiff feathers of the tail being employed for support Creepers display great agility in clambering, often back down, about the branches, and probe every cranny for hiding insects or insect eggs make their nests in crevices in trees, old woodpeckers' holes, etc. Although the family is large, it is doubtful if the genus contains more than one true species, the common streakedbrown creeper (Certhia familiaris), a bird found in all temperate parts of the Northern Hemisphere, wherever wood abounds In the United States the word "creeper" is very generally used as a part of the name of several warblers, as the pine-creeping warbler (Dendroica pinus) and the black-and-white creeper (Mniotilta varia) In Jamaica the name is given to a small species (Certhiola bahamensis), otherwise known as "banana bird," because it frequents and nests in the banana trees HONEY CREEPER, TREE CREEPER

CREEP'ING PLANTS Plants whose stems run along the surface of the soil and root at intervals See Stem, VEGETATIVE PROFAGATION.

CREFELD, krā'fēlt. See KREFELD.

CREIGHTÓN, kra'ton, James Edwin (1861-). An American philosopher. He was born at Pictou, Nova Scotia, graduated from Dalhousie College at Halifax, N. S, studied in Germany and received the degree of Ph.D. from Cornell University in 1892 He became connected with The Philosophical Review in its second year (1893), first as coeditor and subsequently as editor, he was also chosen the American editor of Kant-Studien. In 1895 he was appointed professor of logic and metaphysics in Cornell University, after having served in that institu-tion as instructor and associate professor for six years. He helped to organize the American Philosophical Association and was its first president (1902-03). He published An Introduc-tory Logic (1898) and some English translations of German philosophical and psychological works, and contributed frequently to philosophical journals In 1900 he received the honorary degree of LLD. from Queen's University, Canada

CREIGHTON, krā'ton, Mandell (1843-1901) An Anglican prelate and historian He was born at Carlisle, Northumberland, graduated from Merton College, Oxford, in 1866, with the highest honors, and continued there as tutor until 1873 In 1870 he became deacon, in 1873 priest, and in 1875 assumed the college living at Embleton in his native shire He was appointed rural dean of Alnwick in 1879, honorary canon of Newcastle in 1882, and professor of ecclesiastical history at Cambridge in 1884. In 1891 he became Bishop of Peterborough and remained there until 1897, when he was transferred to the see of London and was made a Privy Councilor. He represented Emmanuel College, Cambridge, at the celebration of the two hundred and fiftieth anniversary of Harvard University (1886) and in 1896 attended the coronation of Czar Nicholas II as delegate of the Church of Eng-Dr Creighton will be remembered as

one of the ablest bishops of the see of London His stanch high-chuichmanship, striking and piquant personality, and incessant activity com-bined to make him the most notable Anglican divine of the nineteenth century His historical writings are of great importance Among them are The Age of Elizabeth (1876 14th ed., 1899), History of the Papacy during the Period of the Reformation (4 vols, 1882-87), Cardinal Wolsey (1888), History of the Papacy from the Great Schism to the Sack of Rome (new ed, 6 vols, 1907), Life of Simon De Montfort (new ed, 1905), Historical Essays and Revieus (1902), Historical Lectures and Addresses (1903) Consult his wife's Life and Letters of Mandell Creighton (2 vols, London,

1903, new ed, 1913)
CREIGHTON UNIVERSITY An institution for higher learning, founded under the auspices of the Roman Catholic church, in 1878, at Omaha, Neb The University includes departments of law, medicine, dentistry, pharmacy and the college There is also a high-school preparatory department The total enrollment in these several departments in 1914 was 1116, divided as follows law, 173, medicine, 187, dentistry, 117, pharmacy, 153, college, 112, high school, 374 The faculty numbered 150 The productive funds of the university amount to about \$2,750,000, and the annual income to about \$2,00,000. The library contains about 50,000 volumes. The president in 1914 was Rev. E A Magevney, S J

CREIL, kra'y' The capital of a canton in

the Department of Oise, France, on the Oise, 32 miles north of Paris by rail (Map France, N., H 3). The parish church dates from the twelfth century; a ruined twelfth-century church is situated on an island in the river, and there are remains of a royal castle where Charles V was kept during his madness Hardware, copper, machinery, bricks, tiles, glass, nails, and pottery manufactures are its chief industries. The Northern Railway has large repair shops, and near by are extensive engineering works. Pop, 1901, 9125, 1911, 10,214
CREIZENACH, kri'tse-nae, Theodor Adolf

(1818-77) A German poet and literary historian. He was born in Mainz, the son of Michael Creizenach, a famous Hebrew scholar, studied at Giessen, Gottingen, and Heidelberg, and was one of the founders of the Jewish Reform Society in Frankfort-on-the-Main embraced Christianity in 1854 and in 1863 was appointed professor at the Frankfort Gymnasium He was a versatile writer, his poems, Dichtungen (1839) and Gedichte (1851), being distinguished by simplicity and an elegiac char-acter. His publication of the correspondence between Goethe and Marianne von Willemer (1878) is a valuable contribution to the litera-

ture on the great poet CRELINGER, krā'ling-ēr, Auguste (Dur-ING) (1795-1865). A German actress, born in Berlin. She made her first appearance at the Court Theatre, Berlin, May 4, 1812, subsequently became one of the most famous actresses of her day, and frequently appeared as a star at the leading theatres of Germany as well as in St. Petersburg Sappho, Lady Mac-beth, Iphigenia, Phadra, and Adelheid in Gotz von Berlichingen were some of her favorite rôles She excelled also in comedy parts and was distinguished alike for her beauty, numerous histrionic accomplishments, and consummate artistic training Her maiden name was Duiling She was mairied in 1817 to an actor, Wilhelm Stich, after whose death in 1824 she became the

wife of a Beilin banker, Otto Crelinger. CRELL, Nikolaus See Krell, Nikolaus CRELLE, kielle, August Leopold (1780-1855). A self-educated German mathematician He was born at Eichwerder, near Wriezen, and was an architect by profession, but is chiefly known as the founder of the Journal fur reme und angewandte Mathematik (Berlin, 1826) This journal gave expression to many of the greatest mathematical developments of the nineteenth century. Abel's proof of the impossibility of solving the general equation of the fifth degree by algebraic methods appeared in the first volume Steiner, "the greatest geometri-cian since the time of Euclid," was a leading contributor, and Mobius intrusted to it the publication of his most important researches Crelle wrote quite extensively on algebra, trig-onometry, the theory of numbers, the theory of functions, and various subjects of mathematical physics. His chief works are Versuch einer allgemeinen Theorie der analytischen Facultaten (1825), Encyklopadische Darstellung der Theorie der Zahlen (1843), Sammlung mathematischer Bemerkungen (1820-22), Elemente der Geometrie und ebenen und spharischen Trigenometrie (1826-27). He was also editor of the Journal der Baukunst

CREMA, kra'ma An episcopal city in the Province of Cremona, north Italy, situated on the right bank of the Serio, 25 miles southeast of Milan (Map Italy, D 2) The cathedral has a Romanesque façade, and the church of Santa Maria delle Grazie has interesting fiescoes. The circular church of Santa Maria delle Grazie has interesting fiescoes. The circular church of Santa Maria della Cioce, 1 mile from the city, built in 1400, has an octagonal interior adoined with paintings by Campi. Crema also has a ruined castle and a technical school The chief products of the district are wine, fruit, flax, hemp, rice, and cheese, lace, silk, and linen goods are manufactured here, which are famous throughout Europe Crema was founded by the Lombards in the sixth century and suffered much during the wais of the Guelphs and Ghibellines. It was besieged, taken, and destroyed by Frederick Barbaiossa in 1159-60 Pop (commune), 1881, 1911, 1490, 19755, 1911, 1,141.

1881, 9111, 1901, 9755, 1911, 11,411 CREMA/TION OF THE DEAD (Lat crematio, from ciemaie to buin, connected with Goth haurs, coal, Icel hyrr, fire) The process of disposing of the bodies of the dead by reducing them to ashes. Three methods of disposing of the bodies of the human dead have prevailed since the earliest times. simple exposure, buiial in the earth, in caves, or in artificial tombs, and cremation. Among the factors which have determined which of these methods should be adopted by a nation or race have been physical conditions, such as the character of the soil and climate and the abundance or scarcity of fuel, sanitary considerations, and religious beliefs Only the most uncivilized tribes have practiced simple exposure, depending on the elements and the wild beasts to dispose of the bodies of their dead Such was the practice of the early Col-chians, who, we are told, hung dead bodies on the limbs of trees while the Syrians abandoned

then dead to wild animals
Disposal of the Dead among the Ancients
and among Uncivilized Tribes. Of the two
methods employed by civilized nations, ciema-

tion and burial, the former is the one originally prevalent among the Indo-European races graves of north Europe throughout the Bronze age contain, not skeletons, but only urns for the reception of funeral ashes The Egyptians, on the other hand, embalmed their dead, the Jews laid them away in sepulchres, and the ancient as well as the modern Chinese buried them in the earth The Chinese, influenced by religious doctrine, now, as of old, insist on properly placed graves in their own land, and for this reason corpses are sent home from abroad They do not have cemeteries specially set apart for the bunal of the dead, but may bury them anywhere, and the frequent occurrence of these hallowed spots, which may not be desecrated, has proved a serious obstacle to railway projects. The dry, hot climate of Egypt made the embalming process possible, and the scarcity of fuel made it less expensive than burning The same natural cause, lack of fuel, may have led to the practice of burnal among the Jews and other tribes Among the ancient Persians the bodies of the dead were exposed to the ele-ments, as is the practice of the modern Parsis, or followers of Zoroaster. It is, however, probable that in some instances, especially in the case of kings, burial with a coating of wax was allowed. The ancient Greeks practiced both cremation and builal, the former being introduced by the Phrygians, and burial by the Egyptians In Greece only suicides, unteethed infants, and persons struck by lightning were denied the right to be burned Burial was forbidden within the walls of Athens. Among the Romans cremation was the general practice during the latter days of the Republic and through four centuries of the Empire Many of the early American Indians burned their dead and disposed of their ashes in various ways. Recent excavations in Guerrero, Mexico, showed that the immense population which once inhabited this region incinerated their dead before burying them. The body was placed on a large slab in the bottom of a deep grave It was then covered with a glowing mass of coals and embers, on top of which was placed another slab, elaborately carved Two plain slabs were placed above, and after the body was consumed the grave was filled with earth

Cremation was once common in England and was but slowly supplanted by inhumation. The same is true of the Gallic and Germanic races It is said that Charlemagne, in his zeal for Christian burnal, pumished the act of elemation with the death penalty Cremation is still practiced in India and among some other Oriental nations. In Japan the Shinto sect practices burnal, and the Monto sect cremation.

While natural causes undoubtedly had a great influence in determining the method of disposal, especially in very early times, religious belief in the resuit-ection of the physical man has usually been the chief factor which has caused the spread of the custom of interment in the than the more sanitary method of disposal by fire. The Egyptians, Jews, Mohammedans, and Christians all believe more or less fully in the physical resuirection of the body, and the question arises, whether cremation does not impair the prospect of a future life. With the spread of Christianity burnal was substituted for crematon, both in the heart of the Roman Empire and among the converted pagans on its out-skirts.

The Roman Catholic church remains actively opposed to cremation Decrees of Roman Congregations from 1884 to 1892 prohibit burning the bodies of the dead In 1300 Boniface VIII condemned analogous practices. Some of the reasons why the Roman Catholic church is rigidly opposed to cremation (though her decision relates not to doctrine but to discipline) are that burnal conserves an old tradition, that the rituals of cremationists savor of irreligion. and that it is still an unproved thesis that cremation benefits the race more than burnal Its piecise position has been defined by one of its clergy as follows 1 The church is opposed to cremation 2 If a dying person declares his resolve to have his body cremated, priests will not give him the sacrament nor bury him with Catholic rites 3 But if the body is to be cremated against the will of the deceased, it may be brought to the church for mass or blessing, or blessed at the home where the deceased died After the cremation the ashes without any religious service may be deposited in consecrated ground. The priest, however, may not accompany the body to the crematory for any rites, nor even for social or civil reasons. Consult addresses of the late James R Chadwick, former president of the Cremation Society, Boston

Many Protestant clergymen are actively in favor of this method of disposing of the dead Arguments for and against Cremation. Within the last few decades the conviction has spread that a more rapid and sanitary method of disposal must be substituted for burial, especially in the great centres of population To find enough land for burial purposes is becoming a more and more difficult matter If 4000 corpses are crowded into an acre, and a mortality rate of 15 per 1000 be assumed, then nearly four acres per 1,000,000 population are required annually to bury the dead A similar computa-tion of population, death rate, and space required for burial will show that, unless the custom is changed, much of the available space in the vicinity of all large cities will eventually be required for burial purposes

The sanitary objections to build are of still greater importaine than the economic difficulties in 1900 Sir Henry Thompson, in an address before the Cremation Society of England, advocated that while cremation remained optional for ordinary cases, it should be made obligatory when death is due to such transmissible diseases as smallpor, diphtheria, scarlet fever, typhoid fever, and tuberculosis In cases of epidemics and after battles, when there are large numbers of bodies to be disposed of at once, cremation seems especially advisable

An objection to cremation, in the minds of some, is that trace of the dead is obliterated from the sight of the living. But the condition and ultimate fate of graveyards, especially in the heart of great cities, is a proof that in many cases such memorials are but transitory. In continental Europe an average of 25 years is allowed for the occupancy of a grave, after which, in most cases, the ownership reverts to the municipality and the grave may be opened again. See CEMITERIA.

Caside from the sentimental objection to cremation already mentioned, the chief argument against cremation is the medicolegal one, that with the burning of the body possible traces of crime are obliterated Frederick L Hoffman, in a paper on "Gremation as a Life Insurance Problem" (Sanitarua for January, 1901), calls attention to this phase of the subject and points out that 64 of the 528 persons cremated at St Louis, Mo, in 1895-99 died from accidents, violence, or suicide. In view of the number of murders, by poisson or otherwise, that are committed to obtain insuiance money, it is recommended that very special precautions be taken to ascertain the exact cause of death before issuing a permit for cremation. To meet this difficulty, the Cremation Society of England investigates the conditions of death in the case of every body for whose incineration application is made. It has also secured the services of a distinguished pathologist to make autopsies when necessary

History of the Modern Cremation Movement In Great Britain the revival of the practice of cremation was discussed as early as 1658, when Sir Thomas Browne published his Hydriotaphia, or Urn Burial During the early part of the nineteenth century, Dr Lord, health officer for Hemel Hempstead, continued to agitate the subject, but no practical results were achieved In 1874 Sir Henry Thompson organized the Cre-mation Society of London, whose object is to introduce some rapid process of disposal which cannot offend the living and shall render the remains absolutely innocuous A ciematory was erected at Woking, near London, and here the first incineration took place in 1885 The first municipally owned crematory was opened for use at Hull in 1901 The British Medical Journal of June 14, 1913, states that the yearly numbers of cremations has doubled since 1904, but the numbers are still insignificant

In France, after much agitation, a law was passed in 1887, legalizing the practice Soon after the city of Paris erected a crematory, where cremation is compulsory for certain classes, including all unclaimed hospital dead, the remains from dissecting tables, and dead bodies from streets and sewers Other ciematories have been erected

In Italy the subject was continually agritated by scientific societies after 1852, and finally the incineration of human dead was made legal by a provision to that effect in the National Santary Code The process has rapidly grown in favor, and there are crematories in most of the larger crites

In Germany the subject was discussed at scentrific meetings almost as early as in Italy, but greater legal difficulties were encountered, and at first little was accomplished At present Germany leads in the movement Six crematories were built in 1913, making about 40 in the Empire, at which it is estimated that over 10,000 cremations were performed in 1913

In the other countries of Europe cremation seems to be gaining ground There were two crematories in Norway in 1912, where 143 were incinerated The first crematory in the Netherlands was built in 1913, near Amsterdam The same year a crematory was built in Cairo,

Egypt

The first place in the United States where the subject of elemation was systematically agitated was in New York, in 1873, but it was not until 1881 that a crematory was built for the use of its population. In the meantime a few cremations were made in private furnaces at Washington, Pa, and Salt Lake City. During the last decade of the nineteenth century the movement grew rapidly, and at the close of the center of the center

tury 24 crematories were in operation, at which 13,281 bodies had been reduced to ashes The latest statistics available are for the year 1911, when the total number of cremations (including those in one Canadian city) had risen to 62,465 These were distributed among 38 crematories at the following places Boston, Cambridge, and Springfield, Mass, New York City, Buffalo, Troy, and Waterville, N Y, Chicago, Cincin-Troy, and Waterville, N Y, Chicago, Cincunnati and Cleveland, Ohio, San Francisco, Los Angeles, Pasadena, Saciamento, and Oakland, Cal, Milwaukee, Wis, Davenport, Iowa, Minneapolis and St Paul, Minn, Indianapolis and Fort Wayne, Ind. Denver, Colo, Baltimore, Md, Philadelphia, Lancaster, and Pittsburgh, Fa, Portland, Oreg, Detroit, Mich., St. Louis, Mo, Stattle and Tacoma, Wash, Washington, D. C, Montreal, Canada It appears that the growth of cremation is most rapid on the Pacific coast, and ti is stated that in Oakland Pacific coast, and it is stated that in Oakland and Pasadena the number of incinerations has equaled 50 per cent of the number of deaths Philadelphia operates the first municipally owned crematory in the United States, here the remains of unclaimed dead and those who die in the pest house are incinerated In 1913 a contract was let by the national government for the erection of a crematory in the canal zone The same year a national organization was formed, and the First National Cremation Congress met at Detroit Hugo Erickson, M.D., was made president

Method of Cremation. In the earlier furnaces body and coffin were burned separately, but in the latest furnaces the remains are incinerated in the casket, without handling, as received A chapel is connected with the crematorium, where services may be held if desired The casket is then lowered into the incinerating room, and, after metal handles and name plate are removed, introduced into the retort heat is so intense that after a few hours only the ashes of the bones remain, all else, including the structure of the casket, having disappeared in light ash or gaseous products Screws and nails are removed by a magnet, and about four pounds of pure ash remain This is placed in a metallic receptacle, labeled, and scaled

Bibliography A chapter on ciemation, treating the subject from the sanitary and economic standpoint, is contained in Baker, Municipal En-gineering and Sanitation (New York, 1901). Greening and Santation (New 1978, 1991). Cobb, Quarter Century of Cremation in North America (Boston, 1901), includes a complete history and statistics of the movement in the United States, with brief supplementary matter and tables for Europe The book also contains a very full bibliography of the subject Crematoria in Great Britain and Abroad (London, 1906), contains descriptions with diagrams and illustrations of some of the principal crematoria in the world An introductory chapter contains an historical sketch. The Sunny Side, an undertaker's trade publication, contains a department devoted to cremation news and propaganda

CREMER, krā'mēr, August Hermann (1834-1903). A German Protestant theologian was born at Unna, Westphalia, Oct 18, 1834, studied at Halle and Tubingen, and since 1870 has been professor of systematic theology at Greifswald Two of his publications have been translated, Biblisch-theologisches Worterbuch der neutestamenthehen Grazitat (1866-67, 9th ed, 1902, Eng trans, 1872, 3d ed, 1886), and

Ueber den Zustand nach dem Tode (1883, 6th ed, 1901, Eng tians, 1885), Des Wesen des Christentums (1901, Eng trans, as Reply to Harnach on "The Essence of Christianity,"

CREMER, JACOBUS JAN (1827-80) Especially notenovelist, born at Arnheim worthy are his rural tales in dialect, Betuwsche Novellen (1856) He wrote also the novels De Lelie van's Gravenhage (1851), Daniel Sils (1856), Anna Rooze (1867), Dokter Helmond en zim vrouw (1870) For Cremer's biography, en zijn vrouw (1870) For Cremer's biography, consult J ten Brink, Geschiedenis der Noord-

Nederlandesche Letteren (1887-89) CRE/MER, WILLIAM RANDAL (1838-1908) An English advocate of international peace, born at Fareham He was prominent in English trade-unions in 1860-70 In 1885, as a Liberal, he entered the House of Commons, to which he was reelected in 1886, 1892, 1900, and 1906 To further the cause of universal peace he founded (1887) the Inter - Parliamentary Conferences which have met since 1888 at frequent intervals He visited the United States repeatedly in the interest of an Anglo-American treaty of arbitration, and in support of the International Arbi-tration League, of which he was secretary for 37 years, he journeyed through all Europe also edited the Arbitrator, a monthly devoted to the cause of peace The Nobel peace prize, which was awaided to him in 1903, he gave as an endowment to the International Arbitration League

CRÉMIEUX, krá'mye', Isaac Moise (called ADOLF) (1796-1880) A French statesman and philanthropist, born at Nîmes He studied law, and was admitted to the bar at Aix in 1817. About 1830 he went to Paris, where he soon became famous, particularly in the defense of the political prisoners He became in 1842 a the political prisoners He became in 1842 a deputy from Chinon and served till 1848 Under the Republic of 1848 he was elected as deputy to the Constituent Assembly and the Legislative Assembly, and was one of the first seven named by the Chamber on February 24 to form the provisional government, in which he acted as Minister of Justice On the night of Louis Napoleon's coup d'état Crémieux was airested and thrown into pilson He was soon released and voluntarily retired into private life until November, 1869, when he was elected a deputy to the Corps Legislatif On Sept 4, 1870, he was proclaimed a member of the Government of National Defense, and the following day he was made Minister of Justice He rendered the famous decree which expelled from their seats the infamous magistrates composing the "mixed commissions" under the Empire Another decree bearing his name, the Decree Crémieux, naturalized in mass 30,000 of his coreligionists in Algeria In 1871 he subscribed 100,000 francs towards the payment of the war indemnity for the liberation of the French territory from the Germans. In 1875 he was elected life senator He was one of the founders of the Alliance Israelite Universelle (qv) and its president from 1863 to 1866 and from 1868 to 1880 Consult Jacquot, Les contemporains (Paris, 1867), and Blanc, Histoire de diw ans (Brussels, 1846) CREM'NITZ See KREMNITZ

CREMONA, krā-mō'na The capital of the province of the same name in Lombardy, north Italy, situated 48 miles southeast of Milan, in a fertile plain on the left bank of the Po (Map Italy, E 2) It has broad but irregular streets

and attractive public squares, and a bridge 3100 feet long over the Po; it is formed into an oval by old walls that surround it, and a partly covered canal passes through it. The twelfthcovered canal passes through it century Romanesque Lombard cathedral has a rich main façade of 1ed and white marble and many mural paintings by masters of the Cremona school Adjacent is an octagonal bap-tistery, also of the twelfth century From the From the Torrazzo (397 feet), the highest clock tower in north Italy, is a view of the entire course of the Po through Lombardy Others of its 44 (for-merly 87) churches are the richly decorated sixteenth-century San Pietro al Po, the fourteenth-century Sant' Agostino e Giacomo in Biaida, with paintings by Perugino and others, the sixteenth-century Santa Margherita, built and decorated by Giulio Campi, Sant' Agata, with four large fine frescoes, and in a suburb San Signsmondo, with frescoes and paintings by Cremonese masters Also noteworthy are the restored thirteenth-century city hall and the thirteenth-century Palazzo de' Gonfalonieri, and the Palazzo Reale, with natural-history and other col-lections A memorial tablet marks the house where Antonio Stradivarius (q v ) made his violins Ciemonese violin makers who preceded him were the two Amati and Guarneri Cremona was also famous for its painters, Boccaccio Boccaccino, the founder of the Cremona school; Melone, Bembo, the three Campis, and Sofonisba d' Angussola, whose five sisters also practiced the art Cremona has a seminary, a lyceum, a gymnasium, a school of industrial art, a school for voice culture, a technical school, two theatres, a library of 100,000 volumes, and a chamber of commerce The town has an active trade by rail and water, markets grain, flax, cheese, etc., and manufactures silk, cotton, and wool fabrics, machinery, and earthenware, and is thoroughly modern Cremona was colonized by the Romans in 218 BC and grew to be an important com-mercial centre. It was destroyed in 70 AD by Vespasian, who afterward helped rebuild it, but it was again laid waste by the Lombards in 605 It became important in the tenth century and in the fourteenth century came into the possession of Milan Pop (commune), 1881, 31,788; 1901, 37,693, 1911, 40,436. Consult Holder-Egger, "Die Annales Cremonenses," Neues Archiv der Gesellschaft fur alter e deutsche Geschichtskunde, vol xx (Hanover, 1900), Robaloth, Cremona e sua provincia (Milan, 1859), Guida di Cremona (Cremona, 1904)

CREMONA, Luier (1830-1903). An Italian mathematican, born in Pava He participated in the struggle for independence against Austria in 1848-49, later studied at the University of Pavia, obtained a mathematical professorship in Bologna, and in 1873 became professor of higher mathematics in the University of Rome and director of the engineering school of the institution. In 1879 he became senator of the Kingdom of Italy, and was for a short time in 1888 Deputy Minister. His contributions to the study of projectory geometry and of graphical statics are important. He introduced these subjects into the curricula of Italian technical schools. His works include. Introductione ad una teona geometrica delle curie piane (1862), Le figure recuproche nella statica grafica (3d ed, 1879). Elementi di geometria projettiva (1873). Elementi di geometria projettiva (1873). Elementi di calcolo grafico (1874) He was a contributor after 1856, and for many years joint editor, of the Annah da matematica.

pura ed applicata Vol 1 of an important edition of Cremona's Works was published in 1914 under the title Opere matematiche, pubblicate sotto gli auspici della R Accademia dei Lincei (Milan)

CREMORNE (kre-morn') GARDENS. famous resort in London, closed in 1877

CRENELY, or CRENELLE OF ormel, notch, embrasure, from ML or enellus, dim of Lat orena, notch) Any embrasure or opening in the walls of a fortified place, especially the spaces between merlons (qv) on a battlemented parapet, from which missiles could be discharged Hence it is sometimes used to designate a battlement "Crenellated" is used of a building supplied with crenels See Battlement.

CREVNIC ACID (from Glk. rephrn, krene, fountain), C<sub>12</sub>H<sub>3</sub>O<sub>6</sub>. One of the constituents of vegetable mold, produced wherever leaves and other plant matter are decaying, especially in peat bogs and marshes. Berzelius extracted a mixture of crenic and apocienic acids from the water of Porla (Sweden). Crenic acid is a pale-yellow amorphous substance of soun taste and somewhat astringent aftertaste. Its salts are soluble in water, in which they are gradually transformed, in part, into salts of apocrenic acid.

CRE'ODON'TA (Neo-Lat., nom pl of Gk κρέαs, kreas, flesh + δδούs, odous, tooth). A suborder of extinct mammals, ancestral to the true carnivores, and hence sometimes called Carnivora primigenia, and found fossil in the Lower Tertiary rocks The creodonts comprise primitive or synthetic types of animals that vary in size from that of a weasel to that of a grizzly bear, and that combine the characters of the true carnivorous families in such manner as to render determination of the taxonomic rank of any particular species a matter of some difficulty The members of the suborder present resemblances to the bears, civets, and dogs among the tiue carnivores; the genus Patriofelis seems prophetic of the Pinnipedia, or seals, and Mesonyw resembles the carnivorous marsupials of Australia. The more primitive forms show characters possessed also by the Insectivora, Tillodontia, and Condylarthra Creodont remains are found in the Lower Tertiary of Patagonia, and these are of interest because they resemble the carmivorous marsupials of Australia and New Zealand much more closely than do the North American creedonts The range of the suborder in both North America and Europe is from the base of the Eccene into the Lower Miccene During Eccene time the creedonts played that important rôle among land animals which subsequently, during later Eocene and Miocene time, was assumed by the true carnivores. Among the more interesting and important genera are Arctocyon, Hyanodon, Mesonyx, Oxyana, Patriofelis, Stylolophus

CREOLE (Fr. créole, Sp criollo, probably a negro corruption of Sp criadillo, criado, servant, from oran, to create, lear) A name properly used in the southern United States and in Latin America to designate the pure-blooded descendants of original French, Spanish, or Portuguese stock By English writers it has sometimes been incorrectly supposed to mean a mestizo or mulatto, but it cannot properly be applied to any person of mixed race, non-Latin stock, or European birth, neither is it used in speaking of the Canadian French

CREOLE CASE, THE An incident in American history which caused some friction between the governments of the United States and Great Britain and was the occasion of an animated debate between the proslavery and antislavery elements in Congress In 1841, 19 of the 135 slaves on board the American brig Creole 1evolted, while being transported coastwise between Hampton Roads and New Orleans, and securing contiol, after killing the captain and wounding several others, directed the vessel to Nassau, New Providence, where all those who had not been directly concerned in the revolt were immediately liberated by the British authorities, the others being held for trial, on a charge of muider, in the local courts Daniel Webster, who was then Secretary of State, demanded the return of the slaves, on the ground that they were legally property, and were on American soil and under the jurisdiction of the United States so long as they were under the American flag, even when on board a ship They were never returned, however, by the British government. The incident caused J R Giddoings (q v) to often a series of resolutions in the House of Repiesentatives, on March 21, 1842, declaring that slavely could exist only by posi-tive law of the separate States, that these States had delegated no control over slavery to the Federal government, which alone had jurisdiction on the high seas, and, therefore, that slaves on the high seas became free, and the coastwise slave trade was unconstitutional. The House passed a resolution of censure, and Giddings immediately resigned, but was triumphantly reelected. His resolutions expressed the basis of one phase of the constitutional anti-slavery agitation They are given in full in Giddings's History of the Rebellion (New York, The Statute of March 2, 1807, regulat-1864) ing the coastwise slave trade, is in 2 U S. Statutes at Large, 426 See SLAVERY.

Louisiana. See States. CREOLE STATE POPULAR NAMES OF

CRE'OLIN (origin uncertain). An unofficial dark-brown, sirupy liquid, of tarry odor, derived from coal tar. It is soluble in alcohol and forms a milky fluid (an emulsion) with water Different specimens vary considerably in composition and strength, and the careless use of the substance may cause poisoning. It is a good anti-septic, particularly against organisms that bear no spores, and is a powerful deodorizer In operative surgery it has the disadvantage that the milky character of the solution makes it difficult to see instruments placed in it chief use is in gynæcological affections. It been given (in small doses) internally for gastile fermentation, dysentery, and typhoid fever CRE'ON (Lat, from Gk Kpéwp, Kreön). In Greek legend, the son of Menœceus, and brother of Jocasta, wife of Laius, King of Thebes After the death of Laius he assumed the government and offered the crown and Jocasta to the man who should free the city from the Sphinx (q v ) Œdipus (q v ) accomplished the task and thus unconsciously became the husband of his own mother After Œdipus' fall Creon once more assumed the rule as guardian of the sons of Œdipus, Eteocles and Polynices (a v ) After the death of the brothers Creon again became King, and forbade the burial of Polynices and the Argives Antigone (qv), however, defied Creon and buried her brother's body, whereupon Creon sentenced her to be buried alive Cicon's son Hamon, the betrothed of Antigone, killed himself on her body This is substantially the story as it appears in the plays of Sophocles Other versions told how Creon sacrificed a son from the walls of Thebes in order to aveit the fall of the city, and how later he gave his daughter Megara to Heracles,

who succeeded him on the throne of Thebes

CRE'OSOTE, or CRE'ASOTE (Gk κρέας, kras, flesh + σωτήρ, sōtōr, preseiver, from σω(εν, sōzem, to save) An oily liquid produced in the destructive distillation of wood, particularly that of the beech (Fagus sylvatica Linné, natural order Cupuliferæ) The wood tar obtained at first is subjected to fractional distillation, and the fractions heavier than water are dissolved in caustic potash, the resulting solution is exposed to the air and heated, the resinous matter produced is separated out, and the creosote is set free in the solution by neutralizing with dilute sulphuric acid. To obtain creosote in a state of purity, the piocess just described of dissolving in potash and liberating with sulphuric acid is repeated several times, as a final step in the purification, the crossote is dried and rectified by distillation Commercial creosote is hable to contain more or less carbolic acid, whose presence, however, is not very easy to detect, if drops of a sample of creosote do not readily sink in water and do not remain transparent after contact with water for some time, the sample should be considered as suspicious. Pure créosote is almost colorless when freshly obtained, but gradually assumes a darker color if exposed to the action of light It has a penetrating, smoky odos and a burning taste and is slightly heavier than water, in which it is soluble only to a very limited extent. It is completely soluble in alkalies and mixes readily with alcohol, ether, chloroform, and glacial acetic acid It is composed mainly of guaracol and cresol and has a high refractive power Creosote acts as an antiseptic and has been used in the preservation of meat-whence its name At present it is largely used in the treatment of tuberculosis with mixed infection. For this purpose it may be administered in the form of an emulsion with cod-liver oil and other substances, or else a mixture of else with alcohol and chloroform may be inhaled by the patient, moderate doses of pure creosote being perfectly harmless and causing no disagreeable symptoms whatever Creosote was first prepared by Reichenbach in 1822, and Bouchard and Pimbert were the first to apply it to the treatment of tuberculosis. It is also used in bronchitis with profuse expectoration containing the streptococcus bacillus, and in fermentative dyspepsia, diarrhea, and dysentry. The so-called occosite oil used for the preservation of timber is derived by the fractional distillation of coal tar, constituting the fraction that distills over between 230° and 270° C, 446° and 518° F. It is composed mainly of phenol (carbolic acid), cresol, naphthaliene, and anthracene. The "creosote plant" (Lairaca mexicana) pro-

The "creosote plant" (Larrae mexicana) produces a substance similar to Indian gum lac and having a strong creosote-like odor, hence the

name of the plant

CREOSOTE BUSH See ZYGOPHYLLACEÆ.

CREOSOTE OIL See COAL TAR

CREOSOTOL, krg'o-sōt-ōl' (from creesote +-ol), or Carbonate of Creosote A pale-yellow surupy hquid similar to creosote, but having less odor and taste It is used in tuberculosis and bronchits and is better tolerated by the stomach.

CRÉQUI, krá'ká', CHARLES, MARQUIS DE [1578-1638) A French soldier He was a prominent officer under Henry IV, in 1622 was appointed a marshal of Fiance by Louis XIII, and fought with great bravery against Spanards and Higgenotis. He died in the siege of Crema His military ability was highly praised by Saint-Simon and Voltaire Consult Chorier, Histoire du Macéchal de Créguy de Blanchefort

(Grenoble, 1683)

CRETARE, JOHN (1827-89) An American philanthropist, born in New York City He was a merchant in New York and from 1862 in Chrcago, where he became head of the firm of Crerar, Adams & Co., and an incorporator and one of the duectors of the Pullman Palace Car Company. He contributed \$2,500,000 as an endowment fund for a library in Chicago now known by his name, \$100,000 for a statue of Abraham Lincoln, and bequeathed \$1,000,000 to charitable and religious organizations

CRESCENDO, kre-sherd or volvous or carried and control of the cont

CRESCENT (from Lat. orescens, pres part. of orescere, to grow) 1 A representation of the half-moon with the horns turned upward, called a "crescent," is often used as an emblem of progress and success It is generally spoken of as "the arms" of the Turkish Empire, but is more properly the emblem of the Empire and people The crescent and star occur in the horoscope of Osman, the founder of the Turkish Empire The crescent was also a Byzantine emblem, however, and at the present day is frequently to be seen on churches in Russia, generally surmounted with the cross, marking the Byzantine origin of the Russian church

2. A Turkish musical instrument introduced into the German military bands at the time of the Turkish wars and now in general use in military bands. It consists of a staff surmounted by a cap and supporting several crescent-shaped brass plates upon each of which little bells are hung. The instrument is played by being jungled in time with the music.

3. In heraldry the crescent is used both as

a bearing, or charge, and as a difference, or mark of cadency In the latter case it designates the second son and those that descend from him. See Cadency

CRESCENT, ORDER OF THE A Turkish order of knighthood It was founded by Selm II in 1790 after the battle of Abukii, to be conferred on Christians for service to the Turkish state. Nelson was the first man to receive the honor. The order became extinct after half a century An Order of the Crescent was founded by St Louis of France in 1289, and twice reestablished by the house of Anjou, reginging in Sicily and Naples. This is also extinct The crescent and the star in white upon a red background constitute the Turkish flag. It is supposed that the appealance of the crescent in the horoscope of the great Othman led to the acceptance of its as the national symbol

CRESCENT CITY. A name applied to New Orleans because of its situation on a bend of the

Mississippi Rivei.

CRESCENTIIS, kies-sen'shi-is, Petruts De, or GRESCENTZI, kra-shen'tse, Pitreno (c 1230-c 1310). An Italian agricultural writer, the founder of modein agronomics in Europe He was born in Bologna, but later sojouned in various cities of Italy, where he frequently acted in the capacity of judge lateral to the podestas Upon his return to Bologna after an absence of 30 years, during which he made valuable observations on agriculture, he published his famous work, entitled Ruralium Commodorum Libra XII (1471) This work has been frequently reprinted and has been translated into Italian, German, and French. His Scriptore's ret rusticae (1735) is famous also The genus Crescentia was named by Linneus in honor of the famous author, who was probably the first since the days of the Romans to point out the high value of agricultural science.

ORESCENTINI, krā'shēn-té'nē, Girolamo (1766-1846) An Italian singer, born near Urbino Italy He studied with Ghielli at Bologna, made his début at Rome in 1783, and subsequently sang at Legborn, Padua, Venice, Turin, London, Milan, and Naples Napoleon, who first heard him sing in 1805, decorated him with the Iron Crown and was his patron from 1806 to 1812 He left Paris on account of vocal disorders, later (1816) becoming professor of sing at Naples He published in French and

Italian a treatise on vocalization.

ORESCENTIUS, kres-sen'fsh'-ds, John (1-998) Leader (Patricius in 985) of the national party in Rome against the authority of the Emperor in the last quarter of the tenthe century About 991, probably, Crescentius was all-powerful in Rome With a short intermission, when Otho III visited the city in 996, his rule lasted until 998, when he was beheaded by Otho. In 997 he had driven the Pope, Gregory V, from the city and appointed an antipope Crescentius was long remembered as the champion of Roman liberty Consult Gregorovius, Rome in the Middle Ages, vol iii (London, 1995)

CRESCENZI, krā-shĕn-tsê, Pietro See Cres-CENTIIS, PETRUS DE

CRESCIMBENI, krá'shèm-bā'nè, Grovanni Mario (1663-1728). An Italian critic and poet, born at Macerata, and one of the 14 poets associated with Christine of Sweden in founding the Academy of Arcadia, of which he was the first president (1690). As Arcadia expanded, dur-

ing the 38 years of his presidency, to embrace almost the entire literary set of Italy, Crescimbeni became the high priest of good taste, which was reflected in the pompous ceremonials of the Arcadian branches, the shallow dillettantism of literary production, idealistic sensualism in morals, and arrogant preceptualism in æsthetics The vast but inaccurate and scattered erudition of Crescimbeni is collected in his Istoria della volgar poesia (best ed., Venice, 1730-31, 6 vols.) Though inferior to the best standards of scholarship even in its own time, this work is still of use. Its critical criterion was that of Arcadia accuracy of imitation, not nobility of substance

CRES'CO A town and the county seat of Iowa, about 150 miles (direct) Howard Co, Iowa, about 150 miles (direct) northeast of Des Moines, on the Chicago, Miwaukee, and St Paul Railroad (Map Iowa, E 1). It maintains a hospital, has extensive dairying and live-stock interests, and manufactures machinery, cupolas, telephone condensers, electrical supplies, steel corn cribs, lightning rods, furnituie, stump pullers, tow, flour, and brick and tile A "Farmers' Alliance" store is successfully operated here, and there is also a hospital The city is governed by a mayor and council and owns its water works Pop, 1890, 2018, 1900, 2806, 1910, 2658

CRES'ILAS (Lat, from Gk Kpnollas, Kresilas) A Greek artist of the Attic school, born at Cydonia in Crete, who worked in the latter part of the fifth century BC He made a statue of Pericles, of the base of which fragments with the artist's signature have been found on the Acropolis of Athens This is the earliest Greek portrait statue which has been surely identified From this work seem to be derived the busts of Pencles in the British Museum, the Vatican, and Munich He also made a statue of a wounded Amazon, which is probably represented by the Capitoline type (See AMAZONS) Other statues have been claimed as copies of his works, as the Munich Diomedes, and the Athena of Velletii Consult Furtwangler, Masterpieces of Greek Sculpture, trans by Sellers (New York, 1895), and E A Gardner, A Handbook of Greek Sculpture (London, 1911)

CRESPIN, krā-spān', JEAN (c 1520-72). A Arras, studied law in Louvain and Paris, became advocate in Parliament, 1540, fled on account of his religious opinions to Strassburg in 1545, removed to Geneva in 1548, and carried on the printer's trade there until his death in 1572. His fame rests upon his Livre des martyrs (1554), with its continuations or recastings under different names Recueil (1554), Histoure (1570), new edition of the whole as Historre des martyrs (3 vols, 1886-89) It was translated into Latin and has been the basis of many similar Protestant martyrologies CRESS (AS cresse, const, OHG cr

cresso. cressa, Ger. Kresse, probably from OHG chresan, MHG kresen, to creep) A name given to many plants, of which the foliage has a pungent, mustand-like taste, and is used as a salad. It is sometimes more strictly confined to the genus Lepidium, of the family Crucifere. The common cress, or garden cress (Lepidaum sativoum), is an annual, a native of the East, frequently cultivated in European and American gardens. It is powerfully antiscorbutic Virginian cress (Lepidium virginicum) resembles the garden cress in its properties and is caten as a salad, and used as a diaphoretic medicine in North

America and the West Indies Lepidium pisordium, a native of the South Sea Islands, is one of the plants used by sailors for prevention or cure of scurvy The name "winter cress" is given to species of the genus Barbarea, also ciuciferous biennial or perennial plants The common winter cress (Barbarea vulgaris) is plentiful in moist pastures and hedge banks throughout Europe and North America. It is occasionally cultivated as a winter salad. in Sweden it is used as a boiled vegetable Its pungency is combined with some degree of bitterness. Very similar to this, and also occasionally cultivated, is the early winter cress, or American cress (Barbarea præcox), a native of Great Britain, the continent of Europe, and North America The common bitter cress, or cuckoo-flower (Cardamine pratensis), is also known by the name of lady's-smock Cardamine amara and Cardamine hirsuta are cultivated to a considerable extent in Europe and are also found in America Watercress (Nasturtrum officinale) is a perennial aquatic plant, much used in the United States and Europe as a cold-weather salad It is a native of almost all parts of the world The leaves have a pungent, bitterish taste, with a little saltness plant is of easy cultivation and grows best in clear, shallow, running water, with a bottom of sand or gravel Mud is injurious both to its growth and to the flavor of its leaves For ndian cress, or nasturtium, see Tropæolum

CRES'SET (OF cresset, Fr creuset, from ODutch kruysel, hanging lamp, dim of kruyse, cup, Icel. krūs, Ger. Krause, Eng cruse) A name given to a great light kindled upon a beacon or watchtower, and also to a lamp or torch, or to a light fixed on a pole The name owes its origin to the former custom of surmounting beacons by a cross

CRESSID, or CRESEIDE, TESTAMENT OF, and COMPLAINT OF CRESSEIDE Poems by Robert Henryson, wrongly included in the earlier editions of Chaucer

CRES'SIDA, or CRES'SID. The lover of Troilus in the Troilus and Cressida (qv) of Chaucer, Shakespeare, Dekker and Chettle, and Dryden, and a type of infidelity

The name is
probably a mediaval invention

Eprises, the daughter of Calchas, the Trojan seer.

CRES'SON A borough and pleasure resort

ın Cambria Co, Pa, 75 miles east of Pittsburgh, on the Pennsylvania Railroad (Map Pennsylvania, D 6) It is situated at an elevation of over 2000 feet and is noted for the beauty of its scenery Mineral springs add to its attractions as a resort It has an academy and hotel, lumber, coal, and coke yards, and a brewery. Pop, 1910, 1470

CRESSON, ELLIOTT (1796-1854) A Quaker merchant and philanthropist of Philadelphia. Pa, who devoted much attention to the emancipation of the negroes from slavery. He was president for some time of the Colonization Society (qv), and subsequently as its agent labored to establish the colony at Bassa Cove, on the Grain Coast, Africa

CRESS'WELL, Sir Cresswell (1794-1863). An English julist. He was born at Newcastle, graduated at Emmanuel College, Cambridge, in 1814, and in 1819 was called to the bar. In 1834 he was created King's counsel, in 1842 a puisne judge of the common pleas court, and in 1858 first judge of the newly created probate and divorce court He was largely employed as an

advocate in important navigation and mercantile cases Consult E Manson, Builders of our Law (London, 1904)

CRES'SY. See CRÉCY

CREST (OF creste, Fr crête, Sp, Portug, It cresta, crest, from Lat crista, comb, tuit, connected with Lat crista, hair) Though popularly regarded as the most important feature in heraldic emblems, the crest, in the eyes of heralds, is an external adjunct to the shield without which the bearing is complete, and which may consequently be altered without materially affecting its significance Occupying the highest place on the helmet, it is the member of the bearing by which the knight was commonly known in battle From this circumstance it is to the crest that the term cognizance (from cognosco, to know) is properly given. Its claim to a classical origin is probably better than that of any other portion of coat armor. The helmet, as represented on ancient statues and gems, was frequently adorned with a crest Sometimes it was of horsehair; at other times a lion or other animal, erect or couchant, was placed on the helmet.

The first crest to be met with in the monuments of English chivalry is that on the great seal of Richard Cœur de Lion Crests came into general use about the time of Henry III, and were used as marks of distinction by commanders in the holy wars, as they had formerly been by the Roman centurions For lightness they were often made of stuffed leather, gilt, silvered, or painted—a circumstance which explains their greater size then than in later times, when they were made either of wood or metal. The earliest example of the wreath on which the crest is now invariably placed is that on the monument of Sir John Harsick It consisted of two pieces of silk, of the colors of the armorial bearings of the wearer, twisted to-gether by the lady who had chosen him for her knight It is now represented as consisting of two stripes of gold or silver lace, twisted into a circular cord. Its tinctures are always those of the principal metal and color of the arms. It is a rule in delineating the wreath, which is shown edgewise above the shield, that the first coil shall be of metal, and the second of color. Civic, triumphal, and other crowns were used as wreaths, and this practice is supposed to have given rise to the use of coronets

Consult Fairbairn, Book of Crests of the Families of Great Britain and Ireland (Edinburgh, 1892), and for foreign crests, consult Reitstap, Armorial général (Gouda, 1884-87). See also HERALDBY and the authorities there

referred to.

CREST, or CRESTING In architecture, an ornamental finishing in stone, tiles, or metal, In architecture, an running along the top of a wall or the ridge of a roof or surmounting a gable Crest tiles, or, as they are corruptly called, cress tiles, or crease tiles, are frequently in the form either of small battlements or Tudor flowers See Coping.

CREST'ED. A term in heraldry. When a cock or other bird has its comb of a different tracture from its body, it is said to be crested of such a tracture, naming the tracture CRESTED DOG'S-TAIL GRASS. See Dog's

TAIL GRASS.

CREST'LINE. A village in Crawford Co, Ohio, 76 miles southwest of Cleveland, on the Cleveland, Cincinnat, Chicago, and St. Louis, and the Pennsylvania railroads (Map. Ohio, E

Vor., VI.-17

4) It is chiefly industrial in its interests, having plow, stove and furnace, pump, and buggy factories, a car manufactory, a woodworking establishment, etc The water works are owned and operated by the village Pop, 1910, 3807

and operated by the village Pop, 1910, 3807 CRES'TON. A city and the county seat of Union Co, Iowa, 55 miles (direct) southwest of Des Moines, on the Chicago, Burlington, and Quincy Railroad (Map Iowa, C 3) It has a public library and Elks, Moose, and Eagle homes. There are extensive machine shops, car works, planing mills, and a cold-storage plant Creston was settled in 1868 and incorporated the following year It is governed at present under a charter of 1870, revised in 1890, which provides for a mayor, chosen biennially, and a city council, elected by wards Pop, 1890, 7200, 1900, 7752, 1910, 6924. CRET, PAUL PHILIPPE (1876-

France-Merican architect, born at Lyons, France He was educated at the Ecole des Beaux-Arts, Paris, in 1903 was an architect of the French government, and became in the same year professor of design at the University of Pennsylvania. He received the Paris prize in 1896, the Rougevin prize in 1901, grand medal of the Ecole des Beaux-Arts of Paris in 1901, and the gold medal of the Salon des Champs Elysées of Paris in 1903 He was architect of the Pan-American Union building at Washington and of the Valley Forge memorial arch.

CRETACEOUS (krê-tā'shūs) SYSTEM, or CHALK FORMATION (Lat cretaceus, chalky, from oreta, chalk). A term applied to a series of strata underlying the Tertiary and resting on the Jura-Trias, the name being derived from the chalk beds which form such a prominent mem-ber of the Cretaceous in England and France, although such chalk beds are rare in the United States, occurring only in Texas and Arkansas There exists at times an unconformity between the Upper Cretaceous and the Eocene, or lower member of the Tertiary, especially in the United States The classification of the Cretaceous presents many difficulties, owing to the variable section which it exhibits in different areas, but European and American geologists are agreed on a division into an upper and a lower member, while for divisions of lesser size local names are employed

The Lower Cretaceous, designated by some geologists as the Comanchean system, is represented along the Atlantic coast by the Potomac beds, in the northern Gulf States by the Tuscaboosa stage, in Texas and the western Gulf borders by (a) Trinity, (b) Fredericksburg, and (c) Washita stages The Upper Cretaceous borders by (a) Trinity, (b) Fredericksburg, and (c) Washita stages The Upper Cretaceous in the Rocky Mountain region has the following subdivisions. (a) Dakota stage, (b) Colorado series, (c) Montana series, (d) Laramie series, while in the Atlantic border States it is divided into (a) Matawan, (b) Monmouth, (c) Ranco-cas, and (d) Manasquan stages.

The Cretaceous rocks of North America form a belt of increasing width, extending south-ward along the Atlantic coast from New York, through New Jersey, Maryland, North Carolina, Georgia, and Florida, then around the northern and western shores of the Mexican Gulf, up the Mississippi valley to the mouth of the Ohio, and from Texas northward to the foothills of the Rocky Mountains They occur also in Ne-braska, Kansas, and Iowa The greatest devel-opment of the Cretaceous system is in Wyomng, Utah, Coloado, and west of the Sierra Nevadas in Californa In some portions of these last-named regions it is found at heights of 10,000 and 12,000 feet. It occurs also in Arctic America, near the mouth of the Mackenzie River. The American Cretaceous beds consist of greensand—called also "mail," and much used in New Jersey and elsewhere for fertilizing land—sands of other kinds, clays, shell deposits, and, on the Gulf of Mexico, especially in Texas, limestone or chalk. In New Jersey the formation is 400 or 500 feet thick, in Alabama, 2000 feet, in Texas, over 1000 feet, represented by sands, clays, marls, and chalk, in the upper Missouri basin, more than 4000 feet, and east of the Wasatch, more than 9000 feet.

The rocks of the Cretaceous contain an abundance of both animal and plant remains, for this was a closing period of an era in which reptiles predominated, and, curiously enough, but few or none of the Cretaceous species have continued into the Tertiary The plants found in the Crefaccous represent angiosperms, which were not found before this era, both dicotyledons and palms, the former including species of the oak, willow, poplar, beech, maple, fig, tulip, sassa-fras, eucalyptus, and sequoia Many palms and cycads are found in the Cretaceous of North America. The appearance of the dicotyledons in this formation is rather sudden. The animal remains found include both the smallest and largest forms There are foraminifera, sponges (which were very common in the chalk), echinoids, many mollusks, especially spirally coiled ammonites, and oysters The fishes show a conammonites, and systers The listes show a con-tinuation of the placoids and ganoids of the former era, but teleosts, or true bony fishes, made their first appearance There was also an extraordinary abundance of reptiles, including enaliosaurs, dinosaurs, pterosaurs, and croco-diles Some of the pterosaurs from the Kansas lock measured from 20 to 25 feet in expanse of wing The sea saurians were from 10 to 50 feet long Cope describes the elasmosaurus as a snakelike form 40 feet long, with an arrowshaped head on a swanlike neck that rose 20 feet out of the water Consequently it could swim many feet below the surface and yet have its head extended into the air for breath. The American rocks supply 40 species of sea serpents More curious still were the birds with teeth, found in New Jersey and Kansas (See ICHTHYORNIS) The mammalian remains were mostly those of lower orders, such as marsupials and monotremes

The geographical developments in North America during the Cretaeeous were great. In the closing stages the sea withdrew from the coastal plains of the Atlantic and Gulf of Mexico. The Appalachians were subjected to renewed uplift after having been plained down by erosion. The interior continental sea was shallowed, and finally obliterated by the uplifting of the land, so that the eastern and western portion of the United States were joined into one continent. This uplift became emphasized towards the end of the Cretaeeous, when the Rocky Mountains were formed Violent volcame cruptions accompanied this uplift, and the lare flows of the Yellowstone and of many other sections of the west of the United States date from this time

The economic products include most of the coal and lignite deposits of the Western States As a coal-making period the Cretaceous ranks second only to the Carboniferous period Pe-

troleum is found in the Cretaceous strata of Wyoming. Many of the gold and silver bearing fissure veins of the Rockies were formed in the Cretaceous, while other products are fire clays, chalk, greensand, and products

In Europe the Cretaceous rocks assume great importance According to Geikie, they may be grouped into two fairly distinct areas, of which the northern includes Great Britain, the lowlands of central Europe, with portions of Silesia, Bohemia, and northern France, while the south-ern embraces the central and southern part of France, the Alps, and the Mediterranean basin The northern area is characterized by shallowwater deposits-sandstones, conglomerates, and marls—more or less glauconitic, and passing into a loosely textured limestone or chalk. In the southern basin the typical rocks are massive, compact limestones, which indicate conditions of deeper water and freer communication with the open sea. The entire series of rocks with the open sea. The entire series of rocks is usually grouped by geologists as follows:
Lower Cretaceous—(a) Neocomian, (b) Urgoman, (c) Aprian, Upper Cretaceous—(a) Gault or Albian, (b) Cenomanna, (c) Turonian, (d) Senoman, (e) Danian The dividing line between the University of Lower Contractions of the Contraction of the Contract between the Upper and Lower Cretaceous is regarded by the French geologists as occurring at the top of the Albian The most conspicuous member of the Cretaceous is the white chalk (Upper Cretaceous) which forms the remarkable cliffs of southeastern England and northwestern France

Bablography. Consult Dana, Manual of Geology (4th ed. New York, 1896). Gelkie, Tear-Book of Geology (London, 1903). White, "Correlation Papers, Cretaceous," United States Geological Survey, Bulletin 82 (Washington, 1811). Chambelin and Salisbury, Geology, vol. (New York, 1907).

CRETE (Lat Creta, Gk. Κρήτη, Krētē, NGk Κρίτι, Κιιτι, Turk Kirit), or CANDIA An island in the Mediterranean, situated south of Greece, onsidered the most southerly part of Europe It hes between lat. 34° 57′ and 35° 41′ N. and between long 23° 30′ and 26° 20′ E (Map Greece, F 6) It is oblong in shape, having a length of about 160 miles, and varying from 6 to 35 miles in width, with an area of 3327 square miles Its mountainous surface bears some resemblance to that of Greece The western part of the island is the more elevated, and contains the massive White, or Madaras, Range, rising at Hagios Theodoros to a height of 8104 feet. The central mass of Ida, or Psiloriti, reaches in Stavros 7103 feet. The eastern part is lower, but there are several peaks between 5000 and 7000 feet high. The northern coast is well indented and abounds in good harbors, that of Suda Bay on the northwest coast being one of the best in the Levant The southern coast is mainly unbroken and maccessible. There are several rivers, but they run dry during the summer season. There are numerous springs throughout the island. The climate of Crete is one of the most salubrious in Europe. In spite of its mountainous surface. Crete has a soil of remarkable fertility, producing most of the southern fruits and grains. The thick forests which formerly covered the mountains have almost entirely disappeared, but there are still found some trees, such as the cypress, the chestnut, and the olive, cultivated mostly in the lowlands.

The chief products are olive oil, grapes,

253 CRETE

oranges lemons, and other southern fruits The wine of Crete, which enjoyed such fame in the Middle Ages, has greatly deteriorated One of the chief manufactured products exported is soap, which is made of olive oil. The commerce is chiefly with Greece, Austria-Hungary, the United Kingdom, Turkey, and Italy. In 1911 imports were valued at 21,359,000 drachmas, and exports at 15,631,000. The chief exports were olive oil, 5571,000 drachmas, raisins, 2,375,000. carobs, 1,811,000, southern fruits, 1,516,000, wine, 1,436,000, and soap, 1,138,000 (drachmas = 10 3 cents). The principal ports are Canea, Retimo, and Candia. The Bank of Crete was founded in 1899, with a capital of 5,000,000 drachmas, and obtained the privilege of issuing notes for 30 years.

Crete was formerly a Turkish dependency. The inhabitants, in large part Christian, frequently rose against the Turkish authorities, who were supported by a strong Mohammedan minority. A long series of outbreaks culminated in a general rebellion in 1897, which led to the interference of Greece Thereupon the four Great Powers-Russia, France, Italy, and the United Kingdom-intervened and established an autonomous Cretan government under the suzerainty of the Porte A constitution, which came into force in 1899, vested the supreme authority in Prince George of Greece as High Commissioner of the Powers A representative Commissioner of the rowers A representative assembly was established, and representatives at Rome of the four Powers were given control of the island's foreign affairs. The constitution as modified in 1907 curtailed the powers of the High Commissioner; under it the Assembly was composed of 65 members elected for three years In 1906 the Powers gave to the King of the Hellenes the right of naming the High Commissioner in case of vacancy, Prince George resigned, and was succeeded (early in 1907) by Alexander Zaimis, a former Greek premier In October, 1908, the Assembly declared the union of Clete with Greece, and in the absence of the High Commissioner, chose a committee of six to govern the island in the name of the Hellenic King In the following year the Powers decided that a high commissioner be not appointed nor the status quo changed. On Oct 14, 1912, the Prime Minister of Greece declared formally in the Greek Chamber the annexation of Crete

Revenue is derived chiefly from customs, excise, and monopoless, expenditure is mostly for public works and security, instruction, and finance In 1910 revenue and expenditure amounted to 6,465,760 and 7,308,632 drachmas, respectively, in 1911, 6,518,694 and 6,792,820. The public debt in 1912 was 4,615,709 drachmas

Primary instruction is nominally compulsory, but the school enrollment shows only about one pupil for 10 inhabitants. There are a few institutions for secondary education

Under the Venetians the population of Crete was estimated at about 250,000 A decrease followed the Turkish conquest, but by 1821 the number had risen to an estimated 250,000. Another great decrease resulted from the War of 1821—30, so that an estimate of 1838 placed the population at only 130,000. The census of 1881 showed 279,165 inhabitants (about 205,000 Christians and 73,000 Mohammedans; census of June 17, 1900, 310,056 (269,719 Christians, 33,436 Mohammedans), census of June 17, 1910, 310,056 (27,852 Mohammedans), census of June 17, 1911, 344,001 (307,812 Christians, 27,852 Mohammedans), census of June 17, 1911,

dans, 487 Jew- and 7550 foreignes) The Christians are almost entirely of the Orthodox Greek faith It is to be noted that the Mohammedans have rapidly decreased, they, as well as the Christians, are of Greek origin and speak Greek Of the foreigners about two-thirds were Greeks and about one-sixth Turks Canea, the capital, had, in 1911, 24,399 inhabitants, Canda (Iraklion), 25,185, Retimo (Rethymmon), 9986.

History. Achaeological discoveries tend to show that the island was settled at a very early period by Phenicians and Egyptians, and that it undoubtedly was a stepping-stone for those who brought the culture of the valley of the Nile to the mainland of Greece These discoveries have shown also that the civilization known sometimes as "Minoan," sometimes as "Minoan," sometimes as "Egean," extended back many millennia before Christ, by 2500 or 2000 BC. Crete was the dominant power in the Egean worlds Traces of this Cretan civilization extend from Canaan to Sicily. Thus the Greek stories about Minos (q.v.), once regarded as wholly mythical, have been in many ways remarkably confirmed One of the earliest historical notices of the

island is that embodied in the Odyssey (xix, 172-179). Here it is spoken of as well populated by various peoples—pure Cretans, Achaeans, Dorians, and others The main element in the population was Greek, but whether Dorian or some other type is uncertain. When the Odyssey was composed, Cnosus, Minos's capital, situated in the northern part, was the greatest of the 90 cities of Crete By the side of Chosus, the city republics of Gortyna in the south and Cydonia in the northwest rose to great prominence. See Archeology, I, The Pre-Mycencan or Minoum Period, and II, Microsupernam Candia, Megalokastron, Cnosus, Gortyna; Gournia, Minos, Phæstus. For brief sum-mailes of the more important works bearing on the recent discoveries in Crete, see, in addition to the bibliography under Archæology, Shear, "The Discoveries in Crete," in The Classical Weekly vol 11, pp. 242-244 (1909), and id, "Crete and Cretan Archæology," in The Classical Weekly, vol vii, pp. 82-85 (1914) sult also Archæology and Crete in The New International Year Book, the volumes for 1908-13

As allies of Mithridates the Great and, later, the Cilician pirates, the inhabitants of Crete came into conflict with Rome, and after a desperate resistance of two years were finally subdued by Metellus, in 66 s.c. On the division of the Empire the island fell to the Byzantine ulers, who held it till the year 823, when it was conquered by an army of Saracens from Andalusia In 963 the Byzantines drove out the Saracens and reestablished Christianity in the country. Upon the establishment of the Latin Empire of the East, in 1204, Crete was given to Boniface of Montferrat, who sold it to the Venetians These retained their power till 1669, when the Turks, after a blockade lasting 21 years, took the fortress of Candia The last vestiges of Venetian authority disappeared in 1715, and Crete remained a part of the Ottoman Empire, in spite of various attempts at revolt, in 1770 and in 1821-24 When Greece became in 170 and in 1621-24 which could be influence of the Alhed Powers—England, Russia, and France—was ceded to Egypt, under Mustafa Pasha (1832-52) the island flourished. In 1840 Crete passed again under Turkish control.

The hostility prevailing between the Christian and the Mussulman inhabitants led to repeated revolts and civil wars throughout the inneteenth century. An insurrection lasting from 1866 to 1868 extorted from the Porte the promise of reforms in the government, the pledge remained unredeemed, however, till 1878, when the Sultan, spurred on by the Congress of Berlin, issued a pact or charter, and appointed a Christian Governor-General of the island. This was offset by a Mussulman military governor In 1889 the Christians rose in arms, but the revolt was suppressed, the pact was abrogated, and the island held under military rule till 1894, when the intervention of the Fowers led to the reappointment of a Christian governor

În 1896 a fresh uprising took place. The Sultan gave his consent to the calling of a national assembly, but the Christian insurgents refused to lay down their arms, in expectation of assistance from Greece In February, 1897, Greek force landed in Crete and attacked the Turkish troops. But Greece, which had counted on European sympathy in its struggle with Turkey, found itself alone Austria, England, France, Germany, Italy, and Russia declared that Crete should be granted complete autonomy, but that annexation to Greece was impossible Italy, France, Russia, and England then established a peaceful blockade of the island and demanded that Greece recall its troops The refusal of Greece plunged it into war with Turkey, the outcome of which destroyed all hopes of annexation. From 1897 to near the end of 1898 Crete was the scene of continuous violence. At length the Ottoman forces were withdrawn from the island, and in December, 1898, Prince George of Greece was created High Commissioner of Crete for the Powers for three years A national assembly met and formed a constitution providing for the creation of a legislature and guaranteeing freedom of religion to all inhabitants. Although order was restored, popular sentiment continued to be increasingly in favor of annexation to Greece, and in 1904 the High Commissioner attempted to gain the consent of the Powers to such a step, but without success There were revolts against the High Commissioner's arbitrary policy in 1904 and 1905, in the latter year a revolutionary assembly proclaimed the union of the island with Greece, and this was followed by a similar proclamation on the part of the regular Chamber The Powers intervened, and after some desultory fighting the insurgents laid down their arms in November, 1905.

In 1908 Prince George resigned the High Commissionership of Crete and returned to Athens, but the designation of his successor was accorded by the protecting Powers to King George of Greece as a satisfaction to Greek national sentiment This arrangement lasted six years, but by no means satisfied any of the parties directly interested The overwhelming majority of Greeks in the Cretan Assembly persisted in treating their island as an integral part of the Greek Kingdom, while the government at Athens, out of deference to the four protecting Powers, was obliged to respect Crete as a shadowy vassal of Turkey. The six years were marked by almost constant political unless on the island. A renewed proclamation of union with Greece in 1908, the exclusion of Mohammedan deputies who refused to take an oath of allegrance to King George in 1910, and

the election of delegates to represent Crete in the National Assembly which revised the constitution of the Greek Kingdom in 1912, provoked in each case repeated intervention of the Powers

It was a Cretan leader, Eleutherros Venezelos (q.v), who in 1910 became Premier of Greece and organized the Balkan League that prepared to wage war against Turkey A popular uprisms of Cretans in March, 1912, put an end to the government that had been forced upon the island by the protecting Powers, and erected in its stead a provisional government, the reception of whose delegates at Athens in October, 1912, was one of the excuses for the outbreak of the Balkan War (q.v). In that war the Cretans fought shoulder to shoulder with their fellow Greeks of the Greek Kingdom, and by the Treaty of London (May 31, 1913) Turkey renounced all sovereignty over the island The union of Crete with Greece was formally recognized by the other Balkan states by the Treaty of Bucharest (Aug. 10, 1913).

Consult Pashley, Travels in Orete (Cambridge, 1837), Spratt, Travels and Researches in Orete (London, 1865), Stillman, The Oretan Insurrection of 1806-68 (New York, 1874), Mitchell, The Greek, the Oretan, and the Tuke (London, 1897), Freese, Short Popular History of Orete (lb., 1897), Howes, Orete the Forerunner of Greece (lb., 1907), Nevor-Batteje, Camping in Orete (lb., 1914). See also Archeology.

CRETE A city in Salune Co, Neb, 20 miles southwest of Lincoln, on the Cheago, Burlington, and Quincy and the Missouri Pacific railroads, and on the Bile River (Map Nebraska, H 4) It has a public library and is the seat of Doane College (Congregational), established in 1872, which has a well-equipped observatory. The principal industries comprise flour mills, a creamery, and a voting-booth factory Settled in 1867, Crete was incorporated as a village in 1871 and is at present governed under a revised charter of 1886. The council is made up of the mayor and representatives from the city wards. The city owns and operates its water works and electric-light plant Pop, 1900, 2199; 1910, 2404.

GRÉTIN, krâ-tăn', JOSEPH (1800-57) An American ecclesiastic, first Roman Catholic Bishop of St Paul, Minn He was born in Lyons, France, studied there, was ordained a priest, and in 1838 volunteered to assist Bishop Loras, of Dubuque, Iowa, as a worker in the American missions Vicar-general of Dubuque until 1851, and pastor of the cathedral church of St. Raphael for much of the time, he in that year received episcopal consecration as pioneer Bishop of St Paul, and entered upon his work with a clergy of nine school, a seminary, a hospital, and an asylum, restored the mission among the Winnebagoes at Long Plairie, founded new missions among the Opibways, and began a cathedral. In three years he had increased the number of churches from 1 to 29, and to these had added 35 stations

CRÉTINEAU-JOLY, krátérné zhôle, Jacques (1803-75) A French author. He was born at Fontenay-le-Comte, Vendée. Of his verse Les chants romanns (1826) are best known He wrote for the newspapers and made special historical studies, particularly of the war of the Vendée His principal work is L'Histoire retigieuse, politique et litténare de la Compagnie de Jésus (6 vols, 1844-46), written from unedited and authentic documents and practically an official history. Consult Mavnard's biography (Paris, 1875)

CRE'TINISM (Fr. crétinisme, from crétin, idiot, possibly from OF christien, chrestien, Fr chrétien, an innocent, or from Lat. creta, chalk, suggested by the chalky pallor of cretins, or, more probably, from Rhæto-Romanic cret, dwarf, cretin, diminutive) A term applied in a general sense to idiocy or defective mental development, depending upon local causes and associated with bodily deformity or arrested growth Endemic cretinism is found associated with goitre (qv) in the lower Alpine valleys, not only of Switzerland and Italy, but of the Pyrenees, Syria, India, and China. Families moving into goitrous districts are apt to develop goitre in the first generation, cretinism in the second and succeeding generations. In Europe it is rarely met with at a higher elevation than 3000 feet, and haunts chiefly the valleys surrounded by high and steep walls of rock, which exclude the light and limit the free circulation of air. Cretins are either imbeeles with intelligence or idiots, their bodies are dwarfed, with curvature of the spine, pendulous belly, distorted legs, small wide-apart eyes, large mouth, with protruding lower lip, sparse harsh hair, dry skin, low forehead, and irregularly large or small skull

Cretinism is believed to be due to lime in the drinking water of the districts in which these people live; its immediate cause, however, has been proved to be dependent upon disease of the thyroid gland Treatment of adult cretins with thyroid gland, administered by the mouth, has resulted in some improve-ment. Treatment of infant cretins with doses of the gland has resulted in a cure, but the thyroid must be taken as food for life, otherwise the patient relapses into an imbedile and the physical changes return Sporadic cretinism, or infantile myxœdema, is related both to endemic cretinism and myxedema (qv) Atrophy of the thyroid gland, due to traumatism, infectious disease, alcoholism, or emotional shock in the parents, results in deficient thyroid secretion, but changes in the pituitary body and the thymus gland have also been observed. The physical and mental changes are like those of endemic cretinism The skin is coarse and thick, the nostrils broad and flattened Development is exceedingly slow, the teeth appear late, the child is helpless In this form of retinism, a cure, if treatment is begun early, is generally brought about by the continuous administration of thyroid extract, which may be considered a specific in this disease. The improvement wrought in a child within a few months is remarkable See Goiter, Thyroid GLAND, MYXCEDEMA

CRETONNE, krê-tôn' (so named after its manufacturer). Originally a white cloth of French manufacture. The name is now applied to a printed cotton fabric introduced about 1860 and used for curtains or for covering furniture Chintz (qv), so much employed for the same purpose in former years, is a comparatively thin printed cloth highly glazed. Cretonne, however, is generally thick and strong, and with a twilled, crape, basket, wave, or other figure

produced on the loom When a pattern is printed on this uneven surface, it has a rich, soft appearance A cretonne is rarely calendered or glazed The thick weft threads of inferior qualities are commonly formed of waste cetton, and the patterns upon these, though often bright and showy, are, as a rule, printed in more or less fugitive colors. Some cretonnes are printed on both sides with different patterns.

CREUSA, kne-n'ea. (Lat, from Gk Kpéowra, Kroowa) 1 The wrife of Jason and daughter of King Creon of Counth. She was burned to death with her father by the magneta poisoned diadem and robe given to her as bridal gifts by Medea Consult the Medea of Euripides. 2 The daughter of Priam and Heeuba and wrife of Æhaeas She disappeared during the flight from Troy, and when Æheas returned to the burning city to search for her she reappeared, announcing her adoption as a nymph by Cybele, and prophesying his coming good fortune in Italy. Consult Vergil, Æhead, 11, 730-794.

CREUSE, krēz (Fr., hollow). A central department of France, watered by the river Creuse (Map France, S., F. 3). Area, 2164 square miles Pop, 1896, 279,366, 1901, 277,831, 1911, 266,188. The streams, with the exception of the Creuse, are insignificant. The follmate is cold, moist, and variable, and the soil poor except in the infrequent valleys. The products are rye, wheat, buckwheat, oats, and potatoes, but the raising of cattle forms the chief branch of rural industry Large quantities of cliestnuts and fruit are grown. Coal is mined at Ahun and Bourganeuf, while iron, lead, tin, and antimony are found at various places. Carpets, dyestuffs, lumber, shoes, hats, and porcalain are manufactured The people of Creuse annually migrate in large numbers of find work in various parts of France, making local labor scarce and high-priced. Capital, Guéret

CREUSE A river of France, rising in the mountains on the southern border of the Department of Creuse, flowing in a generally north-northwest direction through that department, then in a northerly and westerly direction through Indre, then on the borders of the departments of Vienne and Indre-et-Loire, and falling into the Vienne, a tributary of the Loire, about 12 miles north of Châtellerault, after a course of 150 miles

CREUTZ, krotts, Gustaf Philip, Count (1731-85) A Swedish politician and poet, born in Finland In 1763 he was sent as Minister to Madrid, and in 1766 as Minister to Paris, where in 1783 he concluded with Benjamin Franklin a commercial treaty between Sweden and the United States He is chefly known for the idyl Ats och Camella (Atys and Camilla, 1761), which, with 10 other poems, appeared edited by Gyllenborg (1795), a new edition (1862).

GREUZER, kroi'tsër. GEORG FRIEDRICH (1771-1858). A German philologist He was born at Marburg and studied there and at Jena In 1802 he was appointed a professor at Marburg and in 1804 obtained the chair of philology and anient history at Heidelberg, which he occupied, with great credit, for 44 years. In 1848 he retired to private life He died at Heidelberg, Feb. 16, 1858 His first and probably his greatest work was Symboths und Mythologie der atten Volker, besonders der Greechen (1810-12).

This treatise, which asserted the symbolical character of ancient mythologies, excited a lively controversy, in which Gottfried Hermann and J H Voss appeared as the opponents of Creuzer. His next work in importance was a complete edition of the works of Plotinus (3 vols, Oxford, 1835). With G. H. Moser, Creuzer edited several works of Cicero-De Natura Deorum (1818), De Legibus (1824), De Re Publica (1826), and De Divinatione (1828) Product (1920), and De Divinatione (1920) Between 1837 and 1848 he published a partial collection of his writings in 10 vols (Deutsche Schriften, Leipzig and Darmstadt), the last of which contains his autobiography under the title Aus dem Leben eines alten Professors. This was supplemented by his Paralipomena der Lebenskizze eines alten Professors (Frankfort, 1858) He was also a prolific writer of essays on archeological topics Consult Stark, Friedrich Creuzer, sein Bildungsgang und seine blackende Redeutung (Heidelberg, 1875), and bleibende Bedeutung (Heidelberg, 1875), and Sandys, A History of Classical Scholarship, vol

erel, from caballo, horse, from Lat caballus, horse), or CAVALRY A name in Florida and the West Indies for various edible mackerel-like sea fish of the genus Carana (family Carangidæ), especially the large horse crevalle, or jack (Carangus hippos), which is found on both coasts of the warm parts of America and also in the East Indies It is olivaceous above, sides and below golden, opercle marked with a large black blotch, canines of the lower pawer of the lower prominent It frequently exceeds 15 pounds in weight and is common in Florida, where it is regarded as a fine food fish. closely related species (Carangus caballus) of the Pacific coast of Mexico is called "cocinero," or "cocinero dorado." See JUREL, Plate of

HORSE MACKEREL

CREVASSE, krā-vas'. See Glacieb. CREVAUX, krā'vô', Jules Nicolas (1847—82) A French explorer, born at Lorquin, Lorraine He made four extensive tours through South America On the first of these (1877) he visited the interior of Guiana and crossed to the Tumuchumac Mountains, the first European to perform that feat In the following year he visited the valley of the Río Oyapok and, after exploring the Amazon region, returned to Paris exploring the Amazon region, returned to raris On his next tour, undertaken for the purpose of exploring the left affluents of the Orinoco, he traveled from Bogota, along the upper Rio Negro to the Rio Guaviare, which he reached Oct 20, 1880 In 1882 he journeyed through the valley of the Parana, explored the Tapajos and several other rivers, and discovered numerous remains of Inca civilization While endeavoring to ascend the Pilcomayo, in order to visit certain Indian tribes, he was attacked by the Tobas and killed with 19 of his companions, two Bolivians of his escort alone escaped to relate the details of the catastrophe. An account of his explorations has since appeared under the title Voyages dans l'Amérique du Sud (1883). A work published by the Geographical Society of Paris, and entitled Fleuves de l'Amérique du Sud (1883), is also based upon his researches.

CRÈVECŒUR, krěv'kěr', Jean Hector Saint JOHN DE (1731-1813) A French agriculturist. traveler, and author He was born at Caen and was educated in England. He came to

America in 1754, bought an estate near New York, and married the daughter of an American merchant He suffered much from the Revolutionary War, and in 1780 was imprisoned three months in New York on suspicion of being a spy He was sent to England as a prisoner, was exchanged, reached France in 1782, and introduced there the culture of the American potato On his return to New York (November, 1783) as French Consul, he found his wife dead, his house burned, his children, too, had disappeared, but were finally found in the care of a kindly merchant He had previously published Letters of an American Farmer (1782), which he translated into French and published in Pans They gave such glowing accounts of the chimate and fertility of America that 500 families are said to have left France for the Ohio valley on the strength of his statements. He wrote also a volume on Potato Culture (in French), and A Journey in Upper Pennsylvania and in New York State (2 vols, in French, 1801) In his most important work, the Letters. Crevecœur, though a man of much cultivation, writes as a simple-hearted American farmer Internal evidence in his writings tends to indicate that he was a Quaker, and the likelihood that he was such is strengthened by his refusal to take any part in the military controversies of the Revolution His idyllic descriptions of life in the New World, with its approximation to Rousseau's state of nature, transformed crudity into an idealistic mirage that fascinated the philosopher The Letters were translated into German and Dutch, and their idealized treatment of American ruial life may perhaps be traced in Campbell, Southey, Coleridge, and Byron—possibly in Chateaubiand After holding his consulship for 10 years Crèveccur returned to France, dying at Sarcelles Consult Tyler, Literary History of the Revolution (New York, 1897)

CREVILLENTE, krā'vè-lyān'tā. A town of Spain, in the Province of Alicante, about 20 miles west-southwest of the city of that name (Map Spain, E 3) It is picturesquely situated at the foot of the hills some 10 miles from the boundary of Murcia, and has a pretentious town hall and a castle, formerly the possession of the Count of Altamira Weaving and agri-culture are the principal industries Crevillente is supposed to have been founded by the Ro-Under the Goths it formed part of the mans Kingdom of Todmir, it passed into the hands of the Moors, by whom it was held until 1263, when it was taken by Jaime el .Conquistador

Pop, 1900, 10,726, 1910, 10,452.

CREW (older form also crue, apocopated from accrue, OF acrewe, acreuc, increment, from acresstre, Fr. accroître, to increase, from Lat accrescere, to increase, from ad to + crescere, to grow). A term used to designate the body of men employed to man a ship, boat, gun, etc. The crew of a full-rigged sailing ship is divided into five parts-forecastlemen, foretopavided into the parts—tot ecastiemen, Ioretop-men, maintopmen, minzentopmen, and after-guard, these are called the parts of the ship, and they are again subdivided into port and starboard watches, and each watch is again separated into first and second parts port (or starboard). Modern men-of-war without sail power usually have the crew divided according to the arrangement of the battery It is customary to have as many gun divisions as the arrangement of the battery demands. In addition to these there are the powder division,

engineer's division, and marines
CREW, HENRY (1859- ) An American
physicist, born at Richmond, Ohio He graduated at Princeton in 1882, was fellow in physics at Johns Hopkins University in 1884-87, and instructor in physics at Haverford College in 1888-91 In 1891-92 he was astronomer of Lick Observatory, and in 1892 was appointed professor of physics at Northwestern University (Evanston, Ill) He was president of the American Physical Society in 1909-10 In 1912 he became president of the Illinois Academy of Science He also became assistant editor of the Astrophysical Journal and published Elements of Physics (1899, 3d ed rev, 1909); Principles of Mechanics (1908), General Physics (1908, 1911)

CREWE, kroo. A town of Cheshire, England, about 34 miles southeast of Liverpool (Map England, D 3). It is a central station of several railways and owes its importance to the establishment in 1843 of the immense work-shops of the London and Northwestern Rail-way, which employ more than 7000 men Crewe was incorporated in 1877 Its affairs are administered by a mayor, a municipal council of 21, and a board of aldermen of seven members (See Great Britain, Local Government.) In order not to interfere with its immense pas-senger traffic, many miles of railway have been tunneled under the city to transport freight It is also a mail-distributing centre Its supply of gas and water is provided by the London and Northwestern Railway. It has a modern system of sewerage connected with a sewage farm. Two hospitals, a technical school and school of art, a library, public baths, and a large general market are maintained by the corporation Among its chief industries are among its ciner industries are the manufacture of locomotives, railway cars, clothing, and fustian. Pop (municipal borough), 1891, 32,774, 1901, 42,074, 1911, 44.970

CREWE, ROBERT OFFLEY ASHBURTON CREWE-MILNES, MARQUIS OF (1858-A British statesman, educated at Trinity College, Cambridge He was assistant private secretary to the Secretary for Foreign Affairs in 1883-84 Lord in Waiting to the Queen in 1886, and Lord Lieutenant of Ireland in 1892-95 In 1905-08 he was Lord President of the Council, n 1908 Lord Privy Seal, and in 1908-10 Secretary of State for the Colonies He became Secretary of State for India in 1910, again Lord Privy Seal in 1912, and also His Majesty's Lieutenant for the County of London in the same year. He received the Oxford D.C.L. in 1912. Besides several articles on Ireland, he is author of a volume of Stray Verses (1889-90, 2d ed, 1893).

CREYTON, krā'ton, PAUL A pseudonym of J T. Trowbridge.

CRIB. See FOUNDATION

CRIB'BAGE (from orib, rack, Ger. Krippe, OHG. krippa, also chripfa, connected with MHG krebe, basket, which is probably related to Lat corbis, basket) A game of cards, which can be played by two, three, or four persons, but is mostly played by two with a pack of 52 cards When four persons are engaged, they take sides. The value of the cards is face cards 10, ace one, and the rest as marked. The number of cards dealt is usually five or six, The points are scored on a board, and 61

constitutes game The players cut for deal, the player who loses the deal takes three points, as a makeweight for the adversary's advantage Five (or six) cards in alternate succession are then dealt, the rest of the pack being placed face downward on the table The players gather up their cards, inspect them, and select two to place them on the table face down These cards are called 'the crib" and become the property of the dealer The nondealer then cuts the remainder of the pack, and the dealer turns up the top card. The play then begins, the player announcing the value of each card as he plays it thus, suppose it is a king, he calls 10—the next player says, eg, 8, then another card is played by the first player, and so on until the whole amount reaches 31, or as near it, without exceeding it, as can be ac-complished The details of counting the points made in play are too intricate to exemplify in a general description After the play of the hand is completed, each player counts all the fifteens he can by any combination make out of the cards he holds in conjunction with the "turn up" card Then the dealer takes up the four cards thrown out for the "crib" by the two players as already mentioned, and counts them in the same way in conjunction with the turn up or start card Each player is entitled, in addition to the points made in play or in crib, to count "pairs," "pairs royal," "double pairs royal," and for the knave ("his nobs") as well as to count sequences-three or more as wen as to count sequences—three or more cards following in successive numbers—and flushes, when all the cards in crib are of the same suit. Consuit Cady, Orabbage (New York, 1897), "Aquarius," Praguet and Cribbage (London, 1883), Foster's Complete Hoyle (New York, 1909)

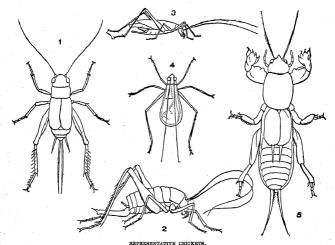

A bad CRIB'BING, or CRIB BITING. habit, met with especially in the lighter breeds of horses and those spending a considerable amount of time in the stable. The act consists in the animal seizing with his teeth the manger, rack, or any other such object, and then arching the neek, giving a grunt, and apparently swallowing air, and is technically called "wind sucking" Cribbing springs often from idle play, may be first indulged in during grooming, especially if the operation is conducted in the stall, and the animal be needlessly teased or tickled; is occasionally learned, apparently, by mutation from a neighbor, and in the first in-stance is frequently a symptom of some form of indigestion. Its indulgence may be suspected where the anterior edge of the front teeth is worn off, and will soon be proved by turning the animal loose where he can find suitable objects to lay hold of It usually interferes with thriving and condition and leads to attacks of indigestion It can be prevented only by the use of a muzzle or throat strap, by covering the mangers and other stable fittings with iron, or by using box stalls without any manger or projecting wood

CRICHTON, krī'ton, JAMES (1560-82), called THE ADMIRABLE CRICHTON A Scotchman famous for his versatility and his universal accomplishments He was the son of Robert Crichton, of Eliock, Dumfriesshire, who was joint Lord Advocate of Scotland from 1562 to 1573 and from 1573 to 1581 On his mother's side he claimed descent from the old Scottish kings. He was educated at St Andrews University Before he reached his twentieth year

he had, it seems, "run through the whole circle of the sciences," mastered 10 different languages, and perfected himself in every knightly acomplishment. In Paris, Rome, Venice, Padus, and Mantua he achieved the most extraordinary victories in disputation on all branches of human knowledge and excited universal amazement and applause. The beauty of his person and the elegance of his manners also made him a great favorite; while, as if to leave no ex-cellence unattained, he vanquished a famous swordsman in a duel at Mantua (1582). The Duke of Mantua appointed him preceptor to his son, Vincenzo di Gonzaga, a dissolute and profligate youth. On July 3, 1582, according to Douglas Crichton, in his Admirable Orichton: the Real Character, Crichton was attacked in the streets of Mantua by six masked men. He

(1866 -A British soldier and explorer, (1866- ). A British soldier and explorer, educated at Magdalene College, Cambridge. He became a lieutenant in the British army in 1884. He was a member of Joseph Thomson's exploring expedition to the Atlas Mountains, reached the top of Tizi Likumpt (15,000 feet) in 1888, and after the recall of Thomson had sole charge of the expedition. In 1890 he received a commission in the Bechuanaland Border Police. In 1892 he was taken prisoner by a Matabele impi, and in 1900-02 he served in South Africa. He was promoted lieutenant colonel in 1911. A fellow of the Royal Geographical Society, his writings on exploration include: In the Heart of the Atlas; Two African Cities; Across the Veldt to Buluwayo.

CRICK'ET (OF. crequet, Fr. criquet; ultimately imitative in origin). Any of the salta-

Common black cricket (Gryllus neglectus).
 A wingless cricket (Ceutophilus maculatus).
 A tree cricket, the small green or "snowy" cricket (Genthus niveus), female.
 Same; male.
 A mole cricket (Gryllotaina borealis).

pushed them so hard that their leader pulled off his mask and disclosed the features of Vincenzo. With an excess of loyalty Crichton threw himself upon his knees and begged the young prince's pardon, at the same time presenting him with his sword, which the heartless youth plunged into the body of his tutor. What degree of truth there may be in the culogies of his biographers it is impossible to determine, but he is known to have associated himself with the Venetian publisher Aldus Manutius, who is the authority for many otherwise unauthenticated biographical details. W. H. Ainsworth wrote a romance founded on the story of Crichton in 1837. Consult: P. F. Tytler, The Life of James Crichton (London, 1819; rev. ed., 1823); Douglas Crichton, The Admirable Crichton: the Real Character (ib., 1909); Whibley, Essays in Biography (ib., 1913). CRICHTON-BROWNE, HAROLD W. A. F.

torial insects of the orthopterous family Gryllidæ, distinguished from the Locustidæ by the cylindrical spear-shaped ovipositor of the fe-male. The family contains three very distinct groups: (1) mole crickets (q.v.), with fore legs developed for burrowing; (2) tree crickets (q.v.); (3) true crickets, including the common field and house crickets. Most of them in all parts of the world are black or of some dull color and are mainly nocturnal. They are herbivorous, and the American black field crickets are most abundant in neglected fields, or ets are most abundant in negrecoed news, of where layers of old straw, etc., give them warmth and hiding. They dig holes in the ground and sit there during the day, chirping, as if with contented enjoyment, and going abroad at night; but any disturbance near them will produce instant quiet. Their eggs are laid in the loose soil, chiefly in the autumn, and hatch in the spring, few adults surviving the winters of cold climates. The commonest species in the northeastern United States (Gryllus neglectus) occasionally comes into houses, but the house cricket proper is a European one (Gryllus domesticate) which labitually domesticates itself, and is especially fond of the crevices about old-fashioned fireplaces, where its merry chirping has woren itself into the romance and poetry of all Western nations, as a sound suggestive of domestic cheer. This species is now acclimatized in Canada and some of the Northeastern States. The wingless crickets are represented in the United States by a species (Ceutophilus maculatus) common in New Eneland.

The chirping of these insects, which begins in midsummer, is produced by rubbing a filelike ridge of one wing over a scraping surface of the other Only the males have these organs, and it is generally agreed that the sounds serve either to call or excite the mute females certain Sicilian species is said to make a noise audible a mile away. The apparatus and the musical characteristics of the sound have been exhaustively studied by S H Scudder, who says that the notes of the black field cricket are pitched at E natural, two octaves above middle C The songs of other sorts of crickets vary from this, each in its own way. To this same group belong some curious forms of the tropics in which "the front of the head is produced into a leaflike projection" Another group are of very diminutive size and resemble minute roaches, one genus (Myrmecophila) dwells altogether in the nests of ants, both in Europe and in North America Several species have been described Other Gryllids are among the insects inhabiting caves Consult Howard and Marlatt, "Principal Household Insects of the United States," in United States Department of 4, N S (Washington, 1896). See Cave Ani-Mals and Symbiosis, and compare Locust; KATYDID, MOLE CRICKET; TREE CRICKET.

CRICKET (probably from OF criquet, stick used as a marker in the game of bowls) The national game of England is played wherever Englishmen have colonized, and in many of Great Britain's possessions, notably in the West Indies, it has become popular with the natives In America it is played in certain portions of the United States and in the larger cities of Canada. The rules which govern the game all over the world are those made by the Maryle-bone Cricket Club of London and from time to time are regulated at meetings of this club. This has always been the custom since the club was founded, about the year 1744. Philadelphia, which is the home of cricket in America, has more clubs than any other place in the United States or Canada, and the four larger clubs-Germantown, Belmont, Merion, and Philadelphia-compete annually for the Halifax cup Two other cups are also competed for by some 15 minor clubs and second elevens from the principal clubs Cricket in Philadelphia is controlled by the Associated Cricket Clubs of Philadelphia, in an organization composed of three delegates from each of the four large clubs This organization publishes a periodical, the American Cricketer, founded in 1877. The Metropolitan District Cricket League, and the New York Cricket Association, which has assumed more importance of late years, regulate the matches within 20 miles of the city hall

in New York The other organizations in the United States are the California Cricket Association, the Northwestern Cricket Association, the Northwestern Cricket Association, with headquarters in Chicago, and the Massachusetts Cricket Association International matches are played annually between the United States and Canada, and on several occasions teams from Philadelphia have visited England In 1912 the Philadelphia Cricket Club made an excellent showing abroad by winning five matches and drawing one out of nine played Almost annually, in recent years, either an English, Australan, or Irish eleven has visited Philadelphia, New York, and Toronto The Intercollegiate Cricket League is composed of teams representing the University of Pennsylvania, Harvard, and Haverford

The game is played between two teams of

Il men each, on a level grass field, but the exigencies of climate in Australia and the Pacific slope of California sometimes necessitate a cement-based, matted stretch In the centre of the field a wicket is pitched, ie, three stumps of wood about 1½ inches in diameter and 27 inches high are placed in a line so that with the space between them they cover 8 inches, on the top of these are two light wooden bails Twenty-two yards in a direct line from and opposite these, three similar bail-topped stumps are erected. A line from each wicket or set of stumps 8 feet, 8 inches in length, with the stumps in the centre, is drawn This is the bowling crease, beyond which the bowler must not pass when delivering the ball In front of the stumps, 4 feet from them and parallel with them, another white line is drawn, called the popping crease, within which is the batsman's domain The bat used must not be longer than 38 inches or wider than 41/4 inches. The ball is 3 inches in diameter and weighs about 51/2 ounces. An umpire is appointed by each team, and, before starting a match, they settle what shall be considered boundaries and other conditions of play Then the captains toss for the right to select which team shall go to the bat first. The team which so elects sends two men in, one to each wicket, the other team sends a bowler to one end and disperses the other 10 men about the field in such positions as the captain's knowledge of the kind of bowler and the kind of batter indicates to him as likely to be most efficacious. The umpure then calls "play," and the bowler bowls, not throws, the ball from the end opposite the batter. If it is a ball which the batsman can reach, he either blocks it or hits it to some part of the field, if he thinks he can run to the opposite wicket and the other batsman change places with him before the ball is re-turned and either wicket thrown down with it, he runs, and a "run" is scored each time the batsmen cross each other. The bowler bowls four, five, or six balls (four in a three days' match) from one end, and then the ball is handed over to a second bowler, who bowls an equal number of balls from the opposite end. The batsman may be put out in any of the following ways. if he fails to defend his wicket and the bowled ball knocks off the bails ("bowled"), a fielder catches a batted ball before it touches the ground ("caught"), should the batsman fail to have his bat or any part of his person within the popping crease before his wicket is thrown down with the ball ("run out"); if he steps out of his ground to play a ball, misses it, and the

wicket keeper throws his wicket down with it before he can step back ("stumped") 1f, when a straight ball has been bowled to him, which in the judgment of the umpire would have hit his wicket had he not prevented it by inter-posing any part of his body except his hand ("leg before wicket"), if in playing at the ball he knocks down his own wicket ("hit wicket"), or if he willfully obstructs the fielders When a batsman is put out, another takes his place, and the game proceeds until the tenth man is out. Then, there being no more batsmen to come, the eleventh man's innings comes to an end, he being "not out" The total number of runs made off the bats, with a few penalties added which it is not necessary to detail here, make up that side's score Then the other side goes in to bat Each eleven has normally two innings taken alternately, the total score of each side determining the result of the match Lillywhite, Cricketers' Annual, and Wisden,

Gricket Ilmanack, are the standard authorities on the rules for the current years. Consult Murdoch, Cricket (London, 1893), Lyttelton, Outdoor Games Cricket and Golf (ib., 1901), Prince Ranjitsinhji, The Jubilee Book of Cricket , Read, Annals of Cricket (Edinburgh, 1897) (London, 1897), Spalding's Cricket Guide (issued annually), Warner, Cricket in Many sued annually), Climes (Philadelphia, 1901), and Cricket Across

the Seas (New York, 1903)

CRICKET FROG. A small frog (Acris gryllus, northern specimens are variety grenitans), abundant throughout the warmer parts of the United States, east of the plains, and noted for its rattling cricket-like cries in spring (See Colored Plate with TOAD.) It is about an inch long, brownish, with a blackish triangular patch (apex backward) between the eyes, the borders of which are light-colored, continued as a dorsal band to the rear end of the body, throat in spring yellow, and legs barred, but all these colors change with surroundings, as the species possesses the power of metachrosis in a high de-"The note of this species," says Cope, "may be exactly imitated by striking two marbles together, first slowly, then faster and faster, for a succession of about 20 or 30 beats The noise cannot be heard at a very great dis-It keeps on the high grass in and tance to keeps on the night grass in and around marshy places, seldom if ever ascending trees or bushes When pursued, it leaps with prodigious agility and lades under water." Their eggs are deposited in April, in little masses attached to the blaces of coarse grass. A short time afterward all the great numbers which make the marshes so noisy in April and May die off, so that until the eggs hatch and the young "peepers" develop late in August, the young "peepers" develop late in the species is practically extinct Consult Abbott, "Notes on the Habits of the Savannah Cricket Frog," in American Naturalist (Philadelphia, 1882), and Dickerson, The Frog Book (New York, 1906) CRICKET ON THE HEARTH (Das Heim-

chen am Herde)

Christmas tale by Charles Dickens (1845)
CRIEFF, kref A police burgh and health resort in Perthshire, Scotland, on the Earn, 17 miles west of Perth (Map Scotland, E 3) It is beautifully situated at the foot of the Grampians, near the entrance to the Highlands It has a public library and a mechanics' institute Its healthful climate makes it a summer retreat for invalids, who resort to its hydropathic establishments There are numerous handsome countryseats in the vicinity The greatest Scotch cattle market was held here till 1770, when it was removed to Falkirk Its industries include the manufacture of leather, linen, cotton, and

woolen goods Pop, 1901, 5208, 1911, 5571

CRILE, George W. (1864- ). An American surgeon, boin at Chili, Ohio. He graduated from Ohio Northern University (AB, 1884) and Wooster (MD, 1887), and studied also in Vienna, London, and Paris He was lecturer on the principles and practice of surgery at Wooster from 1893 to 1900, when he became professor of clinical surgery at Western Reserve University In 1913 he was granted an honorary fellowship in the Royal College of Surgeons His book, On the Blood Pressure in Surgery (1903), is especially important (See Blood Pressure) He published, besides Surgical Shock (1897), Surgery of the Respiratory System (1900), Certain Problems Relating to Surgical Operations (1901); Hemorrhage and Transfusion (1909), Surgical Anemia and

CRILLON, krefyon, Louis Balbis (or DES Balbes) De Berton De (1543-1615) A celebrated French general, surnamed "L'homme sans peur," and "Le brave" He was born at Murs, in Provence, and was trained for war under François de Lorraine, Duke of Guise, then the model of military chivalry In 1558 he gave proof of his valor at the siege of Calais and soon afterward at the capture of Guines fought against the Huguenots and distinguished himself at the battles of Dreux, Jarnac, and Moncontour He was at the battle of Lepanto, in 1571, and, though wounded, was appointed to carry the news of the victory to the Pope and the French King He disapproved strongly of the massacre of St Bartholomew, but in 1573 he took part in the siege of La Rochelle. He accompanied Henry of Anjou to Poland, and after the latter's accession as Henry III conarter the latter's accession as Henry II Catholic League Henry IV found in him as sincere friend and adviser, and called him "Le Brave des Braves" After the peace with Savoy Crillon retired to Avignon Consult Montrond, Historie du brave Crillon (Lille, 5th ed., 1874)

CRIME (OF, Fr crime, It. crimine, from Lat. crimen, accusation, from cernere, spirety, knaneun, to decide). In law, an offense against the peace, order, and dignity of the state Crime has been more specifically defined as "disobedience to a command or prohibition made with reference to a matter affecting pub-lic peace, order, or good government to which a sanction is attached by way of compensation for the injury which the act or omission may

have caused to an individual"

The same wrongful act, eg, assault and battery, may subject the wrongdoer to a criminal prosecution by the state and to a civil action in tort by the injured individual Such an act is at once a breach of the public peace and an invasion of the injured person's rights. In England and in each of the States of the United States certain offenses are crimes at common law, while others are made so by statute Criminal offenses against the United States, however, are all of statutory origin. The common-law classification of crimes was into treason (q v.),

felony (qv), and misdementor (qv), treason being separated from other high crimes because of its character, its mode of trial, and its punishment, and the chief distinction between a felony and a misdemeanor being that the former occasioned the forfeiture of lands and goods, while the latter did not. The statutory definitions of the various classes of crimes now usually includes treason under the head of felony and makes the distinction between felonies and misdemeanors turn upon the disgraceful or infamous character of the punishment prescribed for the crime, a felony being usually punishable by loss of life or by imprisonment in a State prison for a year at least and by the deprivation of civil rights, while a misdemeanor is punished by fine or by imprisonment in a workhouse or by both.

crime, it must be committed with a criminal intent. It is not a crime to take the life of a human being if this is done pursuant to a legal command, as in the case of a sheriff inflicting capital punishment upon a duly convicted and sentenced criminal, nor if it is the result of accident In neither case does the person causing the other's death intend to commit a wrongful or forbidden act But criminal intent is not necessarily synonymous with actual intent to become a criminal A general criminal intent exists when the actor has an intellectual apprehension of the nature of the act which the law pronounces criminal and voluntarily assents to its commission. In most crimes no other intent is required. At times, however, the law requires a specific intent, as in the case of the transfer of one's property with intent to defraud his creditors or sending poison to another with intent to injure him Here something more than knowingly and voluntarily disposing of the property or sending the poison is necessary to the commission of the crime, viz, the disposition or the sending with the specific intent to defraud or to injure. Insanity (qv) relieves its victim from ciiminal hability when it renders him incapable of forming a criminal intention. Voluntary drunkenness, even when causing temporary insanity, does not so relieve its victim, although it may be taken into account in crimes requiring a specific intent on the part of the actor, in determining whether he did the particular act with the specific intent Infancy also relieves from criminal liability when the infant is incapable of forming a criminal intent (See Age ) Analogous to insanity and infancy, as an excuse for an act otherwise criminal, is coercion or duress  $(q\,v\,)$  when of such a character as to destroy the voluntary nature of the act. See Acces-SORY, PRINCIPAL, PUNISHMENT, also CRIMINAL LAW, CRIMINOLOGY, and the authorities there referred to

CRIME AND PUNISHMENT. A novel by Dostoyevsky, published in 1866 It is a study in abnormal psychology.

CRIME'A (Russ Krim, Krym, Lat Oheromesus Tau vac) A pennsula in the south of Russia, forming part of the government of Taurida, and comprising the districts of Perekop, Eupatoria, Simferopol, Yalta, and Feodosia (Map Russia, D 5) It is united to the mainland by the very narrow isthmus of Perekop, between the Black Sea and the Sea of Azov, and separated from the pennisula of Taman, on the east, by the narrow Kertch Strat The Crimea is thus

almost surrounded by water-on three sides by the Black Sea and on the fourth by the Sea of Azov, while a trench 70 feet wide and 25 feet across the isthmus of Perekop cuts it off from the mainland. The Crimea is quadrilateral in shape, but a long, narrow peninsula juts out on the east, which increases the extreme length of the territory from east to west to nearly 200 miles, the breadth being 110 miles The area is about 9800 square miles. The peninsula is peopled by about \$55,000 inhabitants, mostly Turkish-speaking Tatars Greeks, Russians, Germans, and Jews make up the other constituents of the population The coast is indented, particularly on the side bordering on the Sea of Azov It has good harbors and is the seat of a thriving fishing industry throughout its extent Northern Crimea is a continuation of the southern Russian steppes The Salgir River divides the peninsula into two distinct regions Southern Crimea is well watered and fertile Along the side facing the southeast there is a highland region, the Yaila Mountains, forming the watershed These mountains rise to a height of over 5000 feet. their most interesting peak being the Tchatir Dagh (Tent Mountain), the Mons Trapezus of the ancients. The streams rise in the southeast coast highlands, and while a few very short ones flow towards the east and southeast, most of the drainage goes into the Bay of Kalamita. the Gulf of Perekop, and the Sivash or Putrid Sea, which is a portion of the Sea of Azov almost cut off from it by the tonguelike peninsula of Arabat The northwest section of the Crimea has but little fluvial drainage The southern district of the peninsula rises with steep slopes from the sea, while spurs and secondary chains extend northward These are richly wooded, but the beautiful intermediate valleys gradually sink into the uniform and desolate steppe which forms the northern and much greater part of the peninsula The southern district of the Crimea is well cultivated, and is a favorite resort for Russian society. Many noblemen maintain in it their countryseats, parks and gardens surpassed by none in Europe. The famous Imperial countryseat of Livadia is situated near the southern extremity of the peninsula. Tatar villages, mosques, and Greek convents are to be seen in most picturesque situations among the woods and rocks. with many ruins of ancient fortresses

The southeast highland region produces a rich and varied flora. On the northern slopes and valleys grow hardy fruit and various forest trees, in the central mountain region are forests of oak, beech, elm, and other deciduous trees of central Europe, while on the higher southern slope the pine occurs, and at lower altitudes the vegetation is Mediterranean in character, and the vine and the olive flourish Grain of various kinds is produced abundantly, and silk, wax, and honey Fruit culture is being rapidly developed in the Crimea, under the favorable climatic and soil conditions found in the peninsula The Yalta district and parts of the Simferopol and Feodosia districts have a heavy yearly output, among which almonds, apricots, medlars, peaches, pomegranates, and quinces grow in profusion. Some small rodents, hares, and foxes are the chief mammals, reptiles and insects are not numerous Much attention is bestowed upon horses, oxen, sheep, in which no small part of the wealth of the country consists. The climate of the Crimea varies considerably for such a slight extent in latitude. The northern part has cold winters and hot summers, while in the southern part the winters are warm and the heat of the summer is tempered by proximity to the sea and the shelter afforded by the mountainous

barrier emerging northward

The chief industry of the Crimea is agricul-The raising of cereals is carried on mostly by the Russians and the colonists, chiefly Germans, while the Tatars and Greeks are engaged primarily in gardening. Owing to the scarcity of labor and the prevalence of large holdings, agriculture in the Crimea is based on modern lines Cereals are raised, fruit abounds, and wine of an excellent quality is produced Tobacco plantations are numerous. The southeastern littoral enjoys a mild and healthful climate and is rich in flowers, shrubs, and flowering trees, here the olive, the pome-granate, and the fig flourish, and the hills are overgrown with fir and pine, beech, oak, and elm. On the open steppes beyond the Yalladagh the grass is parched by midsummer droughts and bitten by winter frosts. Saline lakes yield quantities of salt, porphyry, limestone, and ironstone exist. The rearing of live stock (which includes camels) is extensively carried on Beckeeping, sericulture, and fishing are important industries The manufactures include flour, leather, wool, soap, preserved fruits and vegetables, metals, and ships. In the country districts the bulk of the inhabitants are Tatars, height, 1644 meters, cephalic index, 80 Cleanliness and morality are proverbial among them Other elements of the population are Russians, Greeks, Armenians, Germans, Karaite Jews, and Albanians The two prin-cipal cities of the Crimea are Sebastopol, a great fortress and naval station, and Simfero-pol, the capital of the government of Taurida An interesting town is Bakhchisaray, celebrated as the ancient capital of the Tatar khans

History To the ancients the Crimea was known as Chersonesus Taurica, from the Tauri, a mountain tribe of the south, who are supposed to have been the remnants of a Cimmerian people driven out by the Scythians in the seventh century BC. (See CHERSONESUS, CIM-MERII) In the sixth century BC, the Greeks of Miletus founded flourishing colonies at Nymphæum, Theodosia, and Panticapæum (the present Kertch, qv) About 500 BC these cities. together with several other towns, united to form the Kingdom of Bosporus, which existed till the fifth century AD and embraced, at the period of its greatest extent, the entire penin-sula and the eastern coast of the Sea of Azov. The Chersonesus stood in close commercial and social relations with the Greeks of Europe and especially with the Athenians, who imported from the country great quantities of grain and hides as well as many slaves. In 114 BC Parias well as many slaves. In 114 BC Fair-sades, the ruler of Bosporus, hard pressed by the Scythians, acknowledged himself the vassal of Mithridates (q v) of Pontus Pharnaces (q v.), son of Mithridates, who had sided with the Ro-mans against his father, received as a reward from Pompey the Kingdom of Bosporus (See BOSPORUS, KINGDOM OF ) Subsequently, under the nominal suzerainty of the Romans and later of the Byzantines, the Kingdom of Bosporus prospered, till about the end, probably, of the fourth century, when it fell before the Huns. The

country, with the exception of the southern coast land, which was held by the Byzantines, was henceforth devastated by a succession of bar-barian invasions. About the middle of the seventh century the Khazars, a flerce tribe from the region of the Volga, took possession of the peninsula and established a powerful kingdom there, chiefly remarkable for the fact that the ruler, the entire nobility, and large numbers of the people became zealous adherents of the Jewish faith In the thirteenth century the country was conquered by the Mongols, and it constituted till about 1430 a part of the Khanate of Kiptchak (q v ) At the same time the Genoese founded a number of trading colonies on the south coast, which was known as Gothia. Among these were Caffa (Kaffa), on the site of Theodosia, which became a great emporium of the commerce between Europe and Asia (See KAFFA ) After forming a part of the independent Khanate of Krim for about 45 years, the Crimea was conquered in 1475 by the Turks and was ruled by a khan under the suzerainty of the Sultan In 1571 the Khan raided Moscow and sacked the town Russian aggressions on the Crimea began in 1735, and in the following year an army under General Munnich laid the country waste By the Treaty of Kutchuk-Kamardji, in 1774, the Porte was forced to recognize the independence of the Khan In 1783 the country was incorporated with Russia In 1854-56 the Crimea was the scene of conflict between the Russian armies and the allied forces of England, Hussian armies and the allied forces of England, France, Sardinia, and Turkey (See Crimea, WAR) Consult Antiquités du Bosphore Cummérien (St Petersburg, 1854, reprinted at Paris, 1892), Teller, The Crimea and Transcaucasia (2d ed. London, 1877), Wood, The Crimea in 1854 and 1894 (lb., 1895), Beauleu, The Empire of Tsars and the Russians (New York, 1893), Minns, Scythians and Greeks (Cambridge, 1907). (Cambridge, 1907)

CRIME'AN WAR. The name given to the War of 1854-56 between Russia on the one hand, and Turkey with her allies, France, England, and Sardima, on the other. Its cause was the struggle between Russia and Turkey, which broke out in 1853, over the assertion by Russia of a protectorate over the Greek Christians in the Turkish dominions Coupled with this was a dispute between Russia and France over the guardianship of the holy places in Palestine The real ground, however, for the attitude assumed by France and Great Britain was resistance to the aggressive policy of the Russian Emperor, Nicholas I. The latter believed that the other Powers of Europe were not in a position to interfere, and saw an opportunity to continue the Russian advance which had Constantinople for its objective. Accordingly, in the spring of 1853 he submitted to the Porte, through Prince Menshikoff, an ultimatum in regard to the Greek Christians and other matters England and France prepared to sustain the Sultan against Russia and stationed their fleets in Besika Bay In July the Russian forces advanced into the Danubian principalities The Vienna Note, prepared by Austria and signed by the neutral Powers as a basis of settlement, was so modified by Turkey as to be unacceptable to Russia, and on Oct. 4, 1853, Turkey declared war The English and French fleets thereupon passed through the Dardanelles. Though the Turks were at first victorious upon land, the Russian admiral, Nakhimoff, won an important

naval vectory at Sinope, November 30, on March 12, 1854, France and Great Britain concluded an alliance with Turkey, and two weeks later they declared war against Russia Prussia and Austria remained neutral. The allied Western Powers determined to assist the Sultan by a naval expedition against Kronstadt, in the Baltic, and by a combined attack with land forces in the south The Baltic expedition proved a complete failure, achieving nothing beyond the capture of Bomarsund on August 16

Early in the summer 20,000 English troops, under Lord Raglan, and 50,000 French soldiers, under Marshal Saint-Arnaud, assembled at Varna, on the Black Sea Against the advice of the Turks, who wished to drive Russia out of the Caucasus, Saint-Arnaud and Raglan decided upon the siege of Sebastopol, Russia's stronghold and depot in the Crimea. The war was thus narrowed down to a limited sphere and was fought in a long siege and a series of stubborn engagements. The first of these occurred at the river Alma, on Sept. 20, 1854, six days after the landing of the Allies Saint-Arnaud died on September 29, and was succeeded by General Canrobert At the beginning of October the Allies began the regular siege of Sebastopol, the defense of which was directed by Todleben On October 25 the Russians attacked the British at Balaklava (q v) The engagement was marked by bad generalship on the British side and by the gallant but ill-advised charge of the Light Brigade The Russians followed this up with an unsuccessful attack at Inkermann on November 5. The severe winter caused the suspension of active operations, and the English and Turks endured terrible hardships because of the inadequate commissary arrangements. Indeed, had it not been for the energy and patriotism of Florence Nightingale (qv), the famous nurse, the British forces would have succumbed in huge numbers As it was, the mortality from disease in this war was frightfully above the average. During the winter an international conference attempted to adjust matters, but without avail. Austria entered into an alliance with France and Great Britain, but as Prussia could not be drawn into action unfavorable to Russia, Aus-tria refrained from entering into hostilities. Sardinia, on the other hand, joined the Allies in January, 1855, and sent 10,000 men of her new army, under General La Marmora, to the Crimea. (See CAYOUR and ITALY.) The Russians resumed activities in February, assailing the Turkish positions at Eupatoria, but without result After the death of the Emperor Nicholas and the accession of Alexander II, in March, 1855, Prince Michael Gortchakoff succeeded Prince Menshikoff in command of the Russian forces

Operations were renewed with great vigor in the spring, the Allies having 174,000 men in the field and the Russians about 150,000. General Pélissier succeeded Caurobert in command in May, and General Simpson succeeded Lord Raglan, upon the latter's death in June. A Russian army, advancing to the relief of Sebastopol, was defeated at the Tchernaya on August 16. From the 19th of August to the 8th of September a terrible bombardment of the besieged city was kept up and was followed on the latter day by a general assault, in which the French took the Malakoff Tower and the British took the Little Redan Gortchakoff now blew up the southern fortifications, evacuated the city, and retired into the hills. All the parties were ready for

peace, which was signed at Paris, where a congress of the Powers had been in session, on March 30, 1856 The integrity of the Ottoman Empire was guaranteed by the Powers, which also renounced all right of intervention in Ottoman affairs; reforms were promised by the Sultan, Russia renounced her protectorate over the Danubian principalities, and ceded a strip of Bessarabia to Moldavia, the navigation of the Danube was declared free to all nations under the supervision of a commission of members from the bordering states, the Black Sea was neutralized The Congress united in the Declaration of Paris (q.v ), which laid down certain principles of international law Consult Hamley, The War in the Crimea (London, 1891), the best short treatment in English. The standard E Aveling (ib, 1897), Lodomir, La guerre de 1853-56 (Paris, 1857), Kovalevski, Der Krieg Russlands mit der Turkei in den Jahren 1853-54 (Leipzig, 1869), Rein, Die Teilnahme Sardiniens am Krimhrieg und die offentliche Meinung in

CRIME DE SYLVESTRE BONNARD, krêm de sêl'ves'tr' bû'nar', Le A graceful romance by Anatole France (1881) The hero, M Bonnard, is an old member of the Institute, whose "crime" consists in releasing a young girl from a boarding school in which she was unhappy and bringing about a happy marriage for here.

CRIMINAL CONVERSATION (usually, in The technical law, abbreviated to CRIM CON ) term for adultery with another man's wife. It is no defense to an action by the husband, in such a case, that the wife freely assented to the defendant's solicitation, for the husband does not sue for a wrong done to her, but to himself. The gist of the action is the shame which has been inflicted upon him, and the hazard to which he instelled from maintaining spurious issue. It is therefore quite distinct from the wrong of en-tening the wife away from the lusband, al-though, like seduction (qv.), it is looked upon as a personal injury to the husband. He may condone the wife's offense, and thus lose his right to secure a divorce, without affecting his right to damages against the paramour It has been judicially declared that the law will not hold a party remediless for an injury of this kind be-cause, through the exercise of Christian virtue, the influence of family interest, or for any other reason, he forgives an erring wife and trusts in her reformation and promise of future good conduct. He may forgive the wife without forgiv-ing the author of the wrong done him See ADULTERY, and consult the authorities there referred to

CRIMINAL LAW. That branch of public law which defines and prescribes the penalties for crime or public wrongs, 1c, wrongs or injuries by individuals against the state or sovereign as distinguished from injuries by individuals against the state of wrongs, or torts. All civilized systems of law now agree in drawing this distinction between public and private wrongs. There is no doubt, however, that the law of trume had its origin in the law of tort, and that in primitive society the consequence of the various acts now recognized as crimes

was to give rise exclusively to an obligation to the injured person or his representative which might be satisfied by the payment of money. Under the early Anglo-Saxon law, which corresponded substantially in this particular with other ancient systems of law, "a sum was placed on the life of every free man according to his rank, and a corresponding sum on every wound that could be inflicted on his person, for nearly every injury which could be done to his civil rights, honor, or peace, the sum being aggravated according to adventitious circumstances." (Kemble, Anglo-Saxons, vol 1, p 177) (See Blood Money, Wergild, Etc.) The earliest recognition in ancient law of distinct wrongs against the state appears in the isolated acts, legislative in character, by which the state avenged itself for wrongs done in the same man-ner that private individuals were permitted under sanction of law to avenge or requite themselves for private wrong

From these occasional legislative acts by which the state avenged itself upon the criminal for the wrong which his criminal act inflicted upon its peace and security, it was a natural transition to a system by which this particular function was delegated to a permanent commission, still legislative rather than judicial in character, whose duty it was to investigate and punish wrongful acts, usually of violence, which, though inflicted on an individual, threatened the peace and public order of the community, and finally and public order of the community, and a per-to the more modern system under which a per-manent tribunal wholly judicial in character de-manent tribunal wholly judicial in character defines and applies the law relating to crime. The history of the Curia Regis, or King's Court, which was at once the legislative, administrative, and judicial body under the Norman kings, shows these successive stages of development in our own criminal jurisprudence The Court of King's Bench, which was the criminal branch of the King's Court, was organized in the reign of Edward I (1274-90). It follows, from the character of all public wrongs, that the first essential of a crime is some act which, because of its effect upon the community, is deemed an offense to the state This may happen either (a) because the act is directly an injury to the state, or (b) because the act is a direct interference with the performance of some duty, as of protecting the life, property, safety and morals of citizens, which, upon grounds of public policy, the state has assumed

Crimes may be conveniently classified as follows: (a) offenses against government, (b) offenses against public peace and health, (c) offenses against personal hiberty and security, (d) offenses against personal hiberty and security, (e) offenses against the dwelling house, (f) offenses against the dwelling house, (f) offenses against property, (g) maritime offenses At common law also climes were classified as folionies and misdemeanors, and the distinction has been preserved to some extent by the modern law and the various criminal codes Sec CRIME, FECONY, MISDEMEMANOR

Crimmal Procedure The first step towards placing one charged with crime upon instrial is his arrest. (See Arrest) After the arrest the prisoner must be brought for examination before the magistrate, who may hold him for the action of the grand jury, or, if an indictment has already been found, may hold him for trial before a petit jury Pending trial, the prisoner is committed to jail, unless admitted to bail. See Ball.

The method of finally accusing one with the commission of a crime is by indictment by the grand jury, which may either precede or follow the ariest (See Jury, Grand Jury) The indictment is the final pleading corresponding to the declaration or complaint in a civil action, which sets out all of the essential elements of the crime and all facts necessary to give the court jurisdiction to try the prisoner for the offense charged (See Indictment) Upon the trial the indictment must be read to the accused. and he is then given opportunity to plead to it The prisoner may demur to the indictment on the ground that it is in law insufficient in force or substance (See DEMURRER ) He may plead in abatement, setting up any facts showing want of jurisdiction in the court or other reason why he should not be placed upon his trial, or he may plead a former conviction or acquittal See AUTREFOIS ACQUIT, JEOPARDY.

If the prisoner is unsuccessful upon his demurrer or the pleas already referred to, he must plead to the ments by a plea of either guilty or not guilty A plea of guilty in effect admits the charge and is equivalent to a conviction after trial. A plea of not guilty puts in issue the indictment and places the prisoner upon his trial before a jury. (See Jury, Pleading, Trial.)
Upon verdict of the jury of not guilty the
prisoner must be discharged If the jury fails
to agree upon a verdict, the prisoner may again be placed upon trial before a new jury, or if the verdict be guilty, he must be sentenced by the court to undergo whatever penalty the law provides for the crime (See PUNISHMENT) After conviction, but before sentence, the prisoner or his counsel may move to arrest the judgment because of some material error in the proceedings appearing on the recoid, or he may move to set aside the verdict because not supported by the evidence, or because of newly discovered evidence Upon denial of this motion the prisoner must be sentenced, the sentence being the judgment of the court fixing and di-recting the punishment of the prisoner according to law

The English common law of crime has been adopted in most of the States of the United States, with some statutory modification and addition. In a few States the criminal law has been codified, and in these jurisdictions it is entirely statutory. The law of procedure, while substantially changed by statute in all of the States in matter of form, varies in no important particular from the substance of the procedure at common law which has here been outlined.

As the several States upon the formation of the Federal Union retained their jurisdiction over orime, the Federal government has no common-law jurisdiction over crime, nor can it have any statutory jurisdiction over crime except over such crimes as in some way interfere with the power delegated to it in the Constitution by the several States, including such as arise in territory subject to its exclusive jurisdiction

CRIMINAL NEGLIGENCE See NEGLI-

CRIM'INOL'OGY (from Lat orimen, crime + Gk λογία, logia, account, from λέγειν, legein, to say) The science which treats of the nature and causes of crime. As a separate study it is of comparatively recent growth, and the credit for its foundation as an independent branch of knowledge is usually given to Cesare Lombroso, an Italian professor in the University of Turin, who in 1876 published a remarkable book entitled L'Uomo delinquente ('Criminal Man') Since its appearance quite a number of eminent scientists—physicians, jurists, economists, and sociologists—have taken up the study of crime and criminals There is, however, such a difference of opinion concerning the fundamental causes or factors of crime that criminologists are divided into several groups. These groups may be classified under two large divisions, their difference turning upon the emphasis laid upon the individual causes of crime, on the one hand, or upon its social causes, on the other hand The criminal, one party asserts is born, not made, he is a criminal by nature, and the circumstances of education or environment have little or nothing to do with his law-breaking career. The opposing party maintains that social organization, education, environment—causes lying outside the individual—really determine whether or not he will become a criminal As a rule, those who adhere to the former point of view conceive the study of crime as a part of anthropology, a part of the study of man, while those who believe that social conditions furnish the causes and explanation of crime consider this study a part of sociology. Thus the two terms usually applied to criminology, "criminal anthropology" and "criminal sociology," each indicate a prejudice in favor of one or the other of the tendencies characterized above.

The subject of cuminology is a complicated and difficult one. It is only within the present generation that the possibility has arisen of conducting the study of criminal problems on anything approaching an exact and scientific basis Before the introduction of a system of criminal statistics it was impossible to ascertain whether clime was increasing or decreasing, what transformation it was passing through in consequence of the social, political, and economic changes constantly taking place in all highly organized societies, and what was the effect of punishment on the criminal population Statistics, moreover, even when carefully collected, often mis-lead. Suppose, eg, that the number of con-victions for crimes and misdemeanors has increased in Belgium from 22,359 in 1870 to 40,372 in 1890, this does not necessarily mean that crime has increased, for the total population may have increased more rapidly than the number of offenses, and in such an event criminality has really diminished The larger number of convictions in 1890 may, perhaps, be due to an increase in the number of punishable offenses because of the enactment of severer laws, certain acts legally permissible in 1870 may have become misdemeanors in 1890 Another possible explanation of a merely apparent increase in criminality is offered by the fact that perhaps the police have become more efficient or more vigilant, and that therefore many offenders who escaped in 1870 are now brought before the courts and condemned These three possible explanations are sufficient to show how careful we must be in the employment of criminal statistics Particularly when we go beyond the statistics of a single nation and attempt to compare two or more nations with a view to their relative criminality, we must be even more cautious. In no two countries is the criminal law the same, and an act which is perfectly harmless when committed in one country is considered in another as a contravention of the law. Each country has also a nomenclature of crime and methods of criminal procedure peculiar to itself. In each country the police are organized on a different principle and act on a different code of rules. Great differences of opinion exist also among different nations as to the gravity of certain offenses. Whenever it shall be possible to collect criminal statistics in the several nations according to a uniform system, then criminology will have the necessary inductive basis for fruitful comparisons between nations

The narrow legal definition of crime as a violation of the law is scarcely of any value for philosophical purposes, and a scientific definition which shall include all acts which at any time have been called crimes, but include none other—which shall, moreover, specify their common characteristics—remains yet to be found It seems highly probable that the study of primitive religious ideas and primitive social organization will throw considerable light upon the problem of discovering the essential nature of crime. It should be noted, meanwhile, that originally the question whether a certain act was criminal or not, and, if criminal, how the perpetrator should be punished, was answered by the offended party—individual, family, or clan—and not by the political organization of the whole people (the state) That the state should determine these matters and reserve to

itself the right to judge and to punish is a result of quite recent evolution. Even to-day the state is far from being the only coercive institution, duels, and, in a measure, lynching, are survivals of the previous status.

The question whether crime is increasing has been very widely discussed, pro and con The statistics for England seem to indicate a slight decrease in the ratio of criminals to the general population, and the same thing holds true of the German Empire In neither country do the more serious forms of crime show a tendency to decrease, and in Germany the number convicted for second and additional offenses-the recidivists, or true criminal class—is steadily on the increase. From 1882 to 1901 first offenders diminished from 736 per 100,000 persons of punishable age to 664 Those convicted for second or other offenses increased from 93 per 100,000 to 135 In the United States there are no statistics that give conclusive evidence as to the relative changes in volume of criminality. but it is the opinion of most statisticians that crime is increasing more rapidly than the general population

Causes of Crime The factors responsible for crime may conveniently be divided into three great categories—cosmic, social, and individual The cosmic factors of crime are climate and the variations of temperature, the social factors are the political, economic, and moral conditions in the midst of which man lives as a member of society, the individual factors are those at-tributes inherent in the individual, such as descent, sex, age, bodily and mental character-It is often extremely difficult to disentangle these factors; many of them, indeed, are tangle these factors; many of steam, marked, no indirectly at work where they appear to be absent Heredity, eg, seems to belong clearly to the individual factors, but if we trace an inherited characteristic back through a long line of ancestors, it may finally be found to have its origin in the circumstances of environment

or education. Cosmic Factors How profoundly the physical structure, and likewise the mental life of man, is affected by his natural surroundings, by climate, seasons, soil, the configuration of the earth's surface and the nature of its products, is illustrated by the low type of life exhibited by the primitive inhabitants of inhospitable, barren countries Concerning the influence of climate on crime, statisticians have concluded that crimes against the person, as assault and homicide, are relatively more numerous in warm climates, while crimes against property are more frequent in colder regions. The statistics of homicide in Europe show that the warmer countries, Italy and Spain, head the list in the proportion of murders to the population, while England, Scotland, and Holland stand at the bottom of the list Prof. Enrico Ferri, after a thorough examination of French judicial statistics for a series of years, concludes that a maximum of crimes against the person is reached in the hot months, while crimes against property come to a climax in the winter Aschaffenburg. by a study of the criminal statistics for the German Empire for the period 1883-92, estabhished similar conclusions Crimes against the person reach their maximum in July and August, being more than twice as numerous in those months as in December and January Crimes against property are more uniformly distributed they are, however, nearly 33 per cent more frequent in December, when at their maximum, than in May and September Crimes against the person are unduly high in the south and west of the United States, but here we have to consider not merely climate, but also race conflicts, pioneer conditions, and uncertain legal control

Social Factors. Concerning the social factors of crime, it must be observed that the action of society upon the individual is so complex that it will here be impossible to discuss, even briefly, all these factors

Considering, first, the conjugal condition of criminals, it appears that there is a higher ratio of criminality among the unmarried and di-vorced than among the married A partial ex-planation of this fact may lie in the circum-stance that married men and women, being subject to the restraining influences of home life, are much less apt to yield to those antisocial tendencies which manifest themselves in crime

secondly, Considering, secondly, occupation, prison statistics show that the higher the character of a man's daily pursuits the greater the unlikelihood of his falling into crime According to the census Report on Prisoners and Juvenile Delinquents in 1904, of male prisoners committed in the year 1904, 50 l per cent were laborers and servants, 23 7 per cent were from manufacturing and mechanical industry, 17 2 per cent from agri-culture French official statistics summarizing culture the results of over 50 years indicate the following number of indictments for every 100,000 members of each class agriculture, 8, liberal professions and proprietors, 9, industry, 14, commerce, 18, domestic service, 29; vagabonds and without trade or regular occupation, 405

Thirdly, and closely related to occupation, is the influence of rural or city life on crime. Germany, in cities of 20,000 and over, the delinquents average 134 2 per 100,000 adults, in the smaller towns and the country the average 18 96 6. In France the cities, having less than one-third of the population, furnish about one-half the criminals Nearly the same proportions hold for Italy, and the disproportionate share of the cities in criminality has been observed in the United States, although trust-worthy statistics are lacking. The city is the refuge and hiding place of questionable characters, it intensifies the struggle for existence, and by the sharp contrast it offers between rich and poor, between luxury and penury, excites envy and class hatred.

A fourth point of great importance is the influence of poverty If poverty in itself were a decisive factor, we should expect poor countries to produce the most criminals, but poor countries like Ireland, Spain, and Hungary show a tries like treasnd, spain, and mungary show a smaller ratio of theft in the population than rich England. It is rather where great poverty exists side by side with great wealth that temptation is greatest and crime most frequent, especially crimes against property. Swift and unexpected industrial and commercial changes. and hard times put character to unusual strains and increase the number of lawbreakers Von Mayr, on the basis of statistics for a part of Bavaria for the period 1835-61, concluded that every half groschen added to the price of grain called forth one additional theft per 100,000 in-Aschaffenburg has compared the habitants number of thefts per 100,000 of population in the

German Empire, 1880-1909, with fluctuations in the price of bread, and has established a re-markably close correlation. Inventions and progress in industrial processes often make it more difficult for men to support existence in their accustomed ways There can be no doubt, moreover, that the keen struggle for existence imposed upon the poor classes disorganizes the family and destroys many of the beneficent influences of home life. It may reasonably be maintained, on the other hand, that excessive wealth, with the idleness that it frequently begets in the possessor, is quite as apt as destitution to lead to viciousness and crime A wealthy criminal has, of course, more numerous and efficient means for escaping detection and punish-

ment than a poor offender.

Among the other factors of crime which may properly be classed as "social" are the influence of social theories which tend to engender contempt for human life and the institution of private property, the absence of a widespread, deep-seated religious spirit which restrains men from yielding to evil impulses, the corruption of partisan politics which permits the worst elements of the population to become the official guardians of the public peace and prosperity, lynching and public exhibitions of cruelty which debase human character; detailed accounts of crimes in the daily press, the influence of asso-ciation and suggestion by which gangs of shiftless men or boys form centres of criminal life under the leadership of unscrupulous chiefs, social disturbances like war, crises, revolutions, and exposures, which disturb the even tenor of social progress and relax the social bond.

Individual Factors Finally, the individual factors of crime should be briefly considered They have been carefully studied by a score of scientists, beginning with Lombroso, the founder of criminology, who was disposed at first to overlook all but the individual factors Sem— In all civilized nations women are less addicted to crime than men, and girls less than boys Among most European peoples between five and six males are tried for offenses against the law to every one female. Women are less inclined to acts of violence than men on account of their physical weakness, but when women do become criminals their crimes are frequently characterized by a cruelty and relentlessness not found in male offenders The crimes of women are mostly infanticide, abortion, poisoning, domestic theft. They are addicted equally with men to the perpetration of parricide, and more frequently con-victed than men of parricide. Women are also more hardened criminals than men, probably because a woman may regain her rank in society only with the greatest difficulty. Age -In proportion to the population crime is, as we should expect, at its lowest level from infancy till the age of 16 From that age it goes on steadily increasing in volume till it reaches a maximum between 30 and 40 Females do not enter upon a criminal career so early as males, and the criminal age is earlier in coming to a close for women than in the case of men. Education -The question whether education reduces or increases criminality is far from being conclusively answered Those states which have the best systems of education have also the most criminals in their jails and prisons. But, as a rule, the proportion of our prison population unable to read or write is considerably higher than in the free population M. Henri Joly, an emi-Vol. VI -18

nent French criminologist, maintains that most frequently passions and vices which have nothing to do with instruction are the veritable motives of crime. It seems reasonably certain, however, that the lack of instruction in manual and trade processes and the absence of personal, moral, and spiritual influences account for much of the tendency to crime Drunlenness.—All authorities agree that intemperance is a serious cause of crime It weakens the will, leads to evil associations, dulls the conscience Statistical information concerning this point is usually nonofficial and of little scientific value German statistics for 1902 show that, of 97,376 persons convicted of aggravated assault, 34,652 had committed their offenses on Sundays or holidays, the days of heaviest drinking Heredity—Individual degeneracy, which Dr Ferri has shown to be closely connected with crime, is frequently passed on from generation to generation. The diagrammatic history of eight families given by Dr Strahan in his book on Marriage and Disease illustrates the degenerate tendencies transmitted from father to children throughout several generations. Similarly, Dugdale, in his book on the Jukes, has traced the posterity of a criminal and found that the great majority of his descendants possessed vicious or criminal instincts Lombroso advanced the hypothesis that the criminal is essentially atavistic-a type harking back to remote progenitors and characterized by the psychology of the savage rather than that of the civilized man. Later study led him to admit pathologic qualities not essentially atavistic, and, above all, epilepsy, as an additional cause of criminality. Evidence of atavism is found by Lombroso and his school in anatomical and psychological peculiarities that appear with greater frequency among criminals than in the noncriminal population. The characteristics enumerated by Lombroso as indicative in certain combinations of the criminal type include height and weight above the average, asymmetry of the skull, brain, and face, brain lighter in weight than the normal, light hair, scant beard; retreating forehead, projecting eyebrows and ears, long arms, insensibility to physical pain; pointed skull; heavy lower law, defective lungs, tendency to diseases of the heart and of the sexual organs; etc Criminal anthropologists, however, are far from agreeing upon these anomalies, and often reach conclusions divergent from and sometimes contradictory to those of Lombroso. The weight of opinion among criminologists of the present day is that while criminality is somewhat more common among atavistic types than in the general population, only a small fraction of present-day criminality is attributable to such types The hereditary criminal exists, but criminality produced by social and economic causes is far more common and of far greater significance For bibliography, see MacDonald, Hearing on the Bill to Establish a Laboratory for the Study of the Criminal, Pauper, and Defective Classes (Washington, 1902). CRIMMITSCHAU, krim'mit-shou. of the Kingdom of Saxony, on the Pleisse, about 39 miles south of Leipzig (Map: Germany, E 3). It has extensive cotton and woolen mills and machine works, and manufactures yarn, wool, dvestuffs, chronometers, and metal ware. 1900, 22,840; 1905, 23,420; 1910, 28,818.

CRIMP (from Dutch krimpen, OHG. chrimpfan, krimfan, to bend together, from chrampfa, Ger. Krampe, Eng. cramp). The name given to an agent for supplying ships with seamen. They are usually in league with the most disreputable class of lodging-house and saloon keepers and with prostitutes in the endeavor to fleece the residers as rapidly as possible. The latter can then be forced aboard ship. There are numerous laws for the protection of seamen against the extortion of crimps and their dealings with masters of vessels who need crews, but these laws are unable to reach a very large proportion of cases; and some of the laws, while not greatly injuring the crimp, scriously affect the interests of a sailor who is not in need of legal pro-tection and those of the honest lodging-house keeper.

CRIMSON. See RED.

CRINED, krind (from archaic Eng. crine, from Fr. crin, Lat. crinis, hair). A term in heraldry. When the hair of a man or an animal differs in tincture from the rest of the charge, the object is said to be crined of such a metal or color.

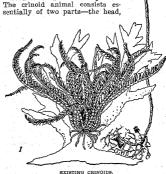

CRINGLES (Ger. Kringel, Icel. kringla, circlet, dim. of kringr, pulley, kring, round). Short pieces of rope, with each end spliced into the boltrope of a sail, commonly confining an iron or brass ring or thimble. Smaller ropes are passed through them to aid in managing the sails. See KNOTTING AND SPLICING.

CRINOI/DEA (Neo-Lat. nom. pl., from Gk. κρινοειδής, krinoeides, like a lily, from κρίνον, krinon, lily + eloos, eidos, form). A class of pelmatozoan echinoderms related to the Cystoidea and characterized by the regular pentameral arrangement of the polygonal plates of the body wall, that form a usually stalked calyx, and by the presence of five generally well-dewelloped flexible arms. The graceful flowerlike appearance of the stalked crinoids has given them the names of "sea lilies" for the living species, and "stone lilies" for the fossil varieties. The group is of great interest both to the zoologist and paleontologist, but the complex modifications of the plates of the calvx, and the usually imperfect conditions of preservation,

make their study a matter of considerable difficulty. At the present time the group is on the

decline, and most of the modern species, those free-swimming kinds like Antedon and Actinometra, are regressive descendants from earlier stalked forms. Although about 300 living species of crinoids are known, the developmental stages of only one genus, Antedon, a stem-less form, have been worked out, and the habits of the living stalked crinoids are little known.

Structure and Development. The crinoid animal consists es-

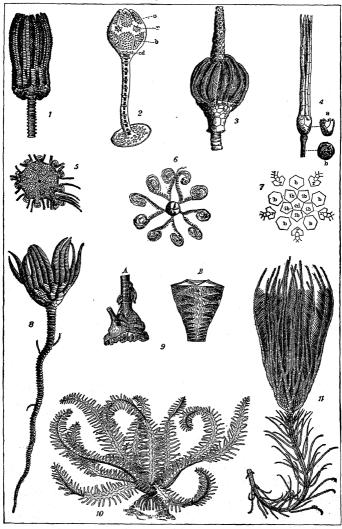

Representative species from the Atlantic: 1. Actinometra pulchella: 2. Rhizocrinus lofotensis. (After A. Agassiz.)

or calyx, and the stem, or column. The calyx bears 5 or 10 generally forked pinnulated arms attached to its sides, has upon its upper ventral surface a central mouth and an eccentric or lateral anal opening, and is itself supported by the column attached to its lower or dorsal surface. The calyx is a spherical or cup-shaped box made up of polygonal stony plates that are arranged in more or less regular horizontal series, and in vertical series according to the plan of pentamerous bilateral symmetry so prominent in the higher Pelmatozoa. The calyx contains the body cavity, in which are the vital organs, consisting of the simply coiled alimentary canal and the central portions of the nervous, generative, and water-vascular systems.

## EXPLANATION OF PLATE,

For description, see article CRINOIDEA.

Prolongations of these latter systems extend into the arms. These are outgrowths of certain vertical rows of the calvx plates, termed the 'radials,' and are capable of free movement In many of the earlier, more primitive crimods, like Pisocrinus, the arms are simple, in the more specialized forms, Pointainus, they are quite complex and fork frequently. In all crimods the arms bear pinnules and are provided with cilia. The feathery branches of the arms serven food from the water, while the cluated grooves transport the food to the mouth through the food grooves, which are continued over the ventral surface from the bases of the arms to the mouth opening.

The ventral surface of the calyx in modern genera is usually covered by a tough skin, but in the Paleozoic forms it was often covered by a superficial "vault' or "tegmen" of calcareous plates The mouth is then underneath the tegmen or ventral covering and communicates with the food grooves of the arms through closed stony tubes In these genera the plates of the vault are often so arranged as to form an elevated "proboscis" (Batoorinus), at the summit of which is the anal opening, which is thus placed above the ends of the arms. The crinoid stem is attached to the base of the calyx, and consists of calcareous plates loosely jointed together to allow of a considerable degree of flexibility. Increase in the length of the stem is accomplished by the growth of new columnar plates between the base of the calyx and the top of the column In form the columnar plates are discoid and of circular or pentagonal outline, and all are pierced by a central cavity through which passes the neurovascular canal of the column. Most crinoid stems are furnished at their lower ends with rootlike branches that serve to anchor the animal in muddy or sandy bottoms, others, Aprocruus, have a disklike expansion that is cemented to rocky surfaces, and one genus (Soyphiocrinus) was fixed in the mud by large spherical bulbs, described as Camarocrinus, and until recently considered as floats of crinoids. Several genera, especially in later geologic and modern times, have columns supplied with lateral branches, called "cirri," which are similar in construction to the stem itself. The pentacrinids have the longest stems known, some of the fossil forms from the Upper Lias rocks of Wurttemberg having been found with stems ranging from 15 feet to the extraordinary length of 50 feet Many of the crinoids with stems seem to have been fixed in their early stages only and detached in maturity Some forms of crinoids, such as Agassizocrinus of the Carboniferous, Uintacrinus of the Cretaceous, and Antedon of secent seas, have no stem and are freeswimming animals, using their arms for loco-motive purposes Uintacrinus is the most remarkable of these, for, with a body only 2 or 3 inches in diameter, it has delicate feathery tentacles nearly 6 feet long, that served both as swimming organs and as food screens Living Antedon, without a stem, has a whorl of cirri at the base of the calyx, and by means of these it anchors itself to the bottom In other stemmed forms, as Woodocrunus from the Carboniferous, the base of the stem appears never to have been attached, as it ends in a simple point

The development of Crinoidea is known for only one genus, Antedon, the feather star, and this cannot be considered as typical of the class as a whole, as it presents a case of regressive

development Antedon appears from the egg as, an elliptical free-swimming larva that is crossed by four transverse idges, has a posterior bundle of bristles and a lateral mouth, and resembles in many respects an annelial larva. This laiva increases in size, and inside of it develops an animal with the form of a cystoid, with a head of loosely jointed perforated plates, a column, and a basal columnar plate. For a time this stalked larva is attached, and it resembles a primitive crinoid, but soon the stem is absorbed, and the animal assumes the form of the adult free-swimming Antedon Almost nothing is known of the ontogeny of the host of fossil crinoids.

Habits and Distribution. The modern Comatulidæ, like Antedon, Actinometra, etc., have a very wide distribution, and are usually found in waters less than 150 fathoms in depth, although one species of the Antedon has been dredged from the great depth of 2900 fathoms The habits of Antedon are best known It is a gregarious animal, and Verrill has obtained 10,000 individuals in a single trawl in the north Atlantic It lives mostly in the upper layers of the water, but when exposed to the direct rays of the sun, it curls up its arms and sinks When clinging by its cirri to a coral or rocky point and disturbed, it releases itself immediately and swims away by graceful movements of the arms, or crawls on its arms like a spider over the bottom. Sudden changes of temperature stun it, it sinks to the When these animals find bottom and soon dies themselves in uncomfortable surroundings, as when taken in the dredge and placed in aquaria, they drop off their arms, which break at specially fused joints, called "syzygies," but the arms are restored through regeneration if the crinoid survives The stalked crinoids are also gregarious animals, but they are more restricted in their distribution and inhabit deeper waters The majority of fossil stalked crinoids are found in rocks that were undoubtedly comparatively shallow-water deposits, and because the calcareous plates of the calvx, and to a lesser degree those of the stem, fall readily apart after the death of the animal, perfect specimens are quite rare The food of crinoids has been ascertained to consist of minute crustaceans, diatoms, spores of algæ, foramınıfera, and radiolarians.

Fossil Crinoids. About 175 genera and 2000 species of fossil crinoids are known They appear first as very simple forms in Ordovician rocks, and they increase rapidly, becoming important elements of the faunas in the Silurian, Devonian, and Carboniferous periods In some regions they were exceedingly abundant, for their fossil remains form great beds of limestone known as "crinoidal" or "enerinal limestone," which are found in formations of various ages In the Silurian system alone, about 400 species, distributed among 70 genera, have been obtained from mostly three localities the island of Gotland, the Wenlock of England, and the Niagara group of North America. Some of the more characteristic genera are Piscorinus, Crotalocrinus, Calceocrinus, Callicrinus, and Eucalyptocrinus. In the Devonian system some localities have yielded good material The Lower Carboniferous rocks of the upper Mississippi valley are the most renowned sources of fossil crinoids The shaly limestone beds at Burlington, Iowa, and Crawfordsville, Ind, have furnished hosts of finely preserved specimens, which are to be seen in geological collections all over the world

The Mesozoic rocks of Europe, especially the Lassic and Jurassic, have furnished some fine examples of Enciusis, Apiocrisus, and the pentacrinids, but the rocks of this era in America hold only rare occurrences of members of this class. The only find of note—and that was one of great importance—was that of Unitacrisus in the Cretaceous chalk of western Kansas. The Tertary rocks seem to be poor in fossil remains.

of this group

Bibliography. General descriptions of the class, and notes on the habits of the animals, can be found in Agassiz, Three Cruises of the Blake, vol ii (Boston and New York, 1888); Walther, Einleitung in die Geologie als historische Wis-Emilierum in die Geologie dis Instortsach Pis-senschaft (Jena, 1893-94), Neumayr, Die Stamme des Thierreiches, vol 1 (Vienna and Prague, 1889), Parker and Haswell, Teatbook of Zoology, vol i (London and New York, 1897); Carpenter, "Report on the Crinoidea," in Challenger Reports, Zoology, vol x1, No. 26, and vol xxvi, No. 60 (London, 1884-88). ECHINODENIANA. CYSTODEA, PENTREMITES
CRIN'OLINE (Fr., from Lat crune, harr +
lunum, flax). A name originally given by French
dressmakers to a fabric made of horsehair,
capable of great stiffness, and employed to distend women's attire, it is also apphed in a general way to those structures of steel wire or
hoops by means of which women some years ago
were able to wear skirts of extraordnary size at
the bottom. The first device for producing an
expansion of the dress skirt is the furdingale,
introduced by Queen Elizabeth. Walpole, in his
fancy descriptions of her, speaks of her "enormous ruff and vaster fardingale." The upper
part of the body was meased in a cuirass of
whalebone, which was united at the waist with
the equally staff fardingale of the same material,
descending to the feet, without a single fold, in
the form of a great bell. In the end of the reign
of James I thus fashiom gradually declined, and,
as a result of the Puritan feeling in the time of

Charles I and Cromwell, it quite disappeared It is next heard of in 1711 as "that startling novelty the hoop petticoat," which differed from the fardingale in being gathered in at the waist About the year 1796 hoops were discarded in private life, but were still the mode at court, where they flourished until the time of George IV, when they were abolished by royal command

The next development of this fashion, about the middle of the nineteenth century, began with crinoline in its original and proper sense, first in the form of the 'bustle" in the upper part of the skirt, then the whole petticoat. The hoops were sometimes made with a circumference of four and even five yards. At last, after indignation and ridicule had for years assailed the monstrosity in vain, and when people had ceased speaking about it, the inflation began, about 1866, without any apparent cause, to collapse, and, rushing to the opposite extreme, ladies might be seen walking about as slim as if merely wrapped in a morning gown. At the close of the nineteenth century the name "crinoline" was applied to a cotton gauze stiffened with a dressing of glue and sold by the yard for use by milliners and dressmakers

CRINUM (Neo-Lat, from GK. spiror, krunon, lily) A genus of bulbous-rooted plants of the family Amarylludaese, having long tubular flowers. It contains about 80 species, natives of different tropical and subtropical countries, generally with umbels of large and beautiful flowers, some of them among the most admired ornaments of our hothouses. Crimum amabile, an Indian species, is much esteemed. The plants are mostly cultivated in greenhouses, although Crimum longifolum is semilardy and, with slight protection, will endure the winters as far north as Washington Numerous hybrids have been produced, some of them of exceeding beauty and possessing exquisite perfume Crimum amaricanium is a native of Florida.

CRIP'PLE CREEK. A town and the county seat of Teller Co, Colo., about 20 miles (direct) west-southwest of Colorado Springs, on the Midland Terminal and the Florence and Cripple Creek railroads (Map. Colorado, D 3) It was founded in 1890 as a mining town, developed rapidly after 1893, and was nearly destroyed by fire in 1896. The district in which it is situated is a complete network of gold-bearing veins, and mining gave rise to the subsequent founding of Victor, Altman, Goldfield, and other near-by towns The mining district covers an area of about 6 miles, of which only about one-tenth has been developed. The total gold output of this region up to 1914 was more than \$300,000,000. The mines have attracted the attention of metallurgists, owing to the peculiar nature of the ores, which has necessitated new methods of treatment. The completion of the Roosevelt Drainage Tunnel in November, 1910, at a cost of \$750,000, solved the problem of unwatering the mines and made deep mining possible Cripple Creek, at an elevation of 9800 feet, is known also for its scenery and healthful climate Pop. 1900, 10,147, 1910, 6206, though the whole district contains about 20.000

CRIPPLEGATE. An ancient London gate, probably dating from the restoration of the walls by King Alfred in 886. It is said to have taken its name from the lame beggars who congregated there, in 1010 a b, to touch the body of Edmund the Martyr as it was passing

through It was twice rebuilt, and was pulled down in 1760. The name was also applied to the district round it

CRISA, or CRISSA See DELPHI

CRISTELD. A city in Somerset Co, Md, about 100 miles (direct) south-southeast of Baltimore, with which it is connected by a steamship line, on the New York, Philadelphia, and Norfolk Railroad, and on Chesapeake Bay (Map Maryland, O 9) Oyster and crab packing is the leading industry. Crisfield was incorporated as a city in 1910. It contains a marine hospital Pop., 1910, 3468

CRI'SIS (Lat, from Gk kplois, krisis, decision, from kpluein, krinein, Lat cernere, to de-A name used by the older physicians to denote the rapid or sudden determination of an acute disease in the direction of convalescence or of death It is opposed in signification to "lysis" (luo, I relax), which denotes the gradual subsidence of the symptoms and improvement in condition in most chronic and in some acute diseases. The doctrine of crises was closely bound up with that of a materies morbi, or material of disease, in the blood, which was presumed to be undergoing changes, during the whole course of the malady, tending to an evacuation of some kind from the system in the form of a critical discharge (apostasis, or abscess), which, when observed, was supposed to contain the matter of disease in a state of coction and to be the direct cause of the sudden relief of the patient Thus, according to the character and seat of the critical discharge, it was common to speak of a crisis by sweating, by diarrhea, by expectoration, by urine, by parotid swellings, etc., and no crisis was considered regular that was not attended by some symptom of this kind Another curious doctrine associated with that of crises was the belief in certain days as ruling the beneficent or injurious, the complete or incomplete, character of a crisis The seventh, fourteenth, and twentieth (according to some, the twenty-first) days of the disease were regarded as eminently critical, less so, but still favorably critical, were the third, fifth, eleventh, and seventeenth, the fourth day was the indicator of a complete crisis on the seventh, the sixth day was the tyrant, notorious for unfavorable crises, the second, eighth, tenth, thirteenth, and the rest were noncritical Physicians now use the term in diseases which run a certain course, such as typhoid fever and pneumonia, and then chiefly in relation to the temperature A fever is said to fall by crisis when it reaches the normal in a few hours, by lysis, when it takes three or four days gradually to disappear.

CRISIS. A series of patriotic writings, 14 in number, published by Thomas Paine at Philadelphia during the Revolution They appeared at intervals from 1775 to 1783

CRISIS, ECONOMIC. A term employed by economic writers somewhat loosely to designate either the acute phase or the whole course of the disturbances in economic life which have characterized the last century and which have recurred with such frequency as to make them appear inevitable results of the modern industrial order. The phenomena involved are so complex that they must be described rather than defined

The salient fact in the economic history of recent times is the "business cycle," or the alternation of prosperity and depression, of good

times and bad A period of prosperity with expanding business, great activity in production and commerce, is followed by a period in which some enterprises, then others, find costs advancing so rapidly as to encroach upon profits Contraction of operations follows, with decline in demand for materials and labor, and with resulting embarrassment for the industries supplying material, and declining demand for products intended for general consumption. Thus the distress extends in widening circles until it affects eventually the whole business system The process of readjustment may be gradual, or it may be greatly accelerated by the failure of a great banking house, an event likely to drag down other banking and mer-cantile firms. Such an event results in widespread uncertainty and suspicion, creditors de-mand the payment of claims, debtors, even though solvent, find the banks unwilling to provide means of payment Panic rules, and for a time the whole mercantile structure threatens to collapse From such a shock business recovers but slowly, its activity is reduced to the lowest ebb, and some time elapses before the restoration of confidence takes place This period of depression is much more pro-longed than the acuter phase which precedes it After a time business revives and begins to Prices rise, and activity becomes A wave of prosperity again appears greater which seems to carry everything before it until 1t, 1n turn, is checked suddenly, and a new crisis is at hand Lord Overstone, in an oft-quoted passage, describes these successive phases as follows: "State of quiescence, improvement, growing confidence, prosperity, excitement, overtrading, convulsions, pressure, stagnation, distress ending again in quiescence?

This related sequence of phenomena is now generally known as a business cycle. The term "crisis" is often employed to cover the whole part of the cycle in which hard times prevail It is, however, more properly applied to the point in the process when contraction proceeds rapidly and liquidation becomes fairly general The long period of stagnation that usually follows is properly denominated by the term "depression" The term "panic" is often used interchangeably with "crisis," but it is more properly restricted to an acute phase, not always appearing in crises, when the consciousness of impending disaster is widespread, and leads to more or less unreasoning acts calculated to aggravate the conditions dreaded.

Crises are designated as financial, commercial, and industrial These qualifying phrases mark the places in the economic organism where the disturbance is felt. In a purely financial crisis the stock market is the storm centre, the disturbance affecting but slightly commercial or productive enterprises A commercial crisis is of wider area and embraces the trading classes, while an industrial crisis extends its baneful influence to producers in all lines of agriculture, manufactures, and the like These expressions do not designate so much different classes of crises as crises of different degrees of intensity, inasmuch as an industrial disturbance will always imply disturbance in trade and the money market, while trade upheavals imply commotion in the money market, though a financial panic does not necessarily imply the others

While crisis and depression are usually associated, this is not always the case Panic and CRISIS

27:

crises may occur, and after a brief interval affairs may prosper as before. This is particularly true of the purely financial crises, which are not deep-rooted enough to affect wider areas. The crisis in its larger sense, however, is invariably followed by hard times. It should be observed, moreover, that crises may be local or general, and while they have many points in common, it is particularly the latter with which we have to deal

General crises affecting the economic situation of an entire country, and extending themselves to other countries which have trade relations with the former, are peculiarly a mark of the modern organization of business A century ago bad harvests or other calamities might cause local distress, or speculation such as was exhibited in the days of the South Sea Bubble and the Mississippi Scheme might cause a pane, but such occurrences did not show the pertinacity and wide-reaching effects which characterize the modern industrial disturbances. That such crises are inevitable consequences of modern methods of doing business and inseparable from the economic activities of our times, seems to be well established by their frequent recurrence and by their greater severity in the most advanced nations

These more or less pronounced occurred in England in the years 1815, 1825–26, 1836–37, 1847, 1857, 1866, 1873, 1890, 1900, and 1907, while in the United States like disturbances were felt in 1814, 1818–19, 1837, 1857, 1873, 1884, 1889, 1903–04, and 1907 The perodicity of these occurrences is marked, and certain writers have gone so far as to establish a normal interval of 10 or 12 years between crises. The facts as far as we know them do not warrant us in fixing any absolute rule, though the history of these crises reveals many common features.

It will further be observed that the dates given for Great Britain and our own country coincide in several instances, and if space permitted us to draw upon the history of Belgium, Holland, France, and Germany, further coincidences would be obvious. Certain crises, notably that of 1873, were felt quite generally The actual crash did not occur in the same month, or even in the same year, in all the countries involved, but it is a frequent occurrence that local circumstances may, hasten or postpone an event for which the general conditions are preparing

The concrete manifestations of a crisic can best be studied in an historical instance, and none is better adapted for this purpose than the crisis of 1873 in the United States. With the close of the Civil War an extraordinary activity in all lines of entenpies was manifested The public lands had been thrown open to settlement, and large tracts had been granted to the Pacific railroads. This, together with the return of the army to the pursuits of peace, and an enormous increase in immigration, was the condition for an era of speculative development in the Western States. The impulse which had been given to manifactures, not only by the highly protective duties which marked the war tarriffs, but also by the depreciation of the currency, which acted as a check upon foreign competition, caused a similar activity in the manifacturing States of the East. Business prospered, prices and profits were high. The census of 1870 showed

in every branch of industry a great advance over that of 1860, and the greater part of this advance was in the latter half of the decade Nowhere was this confidence in the future shown more than in railroad building and in the iron industry In 1867 there were 2249 miles of railway constructed, in 1869, 4615, in 1871, 7379. A like expansion of railways had marked the approach of the panic of 1857. In like manner, the outlay for constructing railways rose from \$271,310,000 in 1864-68 to \$841,260,000 in 1869-73. The consumption of pig iron, which had been 1,416,000 tons in 1868, rose to 2.910,000 tons in 1873 High prices ruled. maximum prices in the period following 1860 were, it is true, attained in 1866, but if they fell in the years 1867 and 1868 it was only to rise again to a point nearly equal to that of 1866 in 1871 and 1872. The activity in the commercial centres is reflected in the rise of clearings in the New York Clearing House from \$28,000,000,000 in 1868 to \$35,000,000,000 in The foreign trade of the United States 1873 showed a like activity, the aggregate of exports and imports rising from \$639,000,000 in the fiscal year 1868 to \$1,165,000,000 in 1873. But even more significant of the expansion of activity in the United States was the fact of increased importations from abroad In 1870 the imports exceeded the exports by \$43 00,000, but in 1872 this excess had become \$182,000,000 and in 1873 \$120,000,000

The crisis of 1873 is usually dated from the failure of Jay Cooke & Co, September 18. The Stock Exchange of New York was closed on the 20th and was not reopened until the end of the month. Clearing House loan certificates. were issued in large quantities There had been certain premonitory symptoms of the approaching collapse. Railroad building reached its highest point in 1871, pig iron its highest price in September, 1872. The crisis lasted a few months only, the last Clearing House loan certificates being redeemed Jan. 14, 1874 But there followed a long period of depression, which reached its lowest point three years later. The activities which had marked the previous era were not entirely stopped, enterprises begun had to be finished to save what was already invested, the daily needs of the people must be met, but all enterprise was timid and cautious buoyancy of the previous years was gone, and new enterprises were not undertaken Railroad construction fell off, and in 1875 reached a minimum of 1711 miles, while in the period 1874-78 the outlay for construction was only \$357,000,000. Prices fell until 1879, to rise thereafter until 1882. The consumption of pig non declined until it reached 1,900,000 tons in 1876 Clearings in New York City fell off from \$35,000,000,000 in 1873 to \$23,000,000,000 in 1874, and reached their lowest point since 1863 at \$22,000,000,000 m 1876 In foreign trade the excess of imports disappeared in 1875

Every crisis, panie, and depression is marked by analogous characteristics. Whatever data are appropriate to show expanding conditions and an inflated condition of business at any particular time and place will exhibit a similar showing. In the United States, particularly since 1840, raiload construction has been a favorite index of conditions, but before the crisis of 1837 similar activity was shown in canal construction. Before the panie of 1826, in England, there were large investments in

273 CRISP

manufacturing establishments, while the panic of 1893 was preceded by reckless investments in foreign countries

As the year 1873 marks the outbreak of the cruss, so the year 1876 serves to mark the lowest pount in the subsequent depression. The whole story of the crisis, its antecedents and results, is succinctly told in the statistics of business failures, as reported by R. G. Dun & Co., as follows

YEAR	Number	Labilities
1869 1870 1870 1871 1872 1873 1874 1875 1876 1880 1880 1880 1883	2,799 3,546 2,915 4,069 5,183 5,830 7,740 9,092 4,735 6,738 9,184	\$75,054,054 \$8,242,000 \$8,252,000 121,056,000 121,056,000 201,000,000 101,17,786 65,752,000 101,547,564 172,874,172 226,343,427
1885	10,637	124,220,321

A period of depression cuts down the existing stock of goods, and the retrenchment of production, coupled with the constant increase of opulation, creates a void in the market. To fill this there is a renewed activity, as prices begin to rise, existing plants find it difficult to meet the demand. Plants are remodeled and extended. Preparation for future production on a large scale takes place. Large investments of fixed capital are made in Duildings, machinery, and the like, and those branches of industry which chiefly serve the purposes of construction, such as the iron industry, make extraordinary advances. Mills and railroads are built to supply an anticipated demand. This is usually overdone, and the facilities of production increase more rapidly than the effective demand for products. Credit is unduly expanded, and it is natural that the money markets feel the first shock when the inevitable readjustment takes place.

While the phenomena of a crisis and its attendant consequences are generally recognized, the widest variety of opinion exists as to the causes of such economic disturbances are prone to lay stress upon local or temporary conditions, and to generalize from them truth, the phenomena of a crisis are so com-plex, and the conditions which may aggravate it so numerous, that it is not surprising to see the latter considered as primary causes speculation, the currency, the tariff, bad harvests, have all been made responsible for crises These are frequently concomitant forces impelling a crisis, but crises are so numerous that there must be some deeper underlying cause. It is in the countries that are economically farthest advanced that the successive phases of the business cycle are most clearly marked. Where production is organized on a small scale, and is chiefly dependent on a local market, similar fluctuations do not appear. Students of crises are agreed that an important circumstance in connection with them is the extent to which credit is employed in industry In a period of prosperity prices rise, and with them, profits. On the basis of high profits credit is expanded to meet the need for new equipment, etc., and the expansion of credit gives further impetus to the rise in places. Within the expanding structure of industry and commerce certain stresses appear. The full employment of labor raises wages and reduces the efficiency of labor, the great demand for loans produces a rise in the rate of loan interest In the period of good times the vigilance of managers is relaxed, and many small wastes accumulate The existing volume of currency becomes madequate to effect the exchange of the increasing volume of products at prices, bank reserves decline, and bank loans are curtailed. The gains of prosperity are not uniformly distributed, some prices are kept from rising by public regulation or custom, others by circumstances peculiar to each These industries, however, feel the effect of advancing costs and advancing interest rates They are the first to show signs of weakness In the end the various stresses become so great that the structure collapses

Certain features of crises are clearly traceable to local conditions. In recent years the United States alone of the great nations has suffered from panies in time of crisis. This fact is ascribable to the want of an elastic and centrally controlled currency system. With the adoption of an improved system of banking (see Bank, Banking) it is believed that this distressing

Whether it will be eliminated
Whether it will be possible to reduce the frequency and severity of crises through legislative measures is still a disputed point It has been proposed to manipulate the funds devoted to public improvements in such a way as to create employment and demand for materials in time of crisis and depression. It has also been proposed, by Prof Irving Fisher, so to regulate the money supply that general prices will remain practically stationary. Many beheve that a more thoroughgoing publicity in matters pertaining to industry and finance will reduce the extent of ill-advised investment, and hence check the development of stresses in the industrial structure At one time it was be-lieved that trusts and similar forms of organization would make for stability in prices and hence prevent the recurrence of crises Hence it was proposed to give state support to the consolidation movement, instead of attempting to check it, as now But recent crises in the United States and Germany indicate that trusts and cartels have not perceptibly reduced their severity Most observers of the phenomena of severty Most observers of the phenomena of crises have little faith in any proposed method of checking them by law, so long as enterprise is so completely dominated by motives of private profit as at present.

Bibliography. Consult "Industrial Depressions," First Annual Report of the United States Commissioner of Labor (1886), Von Bergmann, Geschichte der nationalokonomischen Krisentheorien (Stuttgart, 1895), Veblen, Theory of Business Enterprise (New York, 1904), Jones, Economic Crises (th. 1901), Burton, Financial Crises and Periods of Industrial and Commercial Depression (th. 1902), Lescure, Des crises générales et périodiques de surproduction (Paris, 1907), Hull, Industrial Depressions (New York, 1911), Mitchell, Business Cycles (Gerkeley, Cal., 1913)

CRIST, CHARLES FREDERIO (1845-96) An American jurist and politacian He was born in Sheffield, England, but came to the United States when a child He served in the Confederate army from 1861 to 1864, when he was made a prisoner He was admitted to the bar in 1866, and served as Solicitor-General of Georgia from 1872 to 1877, and as judge of the Superior Court from 1877 to 1882 From this time until his death he was a Democratic member of Congress and from 1891 until 1895 was Speaker of the House

CRISPI, krė'spe, FBANCESCO (1819-1901). An Italian statesman, born at Ribera, in Sicily, Oct 4, 1819 He studied law at Palermo and was admitted to the bar there and in 1846 at Naples He took an active part in the Siellian uprising of 1848 and after its disastrous issue engaged in journalism in Piedmont In 1860 he aided Gailbaldi in his expedition for the deliverance of the Two Sicilies He became the first representative of Palermo in the Italian Parliament, began immediately to play a prominent rôle, and, after having been the leader of the radical Left, became an exponent of monarchical constitutionalism. In 1876 he was elected President of the Chamber of Deputies. To promote the interests of his country, he

visited the European courts in the following year and soon after was made Minister of the Interior Denounced by his opponents on a charge of bigamy, he was obliged to resign in 1878 and, although acquitted, did not take office again until 1887, in the cabinet of Depretis, after whose death, in the same year, he became head of the cabinet and Minister of Foreign Affairs He was an earnest advocate of the Triple Alliance (q.v) between Germany, Italy, and Austria, and in his endeavor to strengthen it visited Bismarck at Friedrichsruhe in 1887 and accompanied King Humbert to Berlin in 1889, conferring also with Caprivi at Milan in the following year. His policy was approved by an overwhelming majority of the electors in 1890, but his ministry was overthrown on a matter of financial policy in February, 1891. He now resumed his law practice in Rome, and in the Chamber of Deputies led the Opposition against his successor in office, the Marquis di Rudini. In 1893 he resumed the office of Premier, and held it till the defeat of the Italians in Abyssina in 1896, when he was again succeeded by Rudini (qv.) In March, 1898, he resigned his seat in the Lower Chamber as a result of the charges brought against him in connection with extensive swindles perpetrated on the Banca d'Italia. Save for a few articles which he published in favor of the Triple Alliance, he took no further active interest in affairs, and he died on Aug 11, 1901, at Naples Crispi was the greatest statesman that southern Italy gave to the united kingdom. In his lifetime he was much misunderstood and maligned Distrusted by the Conservatives as a Radical and Republican, he incurred the hostility of the Republicans by his famous dictum in his letter to Mazzim, March 18, 1865, "Monarchy unites us, while a republic would separate us." From that time he was a firm supporter of the monarchy, but never a friend of the court Consult Stillman, Francesco Crispi, Insurgent, Earle, Revolutionist, and Statesman (London, 1899), T. Palamenghi Crispi, Francesco Crispi, questioni internazionali (Milan, 1913), also the translation of his memoirs into English by

Agnetti (London, 1912) CRIS'PIN. A saint and martyr of the third century, who was descended from a noble Roman family. With his brother Crispinianus, he fled during a persecution of the Christians from Rome to Gaul, where he worked as a shoemaker in Soissons and distinguished himself by his exertions for the spread of Christianity as well as by his works of charity According to the legend, his benevolence was so great that he even stole leather to make shoes for the poor! From this, charities done at the expense of others have been called Crispinades year 285 or 286 he and his brother suffered a cruel martyrdom Both brothers are commemorated on the 25th of October Crispin is the universally recognized patron saint of shoemakers Consult Butler, Lives of the Saints, for October 25, The Accurate History of Crispin and Crispinianus, the Royal Shoemakers (Dublin, 1816), Saint Crispin and the Gentle Craft (London, 1868)

CRISPIN. 1. The old name for shoemakers, applied to them from the fact that St Crispin was their patron saint 2 A conventional character in French comedy

CRISPINO E LA COMARE, krē-spē'no a la kō-má'rā (It. The Cobbler and the Fairy). An opera by Ricci, first produced in Venice, Feb 28, 1850, in the United States, 1861 (New York). CRISS CROSS ROW. See CHRIST CROSS

CRISTINOS, kre-ste'nos (Sp., adherents of Christina) A political party in Spain during the regency of Queen María Christina, mother of Isabella II. They were opposed to the Carlists and upheld the Pragmatic Sanction of Ferdinand VII (qv), by which the crown of Spain was made inheritable in the female line They were also known as Isabelinos

CRISTÓBAL DE LA LAGUNA. GUNA

CRISTOFORI, krë-stô'fô-rë, Bartolommeo (1655-1731). An Italian harpsichord maker, and the inventor of the hammer action used in the modern pianoforte He was born in Padua After manufacturing instruments in that city until about 1687 he was persuaded by Prince Ferdinand, son of the Grand Duke Cosimo III, to remove to Florence An authentic grand pianoforte made by the inventor in 1720 is said still to be preserved in Florence. See Piano-FORTE

CRISTOFORO COLOMBO. An opera by Franchetti (qv) first produced in Genoa, Oct 6, 1802, in America, Nov. 20, 1913 (Philadel-

CRISTUS, PETRUS (?-1473). A Flemish century He was born painter of the fifteenth century at Baerle, date unknown, and may have been a pupil of Jan van Eyck, who in any case influenced him strongly As regards perspective and the treatment of landscape, Cristus is a step in advance of Van Eyck, in all else he is greatly inferior His work is recognizable by the masklike appearance of the faces His works include the portrait of Edward Grimverulam, a Madonna in the Stadel Institute, Frankfort, "St Eligius," in the Oppenheim Metropolitan Museum, New York, "A Virgin and Child" and "The Deposition from the Cross," formerly attributed to Jan van Eyck, are now assigned to Cristus

CRITCHETT, R. D See CARTON, R C CRITIAS, krish'i-as (Lat, from Gk Kpirlas, Kritias) (2-403 BC) An Athenian orator and

poet, the pupil both of Socrates and of Gorgias of Leontini He was a leader in the oligarchical party at Athens and was exiled after the downfall of the Four Hundred in 411 BC After the subjugation of Athens by the Spartans he returned, and in 404 became head of the Committee of Thirty, known as the Thirty Tyrants, and was notorious for his cruelty. In 403 he was killed in battle, in the general revolt led against the Tyrants by Thrasybulus (qv.) His activity was varied in the fields of oratory, tragic and elegiac poetry, and historical prose. Fragments of his elegies are in Bergk, Poetw Lyrici Græci, vol ii (Leipzig, 1900), of his historical work, in Muller, Fragmenta Historicorum Græcorum, vol 11 (Paris, 1868-83)

CRIT'IC, THE. A three-act farce by Richard Brinsley Sheridan in imitation of Bucking-ham's Rehearsal, produced at Covent Garden in

CRITICAL POINT. Experience shows that there is for every gas a certain temperature above which it cannot be liquefied, no matter how great the pressure exerted upon it Thus, above 31 1° C (87 98° F) it is impossible to liquefy carbonic acid gas, water cannot exist in the liquid state above 374° C (705° F), etc Such temperatures are termed the critical points or critical temperatures of substances. vapor pressure of a liquid at its critical temperature is termed the "critical pressure," and the specific volume of the substance at the critical temperature and under the critical pressure is termed the "critical volume"

The following table gives the critical temperatures and pressures for some of the more common substances (the critical pressures in terms of pounds per square inch may be obtained approximately by multiplying the pressures given in the table by 15)

BUBSTANCE	Critical temperature (centigrade)	Critical pressure (in atmospheres)	By whom and when determined
Acetic scid	+327 11°	57 11	Young (1910)
Acetone	+232 8	52 2	Young (1910) Sajotschewski (1878)
Acetylene	+ 35 5	61 6	Cardoso (1910)
Alcohol	1 243 1	62 96	Young (1910) Dewar (1884)
Ammonia gas	+130 0	1150	Dewar (1884)
Amyl acetate	+326 18		Brown (1906)
Amyl alcohol	+348 0		Guldberg (1882)
Argon	-1174	52 9	Ramsay and Travers (1901)
Benzene	+288 5	47 89	Young (1910)
Bromine	+302 2	l	Nadeidin (1885)
Carbolic seid	+419 2	1	Radice (1899)
Carbon dioxide	+ 31 10	73 00	Dorsman (1908)

CRITICAL ANGLE. See LIGHT CRITICAL PHILOSOPHY, or CRITI-CISM The name applied to Kant's philosophy. because it was not willing to accept all dicta that seemed to have the support of reason (see DOGMATISM), but sought critically to investi-gate the conditions of the possibility of knowl-edge and rejected all so-called knowledge that did not conform to these conditions KANT

The critical temperature of a liquid is usually determined by introducing the liquid into a strong-walled glass tube about 3 or 4 milli-meters in internal diameter. The tube is sealed at one end and drawn out to a thin capillary at the other end It is at first filled with the liquid completely, then about one-third of the liquid is allowed to boil away, and the capillary end is sealed off without allowing the air to The two-thirds-full tube is now placed

in an appropriate bath, and the temperature is gradually raised. As the critical point is approached, the liquid meniscus is seen to become fainter and fainter, and when the critical temperature is reached, the meniscus disappears altogether. For a short time the tube looks as if filled with a cloud of blush smoke in up and down commotion, then this too disappears, and the contents of the tube are perfectly homogeneous all is vapor. If the temperature is now allowed to fall, a similar phenomenon occurs as the critical point is reached from above, the meniscus reappears, and the contents of the tube are again divided into two layers, liquid and vapor. In this manner, if the liquid is only pure enough, the critical temperature can be determined within a tenth of a degree A convenient modification of the method has been recommended by Kinetsch, according to whom the glass tube as described may be replaced by a thin glass capillary—which icquires, of course, less liquid for a determination and is easier to manipulate

A simple method for determining the critical pressure was devised in 1893 by Altschul in Ostwald's laboratory A strong-walled capillary tube of glass is filled, half with the liquid under consideration and half with mercury. The upper end is sealed, the lower (mercury) end is firmly connected with a narrow copper tube filled with paraffin oil and leading to a small pump which is likewise filled with oil. The pump is also connected with a spring gauge indicating pressures within a tenth of an atmosphere Now the extreme upper end of the glass tube is heated above the critical temperature of the liquid, so that the liquid within the tube becomes divided into two portions— an upper which is completely gasified, and a cooler lower one which remains liquid as a general rule, there is no meniscus between the two portions. If, however, the pressure is now gradually raised, a moment arrives at which the meniscus appears at a certain point in the tube, viz, at the point where the temperature is equal to the critical temperature of the liquid For at that temperature and under the critical pressure liquid and vapor are in equilibrium and there-fore normally separated by a meniscus. The critical pressure sought is thus the pressure at which a meniscus appears in the fluid

The cutical temperature, as well as the critical pressure, of maxtures is usually intermediate between those of the components, and according to Pawlewski's rule each component contributes its property in proportion to its percentage amount in the mixture. This rule, however, is only a rough approximation to the truth. A similarly crude empirical rule is that of Guldberg, according to which the critical temperature of a single liquid (on the absolute scale, i.e., in centigrade degrees plus 273) may be calculated by multiplying the temperature of the boiling point (again on the absolute scale) under normal atmospheric pressure by 155. For instance, the boiling point of ether is 35° C, or 35 + 273 = 308° absolute 308 × 155 = 477 4, 477 - 273 = 294°, and this should, according to Guldberg's rule, be approximately the critical centigrade temperature is only about 194° C, or 10° lower In some cases the agreement between Guldberg's rule and experiment is somewhat better, in other cases it is even worse.

As to the critical volume, the experimental determination is extremely difficult, and critical volumes are usually calculated on the basis of a reliable empirical rule found by Carlletet and Mathas and generally referred to under their names It must be remembered that when a liquid is ordinarily heated it expands as the temperature rises, i.e., its density continuously diminishes, at the same time the density of its vapor continuously increases, with rising temperature, therefore, the densi-ties of liquid and vapor tend to equalize, and finally at the critical point the densities become exactly equal This is why all difference between liquid and vapor, and with it the separating meniscus, disappear Cailletet and Mathias discovered that if the arithmetical means of the densities of liquid and vapor are plotted against the temperatures, the result is a straight line which at the critical temperature passes through the point indicating the critical density of the substance (and hence reveals also the critical volume) If, therefore, a few points are determined on this line at temperatures considerably below the critical point, where experimentation is still sufficiently convenient, the prolongation of the line to the critical temperature gives the desired density and volume, and the determination may be considered as quite reliable.

If two substances whose critical temperatures are respectively  $\theta_1$  and  $\theta_2$  are at two different temperatures  $T_1$  and  $T_2$  (all on the absolute  $T_1$ ,  $T_2$ ,  $T_3$ ,  $T_4$ ,  $T_5$ ,  $T_6$ ,  $T_7$ ,  $T_8$ 

scale), such that  $\frac{T_1}{\theta_1} = \frac{T_2}{\theta_2}$ , they are said to be

at the same "reduced temperatures" Similarly, substances are said to be under the same "reduced pressures" when the pressures under which they are placed are equal fractions of their critical pressure  $\pi$ , and  $\pi$ . Finally, they are said to have the same "reduced volumes" when their specific volumes are equal fractions of their critical volumes  $\phi_i$  and  $\phi_2$ . When at the same reduced temperature and under the same reduced temperature and under the same reduced pressure, substances are also said to be in corresponding states A number of interesting theorems are connected with these "corresponding states" It can be shown, e.g., that when substances are at the same reduced temperatures and pressures their reduced volumes, too, are the same Altogether the theory of corresponding states forms an important chapter of modern physical chemistry, even though many exceptions to it have been observed and not yet accounted for

The critical point of substances can be taken advantage of for passing from the gaseous to the liquid state of aggregation and conversely in a "continuous" way, i.e, without having to deal, at any moment during the process, with a mass consisting partly of liquid, partly of vapor, and hence having two different specific volumes. Thus, remembering that the critical temperature of carbonic acid is 311° C. and its critical pressure 73 atmospheres, let it be required to transform continuously a given amount of the gas into liquid. To accomplish this we may first heat the gas, say, to 35° C., raise the pressure, say, to 80 atmospheres, and then, keeping the pressure unchanged, let the temperature fall, say, to 20° C. we shall then find the substance entirely liquid, for a sudden liquifaction of the entire mass (with-substance).

vapor) will have taken place when, during the process of cooling, the temperature of 31 1 is reached At no moment will liquid have existed simultaneously with gas Similarly, if it should be required to transform continuously a given amount of liquid carbonic acid into gas. we might proceed as follows: lower the temperature, say, to 20° C, raise the pressure, say, to 80 atmospheres, and then allow the temperature to rise, say, to 35° C, we should then find the substance entirely gaseous, without, however, the mass having at any moment during the process consisted partly of liquid, partly of gas Continuous changes like those just described were at one time expected to break down the barrier between the gaseous and the liquid states of aggregation, and to permit of extending to liquids the simple gas laws For, at least at the critical point, liquids and their vapors are identical in physicochemical properties and must therefore be governed by the same laws

But the hope has not yet come true Consult Van der Waals, Die Continuitat des gasformigen and flussigen Zustandes (2 vols, 2d ed, Leipzig, 1899-1900). Simpler accounts of the subject may be found in the works on physical chemistry recommended in the article CHEMISTRY (qv). See also GASES, GENERAL

PROPERTIES OF, HEAT CRITICISM (Fr. criticisme, from Lat criticus, Gk κριτικόs, hritikos, critic, from κρίνειν krinem, to judge) Cliticism, as the art of judgment, whether favorable or adverse, is applicable in all fields of human accomplishment, and all inventions, all institutions, all life, are, broadly speaking, within its scope It is, however, with literature and with art that criticism has most significantly busied itself, with the result that the term has come to mean the interpretative study of these greatest expressions of man's nature The *Poetics* of Aristotle has for centuries been regarded as the first important work of criticism, and many of the rules there laid down have maintained their value to this day. Aristotle's manner of approach was the scientific method of induction, and his understanding of the fundamental laws of human nature, his perception of those traits, emotions, and desires which, transcending any age, belong to the men of all ages, underlaid and formed the firm basis of his criticism. Briefly summarized, Aristotle's chief doctrines were that all art and literature should have as function the pleasure-giving representation or "imitation" of what was universal—appertaining to all human nature, and not particularly or insignificantly individual, and that great art was measured by the high and lasting pleasure it afforded to society To study the impressive works that have stood the test of time—the Bible, Homer, Vergil, Dante, Shake-speare, Milton, and lesser but well-loved poets in the light of Aristotle's illuminating laws, is to discover how striking in its essence is the similarity in the greatest art, the sameness of man's soul, its passions and aspirations, remaining the keynote of art as it is of life

The technical side of criticism-questions of metrical and dramatic construction and minor points of style-was approached by Aristotle, and the systematic nature of the Poetics is probably the chief reason for the reaction that has now and again set in against what is sometimes termed purely academic criticism Yet it is just because Aristotle appreciated and

showed that all art must have laws that the student will find him so useful, more so even than Plato, whose lightning flashes of inter-pretation must be ranked with the highest creative critical literature. The critical writers after Aristotle are so numerous-Greek, By-zantine, Latin-and for the most part so occupied with the linguistic phase of composition, that one is glad to pass swiftly by all their rhetorical treatises until there looms up in the third century the figure of Longinus, whose refreshing enthusiasm for the beauty of letters places him above the mechanical student of The most important of his successors were Cicero, Horace, and Quintilian, whose observations on style have been of permanent service From the time of Quintilian to Dante there is no great name in criticism, nor is this to be wondered at when one reflects that the mediæval attitude towards literature was, on the whole, that of distrust and disapprobation, Dante's poetry has so overshadowed his critical treatises that there are probably many lovers of the Divine Comedy who have no conception of the interest of the master's reflections on poetic form and beauty, nor any knowledge of his limitations of the subject matter of great poetry to love, war, and virtue, or moral philosophy Of more service than Dante's treatises were the writings of the poets and critics of the Italian Renaissance Through them the classical tradition was passed on to England and to the rest of Europe; in art and literature, as in science and in politics, the Italy of the Renaissance was the great rejuvenator and originator in the realm of the intellect

In more modern times the names of Corneille, Boileau, Voltaire, Diderot, Hugo, and Sainte-Beuve in France, of Kant, Schiller, and Lessing in Germany, of Sidney, Pope, Addison, Dryden, Wordsworth, and Shelley in England, represent differing views and opinions leau's Art poétique, reminiscent of Horace's Ars Poetroa, and Pope's Essay on Criticism have their distinct value as volumes of often authoritative formal instruction, furnishing useful analyses of the different kinds of verse com-positions. Of far more worth is Sir Philip Sidney's Defense of Poesie (an essay richly reminiscent of the Italian Renaissance), wherein he quaintly reminds us that "though the poet cometh to you with words set in delightful proportion," yet "it is not rhyming and versing that maketh a poet." Lessing's great achieve-ment was to disperse the fog that Corneille had raised around the dramatic principles of Aristotle, and by clarifying the classic doctrines, to make possible their application to all art under modern conditions. And here, without going into any details concerning any presentday doctrines, even though they be so interest-ing as the evolutionary theories with which we readily connect the name of M. Brunetière, it may be well to suggest the wider paths open to criticism through modern conditions. The Greek and Roman critics had only their own work to study We of to-day have the dramas, the epics, the novels of many nations and ages The study of comparative literature, now possible, opens up opportunities for tracing those influences which affected the literatures of all Europe, and affords the student the chance of building up from varying yet interrelated sources a standard of criticism. The differences due to national character and individual genius

will teach him the limitations of hard and fast formal rules, while his faith in the fundamental canons of great art can only be made firmer by such comparative study. He will learn that criticism is of use as a method of judgment for the reader, rather than an inspiring guide to the poet, whose highest achievements are never the result of the rules whose vitality they attest. The critic who disregards the universal message of great art and, maintaining that there is no disputing concerning taste, claims for his personal opinion as much value as can attach to any judgment, rejects for his impressionistic mess of pottage the birthright of many ages of culture The subjective element of criticism is not, however, precluded by the positive laws revealed through the inductive method applied to works of art As Lowell pointed out in his essay on Don Quixote, a book is great in proportion to what can be gotten from it, and many an artist has builded better than he knew. The individual critic can be so keen and yet true in his interpretations and so inspiring in his expression as to make his criticism itself creative literature. The qualities which are necessary to the ideal critic are, therefore, not alone knowledge of human nature and of the characteristics of the literature which has endured, he must himself have true power of intuition, sympathy combined with impartiality in judgment, a rational appreciation of the relative importance of form and content, the sense of beauty which will enable him to judge style, and the capacity for making others see what he sees. Method and technique are al-ways valuable, and Americans have much reason to be grateful to Child and Ticknor and Longfellow for their contribution to America's scholarship, for criticism is to be thought of, first of all, not as a formidable and narrowing system, but indeed as a broad viewpoint, occupying the same relation to literature that literature holds to life, and as law is the condition of true liberty in life, so criticism is the bar to anarchy in literature. "We do not possess what we do not understand," said Goethe The true critic, like the rhapsodist of old, can be the connecting link between the artist and the public, leading his readers to understand the beauty of a work and so to possess it The technical beauty may well be a matter of formal development, but the emotional beauty and appeal rest on the basis of the essential oneness of human nature, whether in the days of Athens, of Rome, of London, or of New York

Criticism thus understood is freed from the charges to which certain critics have exposed It is not, on the side of form, a narrowing method of petty rules, but a rational study of fitting construction and adequate expression; on the side of content, its most lasting dicta are opposed to the contention of those who, like Ruskin, would make art a handmaiden of morality It does not restrict genius, because genius precedes it, and genius connotes the sense of form and beauty, and can but be aided by reference to the simple laws of formal beauty As the art of judgment concerning the fairest flowering of the human spirit, criticism has one of the highest of judicial functions, as the art of interpretation, admitting individual intuition and inspiring teaching, it has a creative function of wide and lofty worth

Consult the following representative works S. H Butcher, The Poetics of Aristotle (Lon-

don, 1898), H L Havel and Andrew Lang, Longinus on the Sublime (ib., 1890), Horace, Ars Poetica (translations are easily accessible), Sir Philip Sidney, Apologie for Poetrie (c 1581, and published subsequently as The Defense of Poesie, easily accessible in recent editions) English critical thought in the sixteenth and seventeenth centuries is well represented, with scholarly commentary, in G G Smith, Elizabethan Critical Essays (2 vols, Oxford, 1904), H Frye, Dryden and the Critical Canons of the Seventeenth Century (University of Nebraska, 1907), and Critical Essays of the Seventeenth Century (3 vols. CRITIQUE DE L'ÉCOLE DES FEMMES. krē'tēk' de lā'kôl' dā fam (Fr., criticism of the School for Wives) An amusing comedy by Mohere, produced June 1, 1663, written in defense of his earlier comedy, L'Ecole des femmes, which had been attacked by Le Visé, editor of Le Mercure galant, in the third series of his Nouvelles nouvelles It consists of a discussion of the merits of the former piece, chiefly carried on between a hypercritical marquis and an amiable chevalier.

CRITIQUE OF PURE REASON, kri-tek' (Ger. Kritik der reinen Vernunft) A philosophical work by Immanuel Kant (1781), the

basis of modern German philosophy CRITIUS. A Greek sculptor See HARMO-DIUS AND ARISTOGITON

CRITO (Lat, from Gk. Kpirw, Kriton). A wealthy friend and disciple of Socrates. He arranged for his master's escape from prison, but Socrates refused to take advantage of the plan Plato's dialogue representing the last conversation between Socrates and Crito bears the latter's name

CRIT'OLA'US (Lat, from Gk. Κριτόλαος, Kritolaos) A Greek philosopher, born at Pha-selis, in Lycia, in the second century BC. He succeeded Ariston of Ceos as the head of the Peripatetic school at Athens and acquired a high reputation as a philosopher and orator About 155 BC he went to Rome, and, with Carneades and Diogenes, obtained a remission of the fine of 500 talents which the Romans had imposed upon Athens for the destruction of Oropus. See Carneades

CRITTENDEN, George Bib (1812-80). An American soldier, the son of J J Crittenden (qv) He was boin at Russellville, Ky, graduated at the United States Military Academy in 1832, served with distinction in the Mexican War and was promoted to be lieutenant colonel (1856) He resigned and joined the Confederate army in 1861, was appointed major general, and was placed in command of southeastern Kentucky and a part of Tennessee For his defeat at Mill Spring (1862), however, he was censured He subsequently served as a volunteer, and from 1867 to 1871 was State Librarian of Kentucky

CRITTENDEN, JOHN JORDAN (1787-1863). An American statesman, born near Versailles, Ky He graduated at William and Mary College Ку in 1807, served in the War of 1812, was a United States Senator from 1817 to 1819, United States District Attorney from 1827 to 1829, and a United States Senator again from 1835 to 1841. In 1841 he was appointed Attorney-General by President Harrison, but resigned when Tyler became President, and was again in the Senate from 1842 to 1848, after which he was Governor of Kentucky from 1848 to 1850 He was again Attorney-General under President Fillmore and in 1855 was a fourth time sent to the Senate. Although a Southerner, Crittenden consistently devoted his energy and eloquence to the preservation of the Union, and he exerted every effort, first, to avert the impending Civil War, and later to assist the Administra-tion in its prosecution In the Senate (1860-61) he urged unsuccessfully his famous compromise (See CRITTENDEN COMPROMISE) Re-turing from the Senate in 1861, he served one term in the House, and in that body also strove for the supremacy of the Constitution Consult The Life of John J Cruttenden, by his daughter, Mrs Chapman Coleman (2 vols, daughter, Mrs Cl Philadelphia, 1871)

CRITTENDEN, THOMAS LEONIDAS (1815-An American soldier, the son of John Jordan Crittenden, born in Russellville, Ky. He was a private in the Kentucky Volunteers in 1836, studied law, and in 1842 became commonwealth's attorney During the Mexican War he served as lieutenant colonel under both General Taylor and General Scott and, when the former became President, was appointed United States Consul at Liverpool He entered the Federal army at the beginning of the Civil War, became a brigadier general of volunteers in Octo-ber, 1861, and for his services at Shiloh, where he commanded a division, was raised to the rank of major general (July 17, 1862) He afterward commanded a division under General Buell and took an important part in the battles of Murfreesboro and Chickamauga, but resigned from the service in December, 1864. He entered the regular army as colonel of the Thirty-second Infantry in 1866, was brevetted brigadier general in 1867, and served on the frontier until his retirement in 1881

CRITTENDEN COMPROMISE In American Instory, a measure proposed in Congress in 1860 by Senator J. J Crittenden (qv) as a means of preventing the secession of the Southern States, through the adoption of certain constitutional amendments These amendments were five in number, and provided (1) that the right to property in slaves was to be recognized, and

that slavery was to be permitted and protected in all the common territory south of 36° 30' and prohibited north of that line, while the land remained in its territorial status, (2) that Congress was not to have power to abolish slavery in the places under its exclusive jurisdiction which lay within a State where slavery existed, (3) that Congress was to have no power to abolish slavery in the District of Columbia so long as it existed in either Maryland or Virginia, and then only after the owners of the slaves had been compensated, (4) that Congress was to have no power to prohibit or hinder the transportation of slaves from one State to another, or to a Territory where slavery was legal, (5) that Congress might provide that in cases where escaped slaves were rescued, or their arrest prevented by mobs, the owners should be compensated by the United States, which in turn might recover damages from the county in which the illegal act occurred All of these amendments were to be permanent and "un-amendable" The compromise was defeated in a committee of the Senate and failed of consideration in the House

CRITTENTON, CHARLES NELSON (1833-1009). An American philanthropist, born in Adams, Jefferson Co, N Y He went into the drug business in New York City in 1861; but after 1882, when his five-year-old daughter Florence died, he devoted his time and wealth to the establishment of Florence Crittenton Homes for homeless and unfortunate girls and their infant children. In 1895 the National Florence Crittenton Mission was incorporated to carry on this work Of these mission homes more than 70 were organized in Mr Crittenton's lifetime in all the larger cities of the United States and in Marseilles, Tokio, Shanghai, the city of Mexico, etc. The drug-manufacturing company which bore his name was one of the first profit-sharing concerns in the United States. He was an active member of the Prolibition party

CRITTENTON MISSION. See FLOBENCE CRITTENTON MISSION, CRITTENTON, C N

CRIVELLI, krė-věl'lė, CARLO (c.1430-c 1495). A Venetian painter of the early Renaissance. He was born in Venice, probably the son of Jacopo Crivelli, a painter, and studied with Antonio and Bartolommeo da Murano, and was later influenced by the schools of Padua and Ferrara. Of his life in Venice nothing is recorded except that he was convicted of adultery in 1457, and this was probably the cause of his leaving Venice, never to return In 1468 he began his work in the Marches, where he practiced the remainder of his life, residing after 1473 in Ascoli In 1490 he was named "Miles," and shortly before his death "Eques Laureatus" by Ferdinand II of Capua, as the signatures of his later paintings proudly record Among his early works are a "Madonna" in the Verona Museum, and a "Picta with Saints" in the Berlin Gallery, which show the influence of Negroponte and Squarcione After he left Venice in 1457, his works, owing to Mantegna's influence, increased in earnestness and pathos and improved in color and technique, as is shown in the altarpiece in five compartments with predella in the cathedral of Ascoli (1473) and "St George on Horseback" in the Gardner collection, Boston In the so-called "Demidoff Altarpiece" (1476), in 13 compartments (National Gallery, London), he has fully developed an individual style, and between 1480 and 1490 he reached the height of his power At this time he painted the "Madonna" in the Vatican Gallery, the triptych "Madonna" in the Berie, the "Pieta" in the Boston Art Museum, the same subject in the Johnson collection, Philadelphia, the "Madonna with St Peter and six Saints' in the Berlin Gallery, and "The Annunciation" in the National Gallery. Such works combine grace, charm, and elaborate idyllic accessories with intense pathos and feivid religious feeling They are characterized by wonderful strength of line and a metallic lustre of color technique and sentiment Crivelli was a conservative and stood apart from the general development of Venetian painting. He painted only in tempera and maintained the early scheme of division of his altars into separate panels He excelled in the treatment of such isolated figures, which, although stiff and archaic, are in expression calm and deep as the After 1490 his work shows less originality and intensity but more perfect technique and increasing, almost riotous, ornamentation "The Coronation of the Virgin" (1493) and the "Madonna della Candeletta," both in the Brera, are good examples of his latest style Consult Berenson, Venetian Painters of the Renaissance (New York, 1909), and Rushforth, Carlo Crivelli (London, 1900)

CROAK'ER. See DRUM, GRUNT, QUEENFISH.
CROAKER AND CO The pseudonym
adopted by Joseph Rodman Drake and Fitz-Greene Halleck in the Croaker Preces, in the New York Evening Post (1819). CROATAN, krö'tän' An island off the

CROATAN, krö'tin' An island off the coast of North Carolina, south of Roanoke Island, at the time of the first English attempt at colonization, about 1585 By the shifting of the sands it is now probably a part of Hatteras or Ocracoke Island. A colony of 117 persons who were landed by Sir Walter Raleigh upon Roanoke Island in 1587, and of whose ultimate fate nothing definite was ever afterward learned, is supposed to have taken refuge with friendly Indians upon Croatan Island and to have eventually become absorbed into that tribe Recently new interest has been given to the story through the claim of descent from these colonists, asserted by a considerable body of mixed-blood stock in Robeson County, in the southern part of the State Although their claim has probably no sound historical basis, they have been offi-cially recognized by the State as a separate people under the name of "Croatan Indians." According to the census of 1910 they numbered

CROATIA (kró-ā'shī-a) AND SLAVONIA (Slav Hrvatska i Slavoniya, Hung Horvát-Slavonország, from Croat. Hivat, OChurch Slav. Khrůvatnů, Slov Khrvat, Pol. Karwat, Russ Khrovate, Croat and OChurch Slav Slovieninu. Autours, John Mark Erskaβnrós, Esklabenos, a Slavyanna, MGk Έκκλαβnrós, Esklabenos, a Slavy whence Ger Sklave, Eng. slave). A kingdom of Austria-Hungary, constituting one of the lands of the Hungarian crown (Map Hungary, D 4) It is separated by the Drave and the Danube from Hungary proper on the northeast, by the Save from Servia and Bosnia on the south, has Dalmatia and the Adriatic on the southwest, and Styria, Carniola, and Istria on the west Croatia constitutes the south-west portion, Slavonia, the northeastern part Its area is 16,425 square miles.

A large part of the surface consists of mountain chains ranging in height from about 2000

to 4000 feet, principally spurs of the Julian and Styrian Alps In Croatia are the Agram highlands, the Croatian Karst (see Karst), with an elevation of about 500 feet, the two ranges of Great and Little Kapella, the former reaching a height of about 500 feet, and the Velebit Range, whose highest summit is about 5750 feet. On the boiders of Caimola are the Uskok Mountains The beautiful mountain region on the northwest is called "Croatian Switzerland" The interior along the Save consists of an extensive and finitful valley eastein part contains fertile, well-cultivated valleys, while the western part is covered with forests There are several small rivers flowing into the Save and Drave, and a number of lakes on the coast The Kulpa River, a tributary of the Save rising in Carniola and flowing across Croatia, is generally considered the northern boundary of the Balkan Peninsula.

The climate is not uniform throughout the kingdom Along the coast of Cioatia the summers are dry and the winters long with considerable precipitation, but the annual range of temperature is less than in Slavonia In this western portion the winters are very raw, and the land is subject to the bora, a cold, fierce northeastern wind, which renders navigation dangerous and brings heavy snows to the highlands In the interior the continental type of climate prevails, with winter temperatures frequently below zero and excessive summer heat In parts of Slavonia the climate is very insalubrious on account of numerous swamps soil is fairly fertile, and the range of vegetation very wide. About 32 per cent of the productive area is arable land, 23 per cent is in meadows and pastures, 38 per cent is under forests, and I per cent is covered with vineyards. The common European cereals are raised extensively, especially wheat and coin The yield of potatoes is considerable Fruits are grown in abundance, notably apples, plums, nuts, and grapes in the southern part of the country. Agram in Croatia is the capital and railroad centre. A number of lailroads under government control cross the kingdom, and over 2000 miles of highways have been constructed

The mineral production of Croatia and Slavonia is unimportant Some coal, iron, marble, copper, and sulphur figure in the exports There are but few modern industrial establishments, the bulk of the manufactures originating in the domestic industry of the peasant families. There are some silk mills, glass and sugar mills, a few shipbuilding, milling, paper, and leather establishments in the coast districts, and a number of distilleries and breweries. The plum brandy of Slavonia is famous under the name of "Sliwowitz" There is a considerable transit trade, largely carried on through the ports of Fiume, Zengg, and Porto Ré The chief articles of export are grain, fruits, wine, lumber, flour, horses, and swine. The crownland had, in 1911, 11,997 miles of public roads and 1329 miles of lailway Of the railway, 541 miles were owned by the state, and 536 were also operated by the state though privately owned Agram (Zágráb) is the plincipal lailway centre There is water transportation on the Danube, Save, Drave, and

Croatia and Slavonia, a titular kingdom, is autonomous in its internal affairs. Its executive head, or governor, is the Ban, responsible to the Provincial Diet and to the Hungarian Premier, who appoints him with the approval of the King (the sovereign of Austria-Hungary) There are three ministries-Interior, Public Instruction and Worship, and Justice The Diet, or National Assembly, is a single chamber of 88 elected deputies and certain privileged members, as the heads of the nobility and high ecclesiasties and officials The privileged members, who must not exceed in number half the deputies, usually sympathize with Hungarian policy The crownland is represented by three members in the Upper House and 40 in the Lower House of the Hungarian Parliament and is entitled to a minister in the Hungarian cabinet, who countersigns all important acts affecting it. In 1908 the revenue of the autonomous government was 25,619,000 kronen, and the expenditure 24,710,-000 krones. The crownland is divided into eight counties and four municipal towns

The facilities for both elementary and secondary education are improving In 1910, 526 per cent of the population over six years of age could read and write, as compared with 444 per cent in 1900 Agram (av), the capital, has a university The population in 1890 was 2,201,927; in 1900, 2,416,304 (9.7 per cent increase) in 1910 (census of December 31), 2,621,954 (8.5 per cent increase) The last census returned by language 625 per cent of the people as Croats, 4246 per cent Serbs, 51 per cent Germans, and 41 per cent Hungarians The percentage of Roman Catolics in 1910 was 716, and Greek Orthodox 249. Agram had 79 038 inhabitants; Eszek (Esseg, Osjek), 31,388, Zumony (Semlin), 17,131, Károlyváros (Karlstadt, Karlovac), 16,112, Varnas (Warasdin), 13,388 Average birth rate, 1906–10, 40.4, 1911, 368, death rate, 250 and 251, illegitimacy, 73 and 79 (for Hungary proper, 97 and 95).

History. Croatia and Slavonia were included in the Roman Province of Pannonia The Croats are a southern Slavic people, speaking a language which differs but slightly from that of their neighbors the Serbs They came down in the seventh century from the Carpathans In the minth century the Croats adopted Latin Christianity, while the Serbs received Chris-tianity from Constantinople About the year 910 Croatia asserted its political independence of the Byzantine emperors and under its own king extended its power over Bosnia and Dalmatia A great part of Croatia was annexed to Hungary towards the close of the eleventh century, and in 1102 Koloman of Hungary had himself crowned King of Croatia and Dalmatia The country was involved in the dynastic struggles and wars for self-preservation which were the lot of Hungary for centuries In the great democratic and nationalistic uprising throughout Europe in 1848 Croatia played a prominent rôle By stirring up the race prejudice of the Croats against the Hungarians the reactionary Austrian government was enabled to subdue the great Hungarian rebellion in that year, Jellachich, Ban of Croatia, acting as the ready tool of Austria and the Hapsburg dynasty. After the revolution Croatia was ruled by the Hapsburgs in a purely despotic fashion for 10 years. It was then incorporated again in Hungary by a compromise treaty which gave the Croats representation in the Hungarian Diet Hungary, however, annexed Frume outright, and the Croats, far from satisfied with the compromise, have never ceased to demand complete autonomy. The occupation and subsequent annexation of Bosnia and Herzegovina by Austria-Hungary, with their large Groatian population, has given additional fervor to this desire, and it has been made a constant issue, throughout the last 40 years, by a succession of riots. The more series of these occurred in 1883 and 1903. The lecent Balkan War (q v ) fanned the flame still further, and the Groats, aroused by the success of their neighbors, the Servians, took occasion to renew their demands with unusual vehemence Consult Matkovitch, Kroatien und Slavonien nach seinen physischen und geistigen Verhaltnsen (Aignam, 1873), Krauss, Die vereinigten Konigreiche Kroatien und Slavonien (Vienna, 1889): Lukiki, Fuhrer dunch Ungann, durch Choatien und Slavonien (Vienna, 1902). See Australt-Hungary

CROCE, krō'chå, BENEDETTO (1866- ) An Italian philosopher and critic He was born at Pescasseroli (Avezzano), but early made Naples his residence His contributions to literary history are of the first importance, both for bulk and for rigorous method coupled with enormous erudition Typical of his specializa-tion on Spanish influences in Italy and on the writers and general intellectual history Naples, are Studi letterari del seicento (Bari, 1910), I teatrs de Napole (Naples, 1890), and the critical editions in his monumental series I scrittore d'Italia (Bari, 1911), which, now continued by F Nicolini, will reach 600 volumes At the same time he stimulated a great revival of philosophical studies in Italy, collaborating with G. Gentile on the Bari series of Classics della filosofia moderna (24 vols), to which he contributed important works on Vico and Hegel A world-wide influence has been exerted by Croce's Filosofia dello spirito, a work in three parts Estetica (new ed., Bari, 1908), Logica (1909), Etica (1909), available in English translations by Ainslie (Asthetik, London, 1909, Ethics, 1913, consult Ainslie in the North American Review, vol 198 (1913), "Introduction to Croce's Philosophy of the Prac-The Estetica is of the three most influential and, in spite of the animated criticism aroused by it, remains a classic Proceeding from the criticism of Vico, whom he calls the "discoverer of the science of asthetics," Croce sets himself against the Aristotelian and classic schools of asthetics as well as against Lessing, Kant, Hegel, and other moderns The cardinal point in his theory is the entire distinction of logic from intuition, logic dealing with the appichension of relationships, of universals, intuition with the apprehension of the particular, the individual The act of intuition is the act of expression all expression is "art," and all art is expression. The creative act in art is the act of expression in the mind of the artist: the material execution of the work of art is posterior to this creative act, of which it is only a copy Croce thus excludes from asthetics the idea of "beauty" as it is commonly understood; questions of artistic "technique" become irrelevant to æsthetic criticism, while his insistence on the intuitive nature of art destroys the critical value of rhetorical categories, and the terminology of literary genres and artistic classification becomes devoid of sense, since each production is a work sur generis, representing a moment, a mental state, that has intrinsically nothing to do with any other mental state The function of culticism becomes primarily interpretative, its object being to reconstruct the mental state in its causal and final elements The æsthetic judgment is possible only with reference to the intention of the artist and the extent to which that purpose has been realized

Croce's methods are applied extensively, especially to Italian literature of the nineteenth century, in his journal La Critica (Bari, 1902-

) Selected essays are given in Problems to estetica (Bari, 1910) and the Brevario the estetica (Bari, 1913) A comprehensive application of the theory to grammar appears in Carbolica's Steemed additional companying at the same of the control of the theory to grammar appears in Carbolica's Steemed additional companying at the same of the control of th Trabalza's Storta della grammatica italiana (Milan, 1908), and its influence appears in Germany in Karl Vossler's studies on the Drawne Comedy of Dante Croce's chief American interpreter is Spingarn, The New Criticism (New York, 1909) As an ethical teacher, Croce represents and leads in Italy the revolt against the attempt to treat the spirit in a materialistic or naturalistic manner, and therefore he is to be classed with Bergson and Eucken (qq v ), in spite of the fact that he represents none of their anti-intellectual tendencies The honorary senatorship of the kingdom was conferred on Croce in 1909, and he was chosen secretary of the Società Napolitana di Storia Patria and awarded an honorary doctorate by the University of Freiburg

CROCE, GIULIO CESARE DELLA (1550-1609). An Italian story-teller, born at Persiceto, near Bologna He wrote a number of romances and plays and created the world-famous types of Bertoldo, Bertoldino, and Cacasenno in the often translated Astuzie di Bertoldo and the Simplicita di Bertoldino (1620). Consult biography and bibliography by Guerrini (Bologna, 1879).

CROCHET, krô-shā' (Fr crochet, hook, dim. of croc, hook, from Icel krōkr, hook, perhaps from Gael crocan, Welsh crug, hook, and connected with Lat crux, cross) A form of fancywork where threads of linen, cotton, worsted, or silk are looped with hooks called crochet needles to form various decorative and useful articles Endless varieties of patterns may be formed, and lightness and elegance attained, by twisting the thread one or more times in taking up the loop, while openwork is formed

by passing one or more loops

CROCID'OLITE (from Gk. κροκί, krokis, nap on cloth; connected with κροκή, krokě, thread, from κρέκειν, krekein, to weave + λίθος, lithos, stone) A sodium iron silicate of the amphibole group that occurs in fibrous or asbestos-like filaments, and also sometimes massive or earthy It has a silky lustre and is indigo blue to green in color. The best speci-mens are found in Griqualand, in the Orange River country, South Africa This mineral frequently contains a siliceous base, such as ferruginous quartz, which imparts to it a golden yellow to yellowish-brown color, often handsomely mottled with the blue or green of the original mineral. This, when cut en cabochon, with a high summit and the longer diameter of the oval at right angles to the direction of the fibres of which the mineral is made up, yields the cat's-eye ray, in consequence of which the mineral is popularly known as tiger-eye, and has some value as a gem stone, being used when polished for umbrella handles, charms, etc In the United States specimens are found in North Carolina, Pennsylvania, and Rhode Island, but

carolina, Feansylvaina, and the latest lates, but these are of no value for ornamental purposes CROCK/ER, Francis Bacon (1861- ).

An American electrical engineer He was boin

in New York City, received from Columbia University the E M in 1882 and the Ph D in 1894, and at Columbia was instructor in electrical engineering (1889-92), adjunct professor (1892-93), and professor thereafter In 1892-95 he was president of the New York Electrical Socrety and in 1897-98 of the American Institute of Electrical Engineers He published The Practical Management of Dynamos and Motors (1892), revised under the title Management of Electrical Machinery (7th ed., 1907), Electrical Lighting (2 vols, 1896–1901, 8th ed., 1908), Electric Motors (1910). In 1914 he received an honorary M S. from Columbia.

CROCK'ERY. See POTTERY.

CROCK'ET (from OF. croquet, variant of crochet, hook). An ornamental knob or leaf projecting boldly from a plane surface, or from the edge of a coping or gable, or from the hip or arris of a spire or pinnacle, or from the bell of a capital, usually in the form of a single heavy stem ending in leafage or flower This ornament is probably derived originally from the corner volutes of the Corinthian type of capital with the acanthus leaves curled up under them This form persists through all Romanesque styles and was developed by the Gothic architects into an independent ornament

CROCK'ETT. A city and the county seat of Houston Co, Tex, 113 miles north of Houston, on the International and Great Northern Railroad (Map. Texas, E 4). It has a fine court-house and the Mary Allen Seminary. Fruit, cotton, stock, and corn growing, lumbering, and the manufacture of cottonseed oil are the prin-

the manufacture of cottonseed oil are the prin-cipal industries. The water works are owned by the city Pop, 1900, 2612, 1910, 3947 CROCKETT, Davin (1786-1838). An Ameri-can pioneer and politician, born in Greene Co. Tenn. He was a typical backwoodsman, un-lettered but shrewd, and skillful as a hunter He served under Jackson in the war against the Creek Indians, was elected to the Tennessee Legislature in 1821 and 1823, and in 1826, 1828, and 1832 was elected to Congress, where his oddities of dress attracted considerable attention At the close of his third term he enlisted with the Texan forces, then in arms against Mexico, and in 1836 was one of the six survivors of the 140 defenders of the Alamo (qv), where, on March 6, the entire garrison was killed by Santa Anna's troops Crockett was massacred by order of Santa Anna at his surrender Crockett's well-known maxim was, "Be sure you are right, then go shead" He very probably dictated or authorized A Narrative of the Life of David Crockett (1834), A Tour to the North and Down East (1835). He has been credited, probably erroneously, with Exploits and Adventures in Texas (1836); and Sketches and Eccentricities (1847), all of which are characterized by crude wit The best popular biogacterized by crude wit The best popular biography is that by E S. Ellis (Philadelphia, 1884

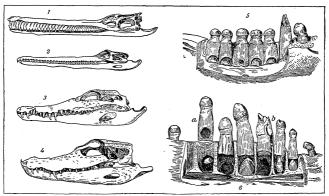

CROCKETT, SAMUEL RUTHERFORD (1860-1914). A Scottish novelist He was born at Duchrae, Galloway, graduated at Edinburgh University in 1879 His first publication, Dulce Cor, a book of poems, appeared in 1886 He was Free Church minister at Penicuik until the close of 1894, when he resigned to devote himself to writing He wrote, notably The Sticket Minister (1893), The Raiders (1894), Bog-Myrtle and Peat (1895), The Grey Man (1896), The Standard Bearer (1898), Joan of the Sword Hand (1900): The Banner of Blue (1902); Red Cape Tales (1904); Maid Margaret (1905); The Bloom of the Heather (1908); The White Plumes of Navarre (1909); Love in a Pernolectry Town (1911); Anne of the Barricades (1912); Patsy (1913); Sandy (1914).

CROC'ODILE (Lat. crocodius, Gk. spokóber-

CROC'ODILLE (Lat. crocodilus, Gk. spootôear. hos, krokodellos). An aquatic lacertiform carnivorous reptile, comparatively gigantic in size (several feet in length), representing the extensive subclass Crocodilia, regarded as the most highly organized of reptiles; more strictly one of the type genus Crocodilus, of the family Crocodilidas, typical of the order Eustachia. Crocodilians differ from lizards in many points of structure, and prominently in the horny plates within the thick skin which form a on by civets, a monitor lizard, and many other enemies. In warm countries erocodiles bury themselves in mud in times of drought, and in cold countries during winter. They feed on fish, birds, and mammals, and human beings are sometimes their victims. The necessity of taking small pieces of food, induced by their rigidly articulated jaws and unelastic throat, compels them to sink all their large prey and keep it until it is sufficiently macerated to be torn into small pieces.

Small pieces.

All the species have a voice, described as a loud short bark or creak, heard at night or when the reptile is angry. The age to which they live is unknown, but they arrive at reproductive maturity when about 10 years old and seem to continue to grow for a century or more. Captives,

SKULLS AND TEETH OF CROCODILIANS

1. Teleoscurus (extinct). 2. Gavial. 3. Nile crocodile. 4. American alligator. 5. Back part of the series of teeth of the lower jaw of an alligator, with the inner wall of the alveoiar grove cut away, showing the absence of partitions and the germs of the successional teeth. 6. Middle part of the sense series, showing the partitions, forming here distinct sockests from which the teeth are raised to show germs of successional teeth and dentiparous cavities; a, a tooth turned around to show the effect (a hole) of the new germ on its base; b, shell of an old tooth and two successors.

dorsal armor, and the firm setting of the strong teeth into alveoli, the fourth tooth often being much enlarged as a seizer. The skull has greater solidity, and the internal anatomy generally is much advanced. The heart has four distinct chambers, preventing an admixture of arterial and venous blood, and the organs of sense are well developed. Their limbs are of much more use to them in walking than are those of either turtles or newts, yet their real home is in the water, where they swim by means of twisting strokes of their compressed tails, which are also powerful weapons, and of aid in gaining food, since animals standing at the edge of a piece of water deep enough to permit a crocodile to swim close to the shore unobserved are frequently swept into the stream by a blow of the tail, then seized and drowned.

All crocodilians are oviparous. The eggs are about the size of those of a goose and are buried in the sand or mud to be hatched by the heat of the sun alone. The females of some, if not all, of the species guard them and take care of their young; yet the eggs and very young are preyed Yor. VI.—19

and those often alarmed, show an ability to learn from experience.

"The recent geographical distribution of the various kinds of Crocodilia loses its mystery," says Gadow, "when we recollect that during the Tertiary period alligators, crocodiles, and long-snouted gavials existed in Europe. The solitary species of alligator in China is the last living reminder of their former Periartic distribution. The group, taken as a whole, is otherwise now intertropical, crocodiles alone inhabiting the Paleotropical region, together with long-snouted forms in the Oriental subregion, while alligators and caymans, with a few crocodiles, live in America."

The order Eustachia contains the crocodilians, ancient and modern. Two other (extinct) orders are recognized by Gadow (1902), both small and peculiar groups known only in late Mesozoic rocks. The genus Biosaurus represents the order Pseudosuchia, and Belodon the order Parasuchia. These and other Mesozoic crocodiles were marine and seem to have been descended from some terrestrial dinosaurian stock. "So

far as modern reptiles are concerned, only the Chelonia and Sphenodon are related to the Crocodilia, while monitors and other lizards

resemble them only superficially "

The crocodilans (Eustachas) fall into seven families 1. Teleosaurida, fossil in the Lias and Oolite of Europe, marine, and of the general appearance of gavials, with very long and slender snouts (see Fig 1) 2 Metrorhynchidae, fossil in the Upper Oolite of Europe, marine 3 Macrorhynchidae, fossil in fiesh-wate deposits of Wealden, etc., of Europe 4 Gavialidae, the gavials (see Gavial.), fossil and iecent 5 Atopsauridae, fossil in the Upper Oolite of Fiance, diminutive alligator-like repitles, only about a foot long 6 Gomopholidae, large fossil crocodiles of the late Mesozoic 7 Crocodilidae.

Of the crocodiles proper (which are characterized by their narrow, elongated heads and muchwebbed feet), the best and longest known is the celebrated Crocodilus vulgaris of the Nile, which was revered, protected, and when dead em-balmed, by certain sects of the ancient Egyp-tians Crocodile worship, according to Flinders-Petrie, was indigenous, and one of the oldest worships of Egypt It was most prevalent in Fayum, "the Lake of the Crocodile," whose marshy shores were especially favorable to that reptile, and which was the seat of the crocodile god Sebek Up the Nile other places were devoted to this primitive worship, while at neighboring towns, such as Denderak, Apolli-nopolis, and Heracleopolis, it was detested. In the very earliest times the crocodile was regarded as a minister of vengeance, but not divine Nowadays these animals are so much hunted that few remain in the lower Nile, but in its upper waters and in other African rivers crocodiles are still dangerously plentiful reptiles also abound in Madagascai, but the "common" one on the West Coast, from Senegal to the Congo, is Crocodilus cataphractus Two species inhabit the fresh waters and estuaries of India (see Mugger) -one ranging to Ceylon, and eastward to China, the Malay Islands, and Australia A local species also inhabits noithern Australia and Queensland There are three erocodiles in North and South America and the West Indies One (Crocodilus americanus) ranges as far north as Florida

The eggs of crocodiles are prized by some people as food, the musk glands are taken for perfume, and the skin and fat are articles of considerable commercial value

Consult Gadow, Amphibia and Reptiles (London and New York, 1902), and authorities on Egypt, Central Africa, India, Ceylon, and Aus-

tialasia See Alligator

Fossil Forms Fossil ancestors of the crood-dhans are known from rocks as old as those of the Triassic, and they are found throughout the later locks of Jurassic, Cretaceous, and Tectary time. The more primitive forms, comprising the totally extinct suborder Parasuchia, are represented by Bolodon, from the upper Keuper of Wurttemberg and the Triassic sandstones of North America. Stagonolepis of the Triassic of Scotland, and Parasuchius from the Gondwana series of central India. Those three have long, marrow snouts, produced by the elongation of the premaxillary bones, and in the structure of their skulls they present some points of resemblance to the primitive dinossuis and to the rhynchocephalians. The Mesosuchia of Jurassic age,

mostly reptiles of small size, have both long and short snouted forms, thit differ from the Eusuchia in respect of the form of the palate, Eustachian tubes, and vertebre. The principal genera are Pelagosauvus, Metriorhynchus. Theriosuchus, Notosuchus, Teleosauvus, Metriorhynchus. Theriosuchus, Notosuchus, Teleosauvus, also with both broad and long snouted species, range from the Upper Jurassic through the Cretaceous and Tetiarry, and comprise all the recent species, in which the Eustachian tubes are inclosed by bone and the vertebial centra are procedus. Direct ancestors of the Malayan genus Tomistoma are found in the Miocene beds of the eastein Mediterranean region of south Europe. During the Eocene typical gavuals lived in the seas of England, but they migrated southward during subsequent Tertiary time, and their remains are found foshized in the Phocene deposits of the Siwalik Hills of India. The largest-known crocodle was probably the genus Rhamphosuchus, from the Phocene of the Siwalik Hills, India, with a length of over 50 feet.

CROCODILE BIRD. A plover (Pluvianus ægyptrus) of the Nile valley, placed among the coursers (suborder Cursoru) It is remarkable for its association with the crocodile and now is usually identified with the troche-lus, or "leech-eater" of Herodotus, whose account of it, long regarded as fabulous, is quoted by Steineger as follows "As the crocodile lives chiefly on the river, it has the inside of its mouth constantly covered with leeches, hence it happens that, while all other birds and beasts avoid it, with the trochilus it lives at peace, since it owes much to that bird, for the crocodile, when he leaves the water and comes out upon the land, is in the habit of lying with his mouth wide open, facing the western breeze, at such times the trochilus goes into his mouth and devours the leeches This benefits the crocodile, who is pleased and takes care not to hurt the trochilus" Modern writers wholly denied this, but it is now known to be mainly true, i.e., these birds do run about the bodies of crocodiles asleep or basking on the sand, in search of the insects or crustaceans clinging to their hides, and may at favorable moments pick parasites and particles of food from their lips, teeth, and gums This has been actually seen by such good observers as Alfred Brehm and others and has also been asserted of a related bird, the Egyptian lapwing. A very complete account of the evidence of this

fact, and for identifying this species with the bird of the Herodotus tradition, will be found in Newton's Dictionary of Birds (London, 1894), article "Ployer" The colors of this species are lavender and cream, strikingly marked with black on the crown and on the sides of the head, the black stripes joining and passing broadly along the back and also extending down the sides of the breast Consult Whymper, Equptian Birds (London, 1909) See Plate of PLOVERS

## CROCODILE RIVER See LIMPOPO

CROCODILE TEARS Hypocritical, forced expressions of grief. This use of the term has splung from the fiction of travelers that crocodiles shed tears over their prey The conceit of cocodiles' tears (the animals have large lachrymal glands) was common in the sixteenth cen-See Spenser's Faerie Qucene, 1, 14-18 turv

CRO/COITE (from Gk. κροκόεις, kroltoeis, saffron-colored, from κρόκοις, kroltos, saffron). A lead chromate It crystallizes in the monoclinic system, has an adamantine to vitreous lustre, and occurs in various shades from a bright hyacinth red to orange yellow. It is found in crystals in quartz veins or in intersecting gness or granite and is commonly assocrated with gold pyrite and other metallic ores. Crocoite occurs in the Urals, Hungary, Brazil, Tasmania, and with wulfenite in Maricopa Co,

CRO'CUS (Lat, from Gk κρόκος, hrolos, saffron). A genus of the family Iridacee. species, about 70 in number, have much general similarity and are natives chiefly of the south of Europe and of the East They set seed, but since the seed pods are underground and are frequently overlooked, and since production of flowers from seed-sown plants is slow, they are chiefly propagated by their corms. Saffron pre-pared from the stamens of Crocus sativus is used medicinally and for dyeing; for the latter purpose, however, aniline colors are replacing it. Some of the species are much cultivated in gardens for the beauty of their flowers, particularly those which, as Crocus vernus and Crocus imperati and the Dutch hybrids of Crocus manacus, flower very early in the spring. The saffron crocus and some other species flower in autumn The flowers of some species are fragrant. It is necessary frequently to take up crocus 100ts and plant anew, on account of the manner in which the corms multiply-the new forming in some species above the old, thus, in time, raising the corm to or even above the surface of the ground When planted in lawns the bulbs must be replaced every two or three years, because they soon become smothered by the grass The autumn flowering species are seldom cultivated in the United States. See Colored Plate with IRIS For illustration of Crocus sativus see article SAFFRON.

CROCUS OF ANTIMONY, or CROCUS MET-ALLORUM. The bright-red antimony oxysulphide that is found native as kermente CROCUS OF MARS, or CROCUS MARTIS.

A polishing substance consisting of finely pow-

dered ferric oxides

CROES, JOHN JAMES ROBERTSON (1834-1906). An American civil engineer, born at Richmond, Va. After graduating in 1853 from the College of St James (Md) he served as engineer of the first high masonry dam in the United States at Boyd's Corners, N Y (1865-70), as topographical engineer of the New York Park Department (1872-78), and as chief engineer of the Suburban Rapid Transit Railroad, New York (1885-91) He made several reports on water supply for New York and other cities. In 1903-05 he was consulting engineer of the New York State Health Department He was treasurer in 1877-87 and president in 1901 of the American Society of Civil Engineers Besides contributing to other magazines he was editorial writer for the Sanitary Engineer (1880-90) CRCE'SUS (Gk. Kpoisos, Kroisos)

A Lydian

king of the Mermnade line The son of Alyattes, whom he succeeded, he flourished in the sixth century BC He came to the throne about the age of 35 (560 BC), and found the wrangling Eolians, Dorians, and Ionians an easy prey, but he did not press his advantage as conqueror beyond the exaction of tribute. Save Lycia and Cilicia, all Asia Minor west of the Halvs fell before him. His ability in practical affairs soon made his wealth a proverb His capital, Sardis, became the brilliant centre of arts and letters, and Crossus was a munifi-cent patron Herodotus asserts (1, 29 ff ) that Solon visited his court, and that, when asked by Cresus whether the possessor of so great riches might not be deemed the happiest of men, he replied in effect that no man can be called happy who is yet alive, to be called happy he must have a fortunate death. When the long peace of the kingdom was evidently about to be disturbed by the eneroaching Persuans under Cyrus, the Great (q v), Cresus formed a league with the Lacedemonians, and sought the aid also of Nabonidos of Babylon He tried to propitiate the gods by bestowing rich gifts upon Apollo's shrine, and, encouraged by the oracle's deliverance that he "would destroy a great empire," he determined to take the offensive. With his Lydian forces only, he joined battle with the enemy, but achieved no advantage—a failure which he attributed to the madequate support of his mercenaries turning to Sardis, he called upon the Lacedæmonians for their promised aid and invited the assistance of the Egyptian King, Amasis, meaning to renew the contest early in the next year Cyrus, however, forced immediate action. Crœsus, almost totally unprepared, was defeated at Thymbra and, after a short siege of Sardis, surrendered his capital. After a reign of 14 years he gave up his crown to the Persian. The oracle spoke truth—he destroyed a great empire, but it was his own. Herodotus further relates that, as the Lydian awaited the fire which, by command of Cyrus, was to consume him, he remembered his conversation with the nim, he remembered his conversation with the Athenian philosopher and called out "Solon, Solon, Solon!" Desiring to know the reason of the exclamation, Cyrus heard the story and straightway commanded that the victim be spared. But the fire was by this time blazing vigorously. However, through Apollo's intercession merciful lain fell, and Crossus was saved from the flames now range short him Beards. from the flames now raging about him Recently, however, on the basis of a newly discovered poem of Bacchylides (q v), in, 22 ff, it has been held that Cræsus had sought to escape capture by burning himself with his treasures, but that he was unable to effect his purpose. Consult How and Wells, A Commentary on Herodous, vol. 1, pp. 99–100 (Oxford, 1912), Jebb. Bacchylides (London, 1905) Crossus, given a residence near Echatana, was taken into his

conqueror's favor and later into that of Cambyes To both monarchs he is said to have rendered valuable service as a counselor, and both he survived His end is not known

both he survived His end is not known CROF/FUT, WILLIAM AUGUSTUS (1836-

) An American journalist and author, born at Redding Conn During the Civil War he was first a soldier and then a correspondent in the field for the New York Tribune Afterward he became editorially connected with various journals and was excutive officer of the United States Geological Survey, whose publications he edited for some time. He is the author of The War History of Connecticut (1867). A Helping Hand for American Homes (1868), A Midsummer Lank (1882), The Vanderbilts (1886), Folks Next Doon (1892, 3d ed., 1904), The Prophecy and Other Deems (1893), a volume of poems, Bourbon Ballads (1880), the opening ode for the World's Columbian Exhibition (1893), Deseret, the libretto for the opera by Dudley Buck

\*CROFT (AS, small field) A piece of inclosed land, usually connected with a humble kind of dwelling, whose inhabitant, the renter of the land, is called a "crofter" This method of letting small pieces of land, either for tillage or for pasture, is known as "the crofting system" This kind of petty farming was formerly common in Scotland, more particularly in the

Highlands See Crofter

GROTT, kroft, Sm Herner (1751-1816). An English writer He was educated at University College, Oxford, took orders, and was appointed to the living of Prittlewell, in Essex, which he retained till his death, passing, however, much of his time abroad He wrote extensively, but is mainly remembered by his "Life" of the poet Young, which he contributed to Johnson's Luce of the Poots (1779-81) He succeeded capitally in imitating Johnson's style A novel in letter form called Love and Madness (1780) became notorious on account of the insertion of certain letters of Chatterton ob-

Tained under false pretense
CROFT, or CROFTS, WILLIAM (1678-1727)
An English musician He was born at Nether Eatington, Warwickshire, and studied music in the choir of the Chapel Royal, then under the direction of Dr. John Blow He was organist of St Anne's, Westminster, from 1700 to 1711. In 1707 he was also appointed organist at the Chapel Royal, and it was in this capacity that he produced the beautiful anthems which have perpetuated his fame In 1724 he published his Musica Sacra (2 vols), containing a collection of 30 anthems and a burial service According to the preface of the composer, this was the first attempt made in England to print the score of a sacred composition from engravings on plates Among the best anthems of Dr Croft are the following I will Give Thanks (1704), for the thanksgiving after the battle of Blenheim, The Soul of the Righteous (1714), for Queen Anne's funeral, The Lord is a Sun and Shield (1714), for the coronation of George I, O Give Thanks (1715), for the suppression of the rebellion

CROFT'ANGRY, CHRYSTAL The imaginary editor of Scott's Chronicles of the Canongate He is said to have been intended for Scott's father

CROFT'ER A term designating a class of small tenants of the Scottish Highlands and islands who hold arable land in severalty and usually certain rights of pasture in common The crofter is for the most part a descendant of the lowest class under the early clan system, and the rights of common pasturage are trace-able to the communal proprietorship of the clan After the breaking up of the clans the legal status of the crofter became that of a tenant at will, by custom, however, he was usually accorded a certain fixity of tenure.

During the flist half of the eighteenth century the chieftain of the clan, while losing his political leadership, came to be regarded as the proprietor of the soil In some districts the chieftains who had been at war with the royal power were displaced, and the land granted to supporters of the king In either case the followers of the chieftain became tenants, owing rent for their land instead of personal services and dues, as formerly Nevertheless, their economic position was fairly satisfactory, especially in the islands But with the expansion of the woolen industry it became profitable for the landlord to turn his estate into sheep runs, accordingly wholesale evictions of the crofters took place in many of the Highland districts Moreover, natural increase of population had necessitated a reduction in the size of the individual holdings, so that at the end of the eighteenth century the whole class of crofters had been reduced to a condition of abject poyerty In the early part of the nineteenth century emigration of the crofters to America and the British colonies was officially encouraged, workhouses were established, and extensive measures for relief in time of famine were undertaken, but no permanent improvement was thus secured In 1883 a parliamentary commission was appointed to investigate the conditions of life of the crofters As a result of the investigation, the Crofters' Act of 1886 was passed By this act the crofter is granted permanence of tenure, so long as he does not violate the specified conditions of his tenure, rents are fixed by a commission, compensation is allowed for improvements which the tenant may make, and the tenant has a right to demand the assistance of the landlord in making other permanent improvements. In order to remedy the evil effects of the excessive subdivision of holdings, the crofter is empowered to call upon the landlord to rent him additional land when the original holding is deemed by the commission

to be insufficient
Since the passage of this act the position of
the crofter has materially improved Rents
have been lowered, and the crofter, assured
that improvements which he may make will not
have the effect of raising his rent and will
not be taken from him through eviction, has
advanced appreciably in methods of agriculture
and in industry See Scotland, Agriculture

and in industry See Scottani, Agranusure Consult Dalriad, The Crofter in History (Edinburgh, 1888), Guerner, Les crofter Secossais (Paris, 1897), Crofter Colonization Eleventh Report of His Majesty's Commission (London, 1901), "Crofters Past and Present," in Blackwood's Magazine (Edinburgh, 1904; Crofters' Holdings, Scotland, Act (London, 1907)

CROFTON, FRANCIS BLAKE (1841-1911) A Canadian author He was born at Crossboyne, County Mayo, Ireland, and was educated at the Royal School, Dungannon, and at Trinity College, Dublin, where he graduated in 1863. He came to Canada and in 1864-65 was pro-

fessor of classics in Bishop's College, Lennoxville, Province of Quebec For several years afterward he lived in New York City, where he was a contributor to various periodicals In 1882 he was appointed librarian to the Nova Scotia Legislature, retiring from that position in 1906. He was an ardent advocate of Imperial federation He published several humorous books, including The Bewildered Querists and Other Nonsense (1875), The Major's Big Talk Stories (1881), The Hambreadth Escapes of Major Mendax (1889), also biographical and political studies, as Haliburton, the Man, the Writer (1889), For Closer Union (1897), The Imperialism of Haliburton (1898), Sombie Tints (poems), and Is Suicide Sin' In 1897 he became a vice president of the International Library Conference, London, England, and in 1901 a vice president of the Canadian Society of Authors

CROFTS, krôfts, EBNEST (1847-1911) English painter, born at Leeds He studied under A B Clay in London, and with E J. Hunten in Dusseldoif, where he lived for many years Among his works are "Cromwell at Marston Moor" (1877), "Napoleon and the Old Guard at Waterloo" (1895), "Funeral of Charles I" (1907, Bristol Museum). They are distinguished for accuracy and truth of detail, but are deficient in action and often merely theatrical in effect. However, Crofts stands among the first of the few English battle painters He was elected to the Royal Academy in 1896 and named keeper in 1898.

CROGHAN, kro'gan, George (1791-1849). An American soldier, born near Louisville, Ky He graduated at William and Mary College in 1810, entered the army in 1812, distinguished himself under General Harrison at Fort Meigs. and on Aug 1-2, 1813, defended Fort Stephenson (on the present site of Fremont, Ohio) against the attack of a greatly superior force of British and Indians, for which he received the thanks of Congress and a gold medal In 1814 he was promoted to be lieutenant colonel, but resigned in 1817 and was appointed postmaster at New Orleans in 1824. He became inspector general with the rank of colonel in 1825, joined General Taylor's forces in Mexico in 1846, and took part in the battle of Monterey

CROISET, krwa'zā', MARIE JOSEPH ALFRED A French classical philologist, born in Paris He was appointed professor of Greek at the Faculté des Lettres in 1885 and became a member of the Academy of Inscriptions in the following year. He is the editor of various Greek authors and wrote De Persons apud Aristophanem (1873), Yénophon, son caratère et son talent (1873), La poésie de Pindare et les lois du lyrisme grec (1880), and, in conjunction with Maurice Croiset, Histoire de la littérature grecque (5 vols, 1887-99, new ed, 1913), an admirable work. An excellent abridgment of the last-named work, entitled Manuel d'histoire de la littérature grocque, appeared in 1901 (Paris, new ed., 1913). With J Petitjean he wrote Grammaire grecque (3d ed, Paris, 1896)

CROISET, MAURICE (1846-A French classical philologist, brother of the preceding, born in Paris. He became professor of the Greek language and literature at Montpellier in 1876, and professor of the Greek language and literature at the Collège de France in 1893 He is the author of De Publica Eloquentia Prin-

cipiis apud Gracos in Homericis Carminibus (1874) Des idees morales dans l'eloquence politique de Demosthene (1874), Essai sur la vie et sur les œuvres de Lucien (1882), Aristophanes and the Political Parties at Athens (Eng trans by James Loeb, London, 1909), and, in conjunction with Alfred Choiset, Historie de la littérature grecque, 5 vols, and Manuel d'histoire de la littérature grecoue

CROIX, kiwa, CARLOS FRANCISCO DE, MAR-QUÉS DE CROIX (1699-1786) A Spanish general and administrator He was born at Lille, French Flanders, and after serving in the Spanish army was appointed commandant at Ceuta whence he was transferred in the same capacity to Puerto de Santa María He afterward be came captain general of Galicia and was Vicerov of New Spain (Mexico) from 1766 to 1771 He was distinguished by strict integrity and high administrative ability. During the last 15 years of his life he was Viceroy and captain general of Valencia

CROIX, CHARLES DE See CLERFAYT
CROIX, TEODORO DE, CABALLERO DE CROIX
(c 1730-91) A Spanish soldier He was born at Lille, French Flanders, and was a brother of the Viceroy of New Spain (Mexico) In 1777 he was appointed Governor of the newly established district known as the "Interior Provinces" of the country and of Sonora, and served in this capacity until 1784 During his brief term as Vicelov of Peru (1784-90) he did much to ameliorate the condition of the Indians and enacted several laws for their protection He died soon after his return to Madrid.

CROIZETTE, krwa'zět', Sophie (1848-1901) A French actiess She was born in St Petersburg After two years at the Conservatory she obtained the first prize for comedy In 1869 she appeared at the Théâtre Français as Queen Anne in Un verse d'eau and four years afterward was made a "sociétaire" Mademoiselle Croizette rarely appeared in classic rôles Her best work was in the Sphina (Octave Feuillet), L'Etrangère (Dumas fils), Fourchambault (Emile Augier), and La princesse de Bagdad

(Dumas fils), her last and greatest creation She married and retired from the stage in 1885 CRO'KER, B M An English novelist. She was a daughter of William Sheppard, rector of Kilgefin, Roscommon, Ireland, was educated in England, married John Croker, of the Royal Munster Fusiliers, and traveled extensively in India and other parts of the East Mrs Croker wrote some good Irish peasant stories, as Terence (1899), and excels in depicting Anglo-Indian life, particularly the fashionable feminine world. The scenes of Jason and Other Stonies (1899), comedy running into farce, are laid in India, Australia, and England. Her novels are commonly translated into French novers are commonly translated into French and German. Besides those above may be cited Proper Pride (1882); Pretty Miss Neulle (1883), Village Tales and Jungle Tragades (1894), In the Kingdom of Kerry (1896), Beyond the Pale (1897), A State Seovet (1901). Angel (1901), Johanna (1903), Nine Days' Wonder (1905), Old Cantonment (1905), Serpent's Tooth (1913).

CROKER, JOHN WILSON (1780-1857). An English writer and politician He was born at Galway, Ireland Educated at Trinity College, Dublin, he entered Lincoln's Inn as a student in 1800 and two years later was called to the Irish bar In 1804 he published Familiar Epistles, a clever satire in verse on the Irish stage, and An Intercepted Letter from Canton, a satire in prose on Dublin society Both ran through several editions. In 1808 he issued a treatise on the State of Iteland, Past and Present—a pamplilet on Catholic emancipation—which brought him to the notice of politicians, and in the same year he was elected member of Parliament for Downpatrick A warm defense in Parliament, in 1809, of the Dule of York, charged with corrupt administration, helped Croker in the same year to the office of Secretary to the Admiralty, a post which he held for more than 20 years He was one of the founders of the Quarterly Review and contributed many violent party articles to its pages, as well as a large number of personal and abu-Sive leviews, one of the most famous being on Keats's Endymion As Rigby he was caricatured by Disraeli in Coningsby In Parliament he steadily opposed the Reform Bill in all its stages, and after its enactment he refused to enter Parliament again He took an active part in the establishment of the Athenaum Club and rendered good service to literature by his annotated edition of Boswell's Johnson (1831), famous for Macaulay's savage review of it, and by his publication of the Suffolk Papers (1823) and Lord Hervey's Memons of the Court of George II (1848) His Stories from the History of England for Children (1817) supplied Scott with the idea of Tales of a Grandfather. He also continued for a time to write verse. His Battle of Talarera (1809) pleased Wellington and was praised by Scott Consult Jennings, Dianes and Correspondence of Croker (London, 1884)

CROKER, RICHARD (1843-An American politician, well known as a leader of Tammany Hall in New York City He was born at Black Rock, Ireland, but when two years of age was taken by his parents to America, and age was taken by his parents to Ambienta, and for a short time attended the public schools in New York City He was then for seven years employed as a machinist, became promi-nent in the New York volunteer fire department, and took an active interest in local politics, and about 1865 identified himself with the Tammany Hall organization. From 1868 to 1870 he served as an alderman, was reelected in 1872, but was forced out of office by Tweed, and acted for several months, on Mayor Havemeyer's appointment, as city marshal, his special duty being the collection of arrears in taxes. He was elected city coroner in 1873 and again in 1876, was appointed fire commissioner in 1883, and was reappointed to that position by Mayor Abram S Hewitt in 1887 In 1886, on the death of John Kelly (q v ), he became chairman of the finance committee of that organization and its recognized leader From April, 1889, to February, 1890, he was city chamber-1880, to retrusty, 1890, he was toly chamber-lain He conducted the successful mayoralty campaigns of Hugh Grant, Thomas F. Gilroy, and Robert A Van Wyek in 1889, 1893, and 1897 respectively, and during the presidential campaign of 1900 supported W J Bryan In 1902, soon after the election of Seth Low to the mayoralty, he resigned as leader of Tammany Hall, and the following year went to England, and later to Ireland In 1907 he won the Derby with his race horse Orby. Consult Lewis, Richard Croker (New York, 1901).

CROKER, THOMAS CROTTON (1798-1854).
An Irish author and antiquarian He was born

in Cork, Jan 15, 1798 He early devoted himself to the collection of legends and songs of the Irish peasantry, and in 1824 he published his Researches in the South of Ireland, characterred by a happy blending of humor and sentiment with archaeological learning The work was followed by the Farry Legends and Traditions of the South of Ireland (1825), trans into German by Grimm (1826), Legends of the Lakes (1829), Popular Songs of Ireland (1839) Croker also edited Memous of Joseph Holt, General of the Irish Rebels, wrote two novels, and contributed to the magazines He devoted much time to archæology, being member of many antiquarian societies. Through the influence of John Wilson Croker, a friend but no relative, he obtained at the age of 20 a clerkship in the Admiralty, a position which he held till 1850 He died Aug 8, 1854 Consult "Life," by his son, prefixed to Fany Legends (London, 1859), and "Memoir of T C Croker" (London, 1889), and stemotr of 18 Valk from London to Fulham (1b. 1860) The Popular Songs were edited by Morley (1b. 1886) Other works that deserve to be mentioned are Adventues of Barney Mahoney (2d ed, 1832), Historical Songs of Ireland (1841), relating especially to the revolutionary struggle between James II and William III, The Keen of the South of Ireland (1844), which illustrates Irish political and domestic history, manners, music, and superstitions, Narratives Illustrative of the Contests in Ireland in 1641 and 1690 (1841), and Bilannia's Pastorals (with W. Browne, 1852)

CROLL, ki öl, James (1821-90) A Scottish geologist He was born at Whitefield, Perthshire, and received only the usual brief schooling of a peasant's son He studied philosophy and physical science and published a treatise on the Physical Cause of the Change of Climate during the Glacial Period (1864). He was appointed an officer of the geological survey of Scotland and in that post (1867-81) prosecuted researches which resulted in works including the treatise on Chmate and Time in their Geological Relations (1875), in which he ascribed climatic changes during geological epochs to secular variations in the eccentricity of the earth's orbit, and Climate and Cosmology (1885), containing a discussion of the origin of the sun's heat and the probable development of the nebulæ and stars Though considerable difference of opinion exists as to the real value of these views in relation to the establishment of a sound geological theory, there is general recognition of the value of his works as stimulating and directing inquiry In his later life he returned to the field of philosophical speculation and published The Philosophic Basis of Evolution (1890), in which he discusses the fundamental principles underlying the doctrine of evolution Consult Autobiographical Sketch of James Croll, with Memoir of his Life and Work,

by J C Irons (London, 1896)

CRO'LY, DAYIN GOODMAN (1829-89). An American journalist, born in New York and educated at the New York University He was associated with the Evening Post and the New York Herald (1884-58) and then became city editor and subsequently managing editor of the New York World. In 1872 he predicted the panie of 1873 and the failures of Jay Cooke & Co and the Northern Pacific Railroad. From 1872 to 1873 he was editor of the Dauly Graphic.

He married "Jennie June" (see Crolx, Jane CUNNINGHAM) His published works include Seymour and Blau Their Lives and Services, with an appendix containing a History of Reconstruction (1868), and a Primer of Positivism (1876)

CROLY, George (1780-1800) An Irish author and clergyman He was born in Dublin and was educated at Trinity College there. In 1810 he was ordained a priest of the English church, and in 1845 became rector of St. Stephen's, Walbrook, London. His first work was a poem, entitled Pans in 1815, which appeared in 1817. From this time up to within a short period from his death he wrote almost incessantly as dramatic critic of the New Times, as a contributor to Blackwood's and the Literary Gazette, and as the author of numerous satires, romances, and biographies. Among his works are: The Angel of the World (1820), Tales of St. Bernard (1820), the novel Marston (1846), and the poem The Modern Orlando (1846). He was an imitator of the grandiose style of Byron and Moore, yet Salathiel (1829), his chief publication, contains many effective scenes and is still good reading. It was reprinted in New York in 1901 as Tany Thou till I Come CROLY, JANE CUNNINGIAM (1831-1901).

CROLY, JANE CUNNINGHAM (1831-1901). An American author and journalist, better known as Jennie June She was born in England, came to the United States when a gril, and at an early age became a contributor to newspapers and magazines She called the first congresses of women in the United States in 1856 and 1869, organized Storosis in 1858, founded the New York Woman's Press Club in 1889, and in 1892 became professor of journalism and literature in the Ruitgers Women's College. She was married to David G Croly in 1856. Her works include: For Better or Worse (1875), Jennie Juneiana: Talks on Women's Club States in 1864), Cookery-Book for Young House-keepers (1866), Knitting and Crocket (1885), Thrown on her Own Resources (1891), History of the Woman's-Club Movement in America (1898 and 1800). She was the editor of Demorst's Magazine from 1800 to 1887, and later was editor of the Cycle (which she founded) and the Home-Maker Consult Memories of Jane Cummingham Croly, "Jennie June" (New York, 1904).

GEO-MAGNON, kró'má'nyon'. A type of mankind supposed to have mhabited southivestern Europe at the end of the Magdalenian epoch, at the close of the Pleistocene They were marked by the most dolichocephalic of crania, elongated at the back (index, 63-74 8), with low face and orbits, but by good stature In 1858 workmen unearthed, in the cave called "Gro-Magnon," near Les Eyzies, in the Department of Dordogne, France, imperfect skeletons of three men, two women, and a child. A peasant found a human bone in a rabbit hole, and at the Cave of Aurignac the remains of 17 persons were recovered At Laugerie Basse, in the Vézère valley, another discovery was made In the Cave of Baumes Chaudes, in Lozère, 35 crania were collected, all of this long, low-faced type. To this type, wherever found, the name of Cro-Magnon is given Consult Mortillet, Le préhistorique (Paris, 1882), Deniker, Races of Europe (New York, 1899), and, for critical observations, Sergi, The Macaterranean Race (London, 1901), Ohermaier, Der Mensch der

Vorzeit (1912), Keith, Ancient Types of Man (1912). See Man

GROMARTY FIRTH, kröm'er-ti ferth (from Gael crom, Olr comb, Wesh crum, Bret crum, Crooked + Olr art Gall artos, stone, and firth, fith, from Icel fjorpr, ford, ultimately connected with Lat pot us, poit, St. par, to cross). A landlocked inlet of the North Sea, on the northeast coast of Scotland, just northwest of the Moray Firth, 18 miles long, 3 to 5 miles broad, and 5 to 35 fathoms deep (Map Scotland, D 2) The entrance is between the North and South Soutars, two high wooded headlands, and is 1½ miles across, with 12 to 30 fathoms of water, and with the Three Kings Reef about half a mile off land Near the firth are the towns of Dingwall, Invergordon, and Cromarty, in the red sandstone, near the entrance, High Miller discovered the fossil fishes Pterschthys, Osteolepus, etc.

CROMARTYSHIRE. See Ross and Crom-

GROM'DALE (from Gael crom, crooked + Eng dale) A village in Inverness-shire, Scotland, on the east bank of the Spey It was the scene of a battle fought May 1, 1600, between the Scottish Jacobites and 800 of William III's troops, in which the latter were vectorious The event is celebrated in a song entitled "The Haughs of Cromdale"

CROME, John (1768-1821). An eminent

English landscape painter and etcher, founder of the Norwich school He is usually called "Old Crome," to distinguish him from his son of the same name Born on Dec. 22, 1768, he passed his youth in humble circumstances, acquiring his taste for painting during an apprenticeship to a sign painter. Together with Robtreeship to a sign painter. Together with Kob-ert Ladbrook, a printer's apprentice, he rented a garret and started upon his career as a painter. The two artists spent their leisure time sketching in the field, endeavoring to reproduce nature exactly Crome's pictures thus became "exact views" of the places he loved. His technique is reminiscent of the Dutch masters, whom he studied in the houses of the Norfolk gentry, in his capacity as a drawing teacher, and in a visit to Paris. Hobbema, in especial, was his favorite master, but the foundation of Crome's art was a genuine English realism, and his pictures combine great breadth with delicacy of color and lightness of brushwork, and although they are occasionally marred by overattention to detail, they always contain a true feeling for light and air. He painted trees with great force and individuality His "Oak at Poringlam," in the National Gal-lery, and the "Willow" are highest masterpieces of their kind. His works are mostly in private possession, especially among the gentry of Norfolk The National Gallery contains three good examples, "Household Heath" and "Chapel Fields, Norwich," besides the one al-leady mentioned. In the Metropolitan Museum of Art, New York, are two good examples, "Hautbors Common" and "The Old Oak" His favorite subjects were taken from the scenery about his native home, but he was capable of adapting himself to the livelier tones of French landscape, as is indicated in his "Fishmarket at Boulogne" and his "Boulevard des Italiens, Paris," both in Keswich Hall near Norwich Although he followed etching as a pastime only, he was an excellent etcher, working with great care and detail, though sometimes not achieving tone and atmosphere His etchings were published after his death, in 1834, under the title of Norfolk Picturesque Scene, y and again in 1838 and 1850 Crome seldom exhibited in London, but he displayed at different times no less than 288 pictures in the Norwich Society of Artists This society he himself founded in 1803, becoming its president in 1808 He died, April 22, 1821, at Norwich, where nearly all of his life had been passed Consult nearly all of his life had been passed Consult his biography by Turner (Norwich, 1838), Wodderspoon (1b, 1858), and Hardie, in the Conderspoon (b. 1888), and Hartne, in the Con-noisseur (London, 1904), also Van Dyck, Old English Masters (New York, 1902), Dickes, The Norusch School of Painting (London, 1905), Binyon, J. Crome and J. S. Cotman (b. 1906), Theobald, John Chome's Etchings (b. 1906)

CROME, JOHN BERNEY (1794-1842) English landscape painter, son and pupil of John Crome, usually called "Young Crome" He was born in Norwich and was appointed president of the Norwich Society of Artists in 1819 He painted usually coast and river scenes of England, France, Holland, and Italy, and his best pictures are so like those of his father that his "Yarmouth Water Frolie" (1821) was long considered Old Crome's masterpiece Towards the end of his life his art degenerated, and he produced little besides potbollers, in-cluding many moonlight effects Consult W F. Dickes, The Norwich School of Painting (London, 1905)

CRO'MER. A seaport and watering place on the north coast of Norfolk, England, 21 miles north of Norwich (Map England, H 4) It stands on the top of one of the highest cliffs on the coast. Nearly all the old town, called "Shipden," with one of the churches, was swept away by the sea about the year 1500 As the sea is encroaching on the land, vessels have to load and unload on the open beach In 1825 some cliffs 200 feet high fell into the sea Seamen call Cromer Bay the Devil's Throat, from its dangers to navigation There is an excellent golf course in the neighborhood Pop, 1901, 3781, 1911, 4073

CROMER, EVELYN BABING, first EABL (1841
) An English diplomatist and administrator, born at Cromer Hall, Norfolk, and educated at Woolwich Academy After a brilliant career at Woolwich Academy Arter a Drilliant career in the Royal Artillery, he was private secretary to the Earl of Northbook, Governor-General of India, from 1872 to 1876, was Commissioner on the Egyptian public debt from 1877 to 1879, was Controller General of Egyptian finances. from 1879 to 1880, was Finance Minister of India from 1880 to 1883, when he became Consul General and Agent in Egypt He was created first Baron Cromer in 1892, Viscount in 1898, and Earl in 1901 He became virtually British Vicercy of Egypt, and his efficient administration won for him the appellation of "Maker of Modern Egypt" He rescued it from bankruptcy, replaced corrupt administrators by honest officials, reduced taxes, reformed the army, increased trade, and greatly extended railway, postal, and telegraph facilities. He resigned in 1907 and returned to England. where in 1911 he was active in securing Unionist votes for the passage of the Parliament Bill, so as to prevent the creation of new peers He wrote Modern Egypt (1908) and Ancient and Modern Imperalism (1910)

CROMER, MARTIN (1512-89). A Polish historian and geographer, born at Biecz, near

Cracow, and educated at the academy in that city He was secretary to the eldest son of King Sigismund I and was intrusted with diplomatic missions to Pope Paul V and to the emperors Charles V and Ferdinand I In 1578 he was appointed Bishop of Ermeland His history of Poland, from its beginning to the year 1506, De Origine et Rebus Gestis Polonorum (1555, frequently reprinted), is a valuable source of information on this subject. Another important work is the geographical and statistical publication Polonia (in Latin, 1586, Ger trans, 1741)

CROMLECH, kiöm'lëk See Dolmen. CROMP'TON A town in Lancashire, England, 3 miles northeast of Oldham, and 11 miles northeast of Manchester It has important northeast of Manchester It has important cotton manufactures and collieries Pop, 1901, 13,427, 1911, 14,750

CROMPTON, SAMUEL (1753-1827) An English inventor, whose spinning mule revolution ized the cotton-weaving industry. In his youth he was largely occupied with weaving at home, and it was the dissatisfaction caused by the machine he used that led to the perfection of his invention in 1779 Unable to bear the expense of taking out a patent, he exploited his machine by private arrangement with manufacturers, some of whom later denied their obligations to him, so that for his valuable invention he received less than £70 In 1812, after much labor, he secured from the House of Commons a grant of £5000, the only official Life and Times of Crompton

CROM/WELL. A diamatic work by Victor Ilugo (1827) It was not intended for the stage The preface to its flist edition has since become famous as containing the breviary of

French dramatic "Romanticism"

CROMWELL, Bartlett Jefferson (1840) An American naval officer, born near Springplace, Ga He attended the Naval Acad-(1857-60) During the Civil War he served in the South Atlantic blockading and Eastern Gulf squadrons, and rose to the rank of heutenant commander He was promoted commander in 1874, and as such was intrusted with the navigation of the flagship Ticonderoga during Admiral Schufeldt's voyage around the world in 1879-81 He thereafter successively became captain in 1889, commodore in 1898, and rear admiral in 1899. After the liberation of Cuba from Spain Cromwell was ordered to take charge of the naval station at Havana In 1901 he was appointed to the command of the United States fleet in South American waters. In addition to his service at sea, Cromwell was inspector of ordnance at the Philadelphia navy yard (1874-78), at the Portsmouth navy yard (1882-84), and captain of the Norfolk navy yard (1891-94) He retired ın 1902

CROMWELL, HENRY (1628-74). The fourth son of Oliver Cromwell At the age of 16 he served as a soldier in the Parliamentary army. In the Barebones Parliament he was one of the six Irish members In 1655 he went to Ireland as a major general, and was appointed Lord Lieutenant in 1657 His rule was popular, and his moderation to Royalists received the approval of Charles II, who at the Restoration confirmed his Irish estates under the Act of His latter years were passed as Settlement

a farmer on his estate, Spenway Abbey, in Cambridgeshire He died March 23, 1674 His great-grandson, the last representative of the house of Cromwell, died in 1821

CROMWELL, OLIVER (1599-1658). Protector of England He was born at Huntingdon, April 25, 1599, and was the only surviving son and heir of Robert Cromwell and Elizabeth. daughter of William Steward, whose family, tradition notwithstanding, has no connection with the royal house of Stuart The Cromwell family sprang from Katherine, who was the sister of Thomas Cromwell, the Hammer of the Monks, and who married Morgan Williams, a Welsh brewer of means Their son Richard took the surname Cromwell and, profiting by his uncle's influence, rose to wealth and honor in the service of Henry VIII, retaining his sovereign's favor even after his uncle's fall in 1540. The family continued to be prominent from that time and was noted for its lavish entertainment of royalty, but, owing to the extravagance of Oliver's uncle of the same name, the fortunes of the family had been squandered, and in 1627 the family seat at Hinchinbrook was sold to Sir Sidney Montague Oliver's father was the second son of Henry, the Golden Knight, and the grandson of Richard (Williams) Cromwell, and he therefore represents a younger branch of the family, whose income was never large Little is known of Cromwell's early life He

was educated at the free school of Huntingdon under Dr Thomas Beard, an austere Puritan In 1616 he entered Sidney Sussex College at Cambridge, a stronghold of Puritanism, soon withdrew, probably owing to his father's death, in 1617. There is no foundation for the reports by royalist biographers of wildness and profligacy in his early years, though he was boisterous and only moderately successful at his studies He probably studied law for a short time at Lincoln's Inn In 1620 he mar-ried Elizabeth Bourchier, daughter of a London merchant, and she seems to have brought him a considerable dowry. The few glimpses that we have of his life before the beginning of his active public career, which may be said to date from the meeting of the Long Parliament in 1640, leave no doubt as to which side he would espouse in the approaching struggle. For some years he was in the throes of a religious conflict, from which he emerged in a triumphant conversion. Throughout the rest of his life he was deeply religious, an ardent though tolerant Puritan The earliest letter from his pen which has come down to us (1636) is a solicitation for a subscription to maintain a lectureship, by which means the Puritans supported preachers, owing to the neglect of this function by the established clergy. He was elected to the Par-liament of 1628, where his only recorded speech is directed against the opponents of Puritanism He watched the career of Gustavus Adolphus with eager sympathy, and it is thought that his own early military successes were in part a result of his careful study of Gustavus Adolphus' campaigns. He took less interest in purely political matters, but we know of three instances where he championed the poorer inhabitants of his districts whose rights of pas-turage were threatened He was fined £10 in 1630 for having neglected to be knighted, but we have no record of his having resisted the forced loan or the payment of ship money Yet there can be no doubt that he was dissatisfied

with Charles's arbitrary rule, and there is a tradition which corresponds well with circumstances, that he once intended to emigrate to New England If this is true, it was probably between 1631 and 1636, and it may have been prevented by a legacy which fell to him in the latter year. He was elected to the Short Parliament in 1640 and to the Long Parliament in the same year

Cromwell played a subordinate part in the deliberations of the Long Parliament He had no share in the impeachment of Strafford was rather more interested in the constitutional reforms, but most of all in ecclesiastical matters, and joined Sir Henry Vane and Hampden in demanding the abolition of the episcopacy, 'root and branch" On the outbreak of the Irish insurrection of 1641 it was he who pioposed that Parliament should assume control of the militia When the Civil War broke out in 1642, he was very active in securing the authority of Parliament in the eastern countries and commanded a troop of horse in the battle of Edgehill, Oct 23, 1642 In 1643 the war everywhere went against Parliament except in the Eastern Association, where Cromwell not only kept the Royalists at bay, but even gained ground His one troop had grown to 10, and afterward grew to 14, forming two regiments of the best-drilled cavalry in England For his services in the Eastern Association Parliament made him lieutenant general of the army of the Eastern Association (1644), and appointed him a member of the committee of both kingdoms In the battle of Marston Moor, July 2, 1644, he commanded the Parliamentary horse, whose final charge decided the fortunes of the day Hitherto the Parliamentarians had been inferior in cavalry, whose military importance was greater in those days than now It was due to Cromwell that this inferiority was overcome It is at about this time that the division of the Puritans into two parties clearly appears The Presbyterians, who were largely in the majority in Parliament, were alarmed at the growth of religious sects in the army, and they were anxious for an accommodation with Charles in order to be free to suppress Independency The army, on the other hand, had become the stronghold of Independency and desired religious toleration and a vigorous prosecution of the war well was the spokesman of the party of toleration. He impeached Manchester for half-heartedness in the prosecution of the campaign and found support with the Commons, but not with the Lords He then disinterestedly proposed the reorganization of the army under new leaders, and on the adoption of the New Model (qv), and the Self-Denying Ordinance (qv), assumed that his military career was over On the contrary, he was appointed lieutenant general in command of the cavalry, and by a charge of the Parliamentary horse decided the day at Naseby, the last battle of the First Civil War, June 14, 1645 The distrust between the Presbyterian Parliament and the Independent army became an open breach when the Parliament not only proposed to disband the army without paying the arrears due to the men, but made overtures to Charles which seemed to the army a surrender of what they had been fighting for Cromwell, now the recognized leader of the army, hesitated, as was his wont, and tried to mediate between the two parties. but in the end threw in his lot with the army It was he who ordered the abduction of the King from Holmby In the Second Civil War, a consequence of this rupture, in which the King played off one party against the other. Cromwell defeated the Stots under Hamilton, who were over twice his number, in a remarkable three days' battle near Preston. Aug 17–19, 1648 The army now chamored for the life of the King, whose duplicity had caused the renewal of the war. For a time Chomwell held back, but when his mind was once made up no legal technicality could stop him 'I tell you we will cut off his head with his crown upon it," he cried roughly, in answer to an argument denying the purisdiction of the High Court of Justice He had nothing to do with Pride's Purge, being absent at the time, but he accepted the result of it, and was foremost in all the events leading up to the King's execution

(Jan 30, 1649) On the abolition of the monarchy the position of the Commonwealth was extremely perilous It was torn asunder by partisan strife, and it was without a filend in Europe Scotland, alienated by the execution of the King and hostile to the dominant Independent and Mil-tary party, proclaimed Charles II King, not only of Scotland, but of England and Ireland as well Ireland demanded immediate attention, for the Second Civil War had its counterpart there, and a coalition of the various parties had all but driven the Parliamentary forces out of the island Cromwell accepted the command of the forces destined for its reconquest on March 30, 1649, and landed at Dublin, August 15, with three regiments. At Drogheda, "being in the heat of action," he ordered the famous massacre of the garrison of 2800 men, which had refused to capitulate (September) This was in accordance with the strict rules of war of the time, though it had not been put into practice in England Cromwell explained that it was a just punishment for the outrages of 1641, which he looked upon as entirely wanton and without provocation. The immediate military effect of the massacre was advantageous, since for a time town after town surrendered with little resistance, but its unfortunate political effect lasts until the present day At Wexford there was another massacie, though not by Cromwell's order. In May, 1650, the resistance was so nearly broken that Cromwell left the completion of the conquest to his successors, Ireton and Ludlow, and has-tened back to confront the danger from the side of Scotland He swept away with impatience Fairfax's legal objection that the Scots had a right to choose their own King, for he saw clearly that England must either coerce the Scots or be coerced by them He defeated one Scottish army at Dunbar, Sept 3, 1650, and another, commanded by Charles II in person, exactly one year later at Worcester While he had to be on his guard from this time forth against plots and upilsings, Wolcester marks the end of armed resistance to the Republic He brought Scotland and Ireland (or the Protestant part of Ireland) into legislative union with England, the first union of the three kingdoms, and gave them free trade and a better administration of justice, but the taxes to support the English garrisons were heavy addition, Ireland groaned under the attempt to transplant her Catholic population, or, as the plan was afterward modified, her Catholic landowners, to the wilds of Connaught in order to make way for English settlers Cromwell's treatment of Ireland was pitfully harsh, but it was caused principally by his complete ignorance of liish affairs, though his ignorance was not greater than that of his countrymen.

The problem which now confionted the leaders of the Commonwealth was the substitution of a permanent constitutional government in the place of the provisional Rump. withdrawal of the Cavalier party on the out-break of the Civil War, and the expulsion of the Presbyterian members in the Pride's Purge, had left only 60 or 70 members in habitual attendance in Parliament, whose power de-pended solely upon the support of the victo-rious army. Not only had they made themselves very unpopular by their harsh measures, but they refused to give way to a newly elected and more truly representative Parliament which the army desired, unless they were made members of the new Parliament without election, and clothed with power to exclude undesirable new members, especially those of Royalist sympathies. In the course of the prolonged dispute they were gulty of what Cromwell considered a breach of good farth, whereupon he angrily expelled them on April 20, 1953, to the great satisfaction of the English nation. But with them went the last vestige of civil authority in the land, and England was left face to face with the army—a state of affairs which, in view of the well-known English detestation of military rule, could not long endure Under the influence of Harrison and the extreme Puritans he called on the various Congregational churches to nominate members for a Parlia-ment, which resulted in the Nominated or Barebones Parliament (qv) of 149 members (of whom four represented Scotland and six Ireland) This Parliament soon showed such a readiness to adopt radical and impossible measures, and was so torn asunder by party strife, that when the Moderates rose, early on the morning of Dec 12, 1653, and voted its dissolution, Cromwell was greatly relieved, though he had no previous knowledge of the conspiracy. The officers thereupon adopted a written constitution, called the Instrument of Government (qv), which is of great interest from the point of view of constitutional history, under which Cromwell, on December 16, assumed the title of Protector. An elected Par-lament of one House was provided for, whose powers were defined by the Instrument The first Parlament which met under its provisions, on Sept 3, 1654, is of great importance to a correct understanding of the Protector's treatment of his parliaments. He invited a revision of the Instrument, but in the debates on it the Parliament showed signs of making itself perpetual, of taking away liberty of conscience, and of reducing both the aimy and the Protector to its exclusive control, breaking down the balance of power between the Protector and Parliament which the Instrument had sought to establish Cromwell interfered by force and excluded from the House all who refused to sign an agreement not to alter the Instrument in these "four fundamentals" This incident is crucial in the appreciation of Cromwell's parliamentary difficulty The leaders of the popular party failed to understand that government by consent of

OLIVER CROMWELL FROM AN ENGRAVING BY JAMES CALDWELL AFTER A PAINTING BY ROBERT WALKER

the people meant the return of the Stuarts and that the sole salvation of the Commonwealth lay in a strong executive backed by the army Furthermore, his demands were moderate, for, says Mr. Gardiner, "his four fundamentals have been accepted by the nation and are at this day as firmly rooted in its conscience as par-liamentary supremacy itself." Cromwell dis-solved the Parliament without coming to an solved the Farlament without coming to an agreement with it and without receiving the necessary supplies. In the year following, Penruddock's rising drove the Protector to acts as illegal as any of which Charles I had been guilty. He divided England into 10 military districts, over which he placed major generals, with extensive police powers backed by military force, the estates of Royalists being taxed by his own arbitrary power to support the scheme. It was a success as a police measure, but the nation grouned when Cromwell used this method to enforce a stricter standard of Puritan morality than the people were ready to accept The foreign wars made new supplies necessary, and in 1656 the Protector called his last Parliament, from which his council first excluded 100 undesirable members Upon the discovery of a plot against the Protector's life, Parliament drew up a new constitution called the Humble Petition and Advice, providing for an Upper House and offering Cromwell the title of King Cromwell hesitated for some weeks, but, finding the title unpopular with the army, he at last declined it. The Petition and Advice was then passed with the title Protector substituted for that of King, and was adopted in place of the Instrument of Government Upon the second session of the Parliament in January, 1658, it was found that the promotion of Cromwell's supporters to the Upper House had given the Republicans a majority in the Lower House. They not only insisted upon revising the constitution anew, but were forming conspiracies of a dangerous sort, whereupon Cromwell dissolved them, February 4. He had failed to transform the military into a civil state
The vigor with which Cromwell conducted

Intervigor with which cromwell conducted England's foreign affairs has been much admired He had little to do with the Dutch War, which he disliked as a war against a Protestant power. This he brought to a successful conclusion, April 5, 1654 The two leading nations of Europe were at war and bidding for his alliance. He was at first included to favor Spean partly from he convertive clined to favor Spain, partly from his sympathy for the French Huguenots and partly because France supported Henrietta Maria and the grance supported Henrietta Maria and the Stuart cause Spain, however, had prohibited English ships from sailing in West Indian waters, even though bound for an English colony In December, 1664, Cromwell sent out a badly equipped expedition under Penn and Vanables which sufficed a description variation. Venables, which suffered a disastrous repulse in an attack against Santo Domingo, but seized Jamaica, whose importance was little appre-ciated at that time This attack naturally precipitated a war with Spain in Europe in which cipitated a war with spain in buttop a warms Blake, having previously brought the Bey of Tums to terms (April 4, 1655), destroyed one Spanish treasure fleet at sea (Sept 8, 1656) and sank another in the harbor of Cadiz (April 20, 1657). Two treaties were signed with France—the first on Oct 24, 1655, providing for the expulsion of the Stuarts from French territory; the second on March 23, 1657, products a second on March 24, 1657, products a second on Marc viding for a joint attack upon the Spanish

Netherlands, in which the English greatly distinguished themselves before Dunkirk, in the battle of the Dunes, June, 1658, and secured Mardick and Dunkirk as their share of the spoils. But while Cromwell succeeded by force of arms in making England universally feared, he was very ignorant of European politics and his aims were faulty. He was completely under the illusion that the Catholic powers were on the point of combining to clush Protestantism, and he was constantly negotiating with Charles X of Sweden, whom he erroneously regarded as a second Gustavus Adolphus, to form a counter Protestant league, not knowing that it was impossible to reconcile, for religious purposes, either Sweden and Holland on the one hand, or France and Spain on the other Moreover, in allying with France against Spain he did much to piepare the way for Louis XIV and the period of French aggression in Europe Nor should it be forgotten that his foreign enter-prises greatly increased the burdens of a heavy taxation which alienated the people of England from his rule He died on Sept 3, 1658

In 1899 Parliament erected a statue to Cromwell in Westminster, facing Whitehall. The debates which the election of this tardy memorial to the great Puritan leader occasioned in Parliament show how vital to many Englishmen are, even yet, the principles for which their forefathers struggled in the period

of the Great Civil War
Bibliography. The chief source of information in forming an estimate of Cromwell's character will always be his own words, first collected by Carlyle, Letters and Speeches of Oliver Cromuell (London, 1845) The speeches are to be found in Stainer, Speeches of Oliver Cromwell, 1644-58 (ib, 1901) His parliamentary career is to be followed in Parliamentary History, vols ix-xxi (ib, 1760-62), together with the numerous memoirs, of which those of Whitelock and Ludlow deserve special mention. The Calendars of State Papers, Domestic Series, together with the great collections of Rushworth, Clarendon, Somers, and Carte, are rich mines of material while the Thurloe State Papers (ib., 1742) contain the greater part of the diplomatic correspondence Gardiner, Constitutional Documents of the Puritan Revolution (1b, 1899), is invaluable Of the older writers, Guizot and Ranke are still useful, but they are largely superseded by the great works of Gar-diner, History of England, 1603-42 (10 vols, London and New York, 1883-84), The Great Civil War (1b, 1893), and the History of the Commonwealth and Protectorate (1b, 1894-1901) Gardiner has summarized the results of his researches in Cromwell's Place in History (1b, 1897) and Oliver Cromwell (London, 1901) Hardly inferior to Gardiner's work is Firth, Oliver Cromwell and the Rule of the Puritans in England (London and New York, 1900). The biographies by Harrison (London, 1900). The biographies by Harrison (London, 1888) and Morley (New York, 1900) are brilliant, but hardly of equal value The Oliver Cromwell of Theodore Roosevelt (ib, 1900) is brief and readable Gardiner and Mullinger, Pistroduction to the Study of English History, part ii (London, 1894), contains an account of the literature of the period, both contemporary and modern. Later works include. Marshall, Story of Ohver Cromwell (New York, 1908); Rhodes, "A New Estimate of Cromwell," in his Historical Essays (ib, 1909), Firth, The Last Years of the Protectorate (London, 1909). Wilkinson, 'A Narrative of the Circumstances Conceining the Head of Oliver Cromwell," in the Archeological Journal, vol Ixviii (ib. 1911), Larned, A Study of Greatness in Men (Boston, 1911), Johnstone, Oliver Cromwell (London, 1912), Marshall, Through Great Britain and Ireland with Cromwell (New York, 1912)

CROMWELL, RICHARD (1626-1712) Lord Protector of England. The third and eldest surviving son of Oliver Cromwell, he was born at Huntingdon, Oct 4, 1626 When Oliver became Protector, he wished to train his son as his successor Richard entered Parlament, was appointed one of the Committee of Trade, and became Chancellor of Oxford But, of an amiable temperament, he was more addicted to pleasure and sport than statecraft, and after his father's death, in 1658, retained the protector-ship for not quite nine months, until his willing demission in May, 1659 He lived in returnment on the Continent during 20 years and returned to England in 1650 Richard was of a peaceful, bucolic temperament that little fitted him to play his part in stirring times. He died at Cheshunt, July 12, 1712 Consult Guizot, History of England wider Richard.

cromwell, Thomas, Earl of Essex (c 1485-1540) An English statesman and Henry VIII's prime agent in effecting the Reformation He was born at Putney, near London, where his father, a man of peculiarly evil character, engaged in the varied pursuits of blacksmith, brewer, innkeeper, fuller, and shearer of cloth After a meagre education he went to Antwerp as a clerk in a factory and successfully devoted his spare time to learning languages He spent some time in Italy as a soldier and trader He returned to England in 1513 and, while following the paternal vocations, developed into a money lender, a lawyer, and an influential citizen He received a trusted appointment from Cardinal Wolsey and under his patronage entered Parliament, where his able speeches attracted attention. He successfully defended his master against the bill of impeachment, and Henry VIII, appreciating his talent, made him his private secretary. He received a succession of honors, which, after knighthood in 1531, included the Chancellorship of the Exchequer (1533), Mastership of the Rolls and Vicarship-General of Ecclesiastical Affairs (1535), the office of Lord Privy Seal (1536), and that of Lord Chamberlain (1539), and culminated in his creation as Earl of Essex in 1540 For seven years, by subservience to the King, he held supreme sway in the royal councils and controlled all the administrative departments He carried out faithfully the monarch's schemes to establish the Reformation His methods in suppressing the monasteries earned him the designation of malleus monachorum, the 'Hammer of the Monks' He was very unpopular, and after promoting the marriage of Henry with Anne of Cleves, the King's aversion to the Queen was extended to the instigator of the union assented to a bill of attainder for treason on a long list of offenses, and, after a piteous entreaty for mercy, Cromwell was beheaded on July 28 1540 Froude praises his character Dixon calls him "the woist enemy the Church of England ever had" Consult Drayton, Historie of the Life and Death of the Lord Cromwell (London, 1609), Hook, Lives of the Archbishops of Canterbury, vol vi (1b, 1868), Froude, History of England (b. 1881-82), Merriman, Life and Letters of Thomas Cromuell (Oxford, 1902) 'Yan Dyke, Renascence Portraits (New York, 1905), Dixon, History of the Church of England, vol 1 (London, 1884-1902), Gairdner, The English Church in the Sixteenth Century (1b, 1902)

GROMWELL, THE LIFE AND DEATH OF THOMAS, LORD A play of unknown authorship, once attributed to Shakespeare, and entered at Stationers' Hall in 1602. It was founded on the tragic fate of the Earl of Essex See Crowwell, Thomas

CRONACA, kró'na-ka, IL See Pollatuolo, Simone del

CRONEGR, krô'nek, JOHANN FRIEDRICH, BARON VON (1731-58) A promising young German dramatist of the pie-Lessing period He was born at Ansbach (in the principality of that name), was educated at Leipzig, where he came under Gellert's influence, and at Halle, and in 1764 received the title of Hofrat His best-known work is his tragedy Codrus (1757), in ilymed Alexandrines—a somewhat rhetorical but sonorous imitation of the French classic manner—which was awaided the prize offered by the Berlin bookseller Nicolai for the best German tragedy His ode Der Krieg (1756) was praised by Lessing He was among the first to direct German scholarship towards the study of Spanish literature Consult the briggiaphy by Gensel (Lepzig, 1894)

CRONENBERG, krō'nen-bĕrk See KRONEN-

CRONHOLM, krön'ndim, Abraham Peter (1809-79) A Swedish historian He was born at Landskrona, was educated at Lund, and in 1849 became professor of history in that city His works, which are based upon a careful personal study of the archives of Stockholm, Copenhagen, Berlim, Dresden, Vienna, and of other leading European cities, include the following Formwordskab Ilumen (1833-85), Katholska Ligan och Huguenotterna (1839), Skånes politiska historia (1847-51), Sveriges historia under Guetaf II Adolpha regering (1857-72).

CRÓNJE, krön'ye, Pietrus Arnoldus (1835-1911). A Boer soldier In the campaign of 1881 against England he distinguished himself at Doornkop and at Majuba Hill, where he was second in command In 1896 he captured the raiders led by Dr Jameson into the Transvaal. At the outbreak of the war against England in 1899 he was stationed with 6000 troops on the western frontier At Modder River (November 28) he fought an indecisive battle with Lord Methuen, who was marching with his division to the relief of Kimberley, in which he inflicted terrible loss on the enemy, and at Magersfontein (December 11) he won a brilliant victory over the same general Immediately upon the be-ginning of Lord Roberts's invasion of the Orange Free State, in 1900, he sent a portion of his army to the north, and with the remainder sought to oppose the English advance on Pre-toria At last surrounded, he intrenched himself at Paardeberg and, under a scathing artillery fire, sustained that position until the failure of food and ammunition compelled him to sur-render, with some 4000 troops and six guns, on February 27, the anniversary of Majuba Hill. He was thereupon sent as a prisoner of war to St. Helena He was one of the most sagacious of the Boer leaders and was a member of the Executive Council of the Transvaal. In 1905

he was forced by poverty to appear in the United
States in a mimic war

An English physicist and chemist, born in London, June 17, 1832 He studied at the Royal

at Ironton, Ohio, he was presiding elder of the
Chillicothe District from 1902 to 1908 He is
author of Character Steetch of Hon C. C White,
of Crete, Nebrasla (1896), Jonathan Edwards
(1903), Earnest Eepectation (1905), Joh
Knox, the Reformer (1906), The Great Five

CROOKBILL See WRYBILL

CROOKED ISLANDS. A group of the Bahamas, consisting of Crooked Island, Acklin Island, Fortune Key, and Castle Island. The largest, Crooked Island, contains 76 square miles (Map West Indies, D 2). In common with some others of the group, it is valuable chiefly for its salt Pop, 1911, Acklin Island 1733, Crooked Island 1541. Chief town, Pitt's

CROOKED LAKE. See KEUKA LAKE CROOKES, kruks, SIR WILLIAM (1832—

don, June 17, 1832 He studied at the Royal College of Chemistry, where he later assisted Hofmann In 1854 he became superintendent of the meteorological department of the Radcliffe Observatory, Oxford, and in 1855 professor of chemistry at the Chester Training College After 1859 he was editor and proprietor of the Chemical News, which he had founded, and after 1864 he also edited the Quarterly Journal of Science He was foreign secretary of the Royal Society in 1908-12, at various times was president of the Chemical Society, the British Association, and the Institute of Electrical Engineers, and was chosen corresponding member of numerous continental societies In 1897 he was knighted, in 1907, with Edouard Buchner, he was awarded the Nobel prize for chemistry, and in 1910 the Order of Merit was conferred upon him He is an authority of the first rank on sanitary questions, especially the disposal of the sewage of towns, and his method of producing extreme vacua rendered incandescent electric lighting a practical possibility. His original researches in chemistry and physics led to the discovery of the metal thallium in Subsequently he devoted several years to 1861 an elaborate investigation on the atomic weight of that element Among his other discoveries may be mentioned the sodium amalgamation process for separating gold and silver from their ores (1865), and especially his new method for the spectroscopic investigation of substances— one of the numerous and brilliant results of his prolonged studies of "radiant matter" He also devised the radiometer (qv) and later the otheoscope, a greatly improved form of the radiometer. Among his publications may be mentioned A Practical Handbook of Dyeing and Caltoo Printing (2d ed, 1883), an English translation of Wagner's Chemical Technology (2d ed, 1894), Select Methods of Chemical Analysis (4th ed, 1905), Diamonds (1909); and papers on radiant-matter spectroscopy His original views on the genesis of the elements may, with the development of knowledge, form an important contribution to chemical philosophy.

CROOKES TUBE A sealed vessel of glass from which the air has been exhausted and a high vacuum obtained, through which a current from an induction coil or other source of highpotential electricity is passed. A Crookes tube differs from a Geissler tube (q v) in the higher degree of its exhaustion and in several important particulars which will appear in the description of its operation given below. The name is derived from Sir William Crookes (qv), who was able by his improvements in the Sprengel pump (see AIR PUMP) to obtain vacuum tubes of greater efficiency than those of previous investigators Crookes was not the inventor of the highly exhausted tube, as Hittorf, of Munster (1869), had performed a number of experiments with tubes having a comparatively high vacuum, but it remained for the English investigator to push the experiments still further and to formulate hypotheses and theories

A Crookes tube contains two or more electrodes known as the cathodes and anodes These are formed by platinum wires which pass through the glass walls of the tube and terminate in metallic plates of the material and shape desired for the experiment. The exhaustion is effected by connecting the tube to a mercurial

air pump and then sealing it when the proper point is reached. The terminals are then connected with an induction coil, or other source of high potential, which is set in operation important peculiarity of such a vacuum tube noticed by Professor Hittorf consists of a fluorescence (qv) or golden-green glow produced on the glass opposite the cathode There is not the brilliancy of glow that is found throughout the tube as in the Geissler tube, and the rays which produce the fluorescence issue from the surface of the cathode in straight lines normal or perpendicular to that surface, not being bent to follow the shape of the tube, as would be seen in tubes of a less degree of exhaustion cathode rays have many other interesting properties They may be deflected by a magnet, and they cause a number of substances, such as diamonds and rubies, on which they impinge, to become brilliantly phosphorescent, their energy is sufficient to heat to a high temperature a surface on which they fall and can also be exhibited in causing a small wheel with mica vanes, mounted within the tube, to revolve as a result of the impact. Crookes used cathodes of plane, convex, and concave surface, from which the rays would be emitted in beams either parallel, diverging, or converging. After studying these rays and their properties he concluded that the discharge from the cathode represented a new form of matter which he considered as existing in an ultragaseous or radiant state. The most important use of the Crookes tube is for the production of Rontgen rays, or X-rays (qv.), which are the rays passing out from the tube opposite the cathode. To produce these rays a tube must be employed where the vacuum is adapted to the work in hand, and there are self-regulating tubes on the market in which this property is obtained In 1913 a tube susceptible of more exact regulation and power, as well as requiring less time of exposure, was devised by W D Coolidge, in which the cathode is formed of a tungsten filament maintained at a high temperature through the passage of current from a storage battery These tubes have a very high vacuum and give a pure electric discharge. The absence of fluorescence is a notable feature. See Electricity for an account of the passage of a current through rarefied gases

CROOKS, GEORGE RICHARD (1822-97). American Methodist theologian. He was born in Philadelphia and graduated in 1840 from Dickinson College, where he later taught for several years. Between 1848 and 1880 he held pastorates in Philadelphia, Wilmington (Del), New York City, and Brooklyn (N Y), thereafter until his death he was professor of historical theology at Drew Theological Seminary. Professor Crooks, one of the most influential and distinguished Methodist theologians of his time, was instrumental in inducing his church to sanction seminaries as a training for its ministry. He edited the Methodist from 1860 to 1875 and published an edition of Butler's Analogy (1852), The Life and Letters of Rev. Dr John McClintock (1876), Sermons (1885) and Life (1890) of Bishop Matthew Simpson, and

The Story of the Christian Church (1897)
CROOKS, WILLIAM (1852- ) An English labor leader He was born in a London poorhouse, was apprenticed to a cooper when he was 14, and became active in the labor-union movement He was a member of the London County Council after 1892, mayor of Poplar in 1901, was elected to Parliament from Woolwich in 1903, and wis reelected in 1906 and 1910.

CROOKSTON, kruks'ton A city and the county seat of Polk Co, Minn, 230 miles west by north of Duluth, on the Red Lake River, which affords abundant water power, and on the Great Northern and the Northern Pacific railroads (Map Minnesota, A 3) Among noteworthy features are the Government Land Office. Carnegie library, Federal building, courthouse, St Joseph's Academy, Bethesda Hospital, and the Northwestern School of Agriculture. city derives a considerable trade from a tributary agricultural country and manufactures lumber, farm machinery, gas engines, castings, sashes and doors, leather goods, furniture, wagons, biscuits, etc Crookston was incorporated in 1879. The government is administered by a mayor and a council. Pop, 1900, 5359, 1910, 7559

CROOKSVILLE. A town in Perry Co , Ohio, 64 miles by rail southeast of Columbus, on the Zanesville and Western and the Cleveland, Akron, and Cincinnati railroads (Map Ohio, It has large deposits of potter's clay, and there are a number of pottery plants, a crate factory, brickworks, and coal mines Oil is also produced in considerable quantities Pop, 1900, 835, 1910, 3028

CROP'PIES. A derisive nickname given by the Protestant Irish to their Catholic opponents in the time of the English Revolution of 1688 The name was applied to the Irish rebels of 1798 because of their sympathy with the French Revolutionists The Roundheads were so called in 1642. A factional Irish song called "Crop-

pies Lie Down!" was a favorite with Orangemen. CROP'SEY, JASPER FRANCIS (1823-1900) An American landscape painter, born at Rossville, N. Y. At first he studied architecture, but he abandoned it to study art and in 1847 visited Italy He spent seven years in London dexhibited at the Royal Academy. His "Autumn on the Hudson" and "Richmond Hill" were plaused by John Russlin. Cropsey belonged to the so-called Hudson River school (qv) and painted mostly views of the White Mountains or the Hudson and English landscapes of similar type. His earlier works were in great demand they are good in color and show much skill and feeling, of which scarcely a trace remains in his feeling, of which scarcely a trace remains in his later pictures Other pictures by him are "Niagara Falls" (Brooklyn Museum), "Landscape" (Metropolitan Museum, New York), "Lake George," "View near Rome," and "Sunset, Lake George," (Wew York Public Library), "The Sibyl's Temple", "High Tom, Rockland Lake" Consult Islam, History of American Painting (New York, 1905)

CROQUEMITAINE, krok'mê'tân' (Fr, from oroquer, to clunch). A French monster or bogy invoked by nurses to frighten unruly children. In L'Epine's Légende de Croquemitaine, Mitame, a goddaughter of Charlemagne, searches for the castle of Croquemitaine, near Saragossa CROQUET See ROQUE.

CRORE See LAC.
CROSBY, krŏz'bĭ, ALPHEUS (1810-74). An
American educator and author He was born at Sandwich, N H, graduated at Dartmouth in 1827, and studied theology at Andover from 1831 to 1832 He became professor of Latin and Greek at Dartmouth in 1833 and of Greek only in 1837. From 1857 to 1865 he was principal of the Salem (Mass.) Normal School. He published an edition of the Anabasis; The Second Advent (1850); First Lessons in Geometry (1851); A Compendious Grammar of the Greek Language (1871); 'Greek Tables (rev. ed., 1871); Greek Lessons (rev. ed., 1872).

OROSBY, Earner Howard (1853–1907). An American reformer and author, born in New York City. He was educated at New York University and the Columbia Law School. While a member of the State Assembly (1887–89), he introduced three high-license bills, all vetoed by the Governor. From 1889 to 1894 he was judge of the Court of the First Instance at Alexandria, Egypt. He became an exponent of the theories of Count Tolstoy, whom he visited before his return to America; his relations with the great Russian later ripened into intimate friendship, and he devoted himself in America largely to promulgating Tolstoy's ideas of universal peace. His book, Pain Talk in Psalm and Parable (1899), was widely commended by such writers as Björnson, Kropotkin, and Zangwill. He is also author of Captain Jinks, Tero (1902); Stoords and Plousshares (1902); Tolstoy and his Message (1903; 2d ed., 1904); Tolstoy as a Schoolmaster (1904); Garrison, the Non-Resistant (1905); Broad-Cast (1905); Labor and Neighbor (1908).

CROSEY, FANNY (MRS. FRANCES JAKE VAN ALSTYNE) (1820—) An American bymn writer, born at South East, Putnam Co., N. Y. She lost her eyesight when an infant six weeks old. After attending the Institution for the Blind, in New York City, for nine years, she became instructor in Greek and Roman history and in various other branches at that institution, until her marriage to Alexander Van Alstyne in 1858. Some of her several thousand hymns are contained in Moody and Sankey's Gospel Hymns and in Mr. Sankey's Sacred Songs and Solos. Among her best-known verses are: "Safe in the Arms of Jesus"; "Pass Me Not, O Gentle Saviour"; "Jesus is Calling"; and "I am Thine, O Lord." Her songs include the well-known "There's Music in the Air" and "Hazel Dell." Her secular poems have been published under the titles The Blind Girl and Other Poems (1884) and Bells at Evening and Other Poems (1883). Consult her Memories of Eighty Years

TRIOSEY, HOWAED (1826-91). An American Presbyterian clergyman, born in New York City. He graduated at New York University in 1844, was professor of Greek there in 1851-59, and subsequently held the same chair in Rutgers College. He was ordained in 1861 and became pastor of the First Presbyterian Church in New Brunswick, N. J. From 1863 to 1891 he was pastor of the Fourth Avenue Presbyterian Church, New York, and from 1870 to 1881 was chancellor of his alma mater. He was moderator of the General Assembly of 1873. He was instrumental in organizing, and for several years was president of, the Society for the Prevention of Crime and was prominent in his activity against the illegal liquor traffic, but distinguished between temperance and total abstinence. He was a member of the American Committee which revised the New Testament. Besidess sermons and addresses, he published: The Lands of the Moslem (1851); Notes on the New Testament (1863); Social Hists for Young Christians (1866); Jesus: His

Life and Works (1870); Thoughts on the Pentateuch (1873); and commentaries on Nehemiah, Joshua, etc.

CROSEY, JOHN SCHUYLER (1839-1914). An american soldier. He was born in Albany Co. N. Y., was educated at New York University, was appointed second lieutenant of the First Artillery in 1861, served throughout the Civil War, and, after being three times brevetted, acted for a time as adjutant general on the staff of General Canhy. Subsequently he served as aid, with rank of lieutenant colonel, under Sheridan and Custer against the Indians, and resigned from the army in 1871. He was United States Consul at Florence, Italy, from 1876 to 1882; was Governor of Montana Territory from 1882 to 1884; and from 1884 to 1886, when he resigned, was First Assistant Postmaster-General. In 1889 he served as school commissioner of the city of New York.

CROSBY, PEIRCE (1823-99). An American naval officer. He was born near Chester, Pa., entered the navy in 1838, and in 1861 served in Chesapeake Bay. He participated in the capture of New Orleans and the bombardment of Vicksburg, and in 1863-64 was employed chiefly in

blockade duty. In 1864 he was placed in command of the Meta-comet and participated in the attack on Mobile. He was promoted to be captain in 1868, commanded the South Atlantic squadron, was made rear admiral in 1882, and in 1883 was retired.

CROSEY HALL. A mediaval Gothic dwelling house in London on Bishopsgate Street, built in 1466 by Sir John Crosby. It is the scene of a part of Shakespeare's Richard III. Richard of Gloucester lived here for a time, and Sir Thomas More, who purchased the house, wrote his Utopia in it. Some of the original chambers still remain. The hall, after having been used for a variety of purposes, is now an eating house.

CRO'SIER (ME. croser, crocer, from cross, crosse, cross, from Latin crux, cross). The pastoral staff of a bishop. Throughout an-tiquity a hooked or curved staff had been an emblem of civil and particularly of religious authority. The crosier is sometimes regarded as derived from the staff of the Roman augurs. It was adopted by early Christian bishops as a symbol of authority. It took two forms-that of the tau (T) with a short transverse top piece, giving the shape of a small cruw commissa, in which the cross appears as a symbol of the authority by which the bishop ruled; and that of the curved end or volute, imitating the shepherd's crook, em-

blem of the office of the bishop to keep the Lord's sheep. The tau form seems the earlier, judging from extaint monuments, for no records of the crook form exist as early as the Carlevingian period. The tau often ends in the head of a lion, emblem of episcopal power; the crook often impales a serpent or a dragon, symbol of the triumph over evil. Abbots were often

privileged to carry the crosser, as a symbol of their pastoral office, as early as the fifth centry, and long before the other cpiscopal insigns of mitre and cross were allowed to them Some of them still retain the pannisellum (a small silk veil hanging to the stail), which has long disappeared from those of bishops Consult Barraud and Martin, Le bâton pastoral (Paris, 1836), Lind, Uebo des Krummsted (Vienna, 1863) See Costum, Ecclesiastical CROSLADD, TROMAS WILLIAMS) HOUSE

CROSIAND, TROMAS W(ILLIAMS) H (1908SON) A British editor and author He became known as a contributor to the Leeds
Mercury supplement, Forkinto Weelly Post,
Black and White, Saturday Review, The Gentlecoman, Public Opmon, and the Evening Standard From 1890 to 1902 he was assistant editor
of the Outlook (Loadon). In 1905 he became
editor of the English Review, in 1911 editor of
the Fenny Illustrated Paper, and later assistant
editor and director of the Icademy His writings include The Unspeakable Scot (1902),
Lotely Woman (1903), The Lord of Greation
(1904), The Enemy (1904), The Wild Irishman (1905), The Subribans (1905), Rea Rose,
verse (1905), The Country Life (1906). The
Beautiful Tectotaller (1907), English Kongs and
Ballads (1907), Somnets (1912), Taffy Wos a
Welshman (1913)

CROS'MAN, HENRIETTA (1870—) An American actress, born at Wheeling, W Vs., Sept 2, 1870 She made her début in 1889 in The White Slave and later was successively under the management of Daly and the Frohmans In 1897 she was married to Maurice Campbell In the following years like became a star Her greatest successes have been her production of George C Hazleton's Mistress Nell, Oct 9, 1900, in New York, where it ran for over 100 performances, and her Rosalind in As You Like It (Feb 27, 1902), which ran for eight weeks at the Theatre Republic, New York. After this she appeared in many popular successes, including The Sword of the King (1902), Sweet Kitty Bellaws (1903), All-of-a Sudden Peggy (1908-07), Sham (1909); Amilatrimony (1910), The Real Thing (1911).

CROSS (AS or ūc, OHG crūci, chrūci, chrūze, Ger Kreuz, Prov. cros, crotz, OF cross, cross, cross, cross, cross, cross, from Lat The cross was a common instruerum, cross) ment of capital punishment among the ancients, and the death on the cross was deemed so dishonorable that only slaves and malefactors of the lowest class were subjected to it by the Romans It was customary to proclaim the name and offense of the person crucified, or to affix to the cross a tablet (album) on which name and offense were inscribed Malefactors were sometimes fastened on a simple upright stake, and so left to die, or they were impaled upon it, and to this upright stake the Latin name crux was originally and more strictly applicable, but very generally a crosspiece (patibulum) was added to the stake, to which the arms of the criminal were tied, or to which his hands were nailed The person crucified often lived for days When the crosspiece was fastened at right angles below the summit of the upright stake, the cross was called crux immissa (the Latin cross), the Greek cross, where the crosspiece was set so low as to form four equal or nearly equal arms, is a variant of this form; when the crosspiece was fastened at right angles across the top of the upright stake, the cross was crux commissa (also called 'cross of St Anthony'), and when it was formed of two beams crossing one another obliquely, it was crux decussata (also called 'cross of St Andrew') The cross was erected outside the gates of towns, but in places of frequent resort:

It appears that the cross was in use as an emblem, having certain religious and mystic meanings attached to it, long before the Christian The Spanish conquerors were astonished to find it an object of religious veneration among the natives of America But the death of Christ by crucifixion led Christians to regard it with peculiar feelings of veneration and to adopt it as a symbol with express reference to the central fact of their religion. It was seen everywhere in Christian countries, in the home as well as in the church, where it formed an invariable ornament of the altar The Iconoclastic variable ornament of the attar The reonoclassic party contended against the worship of the cross, but the Church, while defining the sense in which worship might be offered to it, condemned their views Though the word latreia, 'adoration,' is used of the veneration paid to the cross, it is explained as only relative, and referred back to the person of the Crucified This species of veneration, which is sometimes misunderstood on account of the restricted use of the word "worship" in modern English, is solemnly paid in the Roman Catholic church to pieces of the true cross (considered the most sacred of all relics) whenever exposed, and to other crosses, especially on Good Friday The cross on the high altar, which has been wrapped in a violet covering throughout Passiontide, is unveiled during the singing of the anthem "Behold the wood of the Cross, on which the Saviour of the world hung" It is then laid on the altar steps, and the celebrant and other sacred ministers approach with genuflections and kiss it After this a smaller cross is offered to the congregation, kneeling at the altar rails, to be kissed (Consult Cardinal Wiseman, Lectures on the Offices and Ceremomes of Holy Week, London, 1839 ) The earliest account of the solemn veneration of the cross occurs in the Peregrinatio Sanctæ Silviæ ad Loca Sancta, recently discovered by Gamurrini and published in Rome, 1887-88, which describes a pilgrimage to Jerusalem during the episcopate of St Cyril, probably in the year 384 or 385 The sign of the cross has been made in Christian worship, since the second century at least, as an act of homage to God in remembrance of the Redemption, and of blessing to the person or object over which the sign is made It is differently made in the Roman Catholic and Eastern churches, and has been disused among most Protestants, as a ceremony of human invention tending to superstition A cross was in the Middle Ages prefixed to most inscriptions and documents as a sort of consecration, and placed before signatures for the same reason, the latter practice is still retained by Roman Catholic bishops At the time of the Reformation the use of the cross was discontinued in the Anglican church, but later a reaction in its favor set in At the present time it is often seen upon the altar of the churches of the Anglican communion and is also frequently carried before the procession of chor and clergy The Lutheran churches have re-tained the cross behind the altar, and they occasionally use the sign of the cross in liturgy This is the authoritative practice in the Anglican churches at baptism and in the anointing of the monarch at the coronation.

The forms given to crosses in art are endless; but the two leading types are the Latin cross, or cux inmisse, supposed to be that on which Christ suffered, and the Greek cross, both of which are subject to many fantastic variations. The Greek cross forms the well-known cross of St. George, which, adopted from the legends of that hero, was the national ensign of the English previous to the union with Scotland (See Union Jack). The cross of St. Andrew, according to the legend, was the form of cross on which St. Andrew, the national saint of Scotland, suffered martyrdom. As the Scotland suffered martyrdom. As the Scotland suffered martyrdom. As the Scotland suffered martyrdom, the Maltese cross, with its eight forked ends, was a form used by the Knights of Malta. It is similar to the crosslet form where small crosses are formed at the ends.

Sanctuary, Boundary, or Monumental Crosses, as they are called, consist of an upright flat pillar, or obelisk, covered with sculptured devices and set in a socket level with the ground Occasionally they appear to have marked boundaries, but more frequently were monuments over the graves of heroes, kings, bishops, etc. In some instances they probably marked the verge of a sanctuary The older of these crosses are said to be Scandinavian or Danish, and such are known as runic crosses, being inscribed with runes. We are told that the island of Iona at one time possessed 360 crosses, but all are now destroyed or dispersed, except one, called St Martin's Cross, standing in the grounds of the cathedral It is a column of compact mica schist, 14 feet high, 18 inches broad, and 6 inches thick, and is fixed in a pedestal formed out of a massive block of red granite, about 3 feet high In connection with certain ancient religious houses in Ireland, there were some very fine crosses of this kind, the most gigantic and impressive which still exists being that of St Luke's in the County of Louth. The prominence of such crosses extended to the East, where the Gothic and other tribes of the Caucasus, Georgia, and Armenia also used them prominently in church sculpture and in cemeteries

Memorial Crosses are those which were erected in memory of some beloved object, or in commemoration of some event of local importance. In England there are some superb crosses of this kind, they are popularly called Norman crosses. This species of cross resembled a Gothic turret set on the ground or on a base of a few steps, and was erected by Edward I (1290) in memory of his queen, Eleanor, being placed on the spots where the body rested in its funeral progress to Westminster Of the 15, three remain—at Geddington, Northampton, and Waltham

Town or Market Crosses were creeted as stands to preach from, or in commenoration of events regarding which it was deemed proper to evoke prous feelings. As these structures were incorporated with or surmounted by a crucifix, the term cross was so indelibly associated with them that it survived the religious character of the fabrics. The earliest examples of this kind consisted, probably, of tall crucifixes of wood, such as are still seen by the wayside in some continental countries. Afterward stone shafts would be substituted, and according to the in-Voir, VI-20

crease of market revenues, or progress of taste, these town crosses assumed that imposing character which they latterly possessed Of the larger ornamental crosses of this kind, there are some striking specimens in England, such as that at Cheddar in Somersetshire, and that at Malmesbury in Wiltshire, both are open-vaulted structures, with a commodious space beneath, as a refuge for poor market folks during rain, and surmounted with a kind of Gothic turret At Chichester, Bristol, and Winchester the market crosses, while similar in form, are of a higher architectural quality Adjoining St. Paul's in London, stood Paul's Cross, a structure which we read of as early as 1259, in the reign of Henry III It was essentially a town preaching cross and is associated with some interesting occurrences in history Before this cross the unfortunate Jane Shore, the mistress of Edward IV from 1470 to 1483, was forced to do penance in the reign of Richard III. Here Dr Shawe, in his infamous sermon, attempted to bastardize the children of Edward and eulogized Richard In front of this cross sat Cardinal Wolsey to hear fulminations against Luther, and about 10 years later, by order of Henry VIII, preachers here delivered sermons in favor of the Reformation. At this cross Queen Elizabeth attended to hear a thanksgiving sermon for the defeat of the Spanish Armada Here sermons continued to be delivered until 1643, when, with other so-called relics of popery, it was de-molished by order of Parliament Whatever was the original form of Paul's Cross, it was in later times a plain, pulpit-like fabric of wood, covered with lead

The Scottish town crosses, while simple, had ome distinguishing features. The more simple some distinguishing features kind consisted of a shaft of stone, generally octangular in shape, and 12 or more feet in height At the top was an ornamental capital, which bore a dial and vane, or the figure of a unicorn. The shaft sprang from the top of a graduated flight of circular or octangular steps A specimen of this species of cross is seen in the market place of Melrose The grander market cross consisted of a tall stone shaft, such as just described, but instead of having steps it sprang from the centre of an imposing substructure This structure was circular, hexagonal, or octagonal, and from 10 to 16 feet high The top formed a platform, which was surrounded with an ornamental stone parapet and was reached by a stair inside The sides of the building were decorated with pilasters and bore various heraldic and other devices. Such were the crosses of Edinburgh, and such is the renovated cross of Aberdeen, the sides of which, however, are open Losing their religious character, the Scottish market crosses were employed for royal and civic proclamations, and as places where certain judicial writs were executed general removal of these ancient and interesting structures has often been a matter of lamentation

In the history of the cross as a Christian symbol, it is evident that it was used at first as a symbol of triumph, not of suffering. In the sarcophagi and mosaics from the fourth to the minth century it often stands alone on the sacred rock from which flow the Four Rivers of Paradise. It is sometimes surmounted by the Constantinian monogram of Christ, the Labarum, and thus became the standard of victorious Christianity. It was inscribed within

300

the circle around the head of Christ, thus forming the cruciform nimbus (qv.). As an emblem of Christ, it preceded the crucifix, and it was not until the tenth and eleventh centuries that the figure of Christ had quite generally replaced on the cross the ornamentation which had previously been its usual decoration Even when the monumental crucifixes had come into general use in central and southern Europe, the northern nations (eg, Great Britain and Scandinavia) continued for centuries the use of the mere cross The form of the cross given to the majority of churches in the later Middle Ages is more connected with the specific crucifixion than the mere cross, as is shown by the bend sometimes given in some church ground plans, imitated from the twist of the body on the cross. Consult Stockbauer, Kunstgeschichte des Kreuzes (Schaffhausen, 1870), Fulda, Das Kreuz und die Kieuzigung (Breslau, 1878), Dobbert, Zur Entstehungsgeschichte des Kreuzes (1880); Bunsen, Das Symbol des Kreuzes ber allen Nationen (Berlin, 1876), Alger, History of the Cross (Boston, 1858); Mortillet, Le signe de la croix avant le chi istianisme (Paris, 1866), Zockler, Das Kreuz Christi (Gutersloh, 1875), Forrer and Muller, Kreuz und Kreuzigung Christi in ihrer Kunstentuickelung (Strassburg, 1893) See also the bibliographies of CRUCIFIX and JESUS CHRIST IN ART

CROSS. In heraldry (q v.), one of the charges known as "ordinaries"

CROSS, CONGREGATION OF THE HOLY

HOLY CROSS, CONGREGATION OF THE

CROSS, INVENTION OF FINDING OF THE The name of the Church festival commemorative of the finding of the cross upon which Christ died by the Empress Helena, the mother of Constantine, in the year 326. As related by Socrates (Ecclesiastical History, I, xvii), who wrote about 439, the story is this In Christ's sepulchre she found three crosses, along with Pilate's tablet, and on the advice of Macarius, Bishop of Jerusalem, determined which was Christ's cross by taking the three to a sick woman, who touched the first two without avail, but was restored as soon as she had touched the third-so that was accepted as Christ's. Similar is the story in Sozomen (Ecclesiastical History, II, 1), who wrote a little later From this time on for many centuries there was no ques-tion of the fact. Doubt has been cast upon it by the consideration that Eusebius, who wrote m the fourth century, and who was particularly explicit regarding everything relative to the Constantine family in his account of Helena's visit to the Holy Land (Life of Constantine, III, lii), says nothing of her discovery of the crosses, nor when speaking of the erection of the church over the Holy Sepulchre (ib, III, xxviii et seq) It is also noteworthy that the Bordeaux Pilgrim, the author of the Itanerarum Burdegalense, writing in 333, says nothing in his description of the holy places of any cross being discovered in the Holy Sepulchre (Itunerary from Bordeauw to Jerusalem, Palestine Pilgrim's Text Society's Eng. trans, London, 1877, p 24) Still Cyril of Jerusalem, writing in the Holy City in 347-348, uses this language. "He was truly crucified for our sins For if thou wouldest deny it, the place refutes thee visibly, this blessed Golgotha, in which we are now assembled for the sake of Him who was crucified, and the whole world has since been filled with pieces of the wood of the cross"

(Catechetical Lectures, IV, 10) And he alludes to the finding of the cross when writing to Constantius, the son of Constantine (Ep ad Const, c 3), though the authenticity of this letter has been questioned, but not disproved. That Helena found three crosses and that she and many others believed that one of them was the cross of Christ may be accepted, though we have no confirmatory proof of its authenticity.

The festival of the Invention of the Cross may date from the visit of Helena, but unless it was at first local, the earliest certain mention of it at irst local, the earlies certain inheritors of its in the eighth century. In the Latin church the day is May 3. In the Greek church there is a festival of the Exaltation of the Cross on September 14. Consult, in favor of the story J H Newman, Essay on Ecclesiastical Miracles, and as against it W C Prime, A History of the Invention, Preservation, and Disappearance of the Wood Known as the True Cross (New York, 1877), E Nestle, De Sancta Cruce, Ein Beitrag zur christlichen Legendengeschichte (Berlin, 1889), Staley, The Liturgical Year (London, 1907

CROSS, VICTORIA. See VICTORIA CROSS.
CROSS, CHARLES ROBERT (1848- )
American physicist, born at Troy, N Y He graduated in 1870 at the Massachusetts Institute of Technology and was instructor there in 1870-77 In 1877 he was appointed professor of physics and director of the Rogers laboratory. He established at the institute in 1882 the first American course in electrical engineering His publications include Course in Elementary Physics (1873), Lecture Notes on Mechanics and Optics (1884), Notes on Mechanics (1908, 2d ed, 1911)

CROSS, MARY ANN, or MARIAN See ELIOT, GEORGE

CROSS, MRS GEORGE FREDERICK. See CAM-BRIDGE, ADA

CROSS, RICHARD ASSHETON, first VISCOUNT CROSS (1823-1914). An English politician. He was born at Red Scar, Lancashire, graduated at Trinity College, Cambridge, in 1846, and in 1849 was called to the bar He sat in Parliament as a Conservative, for Preston from 1857 to 1862, for Southwest Lancashire from 1868 to 1885, and for the Newton Division, Southwest Lancashire, from 1885 to 1886. From 1874 to 1880 and in 1885-86 he was Home Secretary, and from 1886, when he was made Viscount, to 1892 Secretary of State for India In 1887 he headed a commission on the working of the Education Acts, which brought in reports diametrically opposed to each other. He published The Acts Relating to the Settlement and Removal of the Poor (1853) and The General and Quarter Sessions of the Peace (1858)

CROSS, (CHARLES) WHITMAN (1854-An American geologist, born at Amherst, Mass. He was educated at Amherst College and the University of Leipzig In the United States Geological Survey he was assistant geologist in 1880-88, geologist after 1888, and chief of the section on petrology in 1903-06 In 1911 he became treasurer of the National Academy of Sciences. He is author, with three others, of the important Quantitative Classification of Igneous Rocks (1903), a new system with new nomenclature (see Petrography) He also pre-

pared a number of Geological Survey bulletins and in 1902 published The Development of Systematic Petrography in the Nineteenth Century

CROSS, WILBUR LUCIUS (1862-American educator and author born at Mansfield, Conn He graduated in 1885 at Yale University, and from 1894 to 1897 was instructor in English in the Sheffield Scientific School In 1807 he was appointed an assistant professor in English and in 1902 professor. In addition to magazine contributions on Ibsen, the novel, and editions (with notes and essays) of Macbeth (1900), the Works of Laurence Sterne (1904), and Defoe's Robinson Crusoe (1911), his publications include an excellent handbook, Development of the English Novel (1899), and Life and Times of Laurence Sterne (1909) contributed to the first edition of the New International Encyclopædia Under his editorship the Yale Review at once took a high

place among contemporary periodicals

CROSS'BILL'. A bird of the genus Loxia, large finches with a singular bill, the mandibles -which are rather long, thick at the base, and much curved-crossing each other at the points when the bill is closed. These mandibles are capable not merely of vertical but of lateral motion, and muscles of extraordinary power are provided for moving them, so that the crossbills readily obtain their principal food-the seeds of firs and pines-by tearing off the scales of the cones They bring the points of the mandibles (which they can do so as to pick up a together very small seed) and insert them into the cone, when the act of allowing the points to slip past one another exerts a powerful lateral movement, opening the scale, and the tongue, which terminates in a singular movable scoop, formed of a bone articulated to the os hyoides, or ordinary bone of the tongue, is inserted to detach the seed.

BEAK OF THE CROSSBILL Side view, shut and open, and top view.

The power of the bill is such that wood may be torn to pieces, and crossbills in confinement see to take a mischievous pleasure in destroying the cage. An apple is cut to pieces almost in an instant, in order that its seeds may be reached, and flocks of these birds sometimes do great mischief in orchards Three or four species are known, two of which are found in America, although only one, the common red crossbill (Lowia curvirostra), is numerous, and even this in most years is scarcely to be seen in the United States. It is a native of Europe, Asia, and North America, dwelling chiefly in evergreen forests and extending as far north as they do, not dreading the coldest climates The American bird is regarded as a subspecies, and a second subspecies is found from the southern Rocky Mountain region to central Mexico The whitewinged crossbill (Lowia leucoptera) is the other American species, but is not so common as the preceding. Both species are red in the males and olive brown in the females, the former species with blackish wings and the latter having wings crossed by two conspicuous white bars They go about in small, chattering flocks and are resident in the most northern parts of the

United States and in Canada They breed in the late winter or early spring, sometimes during very severe weather

CROSS BILL. In chancery or equity, a bill, or petition, filed by the defendant in an equity proceeding against the plaintiff or against other defendants, or both, in the same suit, either to obtain a discovery of facts in aid of the defense. or to bring the matters in dispute more completely before the court than could be done by a mere answer to the original bill The cross bill must not introduce new parties nor new matter not embraced in the original suit, and is considered as an auxiliary suit in the nature of a defense to the original bill, the two proceeding together as one cause However, the persons made defendants in it must answer, plead, or demur to it, or the relief demanded will be granted by default Cross bills are used in the equity practice of the United States and many of the State courts and in the English chancery courts See Bill, Discovery, Bill of, Equity, also PLEADING, and consult the authorities there referred to

CROSSBOW. See ARBALEST, ARCHERY.

CROSS BREEDING See BREEDING.

CROSS BREEDING IN MAN. Intercrossing in animals, as among plants, may, within due limits, be beneficial. These limits are confined to the same variety, race, or stock individuals of widely different races or breeds intermix, the result is degeneracy and sterility, the outcome of such unions being of the same nature as hybrids between different though allied species As Darwin states "After plants have been propagated by self-fertilization for several generations, a single cross with a fresh stock restores their pristine vigor, and we have a strictly analogous result with our domestic animals." This will apply to man also. When the French aristocracy was, as the result of the Revolution, broken up and forced to intermarry with the bourgeoisie, the result was an increase in the population and additional vigor in the race. An old family in its decline may be re-juvenated and restored by intermarriage with a more vigorous, even if a coarser, stock or strain The population of our cities is maintained by the constant influx of fresh blood from the rural districts

The mixture of the European races, now so marked, has been going on from early prehistoric (Neolithic) times The French population is highly composite The Anglo-Saxon race is equally or still more so, and the American people so in a still more marked degree, the intermixture being the result of emigration from the countries of northern and central Europe It is not only that the old mixes with new stock, but the latter comes from regions differing in soil, climate, etc. Intermarriages between the stocks or breeds or strains of the white race are happy in their effects, resulting in increased vigor and fertility, and so with the stocks of the yellow, brown, or black races. The same law prevails throughout the animal world, everywhere Nature abhors too close inbreeding.

Miscegenation, or Interracial Marriage. "métissage," is marriage between individuals of widely different races, i.e., a high and a low race or variety Its effects are bad physically and morally, since the product, like mules or hybrids between species, is inferior to the higher though superior to the lower race, the result is that, when general, the higher race is pulled down, or

tends to degeneracy, while the lower is in a degree elevated Hybrids, or half-eastes, are notoriously inferior to either pure race, though so partly from social causes The results, so apso partly from social causes parent in human history, show that crosses are injurious between races too far removed in physical characters and constitution, or where living under remote climatic conditions While marriages between black or other backward races and white races are markedly evil in their effects, unions between those nearer allied, such as those between the white race and the Japanese or the Polynesian or Malayan or North American Indian, also tend to result in sterility, on the other hand, crosses between the yellow and brown races, and the brown and black, are apparently fertile, and the results not harmful

In-and-in Breeding The deleterious effects of self-fertilization, or of marriage between blood relatives, are recognized both by Darwin and by Wallace Darwin found that certain plants which had been naturally cross-fertilized for many or all previous generations suffered to an extreme degree from a single act of self-fer-tilization 'Nothing of the kind," he adds, "has been observed in our domestic animals, but then one must remember that the closest possible interpreeding with such animals—that is, between brothers and sisters-cannot be considered as nearly so close a union as that between the

pollen and ovules of the same flower"
Consanguineous Marriages The bearings of the previous statements on this important subject are obvious Yet the matter is involved in doubt, authorities differing. The popular notion is that marriages between first cousins result in disease, idiocy, insanity, sterility, etc. That the results are not, however, always deleterious is a matter of frequent observation Darwin refers to his son's (G. H. Darwin) attempt to discover by a statistical investigation whether the marriages of first cousins are at all in-jurious, "although this is a degree of relationship which would not be objected to in our domestic animals." It appears from these and domestic animals" It appears from these and other researches that "the evidence as to any other researches that the evidence as the evil thus caused is conflicting, but on the whole points to its being very small" He concludes "that with mankind the marriages of nearly related persons, some of whose parents or ancestors had lived under very different conditions. would be much less injurious than that of persons who had always lived in the same place and followed the same habits of life Nor can I see reason to doubt that the widely different habits of life of men and women in civilized nations, especially among the upper classes, would tend to counterbalance any evil from marriages between healthy and somewhat closely related persons"

Finally, to sum up the results thus far obtained, it appears, as concluded by Wallace, that a slight amount of crossing, attended by slight changes of the conditions of life, is beneficial, while extreme changes and crosses between individuals too far removed in structure or constitution are injurious For the literature, consult many of the volumes under Evolution

CROSS-BUN A small cake specially prepared for Good Friday and in many English towns cried about the streets on Good-Friday were appropriately marked with the cross, hence the name. The origin of the practices obscure. Most probably it is a relic of some heathen observance, to which the early Church gave a Christian significance
CROSSCUT A horizontal, or nearly hori-

zontal passageway driven between two levels, drifts, or underground workings in a mine coal mining crosscuts are often driven in the coal for ventilation, whereas in metal mines they are usually driven across the formation, at right angles to the strike, to prospect for or connect parallel veins

CROSSE, ANDREW (1784-1855) An English tysicist He was born at Fyne Court, in the physicist Quantock Hills, Somersetshire, and was educated at Bristol and Brasenose College, Oxford He early devoted himself to the study of electricity and in 1807 he commenced experiments with the view of forming aitificial crystals discoveries and investigations in electricity were described at the meeting of the British Association for the Advancement of Science, at Bristol, ın 1836 A few months later, while experimenting with some highly caustic solution, out of contact with atmospheric air, there appeared, as if gradually growing from specks between the poles of the voltaic circuit, certain animals of the genus Acarus. Crosse never affirmed that he had developed animal life out of inorganic elements, but simply that under physical conditions he could make Acar appear, and not otherwise This discovery aroused such violent criticism that Crosse retired from the world and for some time neglected his researches, but later he published papers on Mode of Extracting Metals from their Oies, On the Perforation of Non-conducting Substances by the Mechanical Action of the Electric Fluid, and On the Apparent Mechanical Action Accompanying Electric Transfer

CROSS-EXAMINATION. The examination of a witness on behalf of the party against whose interest he has been called and against whom he has given testimony The object is to test the correctness of the testimony given, to disclose any prejudice, lack of intelligence, weakness of memory, or untruthfulness that may exist, and to break in any proper way the force of the direct examination Greater latitude is allowed to counsel in cross-examination of an adverse witness than in adducing direct test-mony for his own client Thus, "leading ques-tions"—i.e., those which in their form suggest or indicate the answer desired—are allowed in cross but not in direct examination. In the United States generally it is held that cross-examination should be limited to inquire into matters drawn out on the direct examination, and if counsel asks questions as to new matter he thereby makes the witness his own and cannot thereafter impeach his credibility

Counsel are required to confine the questions on cross-examination to material and relevant matters, but the determination of the question whether the facts sought to be shown are material and relevant rests in the discretion of the court, and, when occasion seems to demand it, this discretion is liberally exercised, especially in cases of cross-examination of expert witnesses, where it is necessary to show the standing and ability of the expert Previous mistakes in collateral matters not connected with the cause in issue have been allowed to be shown on this point

The right to cross-examination should be exercised immediately after the examination in chief, but it is in the discretion of the court,

upon good reason shown, to allow the privilege at a later stage of the trial. Consult Wellman, Art of Cross-Examination (New York, 1904). See EVIDENCE, EXAMINATION, TESTIMONY, and authorities there cited

CROSS-FERTILIZATION, IN PLANTS. See

POLLINATION.

CROSS-FOX A valuable variety of the American red fox, marked by a dark line along the back, crossed by one upon the withers, whence the name See Fox

CROSS KEYS. A post village in Rockingham Co, Va, about 20 miles northeast of Staunton Here, on June 8, 1862, during the Civil War, an indecisive engagement occurred between 18 000 Federals, under General Fremont, and a part of Jackson's retreating army, numbering about 8000, under General Ewell, the latter withdrawing during the night to effect a junction with Jackson Each side lost about 500 The engagement was a strategic success for the Confederates, in that it checked the pursuit by Frémont and prevented his joining with General Shields for a combined attack

CROSS'LEY, SIR FRANCIS (1817-72) An English philanthropist, born at Halifax, Yorkshire He succeeded to the proprietorship of the Dean Clough carpet mills and accumulated a vast fortune His many benefactions included the gift to Halifax of 21 almshouses in 1855 and an endowed public park, and to the London Missionary Society of £20,000 He was created a baronet in 1863 and published a lecture,

Canada and the United States, in 1856

CROSSOPTERYGII, kros-sop'ter-ij'i-i (Neo-Lat nom. pl, from Gk κροσσοί, krossoi, fringe + πτερύγιον, pterygion, dim. of πτέρυξ, pteryx, wing) An order of ganoid fishes, numerous in former ages, but surviving only in the ganoid-like genera Polypterus (see Bichir) and Calamouchthys They are described as "Teleostomi, in which the pectoral fin consists of a rounded basal lobe, supported by endoskeletal structures and fringed by dermal rays There are no branchiostegal rays. The vertebral column is well ossified, and the caudal fin is diphycercal The pelvic fins are abdominal A spiral valve and a conus arteriosus are present, and the optic nerves form a chiasma"

CROSS RIVER. See CALABAR CROSS STONE See MACLE

CROSSWELL, kroz'wel, Edwin (1797-1871). An American journalist and leader in Democratic politics as a member of the Albany Regency (q.v). He was born at Catskill, N. Y, began his journalistic career on the Catskill Recorder, a journal established by his father, and in 1824 became editor of the Albany Argus, which he made the official organ of his party in the State. He was also State printer from 1824 to 1840 and from 1844 to 1847 In 1854 he gave up journalism and went into business in New York City Crosswell was the great antagonist of Thurlow Weed and exerted powerful influence by his editorial utterances in both State and national politics

CROSWELL, HARRY (1778-1858). An American journalist and clergyman, born at West Hartford, Conn In 1802 he became editor of the Balance, a Federalist newspaper, at Hudson, N Y, and later of the Wasp In the latter he charged Jefferson with paying Callender to de-fame Washington He was sued for libel and defended by Alexander Hamilton, whose plea in this case Kent called "the greatest forensic effort Hamilton ever made" In 1814 Croswell took orders and in 1815 became rector of Trinity Church, New Haven, Conn He was the author of The Young Churchman's Guide, Manual of Family Prayers (1857), Guide to the Holy Sacrament (1867)

CROT'ALA'RIA (Neo-Lat nom pl, from Gk κρόταλον, hrotalon, rattle) A genus of plants of the family Leguminosæ, deriving its name from the inflated pods in which the seeds rattle when ripe. The species, about 250 in number, are annual, perennial, and shrubby plants, natives of the temperate and tropical parts of the world. (See Plate of CRANBERRY) Many of them have long, straight, slender stems and branches, and some of these yield valuable fibre, particularly the Sunn (q v ), or Sunn hemp of India, Crotalaria juncea, an annual species, the fibre of which is now an important article of commerce Jubbulpore hemp, also an important fibre, and regarded as stronger than Sunn, is the produce of Crotalaria tenuifolia, usually considered a variety of Crotalaria juncea, a perennial species about 9 feet high, a native of the south of India, which, when growing in abundant space, throws out many branches, but, when sown thick, grows with little branching Crotalaria burhia, which naturally grows in very arid places, is also cultivated in Sinde for its fibre There are a dozen species

loco (q v ) CROTAL'IDÆ (Neo-Lat. nom. pl, from Gk. κρόταλον, krotalon, rattle). A family of venomous serpents, the pit vipers, viper-like in form, but distinctively characterized by the presence of a deep pit on each side of the face between the nostril and the eye. It includes the American rattlesnakes, moccasins, and copper-heads and some Asiatic species See RATTLE-

native of the United States, one of which, Cro-

talana sagittalis, and perhaps others, are re-

puted to be injurious to horses, causing what is termed "crotalism," a disease something like

SNAKE

CROT'ALISM. See CROTALARIA

CROTAPH'YTUS See COLLARED LIZARD

CROTCH, WILLIAM (1775-1847) A distinguished English composer, born at Norwich He was quite as precocious as Mozart When little more than three years old he could play "God Save the King" almost throughout with chords, and could detect in a moment what note was struck and in what key music was composed. When only 22, Crotch was appointed professor of music in Oxford University, and the degree of doctor of music was conferred upon him 1822 he obtained the principalship of the Royal Academy of Music. He composed much for the organ and piano, as well as many glees Among several oratorios which he wrote, two, Palestine (1812) and The Capturity of Judah (1834), are especially noteworthy He died at Taunton, especially noteworthy England.

CROTCH'ET A musical term used in England to denote the quarter note ( ) France the *crochet* denotes the eighth note ( ). The semiminum of the older notation (see MENSURABLE MUSIC) was called in Italy crocheta and was written as an open note with one hook ( ) When later on the larger values of notes were abandoned and all notes of lesser value were written black, the French applied the old name to the shape, the English to the value, of the note.
